It is not to be supposed that the calibre of the gun will be limited to 13.5 inches. Germany and the United States are already manufacturing 14 inch guns, and the Japanese Government besides constructing guns of this calibre, are also acquiring in England a number of similar guns. Other nations are following this powerful lead, and signs have not been wanting of further developments.

Gun power has also been increased by improvements in the shape of the head of the projectile. Until two or three years ago the radius of the ogive had been 2 calibres but experiments with pointed bullets having a radius of head of from 6 to 8 calibres had shown that the sharper form of head gave owing to the reduced air resistance higher remaining velocities at all ranges, and consequently for any given range a much flatter

trajectory was ensured. Experiments were then carried out with gun projectiles in order to obtain similar advantages, and it was found that the remaining velocity increased with the radius of the head, but that the accuracy became less if the point was unduly acute. A radius of head of about 4 calibres was finally decided upon as giving the advantage of increased remaining velocity, or longer range with good accuracy.

The perforating power of the armour piercing projectile has been much increased by the introduction of the cap. The cap as first introduced was solid with a flat nose of considerable thickness in front of the actual point of the shell. Lately this thickness has been greatly reduced, but in order to preserve the external form of the large radius ogive the cap is provided with a hollow point.

By the use of a higher grade of steel the thickness of the walls of armour piercing shell can be slightly reduced, thus the internal capacity of the projectile is increased and a larger bursting charge of high explosive can be used.

The high explosive bursting charge for the various kinds of projectiles has also increased in weight, so that modern shells are more powerful than those of older types. In these a bursting charge of lyddite, or melted picric acid was employed. This material although a most powerful explosive has certain drawbacks of which the following may be mentioned: it requires a somewhat high temperature to melt it for the purpose of running it into the shells, and it readily forms dangerous combinations with certain metallic salts should these be present. Great care has therefore to be observed to prevent any possibility of their presence. An alternative chemical substance, trinitrotoluol, has come into favour. This melts at a very much lower temperature and has the further advantage of not forming dangerous compounds as picric acid does. On the other hand it is more inert, so that a powerful exploder is required to properly detonate it, but this inertness is otherwise an advantage in as much as it enables an armour piercing shell filled with trinitrotoluol to perforate armour even at a striking velocity of over 2000 f/s without exploding the shell. Thus with a well designed fuze and exploder it is possible to burst the shell after it has passed through the armour into the interior of the ship.

(A. G. HADCOCK.)

## V. ARMOUR-PLATE<sup>1</sup>

*Progress of Manufacture*—Improvements in armour plate manufacture with a view to increasing the resisting power of plates are the jealously guarded secrets of the manufacturers and their respective Governments. As far as can be ascertained, however, there have been no further developments during the last two or three years comparable in importance with those introduced in the past by Harvey or Krupp. Minor improvements have no doubt been made, and the actual quality of an average plate is probably better than it was three or four years ago, but relative to the attack it is doubtful whether any progress has been made in the resisting power of armour.

It is claimed, however, that in the United States at least, a considerable advance has been made in the case of the thinner plates up to 3 or 4 inches in thickness, including those used for decks, splinter proofs, roofs of turrets, conning towers, etc., by the adoption of a nickel-chrome-vanadium steel subjected to a special heat treatment. In view of the possibilities of aerial attack, the importance of horizontal armour, especially in the form of light overhead cover, is greater than ever, and for this reason alone any development in the resisting power of thin plates is to be welcomed. In the case of the thicker plates no definite advance of any importance has been reported, except in the matter of surface flaking when struck, which is said by Rear Admiral N. C. Twining, the Chief of the United States Bureau of Ordnance, to have been very greatly reduced in recent years (see *Scientific American*, December 9, 1911).

In the above remarks no account has been taken of the Simpson process, which would seem to be still in the experimental stage. The process is one of welding together steel plates of varying hardness by means of copper. As described in the *Times* (London) of March 29, 1911, the weld is effected as follows. The plates to be united are placed,

<sup>1</sup> See E. B. 11, 578 et seq.

with a layer of copper between in a mixture of carbon, brown sugar and water of the consistency of compressed snow, and the whole mass is heated to a temperature of  $2,000^{\circ}$  F, when the copper melts away into the adjacent steel, forming a perfect weld. The advantage to be gained by such a process is obvious. One of the limitations of the cementation process is that the carbon upon which the hardness of the face mainly depends only penetrates to a depth of about one inch and consequently, there is a difficulty in the thicker plates of getting the best relation of thickness between hard face and tough back. By the Simpson process—if successful—it would be possible to obtain any desired relation between the two and to use any class of steel which might be preferred. Further it would appear possible to employ one or more intermediate layers if it should be found desirable, to prevent too abrupt a change in the character of the steel. The possibilities of the process depend upon the soundness of the weld—the point in which the earlier compound plates faded.

An interesting account of the Krupp process as carried out at Essen was given in *Engineering* of August 16 1912. It is noteworthy as giving the approximate temperatures of the various stages including the differential heat. The account differs in some details from earlier descriptions notably in the use of illuminating gas instead of solid carbon in the cementation process and in the method of the final chill.

*Modifications in Thickness etc. of Plates*—The increased power of the attack which apart from the tendency to adopt heavier primary guns is due partly to improvements in the projectile and cap considered merely as perforating or punching tools and partly to increased ranging power due to the elongated form of head now universally adopted is having the inevitable effect in the absence of any revolutionary change in the character of plates of increasing the maximum thickness of the main armour and it has been stated that in the U.S. battleship *Nevada* the maximum belt thickness is to be  $13\frac{1}{2}$  inches as against the 11 inches of the *Wyoming* and her foreign contemporaries while armour of as much as 18 inches thick is to be used on the port plates of the 3 gun turrets. During 1911 trials are known to have been carried out in the United States with 18 inch plates. On the other hand there would appear to be a tendency in America to drop light vertical armour for the protection of the secondary armament on the ground that it merely serves as an effective shell burster. In the latest British battleships it is reported that light armour for the secondary guns is reverted to.

Another modern feature of interest is the use of plates of varying thickness vertically for belt armour. There is thus no marked line of cleavage, as formerly between the thicker and thinner horizontal layers of the belt.

The use of cast steel—such as Hadfield's 'Era' steel—for gun shields armoured tubes etc. is increasing. Its resisting value is high a recent example of a 2.7 inch plate showing a figure of merit well over 2 against capped 4 inch armour piercing shell.

This class of material is specially adapted to cases where a monolithic form is desirable and enables the thickness to be graduated in the most economical way to suit the exposure of the various faces to attack.

In connection with the penetration of armour a point of considerable interest—whether as is usually held the projectile remains sensibly at a tangent to the trajectory during flight or whether as has been occasionally maintained by certain ballistic heretics it remains parallel to the initial direction of projection—has recently been discussed (see *Scientific American* August 10 and 17 1912) by Admiral Twining, who shows both theoretically and from actual firing trials at long ranges against armour that the orthodox theory is correct. The importance of the point is obvious when we consider that no projectile could withstand the cross breaking strain to which it would be subjected on impact at any but very close ranges if it retained its original direction so that the employment of projectiles specially designed to perforate armour would be a sheer waste of money.

*Caps*—Complete agreement as to the exact way in which the cap assists penetration has not yet been arrived at. All authorities concur in attributing great importance to the lateral support which it affords to the point on impact above a certain velocity which varies in all probability with the particular plate and projectile involved (there is a general agreement that the minimum velocity to render the cap effective varies from about 1,600 to 1,800 f.s.), but while some following Tresidder (see the latter's lecture,

April 8 1908 before the Institution of Naval Architects), think this the main if not the sole function of the cap others, such as Chladek and Bahn attribute considerable importance to its (supposed) action in breaking up or otherwise weakening the hard surface layers of the plate before the undamaged point impinges upon them Those now a days in the majority who hold the view of Tresidder, naturally use all the weight available in giving lateral support to the cap and put little or no metal in front of the point Those on the other hand who believe that the cap can weaken the plate before the actual impact of the projectile itself will place some of the metal of the cap in front of the point From the point of view of external ballistics it is desirable that the external contour of the projectile should be continued to the point and this is against the flat ended cap suggested by Tresidder This difficulty can however be met by using a hollow cap with the bulk of the metal giving lateral support to the point and practically flush with it but with what may be termed a false head to give it a suitable ogival outline as for example in the Firth cap shown on page 291 of Brassey's *Naval Annual* (1912)

(W E EDWARDS)

### MINING<sup>1</sup>

So far as mining processes and operations are concerned the principal new developments in the last few years have been connected with coal mining<sup>2</sup> and reference is chiefly made in the following sections to that industry

**LEGISLATION**—The passage of the Coal Mines Act 1911 which came into force as regards the bulk of its provisions on July 1 1911 has been the event of outstanding recent importance in the British coal mining industry It introduces radical changes in the control and management of coal mines and has entailed considerable alterations in the mechanical equipment and methods of working collieries In France new coal mines regulations became operative on February 25 1912 New Belgian regulations were issued in December 1910 in regard to travelling roads and shafts A new Coal Mines Regulation Act was passed in British Columbia during 1911 and a movement was on foot in 1912 to consolidate the various Provincial Acts in Canada relating to coal mining The United States Bureau of Mines was established by Act of Congress on July 1 1910 its purpose being to investigate methods of mining The headquarters of the Bureau are at Washington and the mining experiment station is situated at Pittsburg with an experimental mine at Bruceton Pa and six mine safety stations and seven mine rescue cars distributed one in each of the principal coalfields

**COAL SUPPLY**—The three years 1910-12 have been notable for the deepening interest that has been shown in regard to the question of coal resources During 1912 the Royal Commission on Conservation appointed by the Canadian Government issued voluminous reports (see also *An Investigation of the Coals of Canada* Ottawa 1911 in 6 vols) and similar enquiries have been prosecuted in the United States under the auspices of the Geological Survey and the Bureau of Mines

In British Columbia at the headwaters of the Skeena river in what is termed the Groundhog Mountain area enormous deposits of anthracitic coal have been located a conservative estimate placing the resources of the coalfield at 3 072 000 000 tons other smaller basins have also been prospected The development of the Rocky Mountain Coalfields—in British Columbia Alberta and Manitoba—has proceeded apace D B Dowling has estimated that the known areas in Canada underlain by workable coal beds (excluding the Skeena district) cover little short of 30 000 sq m and contain a total of 17 057 000 000 tons subdivided as follows Nova Scotia 6 250 000 000 tons New Brunswick 155 000 000 tons Manitoba 330 000 000 tons Saskatchewan 20 000 000 000 tons Alberta 104 937 000 000 tons British Columbia 38 976 000 000 tons Yukon 914 000 000 tons Mackenzie District 500 000 000 tons Further prospecting has taken place in Alaska, but transport difficulties have still to be overcome and the same consideration delays the utilisation of the deposits in Siberia and China in which the existence of enormous quantities of high class coal is established In Victoria Australia,

See E B xviii 528 *et seq* and allied articles <sup>2</sup> See E B xi 579 *et seq*

whose known coal supplies have previously been of a lignitic character large deposits of good coal have been discovered in the Powlett River district, and pits have been established under government direction, these are now producing quantities of coal

On the Continent of Europe, further knowledge has been derived by borings of the extent and character of the deposits in the French and German Lorraine In Belgium a number of shafts were in 1912 nearing completion in the Campine region in the Limburg province and borings in Hainault had succeeded in locating coal at workable depths to the south of the Eifelian fault, the boundary of the existing coalfields Dutch state enterprise has been extended in the Netherlands Limburg, by the discovery of further areas on the banks of the Meuse

In Great Britain some of the new large collieries sunk in the S E portion of the South Yorkshire coalfield have reached the stage of active work, of which mention may be made of Maltby Edlington, Bentley Bulcroft and Askern sinking operations also were in 1912 either in progress or contemplated at Rossington Barnborough Thorne Hatfield Barnby upon Don Kelham South Carr Harworth, Howden and Thurcroft When in full operation they should add some 12 000 000 tons per annum to the existing output of the coalfield or about five per cent to the national output Developments have also been in progress in South Staffordshire to the west of the boundary fault Warwickshire Fifeshire the Lothians Monmouthshire Kent and South East Durham

The table shows the world's output of coal during 1910 (figures for 1909 and 1908 being given in certain cases as the latest procurable)

*World's Coal Output 1910*

Country	Coal (Metric ton)	Country	Coal (Metric tons)
British Empire	311 613 510	Holland	1 292 289
Great Britain and Ireland	268 676 528	Dutch East Indies	535 226
Australia	9 915 602	Italy	562 153
British Borneo	165 281	Japan	15 681 324
Canada	11 710 993	Formosa	231 641

Greece	1 500		

**COAL CUTTING MACHINERY**—At the time the Eight Hours Act of 1908 (*E B* xvi, 18b) was under discussion in England it was persistently claimed that a great mitigation for the loss of output due to the restriction of the hours of labour would be forthcoming in the more general use of coal cutting machinery This anticipation has not been borne out the application of machinery in Great Britain increases but slowly the governing factors continuing to be the condition and lie of the strata and the relative cost of hand labour The principal developments have been in the direction of improved design and mechanical efficiency

Coal-cutting machines may be broadly divided into two classes—percussive and rotary machines—and there is a tendency to employ increased numbers of the former type, especially of the small character similar to the caulking hammer Continued efforts have been made to produce a satisfactory electrical machine of the puncher type, but so far without conspicuous success In America the pneumatic puncher has been

used to some extent in this machine the actual reciprocating motion is produced mechanically by an electric motor, and is transmitted by compressed air to the percussive tool the whole apparatus being practically self contained. The Ingersoll Rand Company produce a similar machine. The percussive coal cutter has gained from the development of the rock drill and several of the modern machines such as the Hardy, Ingersoll and Siskol embody economical improvements in valve construction.

A novelty has been introduced in the United States in the shape of the Hoadley Knight coal cutter. This machine which is of the tunnelling or breast type comprises swinging cutters rotating with great rapidity. The rotation is effected by electricity whilst the swinging and feeding movements are directed and controlled by hydraulic means. The machine is especially designed for the getting of coking or gas coal in which the size of the product is not a consideration.

At the mines of the United States Coal & Coke Co. Gary W. Va. a system of pneumatic transport has been tested: a machine cuts out the entire thickness of the seam removing the coal as it is cut to the outside by means of currents of air at high velocity.

A concomitant of the increased use of coal cutting machinery has been the more extensive adoption of coal face conveyors.

**MECHANICAL VENTILATORS**—The principal changes in the British Coal Mines Act relating to methods of ventilation are the compulsory provision of an adequate ventilating system on the surface with after January 1 1913 means for reversing the air current. A revolution in construction has taken place in colliery fans the principal features of which are the great reduction in diameter the adoption of high-speed engines a quick running electric motor and the use of short peripheral blades in place of long blades attached to the boss shaft. Another development has been the increase in the number of blades several of the modern quick running fans having no less than 60 as compared with about ten in the older type of fan. The modern inlet is nearly equal to the external diameter of the fan giving a free entry of air into the centre of the fan. In the new fans the scoop blade is adopted in the Bumsted and Chandler fan however the extremities of the blade are curved backwards from the direction of rotation. Examples of the modern type are the Sirocco and Barclay fans and the former has given the high manometric efficiency of 0.0.

Reversing fans have been in use for some time in the American coalfields, their use in Great Britain is comparatively recent. A simple method is so to arrange the fan that it can either exhaust from or blow into the shaft at which it is located or drifts may be so arranged that the fan may exhaust either from the upcast shaft or from the downcast shaft by means of a kind of damper. As a modification a stand by fan is connected to the downcast shaft which is started when a reversal of the air current is desired. The other fan at the same time is stopped. In France small helicoidal fans have been employed driven by the shaft of an electric motor.

**SHAFT SINKING**—A steady extension has recently been witnessed of the patent processes of sinking shafts through water bearing and shifting strata. In the main these processes may be classified under three headings (1) the drop shaft system as represented by the Kind Chaudron process the principal feature of which is the use of telescopic tubing (2) the freezing system developed from the Poetsch process and (3) the cementation process originally applied by Portier at Bethune in the Pas de Calais, and developed by Lombois, Sachier François, Gevers Orban, and others.

As regards the drop-shaft system the most notable example in recent years is perhaps that at the Astley Green Colliery near Manchester when a depth of 3 000 ft was attained (See Pilkington & Wood *Trans Inst Min Eng* Vol 39 p 529).

With the freezing system for the development of which Messrs Gebhardt & Koenig have been largely responsible, much greater depths have been reached than was at one time considered possible. Thus in the Campine coalfield where the freezing process has been adopted in seven of the eight shafts the depth of frozen section has varied from 1 180 to 1 590 ft, at Beeringen where the latter depth was reached 37 boreholes were necessary in order to secure an uninterrupted circumference of frozen strata, and altogether eleven miles of tubing were employed. In England the freezing system has been applied in seven instances—in

the Durham and South Yorkshire coalfields. At Bullcroft Main it was found possible to deal with running water and at Easington with sea water and tidal variations in level.

It is in the cementation system that the greatest improvements have been made. It would seem to have certain advantages in cost while the preliminary estimates are more likely to be accurate. At the Viktoria Colliery in Westphalia the cost was £150 per yd. of depth. The system, as now applied may be sub-divided into (1) the systematic process in which liquid cement is injected into surrounding boreholes from the surface, much as in the case of the freezing system with the object of filling up fissures and water logged cavities in the strata, the pressure being varied according to the necessities; (2) the methodical process in which the pressure is automatically regulated by the pressure of the water; and (3) the progressive process in which the ordinary drop-shaft system is pursued, fissures being filled with cement injected under pressure by means of inclined advance boreholes driven from the shaft bottom.

In addition to the freezing system mention may be made of the Stockfish system which is a combination of percussion and flushing the flushing liquid being of sufficient density to keep out of the shaft any quicksand or loose rock liable to cave in. An installation at the Dargardt Colliery is described by Krecke (*Gluckauf* No. 14, 1912). In this system as in the Hoernigmann system which has also been applied in Germany and in the Kind Chaudron system improvements in the boring trepan have been effected.

By the ordinary methods some exceptionally rapid work has been done in the more recently opened shafts although generally speaking the increasing difficulties of depth and strata militate against speed in sinking. At the Askern Main Colliery near Doncaster a shaft of 23 ft. 6 in. in diameter (total excavation) in the middle coal measures was sunk 29 yds. 1 ft. in 7 days at a labour cost of £9 0s 3½d per yd.

For preliminary protection from surface water use has been made (as at Bentley and Hatfield Main) of interlocking channel steel piling with satisfactory results.

In the equipment of finished shafts which now range up to 22 ft. diameter finished increased use is being made of concrete.

**THE USE OF ELECTRICITY.**—The most profound change in mining since the opening of the present century has been the extension of the use of electricity. It has found its principal application for haulage, pumping, ventilation, signalling and shot firing but its employment for lighting and winding is also steadily growing and the All electric Colliery is now an accomplished fact. New British regulations governing the installation and use of electricity in mines have been issued by the Home Office as provided for by the Coal Mines Act (Section 60) which also prohibits the use of electricity underground—telephone or signalling wires and approved handlamps excepted—wherever the percentage of inflammable gas in the air is found to exceed 1½. Taken generally the main object and intention of the new British rules is to make armouring compulsory in the future although in some cases exempted until 1905. The new French regulations also impose special restrictions on electric installations.

The liability of the electric spark to ignite firedamp has formed the subject of many experiments but they have failed to establish the precise limits of safety. I. Lecomte (*Ann. Mines Belgique* 1911 Vol. xvi p. 321) has shown that explosive mixtures of air and firedamp can be ignited by the finest filaments provided their temperature be sufficiently high and quite independent of any break of contact spark. Such experiments have enforced the use of strong globes with air tight joints.

**THE COAL DUST QUESTION.**—During recent years there has been much investigation of the part played by coal dust in colliery explosions. These investigations which have been attended by research on many collateral subjects have been conducted at a number of centres by means both of large scale experiments in galleries and also of laboratory tests. The testing stations are now for the most part under the control of the Governments of the various countries concerned but were started through the enterprise of the mine owners. In England the gallery erected by the Mining Association of Great Britain at Altofts in Yorkshire, has been transferred to the Home Office and reconstructed on a new site at Eskmeals, Cumberland. The Mining Association in 1910 published their first record of experiments, in 1912 the committee in charge of the experiments at Eskmeals issued two reports, as well as an outline of the scheme upon which it was proposed to conduct future investigations. In France the experimental station at Liévin, erected by the Comité Central des Houillères de France in 1907 and extended in 1909 has been the scene of further researches, under the direction of J.

Taffanel, which form the subject of several reports. An experimental mine has now been secured by the French Government at Commentry. In the United States in addition to the existing installation at Pittsburg a drift at Bruceton Pa. has been equipped for experimental purposes, under the charge of the Bureau of Mines. It remains to mention the gallery erected in 1908 at Babitz near Segengottes by the Vienna Permanent Firedamp Committee and the Frameries testing station of the Belgian *Comité de Grison* since transferred to the neighbourhood of Charleroi at which some important results have been achieved by Victor Watteyne and his collaborators.

In the first instance the experiments at the large galleries were principally devoted to demonstrating the inflammability and explosibility of mixtures of coal dust with air and to testing the adequacy of certain suggested remedies such as water deliquescent substances and inert dust and the arrangement of the same in zones barriers collapsible troughs etc. The possibility of producing a coal dust explosion in the absence of fire damp may be said to have been firmly established in 1910. Latterly research has been principally devoted to establishing the conditions that promote or hinder the full development of explosions as well as ascertaining their real nature. Amongst the points considered have been the velocity pressure and temperature of explosion waves the relative inflammability of various dusts and their behaviour under certain conditions.

One of the results of the British experiments has been to show conclusively that the relative ignition temperatures of a series of coal dusts have no fixed relationship to the percentage of volatile matter as usually determined. In determining the chemical constitution of coal the chemist has hitherto relied upon two different modes of procedure viz (1) the action of solvents and (2) fractional distillation. The method of fractional distillation as recently applied by Burgess and Wheeler, has afforded valuable results which have led those authors to a definite conclusion as to the nature of coal. They maintain that all coals contain at least two different types of compounds of different degrees of ease of decomposition. They regard coal as a conglomerate consisting of cellulose degradation products embedded in a cement of altered resins and gums. It is in their view the latter which first distils by heat yielding mainly the paraffin hydrocarbons. The cellulose products are decomposed later and at a higher temperature yield proportionally large quantities of hydrogen. In the second Eskmeals report strong evidence is adduced to show that the paraffin-yielding constituents are identical with Bedson's pyridine extract for it is proved that in the series investigated there is a marked although not rigid relation between the ignition temperature of coal dusts and the percentage that can be extracted by pyridine. Taffanel Floch and Durr describing certain investigations undertaken at Lievin upon the oxidation and distillation of coal dusts found that at 700 degrees all the ethylene and four fifths of the methane had already been expelled. These gases are also those which possess the greater heat of combustion that for ethylene being given by Taffanel as 341 calories methane 213 hydrogen 58 and carbon 68. It is interesting also to note that these same gases which are most readily distilled from coal dust have the lowest limit value for inflammability in air. As in other distillations the *produits de tête* differ markedly from the *produits de queue* and the danger of coal dust is vastly enhanced by the fact that the early distillates are the more readily inflammable.

The present feeling is that in stone dust lies the principal hope of a remedy. W. E. Garforth, in delivering his presidential address before the Institution of Mining Engineers on June 6 1912 expressed the opinion that the dangers of explosion of coal dust from electrical causes could be completely counteracted by the vigorous application of this remedy. Investigations have shown that suitable diluents exist which satisfy the considerations of health efficiency and economy. At Altofts the cost of stone-dusting was 7½d per ton raised.

At the Clarence colliery where an explosion occurred on September 3 1912 the collapsible *arrêts barrages* (arresting barriers) proposed by Taffanel failed to arrest the course of the explosion in the one instance in which they have been put to a test under actual working conditions. This failure however may have been due to the improper application of the barriers to the presence of firedamp or to the exceptional slowness of the explosion.

**RESCUE APPLIANCES**—The organisation of rescue operations has made great advances since 1910. In 1910 the Mines Accidents (Rescue and Aid) Act was passed in England providing for the organisation and equipment of rescue brigades at all collieries and the erection of private and central rescue stations. An order was finally promulgated in 1912 defining the requirements under these heads. In the meantime central rescue stations have been erected or are in course of erection in all the British coalfields, and valuable services in the direction of recovery work have been rendered by the trained brigades at Darran Hulton, Bignall Hill and Cadeby.

In the United States rescue stations have been established by the United States Bureau of Mines at Urbana, Illinois; Knoxville, Tennessee; Seattle, Washington; McAlester, Oklahoma; Birmingham, Alabama, and Pittsburg, Pennsylvania. In extension of these stations are seven mine-safety cars. In 1911 over 100,000 miners attended lectures and demonstrations and over 7,000 received training in mine rescue and first aid work in addition to the arrangements made by independent companies.

The principal types of apparatus in use at the present time are the following: oxygen regenerative appliances—*Draeger*, *Proto* (or *Fleuss*), *Meco* (or *Westfalia*), *Tissot* and *Weg*; liquid air appliances—*Aerolith* (or *Suess*) and *Claude*. An investigation in the Rhemish Westphalian districts under the mine regulations of May 1, 1912, showed that 347 portable sets of apparatus were in use, of which 381 were of the *Draeger* type and 440 of the *Westfalia* type. Broadly the improvements in apparatus have taken the form of modifications in design accommodating them to the convenience of the wearer; increased attention has been paid to the effects of heat and in the *Proto* apparatus experience at the Howe Bridge station has resulted in the addition of an emergency by-pass arrangement which may be used for cooling the air in the breathing bag. Lung governing valves have also been introduced similar to that first employed by Garforth in the *Weg* apparatus, used at Altofts and Cowdenbeath.

In the liquid air appliances a new feature is the use of regenerative purifiers. At Newcastle a new liquid air apparatus entitled the *aerophor* has been developed by W. C. Blackett, which is able to supply air to persons in distress independent of the wearer. In this apparatus, which is a development of the *Suess* or *Aerolith* apparatus, the pack and breathing bag are united and the pack is built to fit across a man's loins. There is a by-pass between the liquid air pack and the mouthpiece and the regenerative properties of the purifier have been improved (*Colliery Guardian*, August 16, 1912).

At the *Singles colliery* in the south of France safety chambers have been provided as places of refuge for men in the event of explosions. Similar steps have been taken in Austria and it may be noted that the *Herrn Draeger*, of Lubeck, have proposed the construction of such chambers equipped with purifying materials.

**LIGHTING**—In the illumination of the working face in collieries the chief development has been the increased adoption of portable electric lamps. The provision of these is now compulsory in connection with rescue operations in Great Britain and there is a growing tendency to employ them for all purposes, where other means exist for detecting firedamp or at pits where this consideration is of lessened importance. One reason for this change is the restriction placed upon the use of flame safety lamps by recent legislation which by their indifferent lighting capacity impose heavy burdens upon the worker.

According to the British Coal Mines Act 1911, locked safety lamps are to be used in any seam in which the air in the return airway is found normally to contain more than  $\frac{1}{4}$  per cent of inflammable gas and with certain exceptions, in any seam in which an explosion of gas has occurred. At the same time an official test for safety lamps has been instituted and the government experimental station at Eskmeals in Cumberland is equipped with appliances for this purpose. Towards the end of 1912 new regulations for lamps were issued by the Home Office. According to Article 146 of the French regulations safety lamps must conform to one of the types approved by the Minister of Public Works. Spirit lamps may only be furnished with internal igniters of approved design. The igniting bands must be disposed so that only one relight can be made at a single time, and must be composed of substances that are inflammable but not explosive. In British mines the use of internal igniting apparatus in connection with spirit safety lamps is limited by law from disciplinary considerations but in Continental mines their use has extended considerably.

Some important researches were communicated in 1912 by J S Haldane and T Lister Llewellyn to the South Staffordshire Institution of Mining Engineers (*Trans Inst Min Eng*, Vol xiv p 267). Their experiments were designed with the view of producing a variation of the atmosphere similar to what occurs in the ordinary working of a mine. The result showed that every diminution of 0.1 per cent in the oxygen present lowered the illuminating power of a safety lamp, burning a mixture of colza oil and paraffin by as much as 3.5 per cent and the striking fact is deduced that with the oxygen reduced to 19.0 per cent the minimum percentage allowed by the Coal Mines Act for purposes of ordinary work in the pit the light would be diminished by 70 per cent under the conditions of the experiment. It has been found that for every increase of 1 per cent in the moisture of the air the illumination of the standard pentane lamp and also of the Hefner amyloacetate lamp falls off by 6.25 per cent and the light from a spermaceti candle falls off by 5 per cent. The authors also call attention to the confusion which has arisen through attributing to carbon dioxide the premier role in producing dimness of illumination. In their view it is only the variation in true oxygen percentage that matters in a practical sense and how this percentage is diminished is of small importance although it is true that added carbon dioxide does produce rather more effect than added nitrogen.

A point which has not yet been covered by the above experiments is the relative behaviour of various kinds of illuminants. Burrell and Seibert (U S Bureau of Mines Technical Paper 13 1911) found that there was a remarkable difference in the composition of the residual air that extinguished the flame of a Wolf spirit lamp as compared with that of an acetylene lamp. Thus acetylene will apparently only cease to burn in an atmosphere containing as much as 6.5 per cent of carbon dioxide and as little as 11.7 per cent of oxygen whereas 5 per cent of carbon dioxide and 10.5 per cent of oxygen marked the limiting composition of air capable of supporting combustion of a Wolf lamp. The general use of acetylene lamps in coal mines is frequently asserted to be impracticable but this scarcely agrees with the experience recently recorded in a Spanish mine where a Lombelaine acetylene lamp has been found to work satisfactorily in a very fiery pit and also to be capable of being used as an efficient gas detector.

One result of these experiments is to point more strongly to the fact that the only satisfactory solution of the illumination problem in mines will ultimately prove to be the electric lamp which is free at least from the deterioration arising from atmospheric influences. If ever a means is found whereby the electric lamp can be adapted to the detection and accurate estimation of firedamp it will be at once established par excellence as the miner's lamp. A handsome prize has now been offered by the German mine owners with a view to the invention of some satisfactory device of this nature.

In May 1911 the British Home Office announced a prize of £1,000 for the best electric lamp suitable for miners. The judges (Messrs C H Merz and C E Rhodes) awarded the first prize of £600 to the Ceag lamp sent in by F Farber of Dortmund. In the Ceag lamp the bulb is protected by spiral springs so arranged that the circuit is broken when the surrounding dome glass is shattered.

An important feature of the work of Haldane and Llewellyn is its relation to the prevalence of miners' nystagmus. A paper on this subject was read before the Royal Society by Dr Llewellyn who is the first Tyndall Research Mining Student. He concludes that whilst the disease is one of extreme complexity and one in which many factors are at work the chief factor is strain caused by deficient light and that the most important preventive measure is improvement in the lighting power of the miner's lamp. This view was adopted by the Ophthalmological Congress at Oxford 1912.

An interesting new safety lamp of great power the Goulet incandescent lamp has been tried at the Frameries Station, in which an Auer mantle is raised to incandescence by the flame of a mixture of air and benzene.

**WINDING**—The use of electricity for winding purposes has made rapid progress during the last three years and is now being applied to plants of much higher capacity. There are broadly speaking two systems, using in the one case an alternating current

motor, either geared or direct coupled to the drum shaft with rheostatic control, and in the other a direct current motor on the Ward Leonard system with the use of a fly wheel accumulator. The field of the former has been greatly extended by the introduction of efficient and durable machine cut helical gearing.

The Brown Boveri system installed at the Heinitz Colliery, Upper Silesia, comprises the conjunction of high pressure turbine Ward Leonard generator and A.C. generator the turbine having considerable overload capacity by means of relay operated by passes if necessary the A.C. generator supplying the general load of the colliery or as much of it as it can and the Ward Leonard generator the winding engine. Another system is the series system due to Prof. Thury.

The three phase commutator motor has also been advocated for work of this description. Two types of such motor are obtainable—the series motor and the double repulsion motor. In both cases speed regulation is obtained by brush displacement.

In 1911 a valuable report was issued of trials carried out by a joint committee appointed by the German Engineers Association, the Dortmund Mining Association and German Boiler Inspection Association (*Gluckauf*, Nos. 42 to 52, 1911). The trials were carried out with the electric winding plants at the Deutscher Kaiser, Rheinische Mathias Stinnes and Emmer Lippe collieries and with the steam plants at Schürhank and Charlottenburg, Julia, Helene and Amalie and Wilhelmine Victoria collieries. The report states that on general principles the working of a steam engine is the more satisfactory as the mean net load approaches that for which it was built and therefore the smaller the load the lower the efficiency. The electrical winder however adapts itself better than the steam engine to reductions in the net load. It cannot be deduced from the different values obtained that any given type or either of the forms of energy is unconditionally the best in general. In deciding which method of winding is to be preferred the prime cost, depreciation and upkeep must be borne in mind as well as the consumption of steam or energy and in addition how the method fits in with the general working conditions of the colliery.

At the Great Western colliery the Wingham winder on the converter equaliser system is capable of raising  $2\frac{1}{2}$  tons of coal from a depth of 1110 ft. in  $37\frac{1}{2}$  secs. at a speed of 70 winds or 175 tons per hour. The maximum shaft speed is 40 ft. per second and at full work the winder requires 4.8 units per wind.

Considerable improvements have been effected in the steam winding engine and the large compound condensing engine installed within recent years represent a high efficiency. A notable one may have been obtained from the utilisation of exhaust steam in mixed pressure turbines with or without accumulators on the Rateau principle, examples of such installations are to be seen at the Hulton, Maypole, New Hucknall and other collieries. They are very suitable for driving large compressed air plants in connection with coal cutting machines, where it is not desirable to take electricity to the face of the coal. Tests at the Königshorn mine at Unna-Königsborn in the Dortmund district have shown that when working with low pressure steam having an initial pressure of 1.2 atmosphere and a final pressure of 0.1 atmosphere 24 lbs. of steam are used for every cubic metre of free air compressed and  $1\frac{1}{2}$  lb. when working with fresh steam having an initial pressure of 7 atmospheres and the same final pressure of 0.1 atmosphere. At Penallta colliery in South Wales the sinking engine were fitted with throttle valves on the high and low pressure cylinders to obtain a starting torque equal to a pair of engines without the admission of live steam into the low pressure cylinders. The engines were designed to wind from a depth of 800 yds. in 45 secs.

The provisions in the British Coal Mines Act in regard to shafts and winding have entailed considerable alterations in the equipment at many collieries. After the beginning of 1913 every vertical shaft is to be provided with a detaching hook and where more than 100 yds. in depth with an effective automatic contrivance to prevent overwinding. Detaching hooks have been in common use at British collieries for many years, overwinding controllers however have been employed in but few instances, although many of the largest Continental mines are equipped with them. Generally speaking, these gears are mechanical contrivances which automatically cut off steam and apply the brakes when the limits of speed are exceeded at certain points in the shaft or in cases where the engineman starts his engine the wrong way in the shaft. During 1912 numbers of these gears were invented. Some of the best known of those used in British mines are the Barclay Whitmore, Wilde & Petrie, Visor, Shaw, Wallace, Jackson & Staley, Profile, Mulling, Futers, Daglish, Walker and Inglish controllers. In France the principal types are the Pécumaux, Sohni & Burg devices.

The same section of the Coal Mines Act provides for the use of guides in sinking shafts and of skips at the surface, the periodical capping and limited employment of winding ropes and the equipment of cages with catches, covered tops, gates and hand bars.

The new French regulations draw a distinction in the testing of winding ropes in respect of the numbers wound at a single journey. Where more than four persons are wound in the shaft at the same time the ratio between the resistance to rupture by tension and the total load must at least correspond to the factor of safety. The rope is to be discarded when the loss of resistance exceeds 30 per cent of its original value and no winding rope may be used for a load greater than one sixth of its breaking strain if of wire or one fourth if of hemp.

According to the French regulations safety catches for holding the cage in the shaft in the event of a breakage of the winding rope are compulsory in this respect differing from British practice. Many British inventors have during the past few years endeavoured to provide a satisfactory catch but the rope and rail guides almost universal at British collieries are not suitable and there is a considerable prejudice against the use of such appliances especially under the exacting conditions met with at many of the new collieries. Several of the recently opened shafts in Yorkshire and Nottinghamshire are equipped with four decker cages capable of raising 70 men. On the Continent the practice is to sink a greater number of shafts in proportion to the mineral area and the engines are designed for lower duties.

At the Maltby colliery steel rail guides have been fitted across the centre of the shaft owing to the depth and increased demands of the loads. The cost per yd. was £6 17s 8d.

At modern collieries the use of hydraulic lift at pit tops and bottoms is now general.

**BLASTING EXPLOSIVES**—On May 1 1911 the Home Secretary issued in England a new order regarding the use and storage of explosives in coal mines. The main features of the order are the more detailed restrictions respecting the use of explosives in mines the standardisation of cartridges regulation of the size of rock drill bits precautions to be taken in the case of miss fires special stringent provisions for fiery mines and regulations in the case of sinking operations. After March 31 1913 the standardisation of cartridge diameters is made imperative. The sizes of drill bits are also specified and this is provided for by the regulation that the drill bit must afford a clearance exceeding the diameter of the cartridge for which the hole is intended. The standard sizes of the cartridges are to be  $\frac{1}{8}$   $\frac{1}{4}$   $\frac{3}{8}$   $\frac{1}{2}$   $\frac{3}{4}$   $1$   $1\frac{1}{4}$   $1\frac{1}{2}$   $1\frac{3}{4}$   $2$  inches and the drill bits for each size must not be less in diameter than  $\frac{1}{8}$  in in excess. The diameter of a drill bit for the smallest permitted size of cartridge must not be less than 1 in.

In Belgium and France further tests have been carried out with a view to establishing the safe limit charges of explosives under varying conditions.

The United States Government has for some time past conducted experiments at their testing station at Pittsburg in order to discover which of the many grades of short flame explosives possess the qualities that render an explosive most effective and least dangerous for mining coal. As a result a permissible list has been issued.

A new type of instantaneous fuse has recently been introduced known as Cordau Detonant or Cordau backford consisting of a core of trinitrotoluol enclosed in a lead sheath which has a speed about 15 000 feet per second. This requires a detonator to initiate the explosion but is sufficiently powerful in its action to induce detonation in a cartridge through which it is threaded. It is largely used for certain experimental work as a standard for comparing the speed of detonation of other explosives.

**DEEP MINING**—Of all physical causes that underlie the development of mining the question of depth may be said to be the most important and far reaching. Its influence upon the operations of winding and pumping the methods of working the transmission of energy ventilation and last but not least the support of the surface is of ever increasing gravity. The question of temperature is of particular importance. A differentiation in the conditions of labour where at normal temperatures are encountered is a feature of recent industrial mining legislation and in this respect the earlier example of Germany has been followed by Belgium and France. By the new French regulations work is prohibited in places where the temperature reaches 33 degrees C. on the dry thermometer or 30 degrees C. wet bulb reading but any temperature exceeding 25 degrees C. wet bulb is considered high.

Some valuable records are given by G. J. Young as to the conditions encountered on the Comstock lode (Ventilating System at the Comstock Mines Nevada *Trans Amer Inst of Min Eng* Vol 41 p 3 1910). He finds that moderately high temperatures from 95 to 105 degrees F. with moderate humidities from 50 to 70 per cent relative humidity and with air currents of velocities from 200 to 300 feet per minute do not prevent work nor are particularly uncomfortable. A higher temperature from 110 to 115 degrees with high humidity and moderate velocity air currents very greatly impair efficiency and a still higher air velocity under the same conditions renders work more bearable though miners cannot work very long at one time. A moderately high temperature from 95 to 105 degrees in a saturated atmosphere with no current becomes very trying. Prolonged exposure with much exertion is dangerous. A moderate tem

perature from 00 to 08 degrees and saturated air currents of a velocity of from 400 to 500 feet per minute with more or less vitiated air are conditions which are very trying and give a low labour efficiency. Vitiated air will impair labour efficiency to a greater extent than a high temperature.

Observations made with the object of determining the rate of increment of temperature with depth have shown considerable divergence in different places. The following results of temperature observations (quoted in the Report of the New Zealand Royal Commission on Mines 1912) show the depth in feet required in various localities for an increase of 1 deg F. Comstock, U.S.A., 33; Witwatersrand Transvaal, 208; British collieries (mean) 64; Bendigo Victoria 77; Ballarat Victoria 80; Thames New Zealand 43.5; Waihi New Zealand (approx.) 32.8. In a valuable paper by J. Whitehouse and W. L. Wotherspoon (*Jour. Chem. Met. & Min. Soc. of S.A.*, May 1911) the mean temperature rise in the deep level mines on the Rand is given as 1 deg F. for 253.9 ft.

Efforts have been made to counteract high temperatures in mines by compressed air refrigerators, water injectors and increased ventilation. Dr. Dietz (*Oest. Z. f. Berg u. Hüttenwesen* 1911 Vol. lxx p. 430) advocates the thorough cooling of a small portion of the incoming air and then mixing it with the remainder. He uses for this purpose a refrigerating-engine, air turbine, turbo-compressor, and a steam turbine.

Prof. Jacob Koenigsberger of Frisberg, while conducting investigations regarding the depth of the boreholes, found that the increase in temperature does not take place uniformly, but that it proceeds much more rapidly in boreholes sunk in the neighbourhood of ore deposits, the reason being presumably that, owing to certain chemical processes, heat is constantly generated there. In the vicinity of coal measures the temperature increased by one degree for every 26 to 30 metres. The change was particularly rapid near mineral oil deposits, where every 8 or 11 metres of increased depth advanced the temperature by 1 degree. Prof. Koenigsberger draws from his observations the conclusion that from the change in the temperature of boreholes the occurrence of coal or mineral oil within 100 metres of the bore may be prognosticated. (See also Koenigsberger and Muhlberg *Trans. Inst. Min. Eng.* Vol. 30 p. 617 1910).

A borehole at Czuchow in Austria, for the purpose of proving coal, in 1909 reached the great depth of 330 ft.

**VENTILATION.**—Ventilation questions have during the past two or three years engaged much attention, especially in view of the requirements of recent enactments in regard to the quantity and character of the mine air. The Coal Mines Act 1911 (Section 29 (3)) for the first time in Great Britain provides for a definite standard of ventilation, i.e. a place shall not contain less than 19 per cent of oxygen or more than 1½ per cent of CO<sub>2</sub>, whilst the samples taken in an intake airway must not show an average percentage of inflammable gas exceeding one quarter. There are exemptions from the former provision in the case of mines liable to spontaneous combustion. The Act also provides for the classification of mines according to the amount of inflammable and noxious gases in the main return airway, thus paving the way for a system of division as followed in France and Belgium for limiting the use of certain types of illuminants and explosives. In France and Belgium the system has been extended so as to provide a classification in which due consideration is given to the dual factors of firedamp and coal dust.

According to the new French regulations a percentage of more than 2 per cent of gas is to be considered dangerous in a working place. The permissible limit in headings is 1.5 per cent measured in the return, and 1 per cent in the return from other working places, but the regulations are more elastic than those now in force in Great Britain.

With the tightening up of the restrictions and the new requirements as to the qualification of officials, increased attention has been paid to the apparatus for measuring and testing the atmosphere of the mine. Briefly, the apparatus used for the detection of firedamp may be classified as follows: (1) Instruments depending on the comparative rates of diffusion of methane and air. (2) Instruments dependent on specific gravity. (3) The observation of the glowing appearance of a platinum wire rendered incandescent by electricity. (4) Instruments depending on the fact that the electrical resistance of

a platinum wire increases in the presence of methane. (5) The safety lamp. (6) Chemical analysis. The feeling at present is that the only reliable indicators are the safety lamp for routine observations and chemical analysis for the more elaborate calculations. Numerous ingenious appliances however have been devised of late to provide an efficient substitute.

The apparatus invented by Philip and Steele (*Journ. Society of Chemical Industry* Vol 30 p 867 1911) depends on the sensitiveness of a relay containing iron and as the hysteresis lag in the iron tends to reduce the sensitiveness of the instrument this lag is removed or reduced either by mechanically vibrating the relay or by passing intermittent pulsating currents through it superimposed on its normal currents. Somewhat similar apparatus have been devised in the Holmes Alderson gas-detecting apparatus and the Holmes Ralph portable electric lamp (*G. J. Ralph Trans Inst Min Eng* Vol 40 p 28 and Vol 42 p 201). In actual practice however it has been found that such apparatus which depend upon the conductivity of platinum have given less satisfactory results in a normal firedamp mixture than in coal gas or petroleum vapour. The interferometer devised by Professor Haber of Karlsruhe and Dr. Lowe of the firm of Carl Zeiss of Jena depends upon the refraction of light in firedamp and other media. The apparatus is in daily use at Gelsenkirchen for the examination of gases passing out of the upcast.

Several devices have been introduced with the view of increasing the sensitiveness of the ordinary safety lamp. Of these mention may be made of the Cunynghame and Cadman device by which the cap on a safety lamp is converted from an indistinct blue to a distinct orange yellow by introducing a little abestos paper soaked in carbonate of soda into the flame (*Trans Inst Min Eng* Vol 39 p 13). Briggs has also proposed the use of a copper loop (*Trans Inst Min Eng* Vol 43 p 64).

Turning now to the more accurate determinations obtained from chemical analysis it may be observed that J. S. Haldane has recently designed an apparatus for estimating percentages of firedamp in which the potash solution is dispensed with the percentage of firedamp being given simply by the contraction on combustion (*Colliery Guardian* Sept. 7 1911). In the United States a modified Orsat apparatus has been employed by Burrell and Seibert (U. S. Bureau of Mines Technical Paper 13 1911) for use in connection with mine fires with which it is stated  $\text{CO}_2$ ,  $\text{CO}$  and  $\text{CH}_4$  can be determined within about 0.2 per cent.

New views have quite recently been advanced by physiologists as to the influence of oxygen and  $\text{CO}_2$  upon human life and it has been urged by Leonard Hill and Harger amongst others that the existing standards might be varied without dangerously affecting health even when due consideration has been given to alterations in barometric pressure. The object is to produce an atmosphere in which the liability to firedamp explosions and fires would be reduced owing to the incompatibility of the media. Objections raised apart from the suspected dangers to health are the effect upon lighting and the difficulty of obtaining  $\text{CO}_2$  free from dangerous quantities of  $\text{CO}$  if introduced in the form of flue gas as proposed. Harger claims to have obviated the latter difficulty by the use of small gas engines. The former difficulty may be overcome in specific cases by the use of acetylene lamps or portable electric lamps. The value of inert gas as a means of combatting fires has been recognised and it was used in the recovery operations following the Cadeby explosion (1912) which was due to the existence of gob fires. In the United States the influence of carbon dioxide on the explosibility of mine gases has been investigated primarily for the purpose of determining the practicability of introducing carbon dioxide into mine workings to extinguish fires and prevent explosions. The results have led to the following conclusions: (1) Carbon dioxide owing to its higher specific heat is more effective than nitrogen in preventing explosions. (2) The addition of 25 parts (by volume) of  $\text{CO}_2$  to 75 parts of the most explosive mixture of methane and air renders the mixture non explosive. (3) When carbon monoxide is introduced in place of oxygen 7 per cent of  $\text{CO}_2$  is sufficient to prevent explosion.

The rapidity with which coal absorbs oxygen has been shown by Porter and Oviitz (U. S. Bureau of Mines, Technical Paper 2 1911). Ten kilograms (22 lbs.) of coal from Connellsville absorbed during first day after mining nearly one half the oxygen in 10 litres of air. Slightly more than one tenth as much carbon dioxide was produced as would have been produced had all the oxygen absorbed combined with carbon to form

carbon dioxide Burrell and Seibert (*id* Technical Paper 13 1911) find that oxygen is absorbed by the coal in mines. Samples of gases collected by the same authors near a fire where the coal was intensely hot and the oxygen content of the mine atmosphere was only 2 per cent contained 15 per cent of CO.

Our knowledge of the composition of "blackdamp" has been greatly extended by the researches of Haldane. In a paper on 'A Flame Test for the estimation of Oxygen and Blackdamp in Naked Light Mines' (*Trans Inst Min Eng* Vol 41 p 455) he describes a series of laboratory experiments with an apparatus consisting of a glass tube and thin tapers. When a lighted taper is held inside the tube the flame is extinguished by the draught so produced at a point lower down or higher up the tube according to the percentage of oxygen. The tube is graduated to indicate various percentages of oxygen and blackdamp.

R. Nowicki (*Oesterreichische Zeitschrift für Berg und Hüttenwesen* 1911 p 58,) describes an apparatus for detecting CO using palladium chloride. Many however prefer the use of animals to chemical tests and G. A. Burrell (*US Bur Mines Tech*, Paper 11 1911) gives a preference to canaries as against mice.

(ALLAN GREENWELL, HUBERT GREENWELL)

### METALLURGY

The period 1900-12 has not been marked by any great or revolutionary development in either metallurgical science or practice or rather if any of the developments which have taken place should be destined to carry important changes in their train no striking signs of such changes have as yet become visible. In general terms progress here as in most industries has been in the direction of increased production, increased economy of labour and more efficient utilisation of raw materials and of by products and in some cases this has led to the installation of plant on an astonishingly large scale. In other directions the systematic and scientific exploration of the available materials and their products has led to the evolution of new and valuable materials principally in the form of novel alloys. The developments of metallurgical practice in reference to the several groups of metals may be more conveniently considered before dealing with the scientific aspects of metallurgy in general.

*Iron and Steel* (*E. B.* xiv 801 *1 seq*)—Ore resources are being further developed and the beginnings of iron and steel industries have been made both in South America and Australia. Progress has also been made in the utilisation of finely divided ores and such materials as blast furnace flue dust by improved methods of briquetting in the Schumacher process the addition of a small percentage of magnesium chloride solution to the flue dust serves to release a latent power of setting while in the Dwight Lloyd system the material is sintered by mixing it with finely divided carbon which is caused to burn thus partially reducing the ore and producing a porous sintered mass.

In blast furnace practice the use of thin lined and water cooled furnaces has increased while the drying of the blast is becoming universal. For this purpose several new methods have been used including refrigeration by the use of ammonia without the intervention of brine and the use of calcium chloride as a drying agent. The latter is used for six or eight hours and is then regenerated by drying in the heat of the flue gases. The former process has been used in Wales and the latter in Luxemburg while at one Belgian plant the use of blast enriched with oxygen has been tried and if the price of oxygen can be further reduced this may prove to be an important improvement. In this connection the use of an oxy acetylene torch for burning out tapping holes may also be mentioned. The utilisation of blast furnace gases has been pushed further so that these furnaces now constitute important sources of power the use of the gas in open hearth furnaces has been contemplated but its calorific value is too low to allow of its use alone. Mixed with producer gas or with gas from coke ovens however success has been attained. Quite recently the utilisation of the waste heat of blast furnace slag has been accomplished by running the molten slag into water and allowing it to generate steam for driving turbine engines.

In steel making the general progress of the open hearth process as compared with the Bessemer is the most prominent feature especially as regards the basic open hearth process. In America even for rail manufacture the open hearth has largely supplanted the converter. The open hearth furnaces themselves are steadily increasing in size the 30 and 75 ton furnaces of previous years being replaced by 100-ton units. This increase in size is accompanied by devices for prolonging the life of the furnace principally by the more extensive use of water cooling and the introduction of removable furnace ports. The importance of maintaining the shape and position of the ports having been recognised water cooling has been employed on the other hand the use of removable ports makes the life of the furnace independent of the life of the ports. Thus a basic open hearth furnace which formerly had a life of 350 to 500 heats now runs up to 1000 heats with three changes of ports.

Rolling mill practice (*E. B. xxiii 468*) has developed concurrently with the development of the furnaces in America particularly the tendency for obtaining very large outputs by installing plant of great power and speed has been strongly marked. The rolling mill installed at Gary Indiana may be taken as an example. This mill is driven by a 6,000 horse power electric motor working on a circuit at 6000 volts three phase current at 25 cycles a 1 inch ingot can be broken down in this mill and rolled into a 7 inch plate in 2 passes in approximately two minutes. It is however doubtful whether the market can dispose of the enormous full power output of these very large mills and the question of the quality of the resulting products is also a serious one. It is claimed however that there is now a strong tendency for American steel makers to pay greater attention to the quality of their products than has hitherto been the case. The serious troubles experienced with steel rail fractures in recent years have no doubt produced some such effect. The mill just referred to is typical also of the tendency towards the increased use of electric motors for driving rolling mills.

An important feature in recent development in siderurgical practice is the steady progress of the electric furnace. At Trollhattan in Sweden electric iron ore smelting has been in continuous use and it is claimed that under the favourable conditions as to water power which prevail there the process is profitable. More frequently the electric furnace is employed simply for refining or rather super refining steel which has been roughly treated from its impurities either in the converter or the open hearth. For this purpose one or two American steel works have installed combined open hearth and electric furnaces in which the steel first reached down under gas heating and electric heating is employed only for the final stages. The use of electrically melted steel for the production of steel castings has developed considerably and a steel foundry working entirely with Siemens electric furnaces has recently been put down in England. The advantages of electric steel in regard to freedom from gases oxides etc are now widely admitted but excessive and ludicrous claims on behalf of this material are still put forward at times. An interesting special use for the electric furnace has recently been found in melting the ferro manganese or ferro silicon prior to its addition to the molten steel in the ladle or the furnace considerable advantages are claimed for the practice of making these additions in the molten state.

The difficulties experienced with steel rails in America and elsewhere have drawn attention to the question of soundness of ingots and the effect of blow holes. In regard to the latter Stead has shown that deep-seated blow holes certainly and even superficial ones probably would up completely when the ingot is rolled provided that the holes are not associated with sulphide enclosures. Hadfield on the other hand regards complete freedom from blow holes as essential and prefers a steel which settles well and pipes but he counteracts the piping tendency by supplying the ingot during cooling with hot liquid steel from a feeding head placed on top of the ingot mould in which the steel is kept molten by a layer of charcoal kept in active combustion by the aid of an air blast. Talbot again consolidates his ingots by giving them a few passes through the cogging mill while their interior is still liquid thus claiming to produce in a simple and inexpensive manner the same results as the Harriot compression process. Goldschmidt claims that soundness may be insured by the introduction of a cartridge of thermite into the bottom of the solidifying ingot and quotes examples from an extensive practical trial in support of his claim.

The use of alloy and special steels has extended very considerably notably in the case of steels to which vanadium and titanium have been added during manufacture. In the case of vanadium this has become possible by the fact that the price of vanadium alloys at one point dropped to one half of the former figure and the use of vanadium steels has increased considerably. The use of titanium steels has however increased — particularly in America — more widely than that of any other special steel. American metallurgists regard

titanium as a cleansing addition which removes oxygen, nitrogen and other impurities rather than as an actual alloying element. The value of titanium was first established in the case of rails but its use has since extended to other classes of steel. As regards alloy steels proper, the use of nickel, nickel-chrome and chrome-vanadium steels has extended chiefly through the growth of the automobile industry. The use of manganese steel and of nickel steel rails has also been tried.

The question of the corrosion of iron and steel has continued to receive much attention apart from the general controversy between the electrolytic and the chemical (carbonic acid) theories of corrosion. The electrolytic theory has received a serious check from the researches of Heyn, who has shown that while the existence of local cells determines the rapidity with which corrosion commences, it does not affect the ultimate rate of corrosion. In America a new material known under the name of American ingot iron or open hearth iron has been produced for the purpose of resisting corrosion; it is claimed that this metal is the nearest practical approach to chemically pure iron and that it resists corrosion better than mild steel. The material however has an appreciable content of copper—it is even suggested that copper is intentionally added to it and that its non-corrodibility is due to the copper. The addition of copper to steel for this purpose has also been introduced. Some progress has also been made in the production of actually acid-resisting varieties of cast iron such as the high silicon iron of Jouve and the material known as tint iron. The use of approximately pure silicon metal for this purpose is also contemplated.

The subject of the cementation of iron and steel has received much attention; the most notable advances being probably those made by Giolitti and his collaborators at Turin by the use of charcoal and a mixture of carbon dioxide and carbon monoxide gases under pressure in a furnace where both temperature and pressure can be varied; these workers obtain a wide power of regulating both the intensity and depth of cementation and also the width of the transition zone between carburised and non-carburised material.

*Copper (F B vii 102 et seq)*—The most marked feature in the metallurgy of copper during the past three years has been the great development of basic converting causing a radical change in equipment, durability and tonnage of converters and in general practice. Even standard shells of the older type have been relined with basic material. Apart from this feature progress has also been made in the handling of ores; as regards transport, troughed conveyor belting has proved eminently successful as compared with the electric car even for distances of four miles. The use of fine ore sluff dust etc. has also been advanced so that ores for the blast furnaces are now generally screened so that the coarse charge can be worked at a higher rate. One interesting development is that of blowing fine material into the converter through the twyers by means of a jet of air at higher pressure than the blast. In the treatment of metallic copper itself the use of boron sub-oxide has been introduced. Boric anhydride is reduced by metallic magnesium yielding magnesium borate and boron sub-oxide. The latter acts as a very satisfactory reducing agent on the copper and for castings intended for electrical purposes removes oxygen so well that conductivities up to 90 per cent have been obtained. The use of the boron sub-oxide to replace poling has also been tried but although the results are satisfactory there are practical difficulties on the ground of expense and attack on the furnaces.

Among the alloys of copper, Monel metal—a natural alloy of copper and nickel—has received extended use owing to the remarkable combination of strength with resistance to corrosion which it presents. It has been used for screw propellers in battleships (U.S.S. *Dakota*) and for roofing large buildings (Pennsylvania terminal in New York). A remarkable test at 1000 F. has shown the alloy to retain 80 per cent of its normal strength. The alloys of copper with aluminium and manganese have also been studied very closely (Ninth Report Alloys Research Committee); one of these attains in the form of rolled and drawn rod a tensile strength of 52 tons per sq. in. with 10 per cent elongation on two inches. These alloys are remarkable for their resistance to corrosion and to abrasion. Another special bronze is that of Rubel which contains 58 per cent of copper, 41 per cent zinc and 1 per cent chromium and possesses remarkable mechanical properties.

*Aluminium (E B i 76, et seq)*—The production of this metal has increased and a steady improvement in quality is being obtained when the metal is excessively pure; however, difficulties arise in working it. Its uses have developed considerably principally in the direction of cooking utensils and of large tanks for breweries and similar purposes. The latter development has been facilitated by the established success of methods of joining aluminium sheets by autogenous welding. Extruded aluminium—  
—all as the sheet metal—are also extensively used in carriage construction.

Light alloys of aluminum have received much attention and marked progress has been made. In the Ninth Report to the Alloy Research Committee the alloys of aluminum with manganese and with copper plus manganese have been studied. Derived from the best of these alloys is the metal known as duralumin developed in Germany by Wilm; this alloy contains from 3 to 4 per cent of copper and from  $\frac{1}{2}$  to 1½ per cent of manganese together with  $\frac{1}{2}$  per cent of magnesium. This latter addition gives the alloy the remarkable property of undergoing a gradual spontaneous hardening after suitable heating and quenching—at first the mechanical properties are unchanged but in the course of four days the tensile strength is doubled while the ductility is only slightly affected. In this hardened condition the alloy combines mechanical properties similar to those of mild steel with a specific gravity slightly less than 3, but these properties are destroyed by even moderate heating. This alloy was used in the construction of the ill-fated British naval air ship of the rigid type at Barrow in Furness. Quite recently a detailed study of the alloys of aluminum with zinc and with zinc plus copper has been published in the Tenth Report to the Alloy Research Committee. One of the alloys there described containing 25 per cent of zinc and 5 per cent of copper attains mechanical properties similar to those of steel or of duralumin but entirely without any special quenching or other heat treatment; this alloy however has a specific gravity slightly higher than duralumin (3.25). The demand for materials combining strength with lightness arising from aeronautical construction has given a fresh impetus to the study of light alloys and further important developments are to be anticipated.

*Gold and Silver, Platinum etc.*—Apart from the general tendency towards perfection in detail resulting in greater efficiency and increased output few remarkable developments are to be recorded with regard to the precious metals. The cyanide process (*E. B. v. 109*) has received increased application and is becoming standardised to some extent. A novel proposal was that of Clancy to replace the expensive alkaline cyanides by the cheap product of atmospheric nitrogen fixation—calcium cyanamide coupled with the application of electrolysis. No large practical developments of the process appear to have taken place as yet. Efforts are being made to render the cyanidation process truly continuous but the resulting gain is somewhat doubtful. On the other hand the method of agitating slimes by means of air jets is now wide spread and successful. The treatment of sulphide ores by this process is also receiving greater attention and as the chemistry of the process is better understood simplifications have become possible.

In regard to the metallurgy of the remaining metals similar general tendencies have manifested themselves and only a few special matters need be referred to here.

In connection with the use of lead for accumulator plates or for any purpose where large reacting surface area is desirable the process invented by Hannover for producing porous metals becomes of importance. Hannover utilises the fusibility of the eutectic alloy by casting an alloy consisting for instance of lead and tin in such a way that the metal consists of lead crystals whose interstices are filled up by eutectic at a suitable temperature the eutectic is fluid and can be expelled by such means as centrifuging when porous lead is left behind. Lead tin and especially zinc as required for the cyanide process can now be obtained in the form of ribbon metal produced by allowing a jet of the molten metal to fall upon a rapidly rotating cooled iron drum the metal runs off as a continuous flat ribbon. By the use of very wide jets sheet metals can be produced in the same way. More remarkable still is the process of Schoop in which a jet of molten metal meets a jet of high pressure gas and is atomised so as to form a metallic cloud. This finely divided metal can be sprayed upon any object which it is desired to coat and yields a strong coherent deposit which can be made either to adhere firmly to the matrix or to leave it in the form of a cast. The metallic spray does not burn or injure even delicate articles so that silk or wax can be readily coated. Quite recently it has been found that finely divided solid metal (powder) can be similarly made to adhere and to cohere by a spraying process.

In regard to zinc the efforts at electric smelting are still being continued in Sweden, and although it is considered in most quarters that the process is still in an experimental stage definite success particularly in the production of spelter of high purity is claimed. Extremely pure spelter said to be of electrolytic origin is at present produced in small quantities in England but the demand for very pure zinc appears to be increasing. Efforts to meet it are taking the direction of improved method of refining and although much secrecy is observed it is probable that vacuum processes of distillation are being introduced.

Some reference must also be made to the advance in the metallurgy of the very refractory metals, such as chromium, molybdenum and tungsten. The latter metal is now produced in approximate purity by the electric furnace and for the purpose of electric incandescent lamps drawn tungsten wire is now used in place of the agglomerated filaments formerly employed. Both tungsten and molybdenum find increased uses in high speed tool steels while chromium is finding a wider application in the production of new alloys. Among these an alloy of nickel with chromium and manganese known as nichrome has achieved

considerable success as an electric resistance heater at high temperature the newest grade of this alloy is claimed to withstand continuous heating at 1100° C. An alloy of chromium and cobalt is described as having a white colour and being practically incorrodible being unattacked even by nitric acid. It is said to have the hardness of steel and to take a cutting edge. Its incorrodibility indicates that the material would be particularly useful for such purposes as fruit knives and table cutlery. Its use for razors is also suggested but it remains to be ascertained whether it shares the tendency of modern high speed tool steels to produce undesirable symptoms in any small wounds inflicted.

*Physics and Physical Chemistry*—The period under review has been particularly rich in scientific investigations on metals and alloys which come under the heading of Metallography in the wider sense of that word but this sense has now become so wide that Physical Metallurgy is a preferable name for the rapidly expanding science which now embraces the study of all the physical properties as well as the physico-chemical relations of metals and alloys. Typical of this development is the existence since 1911 of an *International Journal of Metallography* published in Berlin and the rapid rise of the Institute of Metals founded in England in 1910. The wide spread activity in this subject is also typified by the fact that in a report on progress presented by Heyn to the International Association for Testing Materials references are given to over 500 papers bearing dates later than 1900.

The equilibrium diagram of the iron-carbon system has been the subject of continued research and controversy on minor points but the main features of the diagram are now accepted by all except a few extremists. Among researches bearing upon it the work of Gutowsky may be mentioned which indicates the necessity of revising the position of the solidus curve for the low carbon end of the diagram. Rosenhain and Humfrey have demonstrated the existence of a relatively hard modification of iron above the critical points while Bakoff has shown by means of etching with gaseous hydrochloric acid at high temperatures that steel is a homogeneous solid solution at those temperatures as required by the accepted diagram. Controversy and difficulty still centre around the true relations of graphite and cementite and the names of Ruff and Goerke, Ruer and Ilyn and Hanemann are associated with important work on this question. Another important step in the metallography of steel is denoted by the adoption at the recent New York Congress of the International Association for Testing Materials of a uniform nomenclature for the microscopic constituents of iron and steel. The fact that Howe and Sauveur have been able to prepare such a report indicates that a substantial agreement has now been reached by the majority of the world's leading experts. Increased attention has also been given to the foreign bodies such as slag, sulphides and silicates of manganese and iron etc. which are met with in steel. Recent research is summarised in a report to the above named Congress by Rosenhain.

*Copper and its alloys* have received much attention. In the copper-zinc series (brass) Carpenter has drawn attention to a thermal point at 470° C. and has demonstrated its nature as a decomposition of the  $\beta$  into the  $\alpha$  and  $\gamma$  phases in an elaborate series of papers. The constitution of copper-arsenic alloys (Hudson) and of the phosphor bronzes (Law) has also been studied. The Ninth Report to the Alloys Research Committee of the Institution of Mechanical Engineers (London) contains an elaborate study of the ternary group of alloys of copper with aluminium and manganese and a detailed metallographic study of portions of the system (Rosenhain and Lantberry). This attack on the problem of the constitution of ternary systems of alloys is typical of a very large amount of work which has been undertaken principally in Germany during the past two years. Most of this work, however, although of great interest as yielding a first rough idea of the constitutions of these systems must be regarded as strictly preliminary, since the methods and apparatus used are in many cases inadequate for the complete study of such complex problems. The manner in which early investigations of alloys are apt to be inaccurate has recently been illustrated in the aluminium-zinc system where a research carried out with the greatest available refinements has led to a complete revision of the formerly accepted diagram (Rosenhain and Archbutt).

Many other fields of enquiry which have begun to yield important results can only

be mentioned. These include the study of the gases dissolved or occluded in metals and removed by heating or even melting in vacuo, of the behaviour of metals in high vacua especially in the light of the theory of an amorphous inter-crystalline cement in metals, of the magnetic properties of alloys both of iron and of copper aluminium manganese and of the electrical resistance of alloys and its variations with temperature.

For these and allied researches reference should be made to the original publications, many of which exist only in foreign languages. In English many original papers and abstracts of many others including most of the more important foreign ones will be found in the *Journal of the Iron and Steel Institute*, the *Journal of the Institute of Metals*, the *Proceedings of the Faraday Society* and of the *Institution of Mechanical Engineers* and in the pages of *Science Abstracts* devoted to physical chemistry. In French the *Revue de Metallurgie* and in German *Stahl u. Eisen Metallurgie* and the *Internationale Zeitschrift für Metallographie* may be consulted as well as the more recent text books upon this subject.

(W. ROSENHAIN)

## SOLID LIQUID AND GASEOUS FUELS<sup>1</sup>

### 1. Solid Fuel

**Coal**—In the middle of the 19th century a large amount of scientific work was done concerning the composition of coal and the view was held by many observers that the variations in the properties of coals were dependent as much upon the character of the vegetable matter from which they had been formed as upon the conditions of formation. These views however were more or less lost sight of until the last couple of years when they have again been brought to the front and are now shown to give a far more satisfactory explanation of many obscure points with regard to the thermal value and chemical decomposition of coal than was possible before. In 1911 M. J. Burgess and R. V. Wheeler published the results of a series of experiments on the distillation of coal at various temperatures which led them to conclude that coal contained two types of compounds of different degrees of ease of decomposition, the one a degraded product of cellulose, the other derived from the gums and resins of the coal plants, and that the character of the coal is determined by the proportion in which these two types exist in coal.

**New views on the composition of coal**—I have put forward the general theory of the formation and composition of coal as follows. Carbon is practically non-existent in the primary rocks constituting the crust of the globe, hence all the free carbon and compounds containing carbon that we now find have been produced by secondary actions from carbon dioxide in the atmosphere, the amount present showing that the atmosphere in times prior to the carboniferous period consisted of a high percentage of carbon dioxide, nitrogen, oxygen and water vapour. Human life under these conditions was impossible, but as the crust of the cooling globe reached a sufficiently low temperature a vegetable life of a low order started and grew with a luxuriance and rapidity that could never again be equalled owing to the conditions of moist heat and plentiful carbon dioxide. As the vegetation grew it absorbed the carbon dioxide and moisture and under the influence of the sun's rays built up the plant structure and evolved oxygen, thus in the course of geological time creating an atmosphere fitted for lower forms of animal life, which gradually became of a higher order as the necessary oxygen increased in percentage. Owing to the paucity and dilution of oxygen in the earlier periods decay as we now know it could take place only to a very limited extent and this, with the rapidly growing flora of the carboniferous period, gave rise to the enormous vegetable deposits and drifts from which eventually all fuel was formed.

All the plants of which there are fossilised records in our Coal Measures consisted of sedges and reeds, tree ferns, club mosses or lycopodia, and trees akin to the pine, but in these prehistoric days the conditions of growth were such that the plants grew with a succulent freedom and rapidity since unknown and this later rendered their tissues an easy prey to fermentation—an action which left only the more resistant unchanged. The work of Morris, Carruthers, Fleming and Huxley has shown that the bituminous

<sup>1</sup> See E. B. xi 274 et seq.

matter in coal is derived largely from the spores of fossil mosses akin to the lycopodia, and spores of this character from the giant growths of the carboniferous period, together with the more resistant portion of plants akin to the pine are the substances which have best resisted the actions taking place during the ages that have elapsed in the formation of coal

The vegetable matter consisted chiefly of a basis of celluloses and lignose, together with the extractive matters rich in resin and as these were unable to undergo rapid decay owing to the low oxygen content of the air fermentation became the chief factor of change, and the mass being overlaid gradually by sedimentary and other deposits pressure and heat added their forces to the actions taking place the celluloses and lignose becoming converted into humus bodies having the general percentage composition—carbon 63 hydrogen 5 oxygen 32 During these periods the resins—which have the general composition carbon 70 hydrogen 11 oxygen 10—underwent but little change but in the long ages that have passed some of the resin bodies have been converted into such hydrocarbons as retene and hexahydrides while the humus bodies have undergone general degradation, resulting when completed in residual carbon All these constituents are found agglomerated in the coal—the humus bodies and residual carbon being luted by the resin bodies and hydrocarbons the properties of the coal being dependent upon the proportions in which they are present

The lignites or tertiary coals being of younger age were formed at a period when the air contained a higher percentage of oxygen so that direct oxidation played a more important part and as the resins are the bodies most affected by this they were reduced in quantity but the great difference between the lignite and true coal is that the humus bodies have undergone a minimum of degradation so that the free carbon is lower than in any other class while the humus bodies still retain their attraction for water which is always present in considerable quantity in the Tertiary coal

During the formation of coal the gases evolved are carbon dioxide methane and water and where the roof of the seam has been impermeable to gas methane is found occluded in the coal together with some carbon dioxide but the bulk of the latter gas has dissolved under pressure in water and formed bicarbonates in the sedimentary deposits and has then helped in such other changes as the dolomiting of limestone

Many classifications of coal have been suggested some based on their chemical some on their physical and others on their coking properties Of the latter the most generally adopted is that of Gruner in which he tabulates bituminous coals into five classes Although M Schondorff F Muck and others have shown that it is not applicable to all kinds of coal still this criticism applies to all classifications that have been proposed

		Carbon	Hydrogen	Oxygen
1 Dry coal	Long flame and non coking	75—80	4 3—5 5	13 0—18 5
2 Fat gas coal	Coke porous and brittle	80—85	5 0—5 8	10 0—13 2
3 Semi fat or furnace coal	Good coke but porous	84—89	5 0—5 5	5 5—10 0
4 Coking coal	Best coke	89—91	4 5—5 5	4 5—5 5
5 Lean coals and anthracite	Non-coking	90—93	3 0—4 3	3 0—4 5

This arrangement shows not only the coking properties but also the changes in composition which the coal undergoes the concentration of carbon and reduction in highly oxidised bodies In the first class there are the dry coals yielding large volumes of gas and liquid products on distillation and these—as might be expected—most resemble the lignites and share with them the property of non-coking or binding together of the residue on carbonisation This is due to the fact that the humus like bodies are still present in much larger quantities than the resinic compounds and hydrocarbons and as on distillation they leave no binding material in the residue the resinic bodies cannot supply enough to give more than a friable mass In the second class of coals altered conditions of temperature pressure and time have led to further decompositions of the humus bodies and the resinic constituents and hydrocarbons having increased in ratio by concentration a point is reached at which coking takes place although not of a really satisfactory character In the third class the action has continued with further concentration of the resin bodies hydrocarbons

and residuum with the result that the former bodies are so increased in comparison to the humus and residuum that a good coke results although rather too porous and bulky. In the fourth class the proportion of resin and hydrocarbon bodies has reached the right ratio as compared with the humus and residuum and the best coking coal is obtained. Bituminous coals of the kind classified by Gruner may therefore be looked upon as an agglomerate of humus and the degradation products of these bodies down to carbon, luted and protected by resin bodies and their derivatives, steam coal and anthracite as the degradation products of humus which has nearly completed its decomposition owing to the small quantity of resin bodies in the original vegetation—cannel coal as consisting mainly of resin bodies derived from accumulations of seed spores which having been brought down by streams have mixed with sedimentary earthy matter and are therefore often high in ash.

Such a theory has an important bearing upon the consideration of the thermal value of coal as well as its other properties, as it is manifestly the ratio of the coal constituents and not the percentage of the elements in the coal that governs these. In all attempts to calculate the calorific value from the percentage composition it is found that with coals poor in oxygen such as steam coal or anthracite there is a very fair agreement between the calculated value and the value as determined in a bomb calorimeter but that directly the coal contains much over 5 per cent of oxygen the value as determined rapidly rises above that calculated.

This is due to the humus bodies in the coal still retaining the endothermic character of the cellulose and hemicellulose from which they were derived and it is found that whilst the calculated heat values for the carbon, resin bodies and hydrocarbons in the coal are in close agreement with the determined values an artificially prepared pure humus will have its calorific value determined 16 or 17 per cent higher than when calculated from its percentage composition. It is clear therefore that direct determination in a bomb calorimeter is the only accurate method for determining the thermal value of coal.

The proportions of the constituents in the coal also govern the nature of the products when it is subjected to carbonisation. The humus bodies during carbonisation yield a

**Effect of composition on products of carbonisation**

large proportion of the gaseous products and under the influence of heat show no sign of melting but begin to break up at about 300 °C. The decomposition becomes more rapid as the temperature rises. Water distil over in the early stages, the tar is thin and poor in quantity and the gas, up to 600 °C consists of hydrogen, methane and carbon dioxide with smaller quantities of carbon monoxide and traces of other saturated hydrocarbons. The decomposition can be completed below 800 °C but if the temperature is run up to 1000 °C the carbon dioxide is reduced in quantity by the reaction on it of the red hot carbon. Carbon monoxide increases correspondingly whilst hydrogen and methane are still evolved.

The decomposition of the humus is also largely affected by the rate of heating. If slowly heated a large proportion of the oxygen is given off in combination with hydrogen as water vapour whilst if quickly raised in temperature more combines with carbon to form carbon dioxide and monoxide. The residue shows no sign of caking whilst like the naturally formed residue—moisture of coal—it requires a large proportion of cementing material to make the particles cohere. The resin bodies and hydrocarbons which form the cementing portion in the coal melt between 300 and 350 °C and if a coarsely powdered sample of the coal becomes pasty or semi fluid at this temperature it is a strong inference that the coal will coke on carbonisation—a fact noted by C. Anderson. About these temperatures also the resin bodies and hydrocarbons begin to decompose.

The resin bodies at low temperature yield saturated hydrocarbons unsaturated chiefly hexahydrides or naphthenes together with some oxygenated compounds whilst the hydrocarbons yield paraffins and liquid products—all these primary constituents undergoing further decomposition at slightly higher temperatures. The liquid produced begins to distil out as tar vapours and leave behind with the residuum pitch which at 500 °C forms a mass already well coked together if the residuum from the humus is not too great. The coke formed is soft but if the heat be raised to 1000 °C the pitch residue undergoes further decomposition yielding gas and leaving carbon which binds the mass into a hard coke.

**Coke and smokeless fuels**—The efforts of the Smoke Abatement Society in England have led to many attempts being made to introduce smokeless fuels like coke for domestic consumption and there is no doubt that if a fuel of the character of Coalite—easy to light and burning with a bright cheerful combustion—could be produced economically and sold at a reasonable price it would not only command an enormous sale but, in conjunction with gas fires would go far to solve the problem of smoke prevention. The combustion of bituminous coal as a national domestic fuel brings in its train consequences so objectionable that every effort should be made to bring about a more rational state of things.

In order to overcome the trouble of smoke whilst using solid fuel many forms of grate have been suggested the most successful of them being dependent upon the principle of

feeding fresh fuel to the bottom of the fire instead of to the top so that as the tar hydrocarbon vapours and steam distil out from the coal they have to pass through a mass of incandescent carbon above which decomposes the complex tar vapours into simple hydrocarbons. These are then completely burnt up on reaching the fresh air supply at the top of the fuel. The fact however that any special form of grate would require the removal of the old type and introduction of the new has been sufficient to prevent any success in this direction and what is really needed to make smoke prevention a practical possibility is the introduction of a fuel which could be treated in every way like coal which would be as easy to ignite would burn with a cheerful flame and would in reality commence its combustion just at that period when in a fire the smoke has ceased and the fire has burnt clear.

Coalite was a fuel which fulfilled these conditions exactly and consisted of coal carbonised at 420° C. instead of at 1000° C. it was in fact a half-coked coal of uniform composition with enough volatile matter left in it to give it the needed properties. For various reasons unconnected with the nature of the fuel itself coalite has not so far proved a commercial success but it has convinced everyone who has used it that it is infinitely superior as a fuel to any bituminous coal and has created such a demand for a model fuel that some imitations which differ from gas coke only in name have been able to find a market. The best known of these is Coalexide made by mixing a very small proportion of alkaline nitrates with the coal before carbonisation. These evolving small traces of oxygen on their decomposition give small areas of high temperature during destructive distillation and so give a slight increase in the gas yield. Another is made by cooling the hot coke as when it is drawn from the retort by smothering it with a layer of coke breeze instead of quenching it by water in the usual way and is known as Charco. Both these cokes contain about the same amount of volatile matter as ordinary coke made from the same coal.

Ordinary gas coke is not a popular domestic fuel it is often over quenched at the gas work and sent out too wet whilst its ignition point if made at a high temperature is nearly double that of coal so that it is difficult to light and gives a dull fire unless the chimney draught is exceptionally strong. With the introduction of continuous carbonisation in vertical retorts (see under GAS MANUFACTURE) the quality shows distinct improvement in dryness and it would be easy for the gas manager to regulate the heat of carbonisation as to leave 3 or 4 per cent of volatile matter in the coke to fit it for domestic use.

*Peat*—The vast area of the recorded peat bogs existing in the world which in Great Britain alone amounts to 800,000 acres and the fact that dry peat especially in the form of briquette is a pleasant and efficient form of fuel have led to many attempts being made to utilise this enormous store of latent energy. So far all attempts to solve the problem have been commercial failures as the mass of raw peat existing in the bogs contains approximately 90 per cent of its weight of water most of it so held in a condition of feeble combination that it cannot be pressed out mechanically whilst if heat is employed to drive it off as much is needed as remains in the residual solid and the attempt ends in a loss equivalent to the money expended on labour.

In countries where coal has been abnormally expensive and the climatic conditions good, cutting and stacking the peat in such a way as to allow air drying to reduce the moisture to about 50 per cent and then driving off some more of the remaining moisture by artificial heat and briquetting the product with 10 to 20 per cent of moisture still in it has yielded small profits but the enormous area needed for the air drying the amount of labour needed to cut the peat and the fact that it is possible to do so only for a few months in the year have prevented anything like commercial success whilst in most countries the humid climate of the peat districts renders such a process impossible.

In 1906 Dr M. Fkenberg discovered that peat consisting as it does of partially decomposed vegetable matter contains cells which are filled with and coated by a slimy substance which he called hydrocellulose and that this jelly like compound held the water in such a way that mechanical drying of the peat by pressure was not possible but that when heated to 150–200° C. the slime became hydrolysed and went into solution and that the peat so treated could be made to part with its water under hydraulic pressure. Starting from this point the Fkenberg process of 'wet carbonisation' was elaborated, and works have been erected on a peat bog near Dumfries the working of which has been designed to obviate both the climatic and labour difficulties.

In this process the peat is mixed with sufficient water to render it fluid enough to pump through tubes and with a dry bog extra water would have to be added at Dumfries however the bog is sufficiently wet for the purpose. The peat is dug by an ordinary mechanical digger of the type used in civil engineering operations mounted on a pontoon which floats in the

space excavated by it on the bog. This digger raises the material into a disintegrator of special design whence it is pumped through pipe lines to the works.

The power required at the peat getting station is supplied by generating electric current in the works and transmitting it to the plant at the bog. The peat pulp is then passed through the carboniser which may consist of an arrangement of two concentric tubes such as is found in the Nichlausse boiler heated in a gas furnace. The raw peat is pumped continuously into the space between the outer and inner tube and the carbonised peat flowing back in the reverse direction through the inner tube thus parts with its heat to the entering raw pulp. Under the pressure existing in the carbonising plant the pulp passes into the filter presses which squeeze out much of the water leaving the peat in a condition ready to go into the producer for ammonia recovery or after further drying by the waste heat of the gases from the producer to the briquetting press.

One of the chief points in the process is that double the quantity of peat is treated that is required as briquettes one half being taken as press cake and used in producers of the Crossley type for conversion into producer gas which after the ammonia in the gas has been absorbed by sulphuric acid is then partly employed in a battery of gas engines to give the necessary power for working all the apparatus used and bringing the peat from the bog and also for supplying the heat for drying the remaining half of the peat that is to be briquetted down to about 5 per cent of moisture.

Peat contains nitrogen in amounts which vary from 1 to 3 per cent and theoretically for every one per cent of nitrogen present it should be possible to obtain 105 lbs. of ammonium sulphate per ton but in practice with gas producers of the Crossley type about 75 to 80 per cent of this quantity is recovered.

The calorific value of the peat blocks made in the briquetting press is about 5,490 calories or 9,882 B.T.U. and the amounts which can be carbonised for ammonia recovery or can be briquetted are very elastic the output can be arranged to meet local requirements. This process is undoubtedly far more promising than any that have been before attempted.

### *Liquid Fuel*

During 1911 and 1912 the use of liquid fuel has again received an impetus from the successful results obtained with it in practically all the naval services in the world. The American Government are safeguarding the supply for naval purposes by taking control over an area of the Californian oil fields which will be held in reserve. In Great Britain the shortage of fuel oil supply due largely to difficulties in transport will probably disappear when the large number of new tank vessels now building are completed and these will allow of the utilisation of the large supplies of fuel oil which will be available from Mexico, the Dutch East Indies and Burma as well as from Texas and California. The price of liquid fuel limits its use to a great extent, as it is only where the advantages to be gained by its employment are so great as to overshadow the question of cost that it can possibly compete in Great Britain with coal and the factor which prevents its adoption in very many directions is the impossibility of getting any guarantee as to constant supply. Freights have recently been so high as to make the price of the oil in England almost prohibitive and the question is whether the carriage can be so reduced as to bring the price down. The great hope of the fuel oil market at the end of 1912 rested in the enormous demand for petrol, which during the next few years promises to lead to the development of all possible sources of oil after the portion possible to use for motor-car fuels has been distilled off the residuum which is the portion of the oil available for fuel purposes will be correspondingly large but it must be remembered that in most of the countries on which Great Britain relies for oil supply the use of liquid fuel is advancing rapidly. In America, Russia, Austria and other countries producing oil or close to the oil fields, liquid fuel is now replacing solid fuels in the locomotives on the Government lines as well as for manufacturing and other purposes so that the supply from these sources for export is only what is left over after the home consumption has been satisfied. This of course does not apply to the Indian and Mexican fields from which large supplies of fuel will probably be available.

*Oil Fuel Burners*—Most of the earlier burners used for the consumption of oil in place of coal in marine boilers rely on the principle of injecting the oil as a fine spray into the furnace by means of steam, air or pressure. These burners answered well when the combustion space was large but where a considerable amount of oil had to be burnt in a small space their action of driving forward the oil supplied rendered the passage of the burning oil through the combustion space too rapid to allow of complete combustion and large quantities

of smoke were formed. Further trouble arose because steam had to be supplied and as on a Service vessel this would mean extra boilers this was a great drawback.

Of the burners which sprayed the oil under pressure without the use of either steam or air the Korting and Swensson had already proved successful in many cases but a great improvement was introduced by I. I. Kermodé who designed a burner in which the oil under pressure issued from the nozzle in a swirling cone of mist the particles not being driven straight forward as in other types by the spraying and the rate at which it traverses the combustion space is thus reduced. Air injection for the oil although on theoretical grounds it might be expected to be the most advantageous has never found much favour for marine work as auxiliary power has to be provided to drive the pumps for the air compression but where an intense temperature is required it has been used largely and especially in furnace work on land has proved very successful. One of the most successful forms of burner for this purpose has also been designed by Kermodé and may be used with either steam or air.

At the present time the use of liquid fuel direct in the internal combustion engine has occupied a large amount of attention and the Diesel engine has already shown itself well adapted for marine use where the power required has not been very high. The successful installations in the tank steamer *Vulcanus* and in the *Selandia* have demonstrated its great possibilities whilst the fact that one B.H.P. can be obtained with a consumption of something like 0.45 of a pound of liquid fuel of much the same character as that used for burning under a boiler gives very high economy in its employment.

The first British destroyer fitted with Diesel engines for propulsion was the *Hardy* launched in October 1912 in which for full speed turbines fed with steam from boilers fired with oil fuel are used whilst the Diesel engines are employed for cruising speeds at which the turbine shows a marked falling off in efficiency.

In Germany where there is a heavy import tax upon oil the use of tar and tar oils in the Diesel engine has attracted considerable attention and for the last ten years tar and creosote oils have been satisfactorily used. The troubles that at first arose with tar oils were that the pipes and nozzles of the burners were found to become choked with muddy deposits of solid hydrocarbons consisting mainly of naphthalene which formed a crust also at the mouths of the burners. These deposits made the working of the feed pumps difficult and the solid hydrocarbons increased the temperature of ignition. The crude tar oils varied in composition and quality with differences in the temperature of carbonisation even when the same coal had been used which necessitated constant alteration in the feed and air adjustments of the engine. Of recent years however improved methods of fractionation and refining the tar oil together with careful selection of the material have ensured a supply of fuel of constant and regular quality without the drawbacks incidental to the use of crude tar oils.

### 3 Gaseous Fuel

The most important development in the use of gas as fuel that has taken place since the invention by Bunsen of the atmospheric burner promises to arise from the so called principle of 'surface combustion'. Although a mixture of hydrogen and oxygen in the proportions in which they combine to form water has an ignition point of about 550° C. at ordinary atmospheric pressure yet the two gases will combine in contact with certain metals at lower temperatures but the rate of combination is so slowed down that the ignition point may never be reached. This power of inducing combination between gases at comparatively low temperatures has been known to be possessed by metals of the platinum group, since Sir Humphry Davy first established the fact in 1816 whilst Dulong and Thenard afterwards proved that all solid bodies possess in varying degrees the power of accelerating combustion below the ignition point. It is only within recent years that the study of this phenomenon has been revived by the researches of Professor W. A. Bone and the phenomenon of surface combustion is now receiving a considerable amount of attention and promises to lead to most important commercial developments.

If a mixture of coal gas and air in the explosive ratio of 1 to 6 be directed on to the surface of red hot nickel gauze or incandescent fireclay and asbestos, it is found that the acceleration of the combustion is not confined to low temperatures only but flameless combustion ensues on the incandescent refractory surface producing there a more intense combustion with the result that the material is raised to a high degree of incandescence, and a much greater proportion of the heat energy of the gaseous mixture is converted into radiant heat.

There are two possible conditions under which gaseous combustion may take place—the first, homogeneous combustion, in which the velocity of the chemical change is

dependent on the order of the reaction, and combustion occurs equally throughout the system as a whole and secondly, heterogeneous combustion in which the combustion takes place in layers immediately in contact with a hot surface. This second condition constitutes what is known as 'surface combustion' and is governed by the rate of combustion, the diffusion factors of the components of the gaseous mixture and the products of combustion, the effect of the 'activity' of the refractory surface, the physical texture of the surface and the retarding effect of films of inert gas.

The 'activity' of a given surface can be varied by special treatment within wide limits but the nature of the causes of the variation is still somewhat obscure. For instance using a mixture of hydrogen or carbon monoxide with oxygen in conjunction with a non oxidisable metal or non reducible oxide if the surface be previously treated by contact with the combustible gas the activity of the surface is considerably stimulated whereas if treated with oxygen it is diminished. The activity of a surface also increases rapidly with rise of temperature the difference in activity possessed by various substances being reduced until at bright incandescence it disappears.

*Diaphragm Process*—If an explosive gaseous mixture be forced under pressure through a porous refractory incandescent body combustion in a greatly accelerated form takes place within the pores and the heat developed by this combustion keeps the surface in a state of incandescence without the formation of flame.

This principle may be employed in two ways. The first is to fit a slab of porous refractory material in the front of a fuel chamber into which the gas and air in proportions necessary to give complete combustion are forced under the pressure necessary to drive them through the porous plate the mixture is then ignited on the outer surface which rapidly becomes heated and the mixture burns within the pores of the slab and close to its exterior surface which being raised to incandescence emits great radiant heat. The degree of porosity and size of the pores of the slabs can be arranged to suit the quality of the gas fine pores being used with rich gases whilst a coarser grade is necessary with gases of low calorific power the pressure also being regulated to ensure the rate of flow of the gas being sufficiently high to prevent any risk of back firing or explosion. This method of applying the principle is generally known as the Diaphragm process and as being flameless the slab can be fixed in any position it can be used to throw the radiant heat on the surface of evaporating liquids for the concentration of acids and for many forms of industrial and domestic heating.

*Granular Bed Process*—The second method known as the Granular bed process consists in making a granular mass of the refractory material and blowing the mixed gases on to it or through it under pressure so that the combustion takes place on the surface of the granules and a temperature of 2,000°C can be obtained. The granules can be packed into tubes directly immersed in water for steam raising into the space round crucibles in processes for the melting of metals or formed into a bed for furnace work. In a special form of boiler designed for this process an efficiency of 95 per cent has been attained that steam can be raised from cold in 20 minutes and that the normal evaporation is 150 lbs. per square foot of combustion surface per hour which can be increased to 30 with a slight loss in efficiency.

*Gas Stoves*—Ever since Bunsen in the middle of the last century gave to the world his atmospheric burner the use of gas for heating and power has progressed more and more until nearly as much gas is now used for these purposes as for illumination.

The earlier forms of gas stove had many defects which created a strong prejudice in the minds of the public against them more especially as custom and comfort had created a firm affection for the open coal fire. In the modern gas stoves however due regard has been paid to overcoming the drawbacks found with the older forms and their improved efficiency together with the absence of smell &c. have resulted in a steadily growing popularity.

The greatest objection raised against the use of gas for domestic heating is that of cost. If the open fire and the gas stove be compared on the price of fuel and the number of heat units present the use of gas is shown to be about five times as costly as coal but if the question of efficiency be taken into consideration the difference between the two methods of warming is found to be but slight. With a coal fire in an open grate only about one fifth of the heat units are utilised in warming a room whereas with a modern gas stove nearly four times as great an efficiency can be obtained. Moreover in favour of gas one can place cleanliness absence of dust and labour and convenience of lighting and extinction.

Heating by radiation is the only true and hygienic method of warming a room as in this way the temperature of the air is not directly raised but the walls furniture and other solid bodies in the room absorb the radiated heat and in turn slowly give off a portion of this heat to the air around them consequently the walls &c. are at a higher temperature than the air. If however the room be heated by hot water pipes steam or any other such system the temperature is raised by convection the air around the pipes or radiator is heated expands and sets up convection currents until the whole mass of the air is at the one tempera

ture. The solid bodies in the room however are not raised in temperature to the same extent with the result that a sensation of chill is experienced by a person sitting near a wall owing to the heat of the body passing by radiation to the wall.

In the modern gas fire a large percentage of the heat is converted into radiant heat and the convection heat is reduced to a minimum whilst the efficiency has been so improved that a large proportion of the heat in the gas is utilised. Provided that the stove be fitted in a proper manner the ventilation of the room is effected quite as thoroughly as with open coal fire but to do this the space between the stove and the fireplace must not be filled in with a sheet of metal as was the old accepted procedure but the exit pipe should be carried for some little distance up the chimney when the outrush of hot gases will be drawn up with them by a sort of injector action and nearly as large a volume of air can be withdrawn from the room as with an open fire.

*Hygienic Effect of Gas Heating*—Careful researches have demonstrated that the use of gas in incandescent burners and stoves is by no means detrimental to health but is a valuable adjunct to ventilation owing to increased circulation of the air.

In the old forms of gas stove convected heat was relied on for raising the temperature of a room but this decreased the percentage of humidity to such an extent as to produce rapid evaporation from the plants and occupants in the room the results being drooping in the former and discomfort to the latter. This is always the case where convected heat is the sole method of warming but if a combination of the two systems be adopted it will be found very useful in the case of large spaces where enough radiant heat could not be given by an open grate or gas stove. With a factory or schoolroom for instance radiators or hot water pipes could be fixed below the windows and inlet ventilators and in this way the entering current of air would be warmed up two or three degrees and the fire would then be able to complete its work of warming the solids in the room by radiation in a much shorter time.

(VIVIAN B. LEWES)

### ILLUMINATING GAS MANUFACTURE<sup>1</sup>

In no large industry have such fundamental changes taken place during the past few years as in coal gas manufacture a complete revolution of the old ideas upon the carbonisation of coal having led to the introduction in Great Britain of vertical retort processes while on the European Continent and in America carbonisation in bulk or chamber processes have made rapid headway.

The beginning of the present form of vertical retort in which gravity is brought into full play to aid the filling and discharging of the retort was in 1900 when at the Exeter gasworks a retort on this principle was erected and worked by T. Settle and W. A. Padfield and in the same year vertical retorts began to be experimented on in Germany by Dr. J. Bueb who by 1904 had got a good sized installation at Mariendorf working successfully. In July 1903 however Messrs. H. W. Woodall and A. M. Duckham had patented in England a form of vertical retort on a totally different principle to the German retort inasmuch as they embodied the principle of working continuously so rendering possible the uniform treatment of coal during carbonisation instead of putting in a full charge of coal carbonising drawing the coke and recharging as is done in the Continental type of vertical.

Messrs. William Young and S. Glover in 1905 patented a continuous vertical process which differed from the Woodall Duckham. In the latter the principle is adopted of a continuous column of carbonising material the inlet of fresh coal at the top being dependent on the withdrawal of coke from the bottom the retort being so proportioned with regard to time and temperature that the carbonisation of the coal was completed by the time the bottom was reached whilst in the Young and Glover system the discharge of coke was independent of the coke feed and a space was left in the top of the retort above the coal so as to form a chamber in passing through which tar vapour might be gasified and fixed by radiant heat in this respect resembling the procedure adopted by Settle and Padfield.

In 1909 the Glover West retort took the place of the Young and Glover a cooling chamber for the coke being constructed at the bottom of the retort and the heat utilised for raising the temperature of the secondary air supply to the flues whilst the empty space at the top of the retort was done away with, and the coke withdrawal made to govern the feed, thus reverting to the principle introduced by Woodall and Duckham.

<sup>1</sup> See E. B. xi 483 et seq.

The transition from the experimental to the practical stage proved fatal to the *Settle Padfield system* whilst the Young and Glover became merged in the Glover West process but since 1900 the three remaining systems have been working continuously and with later improvements are so successful that there is no doubt as to their gradually largely supplanting the older forms of retort in English practice.

The German intermittent verticals or *Dessau retorts* have been at work at Sunderland since 1909 where at the Ayres Quay works there is an installation of a bench of six beds of ten retorts each. The retorts are 13 feet 1½ inches high tapering from 9 inches by 22½ inches at the top to 13½ by 27½ inches at the bottom. The bench carbonises 400 tons of coal per week and yields between 12 000 and 13 000 cubic feet of gas per ton. The coal is charged into the retorts from an overhead hopper each taking a little under half a ton which requires twelve hours for complete carbonising and during the last two hours steam is passed at a slow rate through the charge partly to increase the volume of gas and partly to prevent any sticking of the charge due to carbon deposited on the inner face of the retort which might interfere with the discharge of the coke when the bottom door of the retort was opened. The use of steam naturally increases the amount of fuel used in the carbonisation this amounting to 13.96 per cent of the weight of coal carbonised when no steam is used and rising to 17.8 per cent when steam is employed the average of fuel used being about 15 per cent.

Of the two continuous processes the *Woodall Duckham* has been the longest at work and there are numerous installations in Great Britain and other countries. The retorts are 25 feet in height with a sufficient taper to ensure the slip of the charge. The time occupied in the travel of the coal from the hopper to the coke extractor at the bottom of the retort is seven or eight hours. The coke is removed by an extractor actuated by a ratchet and pawl arrangement on a grooved wheel and driven by a rocking shaft and the coke then falls into a watersealed hopper which is large enough to take the amount drawn out during three revolutions of the extractor or about three hours discharge. The coke can be quenched if necessary by a small spray of water in the storage hopper but the amount of water is limited so that the coke is ejected in practically a dry state and at a temperature of 140° F. The passage of the coal through the retort is governed by the speed of the extractor the supply of coal at the top of the retort being arranged to keep the retort full with the exception of a small space at the top where the gas is led off and which can be regulated in size by a sliding partition. The top of the built up retort is closed by an iron casting carrying the coal feed the gas exit pipe and the sliding partition. The coal feed is a gas-tight hopper fixed eccentrically to the retort and closed by a gas-tight valve through which the hopper can be filled from another store hopper above. The operation takes a very short time and is necessary only once in three hours the size of the lower hopper being so calculated as to hold the coal to give the charge of coke removed by the three revolutions of the extractor at the bottom of the retort.

In any process where automatic and continuous action is arranged for the working parts of the apparatus are apt to become rather complex but in spite of the objections raised from time to time against continuous carbonisation the system is an established success being at work all over America and on the European Continent.

The other process based on the continuous carbonisation of coal is the *Glover West*. In this system an economy is obtained by utilising the heat from the cooling hopper for the coke to regenerate the air for the secondary combustion in the flues this making a slight decrease in the fuel consumption which is given as 10.5 per cent. Complete installations have been at work for some time at St. Helens and at Droghda the latter consisting of two settings of eight retorts each setting being subdivided into two sections of four retorts for convenience in working. The output of the plant is rated at 500 000 cubic feet of gas per twenty-four hours.

The retorts are 20 feet long oval in section and with a slightly increasing taper from the top to the bottom. The coke falls into a cast iron chamber at the bottom of the retorts and round it the secondary air supply is led. Beneath the coke chamber is the extractor slowly revolving vertical screw driven from a small gas engine by means of an arrangement of levers and ratchet wheels. The coke is discharged into a bottom hopper from which it is removed about every two hours. The top of the retort is similar to that of the *Woodall Duckham* being provided with the coal feeding hopper gas exit pipe and partition.

Extended experience with these systems has shown that in spite of their apparent complexity they work smoothly and noiselessly with complete absence of smoke and steam which is in sharp contrast with the old methods of carbonisation. The wear and tear also are very small. A great advantage of the process is the uniformity in composition of the gas whereas in the old horizontal retorts the composition of the gas evolved at the commencement and at the end of the carbonisation varied enormously and uniformity in composition was left to the mixture of the gas from many benches in the holder.

Intermediate between the old processes of carbonisation and coke oven recovery plant comes what is known as chamber carbonisation. By this method charges of three to

eight tons of coal can be dealt with at a time and it has met with considerable success especially on the European Continent where a number of installations have been erected

**Chamber carbonisation** The first chamber setting was erected in 1901 at the Munich works by H. Ries and E. Schilling who converted an old setting for inclined retorts by building into it three chambers each taking a charge of one ton of coal the floors of the chambers being at an angle of  $35^\circ$  to facilitate charging and discharging. This plant was so successful that the chambers were enlarged and later on in 1906 an installation of fifteen chambers in groups of three per setting was erected. Each chamber takes a charge of two and a half to three tons and the carbonisation is continued for 24 hours. A regards results Dr Bunte in 1907 reported that he obtained 11 342 cubic feet per ton of Saar coal having a gross calorific value of 626 B. Th. U. per cubic foot.

The success of the Munich plant was followed by the erection of a larger installation at Hamburg. The chambers consisted of ten settings of three chambers each the chambers being 24.6 feet long by 7.4 feet high the width varying from 1 foot 8 inches in the outside chambers to 2 feet in the central chamber. Carbonisation takes 24 hours and the capacity of the three chambers is 17.5 tons. A still larger installation of twelve settings of three chambers each was erected at Moosach the length of the chamber being increased to 28.7 feet. At many other places on the European Continent chamber ovens were erected by H. Koppers. A Klönne and Knoch and the Koppers system is now to be tried at Birmingham. Horizontal vertical and inclined chambers have all been tried and each has its advocates but the tendency seems to be to revert to the horizontal chamber with mechanical coke pusher.

The great advantage of chamber carbonisation is that it reduces the cost of handling and labour and it has been stated that a labour charge of 9d. has been reduced to 2d. on the other hand the calorific power of the gas is below the English standard although the calorific value is satisfactory and the initial cost of erection is very high.

Mr Charles Carpenter at the South Metropolitan gas works in London carried out some experiments with ordinary horizontal retorts by filling them full of coal as had been suggested by Kunath in 1885 instead of only partially filling them an operation which became a possibility only with the perfecting of charging and discharging machinery. He found that a considerable improvement was effected in the make and quality of the gas as well as in the tar. This is no doubt largely due to the elimination of the large space that was left above the charge of coal in the old practice which led to the degradation of the gas and tar vapours owing to contact with the red hot crown of the retort and the fully charged horizontal is being adopted at many works not yet prepared to instal verticals.

All the various systems of carbonisation in general use—fully charged horizontal retorts intermittent vertical retorts and continuous carbonisation retorts—show but little variation in the amount of gas they yield per ton of coal carbonised but if the fuel consumption be taken for comparison the continuous vertical retorts show a decided gain the following figures giving the amount of fuel consumed per 100 lbs. of coal carbonised—

Horizontal	Intermittent vertical	Continuous Woodall Duckham	Carbonisation (Glover West)
14	15	12.1	10.3

The low figure obtained in the Glover West system is accounted for by the regeneration of the secondary air supply by the waste heat from the coke.

The continuous vertical retort also has other minor advantages. In the ordinary gas works practice and with intermittent vertical installations the surrounding air is periodically rendered offensive by outbursts of steam and smoke from the charging and discharging of the retorts and the quenching of the coke but in the continuous vertical there is none of this annoyance the plant works with perfect cleanliness and absence of nuisance whilst the coke owing to being cooled before exposure to the air requires no spraying with water. The quality of the coke and tar and the yield of ammonium sulphate also are improved so that continuous carbonisation in vertical retorts offers the most advantages.

The great improvements in gas and residuals alike brought about by the introduction of the vertical retort and the fully charged horizontal are due to the elimination of the over decomposition of the hydrocarbon gases and vapours that used to take place with the old practice of only about half filling a horizontal retort with the charge of coal to be carbonised. Under these conditions as the heat began to penetrate the charge the gas that was evolved passed up into the empty space in the crown of the retort and was there subjected to radiant heat from the retort wall which are at a temperature of upwards of  $1000^\circ\text{C}$ . and also to contact with them the latter being destructive to the more easily decomposed hydrocarbons breaking them up into simpler hydrocarbons hydrogen and free carbon the latter forming deposits of retort carbon on the interior of the crown of the retort and soot found as free carbon in the tar. As the heat penetrates the carbonising mass the outer portion of the charge becomes red hot coke and the gas distilling from the inner core has to force its escape through this so that not only contact but catalytic action of the carbon surface adds to the destruction of the hydrocarbons as this action increases with the thickness of the red

hot envelope of coke the gas gets poorer and poorer as the carbonisation proceeds so that for the last hour during which gas is coming off it is practically non luminous

In the vertical retort and full horizontal the space above the coal is done away with and as the heat penetrates the charge gas tar vapour and steam distil inwards from the exterior portions and the vapours condensing in front of the zone of heat form a pasty tube through the cool coal core of which the gases escape without undue degradation to the mouthpiece. In this way about two thirds of the charge is distilled under conditions favourable to the formation of good gas and tar whilst a larger proportion of ammonia escapes destruction but as soon as the central core gets tar logged the remaining gas and vapour are forced back through the red hot column of coke and undergo complete degradation

During the last few years no very marked improvements have taken place in the purification of coal gas but a very interesting revival of an old process under new conditions has taken place at the Cheltenham gasworks which may prove of great value

**Coal liming** About thirty years ago the Cooper process of mixing lime with the coal before carbonisation in order to increase the yield of ammonia was extensively tried but abandoned on account of the increase in ash it gave in the coke J Paterson and Twycross have now tried moistening the surface of the coal after crushing with a small steam jet and dusting 2 per cent of lime over it which adheres uniformly to the moistened surface and shows a marked result not only in the amount of ammonia obtained but in the purification of the gas from bi sulphide of carbon the sulphur compounds other than sulphuretted hydrogen being reduced to 20 grains per 100 cubic feet instead of being double that amount whilst the increase in the ash of the coke is practically negligible

Attempts are also being made to introduce direct processes for the recovery of the ammonia sulphate by washing the gas after removal of the tar with dilute sulphuric acid as is done in some coke oven plants whilst a very interesting system of recovering the ammonia sulphate and at the same time utilising the sulphur of the sulphuretted hydrogen in the crude gas is also under trial This is known as **Burkheiser's process** and consists of removing the tar and passing the gas with the ammonia and sulphuretted hydrogen in it through porous hydrated ferric oxide warmed to 60°C which removes the whole of the sulphuretted hydrogen but not ammonia when the purifier is saturated with sulphide a current of air and steam is led through it the sulphur burns forming sulphur dioxide and tri oxide mixed with the residual nitrogen of the air these gases are then passed in small quantities into the gas containing ammonia flowing from another purifier of the same kind and the sulphate and sulphite of ammonia so formed is washed out of the gas in a scrubber with a dilute solution of ammonium sulphate which is used until concentrated when a mixture of two thirds ammonium sulphate and one third ammonium sulphite crystallises out (VIVIAN B LEWES)

### THE COAL-TAR INDUSTRY<sup>1</sup>

The history of coal tar and its utilisation has undergone an interesting phase during the past few years It is well known that the quality and value of coal tar is as dependent upon the temperature at which the coal is carbonised as upon the character of the coal whilst the amount of heating and contact with red hot surfaces that the tar vapours are subjected to after their formation also influences its composition as a result the tar has shown distinct changes with every alteration in gas manufacture these changes affecting the amounts of the products that can be obtained from it on distillation

These changes are best seen by the percentage fractions obtained from the tar —

Period	1820 to 1850	1850 to 1898	1898 to 1911
Process of carbonisation	Iron retorts	Fireclay retorts	Fireclay retorts
Temperature of carbonisation	800 C	1 000 C	1 050 C
Yield of gas cubic feet per ton	9 000	10 500	11 500
Composition of tar by weight			
Ammoniacal liquor	1 04	1 02	0 383
Crude naphtha	3 75	3 45	0 995
Light oils	4 47	2 59	0 567
Creosote oil	27 29	27 33	19 440
Anthracene oil	18 13	13 77	12 280
Pitch	41 80	47 67	64 080
Specific gravity of tar	1 140	1 154	1 206

<sup>1</sup> See E B vi 595 et seq

## COAL TAR

The results show that higher temperatures seriously diminished the amount of the more volatile distillates upon which the value of the tar largely depends.

In the first few years of this century the reduction in England of the Parliamentary standard of illuminating value and the introduction of the No. 2 standard Argand as a test burner led to a further pressing of temperatures in order to obtain a large volume of gas and brought about such a deterioration in the quality of the tar that the market price fell to 3d a gallon and had it not been for the enormous demand for tar that arose at this period for preparing the surface of roads tar would have fallen probably still lower as it contained the minimum of valuable products and anything up to 30 per cent of free carbon which deteriorated the pitch.

Luckily for those industries that are dependent upon tar products a marked improvement in the quality of the tar has taken place with the introduction of vertical retorts fully charged horizontally and chamber carbonisation (see under (45) MANUFACTURE) as is shown by the following analyses—

	Dessau verticals	Continuous Verticals
Specific gravity	1.113	1.074
Free carbon	4.0	3.1
Distillate up to 170° C	13.0	9.1
270° C	24.0	25.7
350° C	9.0	24.0
Pitch	50.0	46.0

**Road Tarring**—The use of tar for road surfaces now occupies so much attention that a short description of the methods employed will be of interest.

The tar used should be coal tar either from gas works or coke ovens and should be partially distilled before use in order to get rid of water and volatile oil. The specific gravity should be 1.2 to 1.25 and high temperature tar containing much naphthalene and free carbon should be avoided as these bodies have no binding effect and lead to disintegration.

Crude tar should never be used for surface work. The complaints which arise from the contamination of water in stream &c. from tar treated road nearly all arise from this source as the trace of water and ammoniacal liquor together with the volatile oil prevent rapid drying and if rain falls shortly after the tar has been used slight crumbling of the surface takes place and the water that flows into the gutters and stream becomes contaminated and shows itself by films on the water. The presence of water in the crude tar is also a serious drawback because the porous road material absorbs water more quickly than tar and this weakens the adhesion of the tar and leads to crumbling of the surface. Where partially distilled tar cannot be obtained the best way to prepare the crude tar is to heat it in copper to a temperature of 65° C (150° F) for several hours when most of the water will be driven off but great care must be taken in doing this as if the temperature rises above this point frothing over of the tar and ignition from the fire below is very apt to take place.

There are three methods by which the tar may be used in preparing the surface of the road—(1) Simply tarring the surface as is done in most rural districts. (2) Making the surface of the road with tar macadam. (3) Grouting the macadam whilst making the road with tar. The first method is the one employed to the largest extent and depends for its success on choosing a period of dry weather to carry it out, the surface of the road must be dry and all dust removed, the tar is then run on preferably hot from a tank on wheels with any form of sprayer that will give an even distribution or it may be applied by hand which allows of more attention being paid to local conditions in the road surface and sand or fine screenings may be dusted sparingly over the surface of the tar and all excess swept off when the tar sets. The advantages of this system are low cost, suppression of dust, increased life of roadway even in watering and good surface whilst the disadvantages are that it gives a slippery road for horses with frost and if the tar contains too much free carbon and naphthalene a black mud in wet weather. The second system consists in mixing the macadam with the prepared tar before making the road. Limestones absorb a very much larger proportion of tar than granites and make a more adherent mass when rolled but granite road metal can be used quite successfully. The procedure is to grade the road metal roughly into 2½, 1½ and ½ inch sizes, these are well dried and are mixed with the prepared tar and made up into heap that are allowed to stand for a week or ten days and a layer of the 2½ inch metal is put down and rolled, the operation is repeated with the 1½ inch metal and the surface is made of the ½ inch size. The third or grouting system is to put down the macadam in the usual way but dry and after light rolling to mix hot prepared tar with sand and float it over the surface brushing the grout into the interstices of the macadam and lightly sifting a little screening over the surface. The great demand for coal tar for this purpose has created a shortage in the supply but the improvement in price will probably lead to a rapid extension in the use of coke oven recovery plant thousands of tons of tar being burnt to waste annually in the by-product coke ovens which still are used in the North of England to a very great extent.

(VIVIAN B. LEWES)

GAS LIGHTING<sup>1</sup>

The incandescent gas mantle both in its upright and inverted forms has made steady headway during the past few years and the great increase in light that can be obtained by increase of the pressure under which the gas is supplied to the burner has been taken advantage of in constructing lamps for the illumination of large spaces

The most important outcome of the last few years with regard to gas lighting is the change of opinion that is gradually taking place with regard to its hygienic effect on the air of enclosed spaces. When the electric light was first introduced as a domestic illuminant the fact that it took no oxygen from the air and gave off no products of combustion led to the assumption that it must be more healthful in a dwelling room than gas which not only abstracted oxygen but evolved as products of combustion water vapour and carbon dioxide the amount of which latter gas in the air of a room had all ways been taken by the sanitary authorities as an indication of its hygienic condition. The researches of Dr S Rideal and others have shown conclusively however that the air in the breathing zone of an inhabited room lighted by the incandescent gas mantle is always fresher and less oppressive than with electric incandescent burners and that the increase in carbon dioxide and humidity which one would expect is not to be found whilst a large decrease in the organic matter takes place. This is explained by the fact that the uprush of heated air and products from the burner draws up the emanations from the skin and lungs of the occupants charring and sterilising any germs and organic matter that are present and reaching the ceiling at a temperature 1° C higher than when electric light is used diffuses so rapidly through the plaster as to draw in fresh air below the door of the room and whilst so diffusing filters off the carbonised organic matter and dust on the surface of the plaster, so giving the blackening that is always found above a gas burner which is often erroneously attributed to imperfect combustion.

Air movement coolness humidity and reduction in the mass action of pathogenic bacteria are now recognised as being of far greater importance to health than the chemical purity of the air and the convection currents and change of air set up by the heat of the incandescent gas burner lead, it is held to a fulfilment of these requirements far better than the electric light (VIVIAN B LEWES)

OIL LIGHTING<sup>2</sup>

There has been but little change in either the construction of oil lamps or the use of oil for lighting during the past few years and the production of a successful lamp using ordinary lamp oil and an incandescent mantle still awaits solution.

In lighting by oil gas a marked improvement has been made by Messrs Pintsch in railway carriage lamps. Attempts were made for many years to devise oil gas burners fitted for use with incandescent mantles but whilst upright mantles only were available no great success was achieved as the shaking of the train rapidly destroyed them and no anti vibration device seemed to have any effect in preventing this. When however the inverted mantle was introduced it was found that the method of suspending it by its steatite base from lugs on the burner nozzle rendered it far more resistant to shock, whilst in case of the mantle breaking the fabric was suspended in a fine platinum wire basket which kept it in position until it could be renewed. Using the ordinary Pintsch compressed oil gas in small inverted atmospheric burners a consumption of 0.6 of a cubic foot per hour gives with the mantle a light of 24 candle power or three times the amount of light for half the gas consumption with small flat flame burners.

An interesting development of compressed oil gas for portable use buoys, motor lamps etc is the introduction on the European continent of what is known as 'Blau gas'. When ordinary oil gas is compressed as in a Pintsch cylinder a considerable amount of liquid hydrocarbons, which were present in the gas as vapours separate out, the liquid consisting of benzene toluene hexane heptane etc and the gas suffers considerable reduction in illuminating power. The gas thus freed from vapours contains hydrogen methane of little or no illuminating power and the higher gaseous

<sup>2</sup> See *E B* vii 651 *et seq*

## ACETYLENE

members of the paraffin and ethylene series such as ethane propane butane ethylene propylene etc. of high illuminating power, and by cooling and compressing these under high pressure in a steel cylinder they are liquefied whilst the hydrogen and methane remain gaseous and pass on. This liquid gasifies entirely when the valve of the cylinder is opened and constitutes the 'Blau gas,' and is largely used when high light values are needed from jets or flat flame burners.

Of late years there has been a great influx of so-called air gas or petrol air gas machines on the market intended for the lighting of country houses where coal gas or electricity is not available. In nearly all these the principle first introduced by Hooker of adding only enough petrol vapour to the air to make it combustible and not enough to make it explosive has been adopted so that any leakage of the gas instead of forming an explosive mixture as would be the case with coal gas becomes non combustible from over dilution. The principle of all the machines is to evaporate a given weight of petrol into a definite volume of air and to bring this about a large number of automatic devices are employed driven by water power hot air engines or falling weights. The gas so formed consists of a mixture of about 98 per cent of air with 2 per cent petrol vapour and burns in specially constructed burners as a non luminous flame which is used with an incandescent mantle. A gallon of petrol in a good machine will make from 1400 to 1500 cubic feet of gas having a heating value of between 80 and 90 B Th U per cubic foot.

(VIVIAN B. LEWES)

ACETYLENE<sup>1</sup>

The progress of the past two years in the use of acetylene has been chiefly in the direction of oxy acetylene welding and cutting. As an illuminant the number of new installations in Great Britain keeps a steady average. In other countries where central installations for the lighting of small towns and villages are more often met with the increase is more marked. Welding and cutting by means of the oxy acetylene blowpipe however is advancing with great rapidity. America leading the way both in quantity and quality of the work done. Germany occupies the second place. France the third and the United Kingdom a bad fourth. A school of acetylene welding has however been started in England and more rapid progress is expected.

A noticeable feature is that in France and Germany nearly two thirds of the oxy acetylene welding done is in manufacturing work while in America the extreme value of the process for rapid repairs has been fully realized and nearly three quarters of the work done is of that character. The size of the work which can now be undertaken has enormously increased with extended knowledge of the requirements and two examples will suffice to indicate the saving that can be effected by the rapidity with which the work is done. A section of the frame of a steam hammer weighing about four tons was fractured and by means of the oxy acetylene torch new metal was filled into the break the whole of the welding completed and the section delivered within 48 hours. The Commonwealth a large passenger steamer was in collision with a warship and had her bows badly crumpled up but by the oxy acetylene cutting torch the damaged portion was removed the repairs executed and service resumed within a week.

In the early days of welding by the oxy acetylene blowpipe many cases occurred which seemed to point to the steel being rendered hard and brittle in the neighbourhood of the heated portion. Investigation however has shown that this is due to careless adjustment of the ratio of acetylene to oxygen in the blowpipe flame which with any excess of acetylene increased the carbon in the steel and so hardened it and that if a properly designed and adjusted blowpipe is used the tensile strength of test pieces cut from a plate with the oxy acetylene flame is higher than when sheared. Some recent Austrian experiments on two mild steels however show that when a chrome nickel steel hardened for armour plate is cut by the flame a softening of the steel takes place this being most noticeable close to the cut and gradually diminishing as the distance became greater whilst a nickel steel unhardened was perfectly unaffected.

The American Naval Department was one of the first to adopt the oxy acetylene process and in building one of the recent battleships expended over \$70 000 in welding and cutting by it. The system has also been adopted widely at many European ports and at Marseilles Genoa and Antwerp has been in use for several years. The use of acetylene dissolved in acetone under pressure the acetone being contained in porous material packed into strong steel cylinders has largely extended the scope of autogenous soldering as both acetylene

<sup>1</sup> See E B 1 137 et seq

and oxygen under pressure can be obtained in portable cylinders and repairs executed in the confined space of a ship's hold or even in the boilers themselves.

The trade in cylinders of dissolved acetylene has as might be expected expanded rapidly both in Great Britain and elsewhere this being due partly to the advance in oxy acetylene welding but more largely to the enormous increase in the number of motor vehicles the headlights from which are most conveniently supplied with acetylene from a cylinder of dissolved gas which does away with the trouble incidental to a portable generator.

Another direction in which the use of acetylene has made enormous strides in America is for self starters for motor cars of which some fifteen different kinds are in use in the United States. In one class of self starters the pressure existing in the acetylene cylinder is used to force a charge of gas and air into the explosion cylinders of the motor engine where it is fired by the spark and starts the engine the

Disco automatic self starter being one of the best of this class while the Prest-O-Starter may be taken as the type of a second class in which low pressures only are used the mixture of gas and air being pumped into the cylinders in proper firing order.

In 1896 it was shown that when acetylene is passed through a red hot tube it undergoes instantaneous decomposition with deposition of carbon and liberation of hydrogen the

**Polymerisation of acetylene** carbon being rendered incandescent by the exothermic decomposition and that the temperature at which this takes place could be raised by dilution with hydrogen when this was done the acetylene underwent condensation into benzene and other hydrocarbons. R. Meyer has now reported these observations on a larger scale. The apparatus consisted essentially of two vertical tubes electrically heated and a mixture of acetylene and hydrogen was passed slowly through them the temperature being so arranged that separation of carbon was to a large extent avoided. The first tube was heated to 650° C. and the second to 800° C. when it was found that a quantity of a light brown tarry liquid was formed and that the gases leaving the apparatus contained methane. In some cases the yield of liquid was about 60 per cent of the weight of acetylene used and contained nearly 20 per cent of its weight of benzene. Other hydrocarbons identified were toluene naphthalene anthracene indene diphenyl fluorene pyrene and chrysene and further experiments with acetylene and hydrocyanic acid confirmed Sir W. Ramsay's observations that these bodies condensed to form pyridine bases.

A considerable amount of work has been done in utilising calcium carbide for the fixation of atmospheric nitrogen. In order to do this crushed calcium carbide is heated to a temperature of 800-1000° C. in an electric furnace and nitrogen generally obtained by liquefying air by the Linde process and allowing the nitrogen to distil off is then passed through the red hot mass and converts the calcium carbide into calcium cyanamide  $\text{CaCN}_2$ . This is now recognised as an extremely valuable manurial matter and it slowly evolves ammonia under the influence of moisture according to the equation  $\text{CaCN}_2 + 3\text{H}_2\text{O} = \text{CaCO}_3 + 2\text{NH}_3$ . There is a large installation at Odda in which 190 electric furnaces are employed and about 30 tons of calcium cyanamide containing 16 per cent of nitrogen made per 24 hours whilst the world's production for the past year amounts to nearly 200,000 tons.

### THE PETROLEUM INDUSTRY<sup>1</sup>

The winning of petroleum in regions of proved productivity and concurrently the discovery of new sources of supply are being greatly stimulated by the rapidly increasing employment of oil fuel for power purposes both as a substitute for solid fuel in steam raising and through the medium of the internal combustion engine.

Since its inception half a century ago the petroleum industry has advanced to a position of great importance mainly in supplying a cheap convenient and efficient light and an excellent lubricant for machinery. During the past few years it has also furnished the motor spirit which drives our automobiles motor boats submarines hydroplanes and aeroplanes. Now however it is entering upon a new era in becoming a great fuel industry and its further expansion promises to be far more rapid for it is evident that if there is to be any large substitution of oil for coal as a source of power the output of oil will have to be greatly increased. At present the world's production of petroleum does not amount to much more than 5 per cent of the output of coal even allowing for the higher calorific value of the liquid combustible. The general employment of motor spirit has of itself contributed largely to the present profitable character of the business though the high price at which this product is now sold is leading to the use of distillates of higher specific gravity and lower volatility, of which a far larger percent

<sup>1</sup> See E. B. xxii 316 et seq.

## PETROLEUM

age can be obtained from the crude oil. Probably the owner of the private motor car will always prefer to have the product which he has been accustomed to use even if he has to pay a high price for it but for use in public service and commercial motor vehicles an increasing substitution of the less volatile product may be looked for and it is desirable that this should be so for the supply of motor spirit may otherwise become inadequate to meet the increasing demands though at present the United States and the Dutch East Indies which are the chief sources show no signs of failure in this respect.

In regard to the industrial use of oil for power purposes it is instructive to consider the remarkable changes which have been effected in the United States within very recent years by the provision of liquid fuel. As was pointed out by Dr David T. Day in an instructive article published in *The Times* (London) for June 28 1912 the supply of oil fuel has been a potent factor in State development. It has made Oklahoma a state abundant in prosperous cities and has developed the railroads and manufacturing industries of Texas. In Louisiana it has made the sugar industry ready for the free list and corresponding changes are in progress in Illinois and further west in Wyoming. Oil fuel has completely revolutionised California so that the state is in the midst of a startlingly rapid transformation from a mining and agricultural community to a manufacturing centre and the keynote of the Panama Pacific Exposition of 1915 in San Francisco originally intended to be a tribute to the extension of commerce through the opening of the Panama Canal will be the change of San Francisco from a future Liverpool to a future Birmingham.

For marine purposes as well as in industrial establishments the most potent factor in the replacement of coal by oil is however unquestionably the Diesel engine which possesses great economic advantages over other type of internal combustion engines. Not only can a much greater amount of power be obtained with this engine from a given quantity of oil but in addition the less volatile hydrocarbons of which petroleum is chiefly composed and even the crude oil itself can be used with it.

For use on railroads the Diesel engine has not as yet been substituted for the steam locomotive but the employment of oil fuel which for many years has been common in Southern Russia has been extended to other countries especially the United States.

According to the figures compiled by Redwood and Eastlake the world's production of crude petroleum amounted in 1909 to 40 070 832 metric tons and in 1910 to 43 086 551 metric tons while in 1911 (from Day's figures) it was 46 563 344 metric tons. Details of the production in different areas for 1909 and 1910 (Redwood and Eastlake) and 1911 (Day) are shown in Table A.

It will be observed that the United States continues to occupy a predominant position in the industry having contributed in 1911 no less than 62.8 per cent of the world's output the next in order being Russia with 19.16 per cent of the total. During 1911 the production of Mexico increased so largely as to bring that country into the third place and as soon as there are adequate transport facilities the increase will probably be far greater. Other countries of very considerable commercial importance in the industry are the Dutch East Indies Rumania and Galicia. To the aggregate output of the United States California contributed far more largely than any other state and may be expected to provide sufficient oil for the industrial needs of the whole Pacific slope for many years to come. The similar requirements of the Atlantic coast will probably be met by the importation of the surplus production of Mexico.

The older oil fields of Russia in the Baku region which in the past have produced immense quantities of oil from a comparatively small area are showing signs of exhaustion but other districts are being actively exploited with highly promising results. In the Ural Caspian region lying east and west of the Ural river there are over 30 000 square miles of territory where already some very productive wells have been drilled and a large proportion of which may prove to be richly petroliferous. The island of Cheleken has also become commercially important as a source of oil. The sanguine anticipations expressed in regard to the Maikop oil field have not been fulfilled but its prospects will be better understood when we know the results of the deep drilling

operations recently in progress. Attention has also been directed to exploratory work on the Taman Peninsula.

Among other countries which may be confidently expected to add largely to the world's supplies of petroleum in the near future is Persia where there is an immense area of presumably petrolierous lands a portion of which has already been proved by the test of the drill to be highly productive. Drilling operations in Egypt on the Gulf of Suez have also been attended with results which are regarded as sufficiently promising to justify the provision of a large capital for the development of the industry. The island of Trinidad is being systematically examined and sufficient has been done to lead to the belief that large stores of oil exist there in 1911 it produced 1 011 metric tons. Among other potential sources of supply which have attracted the notice of the prospector are Turkey (Mesopotamia) New Zealand New Brunswick Newfoundland Canada (north west) Alaska Venezuela Barbados Madagascar China Argentina Algeria Nigeria Colombia Ecuador and Bolivia. There are also sources of oil in the bituminous shale deposits of France Serbia Spain South America New South Wales New Zealand New Brunswick Nova Scotia and Newfoundland. (BOYDTON REDWOOD)

## AGRICULTURE

### PROGRESS OF SCIENTIFIC RESEARCH

During recent years notable advances have been made in agricultural science and especially in the application of chemistry and biology to agricultural practice.

The perennial question of the source of the combined nitrogen utilised by vegetation has received fresh light from the discovery by Beijerinck of a group of bacteria living free in soil and water and possessing the power of bringing the free nitrogen of the atmosphere into combination. These organisms known as *Azotobacter* are powerful oxidisers of carbohydrate material from which process they derive the energy necessary to effect the fixation of the nitrogen and they have been identified in cultivated and virgin soils from all parts of the world. They are however only practically effective in soils containing carbonate of lime, though they have been found in all the steppe soils where black soil rich in nitrogen

The question of nitrogen

has accumulated to a considerable depth, such soils for example as are found in Manitoba the Russian steppes and the Pampas of South America. Despite the fixing action of the bacteria associated with the leguminous plants it has always been difficult to regard the enormous accumulation of nitrogen in virgin soils as the result only of past vegetation since the higher plants are only capable of taking already combined nitrogen from the soil and restoring it again as they die down. When however the vegetation falls back to the soil carbohydrates are added which have been manufactured by the green leaf from the carbon dioxide of the atmosphere by the help of light and it is by the subsequent oxidation of this non nitrogenous material by *Azotobacter* that free nitrogen is drawn into combination and the stock in the soil is added to.

The examination at Rothamsted England of the soil of a wheat field under arable cultivation for more than half a century shows a steady decline in nitrogen content approximately equivalent to the removals in crop any recuperative actions at work being only sufficient to balance casual losses by drainage weeds etc. A portion of the wheat field was however, allowed to go to waste some thirty years ago and became covered with a natural vegetation of weeds and grasses which are never cut but allowed to die down each year *in situ*. The soil of this portion was found to have gained nitrogen at the rate of nearly 100 lbs per acre per annum the greater proportion of which must have been fixed by *Azotobacter* working on the carbonaceous matter of the dead vegetation. With this clue we can interpret the accumulation of nitrogen in virgin soil carrying a grassy vegetation similarly forest soils which annually receive carbonaceous matter from the fall of the leaf become enriched in nitrogen though in both cases the process will only be effective if the soil contains carbonate of lime. Again when land is laid down to grass for a period there will be a regeneration of the nitrogen stock by the action of *Azotobacter* utilising the carbonaceous matter in the roots and stubble of the grass.

The last decade has also seen the resources of agriculture enriched by two new nitrogenous fertilisers in which the nitrogen is derived from the atmosphere by artificial means. Sir William Crookes had drawn attention to the possibilities of the fixation of nitrogen by means of the electric spark but the process only attained commercial realisation through the methods devised by Birkeland & Eyde now worked on an enormous scale at Notodden in Norway. In this process an alternating current of about 5 000 volts derived from water power is set to form an arc between U shaped copper electrodes water cooled. The arc is spread out into a broad flat flame by means of a powerful magnetic field and through it is blown a current of air at gentle pressure. The issuing air at a temperature of 600-700°C contains about 1 per cent of nitric oxide which after cooling combines with more oxygen from the air and is dissolved out by water and finally by milk of lime. The final products are nitric acid and nitrate of lime which latter with about 13 per cent of combined nitrogen is now being sold as a fertiliser. The lime base gives it certain advantages over nitrate of soda on heavy soils deficient in lime and as the nitrogen is equally effective unit for unit nitrate of lime forms a valuable addition to the stock of nitrogenous fertilisers.

The other fertiliser depends upon a different principle the combination of nitrogen with bodies of a metallic nature to form compounds which will give rise to ammonia on decomposition with water. A metal is not however the starting point but calcium carbide now manufactured on an enormous scale for the generation of acetylene. At a temperature of about 2000°C it combines with free nitrogen to form calcium cyanamide which by the action of water becomes converted into calcium carbonate and free ammonia. The process is now extensively carried out in conjunction with various calcium carbide works situated where water power is available as at Odde in Sweden in Savoy and at Piano d'Orte near Rome. The roughly ground carbide is heated in tubes through which is passed pure nitrogen obtained by the fractional distillation of liquefied air. The product contains 18-20 per cent of combined nitrogen with about 20 per cent of free lime it is sold under the name of nitrolim or kalk-stickstoff and forms an effective nitrogenous fertiliser, especially valuable on soils poor in lime.

Another series of investigations that may have considerable outcome in practice deal with the results of the partial sterilisation of soil. Various observers had noticed from time to time that a soil which had been heated to the temperature of boiling water was thereby markedly more productive than before. A similar increase of fertility follows treatment with volatile antiseptics such as chloroform, toluene, etc. Russell & Hutchinson working in the Rothamsted Laboratory arrived at an unexpected solution of the problem. They found that the increased productivity was due to the rapid rate at which the soil developed ammonia after the treatment; the ammonia did not change further to nitrates because the nitrifying organisms had been destroyed, but the plants utilised the ammonia directly. The treatment moreover did not completely sterilise the soil; a small number of organisms capable of decomposing the nitrogenous residues in the soil into ammonia are left and multiply with great rapidity until within a few weeks the numbers of bacteria within the soil are far in excess of those prevailing in the untreated soil. These bacteria account for the increased production of ammonia and therefore fertility of the treated soil. Further investigation led to the conclusion that normal soil contains agencies restricting the development of bacteria and therefore the rate of ammonia production and consequent fertility, which negative agencies are wholly removed by the heating and treatment with antiseptics, and these agencies were identified as protozoa, amoebae, etc. living in the soil, large organisms which feed upon living bacteria. They are killed off by the partial sterilisation, and on the removal of this check the bacteria are enabled to increase their numbers to an extent previously impossible, thus raising the rate of production of plant food from the otherwise unavailable nitrogenous material in the soil. It has been found practicable to apply these principles with commercial success to the treatment of green house soils, which rapidly degenerate and have to be replaced because the conditions of warmth and moisture are especially favourable to the development of protozoa. Again the soil of sewage farms rapidly deteriorates and becomes ineffective towards the purification of sewage from the same causes, but can be restored to its proper character by partially burning the soil or treatment with antiseptics. Much progress has not been made with the treatment of ordinary farm land, as heating is out of the question; the desideratum is a cheap antiseptic of the right degree of volatility.

The rediscovery and extension of the Mendelian theories of inheritance have placed the question of breeding new varieties of domesticated animals and plants upon a new basis, inasmuch as they offer a method by which the attainment of a particular desired result can be foreseen. While animals present certain special difficulties because of the complexity of the factors involved in such characters as meat, milk, or wool, plants are simpler, and considerable progress has been made in the application of breeding on Mendelian lines to the production of new varieties of cereals, which afford particularly easy material for work because they are naturally self-fertilised. The English and West European varieties of wheat, for example, are distinguished by their capacity for heavy cropping, but they do not command the higher range of prices because flour made from them is not strong, i.e. it does not make large loaves and is starchy rather than nitrogenous in comparison with the wheats grown in the east of Europe, Manitoba, Kansas, etc. Some of the latter wheats preserve a considerable measure of their strength and high nitrogen content on English soils, but the yield is too low to enable them to be profitable even at the higher price per bushel. Biffen at Cambridge has shown that this high nitrogen content and strength is a Mendelian character that segregates in the offspring of cross-bred parents, and has succeeded in breeding one or two varieties which combine to a marked degree the cropping powers of the English wheats and the strength of other varieties, and one at least of these new cross-breeds is now being grown commercially in England. Other experiments that promise success on a working scale deal with the breeding of wheats proof against rust, a disease which seriously affects the yield of wheat in many of the warmer countries and may indeed prohibit their growth as over much of S. Africa. A rust-proof species had been found, and though its miserable yield deprives it of all commercial value it transmits its

immunity on Mendelian lines when crossed with other varieties hence by suitable crossing and selection a rust resistant variety yielding normal crops has been obtained. Another line of attack has led to considerable improvement among existing races of cereals and that is the process of selection of 'pure lines' associated with Nilssen and the experimental station of Svalof in Sweden. If a field of any variety be examined putting aside accidental admixtures a considerable range of variation will be observed in such characters as the length of ear, the stiffness of the straw, the size of the grains, etc. etc. The majority of these differences are due to accidents of nutrition and are not inherited but by selecting a number of ears from plants possessing the desired characteristics and growing the corn from each separately a few will be found to transmit the variation and by raising a stock of seed from the best a permanent improvement in the variety can be effected. Moreover such a pure strain will be found to possess a great uniformity in the time of ripening and similar factors which alone may make it of more value than the composite out of which it originated. The success of such breeding along pure lines is in marked contrast to the failure of many attempts to improve crops by mass selection i.e. by picking out a large number of the best ears or the heaviest corns and raising a stock of seed from this aggregate. So large a proportion of the improved material owes its character to nutrition alone and falls back in the next generation that the resulting mixture of strains is very slightly better than the unselected mass.

The scientific advance in the theory of the nutrition of animals has been of too technical a nature for discussion here especially as it has resulted in no modifications of practice but the advent of a new and valuable feeding stuff into Europe may be noted. This is the soya bean which has been long grown for both human and cattle food in China and Japan. At the close of the Russo-Japanese war when Manchuria was opened up to Japanese traders it was found that large quantities of this bean were obtainable and the firm of Mitsui embarked on its importation into Europe. The bean contains up to 17 per cent of a neutral tasteless oil valuable for food, soap making and other purposes to which vegetable oils are applied and this oil is extracted by pressure in the usual way. The residual cake forms a valuable food for all classes of stock containing about 6 per cent of oil and over 40 per cent of proteins. Its advent has been particularly fortunate in that it occurred at a time when linseed cake for which it is almost an equivalent was rising to an exceptional price.

(A. D. HALL.)

#### AGRICULTURAL ORGANISATION IN THE UNITED KINGDOM

The increasing demand for state assistance for agricultural research and education, improvement of live stock, furtherance of co-operation etc. led Mr. Lloyd George as Chancellor of the Exchequer to introduce the Development Act in 1900 under which a Commission was appointed to make recommendations to the Treasury of grants for the promotion of rural industries. The grants are to be made either to a government department or to a university or other association not trading for profit and a sum in the first instance of £500,000 has been set aside for the purposes of the Commission. Under this Act schemes have already been approved and grants made for the furtherance of research and education, for the promotion of co-operation, for the improvement of live stock and horses, for experiments in the cultivation of tobacco, flax, hemp, etc. etc.

Up to 1911 the Board of Agriculture was charged with the administration of agricultural affairs in England, Scotland and Wales. In 1911 a separate Board was created for Scotland to which were transferred the duties appertaining to the old Board as regards Scotland, higher agricultural education and the administration of a scheme of land purchase for the creation of small holdings. To this Scotch Board of Agriculture an annual grant of £200,000 is made.

Owing to the increased grants derived from the Development Commission the organisation of agricultural education and research has been considerably advanced of late years in the United Kingdom and very shortly it will possess a complete system

making provision for all grades of instruction. The schemes to which effect is now being given deal with research, higher and intermediate agricultural education. Provision for research is being made by the foundation of a number of institutes as a rule attached to a university, each dealing with one branch of agricultural science.

As regards higher agricultural education, England and Wales are divided into 12 provinces in each of which an Agricultural College or Department of a University is located, where long courses of instruction are given leading to a degree or diploma in agriculture. These colleges receive grants from the Board of Agriculture of about £1000 each for education, and in addition grants of £1000 each to provide a staff available for advisory work and local investigation within its area, together with a further grant for a Live Stock officer charged with the organisation of certain schemes for the improvement of live stock.

As regards intermediate agricultural education, all forms of agricultural education below the colleges were formerly under the supervision of the Board of Education, the county being the unit of area and the County Council the authority, but in 1911 the control was transferred to the Board of Agriculture, who administer a grant from the Development Commissioners for the setting up of Farm Institutes. A farm institute may be established by a single county or a group of counties and may take the form of a Farm School receiving pupil for a year or less, a winter school giving short courses of instruction in the winter months, or an institute serving as a centre for short courses of instruction in special subjects and for the itinerant lecturer employed in the county. Travelling dairy schools and similar practical instruction also form part of the programme of the institutes.

In Scotland the whole of the agricultural education is supervised by the Scotch Board of Agriculture, and is carried out under Colleges of Agriculture associated with the Universities of Edinburgh, Glasgow and Aberdeen. These colleges possess in addition to their resident staff, which gives instruction leading up to the degree of B.Sc., a large extension staff of whom one or more is resident in each county, included in the province appropriated to the college. These instructors give lectures, conduct experiments and generally advise the farmers within their area. Many of the primary schools have developed a strong agricultural side to their teaching, but no farm institutes exist in Scotland.

The provision of agricultural education in Ireland is administered by the Department of Agriculture, working as regards intermediate and lower education in conjunction with the County Councils. A three years course of instruction in agriculture and the applied sciences is given at the Royal College of Science, Dublin, and a one year's course of a more immediately practical character at the Albert Agricultural College, Glasnevin, to both of which institutions the Department grant scholarships. The Munster Institute, Cork, and the Ulster Dairy School provide instruction in dairy work and creamery management, while at Athenry, Co. Galway, Ballyvaughan, Co. Cavan, and Clonakilty, Co. Cork, are agricultural stations at which short courses of instruction, chiefly practical, are annually given. In addition the Department maintains a service of itinerant instructors in agriculture working in conjunction with the county councils.

The most notable movement of late years has been the revival of interest in small holdings. The returning prosperity of the agricultural industry consequent on the rising prices of farm produce became noticeable about 1904-05; a demand began to spring up for farms until about 1908 it was rare to find farms in hand in any parts of the country, and a year or two later so numerous were the enquiries that increased rents could be obtained for all land that fell vacant. In 1900 rents were in some cases raised to the sitting tenants, and despite the fact that 1911 and 1912 proved bad seasons in certain parts of the country, there are still more applicants for farms than can be satisfied and rents are everywhere rising. This demand for land on the part of working men resulted in 1907, in the passing of the Small Holdings Act, amending the previous Act of 1891. The new Act gave county councils the power not only to buy land and resell it to small holder, but to take land on lease and let it on such terms as would repay the councils for their expenditure. The county councils were given compulsory powers for both purchase and hiring of land, and a number of commissioners were appointed to stimulate and assist the councils, the Board of Agriculture being given powers to put the Act in operation wherever it was found that the county council was backward. Under this Act a large number of statutory small holdings have been created, the success of which cannot as yet be estimated, though there is evidence that the expenses incurred by a public body in purchase, provision, the erection of buildings, etc., are burdening the holdings with rents that are difficult to earn. Under the operations of this Act holdings of between 1 and 50 acres, which had fallen to their lowest number in 1908, increased from 287,176 to 292,488 in 1911. The Small

**Small Holdings**

Holdings Act with its compulsory powers followed by the Finance Act of 1910, created a feeling of distrust among owners of land, which with the rising values due to the returning prosperity of agriculture prompted an unprecedented number of estate sales. During 1910 and 1911 the sales both of large and small estates went on in increasing volume and many tenants found themselves in the difficult position of having either to give up their farms which they had worked up into a profitable condition from their previous depressed state or to find the capital for their purchase. Many cases of hardship occurred until there was a call for legislation and a Departmental Committee which reported in 1912 was appointed to consider the advisability of state assistance towards enabling sitting tenants to purchase their holdings.

During the period of depression the British farmer may be said to have emancipated himself from the covenants as to the course of cropping that proved so characteristic a feature of the old agreements whether for a lease or for a yearly tenancy.

**Cropping** Freedom of cropping and sale has been rendered possible by the introduction of artificial manures and imported feeding stuffs which enable the farmer to restore to the farm the elements of fertility which are being sold away in the crops. Under the old four course rotation all that was lost to the land was the nitrogen phosphoric acid and potash contained in the corn and meat sold and the losses of the first named element were replaced by the nitrogen of the atmosphere brought into combination during the growth of the clover crop the roots the hay and the straw which make the chief demands upon the soil were all returned and under such a conservative system of farming the fertility of the land could be maintained almost indefinitely though the level of production attained was not high. The sale of the so called recuperative or green crops or even the introduction of additional corn crops into the rotation disturbed this equilibrium and the losses had to be repaired by imported fertility as manure or food. Still it can hardly be said that the British farmer was emancipated from his old restrictions because of any increased appreciation of the scientific issues involved in the bad times he became able to make what bargain he pleased and could force his landlord to accept any scheme of cropping that would yield a profit.

The old fashioned farming on which the covenants were based assumed that the crops were taken out of the soil modern intensive farming only uses the soil as a medium to transform certain raw materials manures and feeding stuffs into saleable products. Big crops do not in practice prove exhausting to the land because they can only be attained by getting the soil into high condition and supplying an overplus of manure. The last decade having been a period of advancing prices has encouraged British farmers to raise the fertility of their land and aim at systems of cropping that would ensure larger returns per acre. It cannot be said that any new rotations have been introduced for the underlying principles are of course not subject to change but such systems as permit of more than two years corn in four or the introduction of a paying crop like potatoes or the reduction of the labour bill have resulted in widespread modifications. For instance the five course shift—roots barley seeds wheat barley or oats—nowadays more characteristic of Norfolk than the rotation called the Norfolk has become very general or even a six course like wheat oats roots oats wheat seeds found in the maritime plain of West Sussex is now regularly followed because thereby the land yields two saleable crops in three years. As examples of cropping dictated by the potato crop we may instance a characteristic East Lothian rotation—potatoes, wheat seeds potatoes turnips barley or a Lincolnshire one—potatoes oats wheat with seeds every seventh year. On the other hand we find in Scotland a tendency to increase the duration of the grass in the rotation as prices fell and labour grew more costly it became common to leave the seeds down for two or three years the five or six shift. Indeed the longer system has been forced upon many farmers by the increasing trouble with finger and toe in the turnips which however becomes greatly reduced during the comparatively long rest from cruciferous plants the land obtains when laid down to grass. Near large cities where market gardening prevails or where there is a demand for hay and straw, and root crops and green meat for the town

dairies farmers have often lost any idea of rotations they consult their convenience and the promise of the market entirely though cleaning the land and arrangement of labour necessitate some alternation of green and straw crops With the need for heavy manuring the necessity for a sequence of crops largely disappears, near Penzance for example farmers have for forty years grown year by year a crop of early potatoes followed by one of broccoli and on the Ayrshire coast early potatoes are similarly repeated on the same land and followed up by some sort of catch crop to be eaten off by sheep

The intensive growers of market garden and other produce in the neighbourhood of the large towns are beginning to find their operations curtailed by the rapidly increasing

*Decrease in town manure*

difficulty of getting town manure For example near London one great market gardening district is the strip of light Lower Greensand that is found in Bedfordshire by Sandv and Biggleswade another lies upon the thin Bagshot Sands and the alluvials derived from them in Surrey, another upon the equally poor sands of the Eocene in North Kent all soils naturally of the poorest quality but easy to work early and grateful when liberally supplied with dung The potato growers on the gravels of Hertfordshire, which Arthur Young described as the jaws of a wolf and the hop growers of Kent, are equally dependent upon London manure as the Lancashire and Cheshire potato growers look to the Lancashire towns and the Ayrshire men to Glasgow But the advent of the motor car particularly its displacement of horses in omnibuses trams and the vans of the big carrying companies, has already enormously reduced the amount of manure produced London manure for example which 35 or seven years ago could be bought at 15 a ton on rail or on barge has now risen to over 45 6d and become of much inferior quality At the same time the town market for straw and hay has declined so that considerable changes in the farming methods near the large towns are inevitable It is difficult to see how the market gardeners can easily replace the dung they are losing on the light soils an abundant supply of humus is as essential as the fertilising elements that are also supplied by farmyard manure Failing the latter the only alternative method of obtaining humus is to turn in green crops but the market gardener cannot as a rule afford to leave his land idle even for the time in which to grow a catch crop like mustard or tares<sup>1</sup>

It cannot be said that any new staple crops have been introduced into the United Kingdom Some considerable experiments have however, been made in the direction of reintroducing tobacco, experiments mainly conducted in Ireland and

*British tobacco growing*

owing their substantial progress chiefly to Sir Nugent Everard of Randles town Tobacco was at one time grown freely in England Scotland and Ireland but the cultivation was put down partly in the interests of the Virginia settlement and partly because of political objections to the excise that had to be applied as an equivalent to the customs duty Permission having been obtained from the Treasury who granted a bounty of £50 an acre and an excise rebate of 1d per lb of manufactured tobacco experiments began in 1904 and 124 acres were in 1912 under crop in Ireland Corresponding experiments did not begin in England until 1911 30 acres being so cropped in 1912 It has been demonstrated that certain grades of smoking tobacco particularly a Virginian variety known as Blue Prior will grow with great vigour in the British Isles crops as large as 1600 lbs per acre of merchantable tobacco having been obtained but it has not yet been demonstrated that the culture will succeed on a commercial scale without any bounty Further experiments extending to 150 acres in Ireland and about the same area in England have been sanctioned

Considerable interest has been aroused in the question of whether the sugar beet crop can be given a footing in British agriculture, largely through the efforts of Mr Sigmund Stein who for many years has organised the growth of trial plots of sugar beet in various parts of the kingdom, and by the analysis of the roots had demonstrated that crops can be grown as large as or larger than those obtained on the Continent, and

<sup>1</sup>In view of the decline in the supply of manure the chief engineer to the London County Council suggested in December 1912 that attention should be directed to the utilisation of the London sewage which at present is simply carried out to sea and destroyed.

of equal richness and purity During 1909 and 1910 crops on a commercial scale were grown in East Anglia and exported to Holland for manufacture but owing to the large amount of capital required for a modern factory none of the projected undertakings was able to make a start The Government were precluded from extending any assistance so long as they were bound by the provisions of the Brussels Convention but in 1911 a branch of a Dutch company established a factory at Cantley in Norfolk It may be taken as established that profitable crops may be grown in England at prices equivalent to those paid by the Continental factories The question is whether the manufacturing process can be conducted cheaply enough to make the industry profitable (A D HALL)

### DRY FARMING

The term "Dry Farming" has come into use to meet the need for a descriptive name for that type of farming which has been developed without irrigation in semi arid regions where irrigation is desirable but impracticable No infallible rule can be laid down as to the range of annual precipitation which will include the dry farming regions and delimit them from humid regions on the one hand and from arid regions on the other It is however fairly well recognised that in most parts of the United States and Canada the minimum requirement for dry farming is represented by about 12 inches annual precipitation and that 20 inches or more is sufficient when properly distributed for crop production, on most soils of the Middle West by ordinary methods of humid agriculture

For several years past annual international congresses have been held in the western states of the United States in the interest of the dry farming movement The 5th congress held at Spokane Wash October 3-6 1910 was attended by 1200 delegates and the 6th held at Colorado Springs Colo October 16-20 1911 and presided over by President J H Worst of North Dakota Agricultural College was even more satisfactory The seventh was held at Lethbridge<sup>1</sup> Alberta Canada October 21-25 1912 and was attended by delegates from 15 nations W R Motherwell minister of agriculture for Saskatchewan was chosen president for the ensuing year and resolutions were adopted favouring the raising of a fund of \$1 000 000 for the purpose of maintaining permanent headquarters and inaugurating a world wide propaganda Oklahoma City Okla was selected as the place for holding the 1913 congress An important part of the work of the U S department of agriculture and of many state agriculture experiment stations in 1912 related to the subject of dry farming

The most distinctive feature of dry farming as compared with other types of farming is that it recognises the conservation and utilisation of moisture as the aim and end of all agricultural practices having to do with soil preparation and crop production Even the problems involved in the quality of the crop produced and the maintenance of soil fertility which are of major importance in most systems of agriculture assume a minor importance in dry farming It is more important that a variety be selected that is reasonably certain to grow and produce a moderate crop of fair quality under semi arid conditions than to select one that might produce a superior quality and quantity of crop if climatic conditions happened to be favourable but would fail to produce any crop under adverse conditions The problems of soil fertility under dry farming conditions are relatively simple as compared with those of humid agriculture Dry farming soils are usually rich especially in the mineral elements of plant food for the reason that they have been formed under arid or semi arid conditions which instead of leaching out the soluble salts formed from the disintegration of rock material, have caused an accumulation of these salts near the surface The same climatic conditions which have produced these fertile soils will tend to preserve these salts under dry farming methods which take from the soil but small quantities of mineral plant food for the production of the moderate crops usually produced The

<sup>1</sup> *Dry Farming and Rural Homes* (founded 1906) the official bulletin of the congress is published monthly at Lethbridge Alberta

deterioration in the soil under dry farming is therefore likely to be mainly in the loss of the organic matter. In most virgin dry farming soils the organic matter is low in quantity but high in nitrogen content and it may be rapidly destroyed under faulty methods of farming particularly where bare fallow is frequently practiced and where the amount of organic matter which is restored by plowing under some portion of the crops grown is small. Here occurs another contrast between dry farming and humid farming. The main object usually sought in increasing the organic matter in soils of the humid regions is to provide nitrogen while under dry farming the main purpose is to improve the physical condition of the soil in its relation to water, with the addition of nitrogen as a secondary consideration.

Many attempts have been made to elaborate some general system of dry farming that would meet all conditions. Such attempts could be made only by those with an entirely inadequate conception of the magnitude and complexity of the problems involved and the diversity of soil and climatic conditions to be encountered or by those having some ulterior motives in promulgating such theories. The soils of the dry farming regions range from the lightest sands and silts to the heaviest clays and the annual precipitation from severe drought to humid conditions. Even in years of normal precipitation the daily distribution of the rainfall in relation to the stage of development of the crop and the character of the soil may under some combinations of these factors result in the production of an abundant crop and in others a total failure. Practically every detail of dry farming practice must be predicated upon the particular combination of soil, climatic and economic conditions with which the farmer is confronted at the time nor can he disregard the conditions that are likely to exist at some future time. For instance some have advocated early deep fall plowing as an invariable practice. Some soils under some climatic conditions are in such conditions at that time of year as to make deep plowing and in some instances even shallow plowing utterly impracticable. The dry farmer must then look forward and attempt to form an opinion as to what combination of conditions is likely to exist during the following spring and to calculate how much spring plowing he can do with his available teams before seeding time. He may come to the conclusion that he must disk some of his land without plowing at all and it is not impossible that he may get his best crop on his disked land. A few years ago the dust mulch was recommended by many as the only proper means of conserving moisture. Practical farmers however soon discovered that on some soils the heavy winds would remove the entire 'dust mulch' and not only ruin the field from which it was blown but in some instances the adjoining fields upon which it was deposited. Such have been the results of many attempts to maintain a dust mulch on the wind swept prairies of the Great Plains. At Nephi, Utah during the summer of 1900 a different result was obtained on a summer tilled field which was supposed to be in ideal condition being covered with a fine dust mulch. A heavy beating rain of 2.5 inches occurred and it quickly reduced the dust mulch to a pasty impervious covering which allowed but 20% of the rainfall to be absorbed while on an adjacent stubble field 40% of the rainfall was absorbed. Similar results have been noted in many other instances. It has been found that both of the above mentioned difficulties can usually be avoided either by leaving the land unplowed and protected by the stubble of the previous crop during the fall and winter or if plowed by keeping the surface until seeded in an uneven or cloddy condition. Subsoiling or very deep plowing is now being very strongly recommended by some but many experiments on a great variety of soils and under varying climatic conditions have shown that frequently as good and sometimes better crops can be grown on shallow plowing or even on land that has been disked but not plowed since the previous crop was harvested. This practice is particularly applicable where small grain is to follow a crop of corn. Alternate cropping and summer tillage is a favorite practice in some dry farming districts especially in Utah and Eastern Oregon and Washington and in some of the Canadian provinces but dry farmers are learning that a properly planned system of crop rotation in which corn or some other inter

## POULTRY FARMING

that lost in faeces urine and gas voided and that required for mastication and digestion of food. A short method of computing rations to supply the daily need of dairy cows has been outlined.<sup>1</sup>

*Production Records*—Recent advances in the price of feed and labour have rendered unprofitable the cow producing a low yield of milk and butter fat, and have stimulated interest in the securing of accurate data as to actual production by individual cows through the Advanced Registry local cooperative test associations and private records. The elimination of unprofitable cows and the increased consumption of dairy products have stimulated the demand for profitable cows until prices are from 50 to 150 % higher than five years ago.

*Advanced Registry Testing* of pure bred dairy cows is the result of a demand for accurate impartial knowledge of the year's production of milk and butter fat by individual cows. The agricultural experiment stations of most American states send a representative to see the milk from each cow weighed for two days per month and determine its fat content which with the owner's daily record furnishes the basis of milk yield for the month's estimate of butter fat production. Compared with the average production per cow for the United States of less than 150 pounds of butter fat in one year the highest individual records in each of the leading breeds are significant—Holstein cow Banostine Belle De Kol 2,404.4 lbs milk 1058.34 lbs fat Jersey cow Jacoba Irene 17,253.0 lbs milk 952.95 lbs fat Guernsey cow Spotswood Daisy Pearl 18,602.8 lbs milk 957.38 lbs fat Ayrshire cow Netherhall Brownie 9th 15,110.0 lbs milk, 820.91 lbs fat.

*Mechanical Milkers*—Scarcity and high price of labour has stimulated a demand for the mechanical milker. The Burrell Lawrence Kennedy and Sharples mechanical milkers seem now to have reached a degree of efficiency where it may be said that they will milk most cows as well as or better than the average man though not as well as the best hand milker while a few cows cannot be milked thoroughly by either machine. They require more intelligent attention to operate and clean than the common labourer ordinarily is competent to give, though within the reach of the better grade of farm labour they are usually most successful in the hands of the intelligent farm owner who operates his own machine instead of depending on employees.

*National Dairy Show*—In America a National Annual Exposition of the dairy industry has become firmly established in Chicago. The show of 1912 brought together nearly 1,000 of the finest dairy cattle every kind of mechanical device from stable fixture to pasteurizer churns and laboratory equipment and attractive displays of butter cheese milk and cream from many states. Commercial demonstration of latest methods of bottle washing pasteurization and bottling of milk for retail delivery and making of butter occupied much space as did the United States government demonstration of feeding methods with profitable and unprofitable dairy cows and municipal exhibits of the influence of bad housing poor milk and preventable diseases on infant mortality in great cities. Visitors were present from every section of the United States Canada and England.

(H. E. VAN NORMAN)

## POULTRY FARMING

Within the last few years the abandonment of a number of the largest spectacular poultry farms in America has had a marked effect upon the general attitude toward large poultry projects. People are not so ready to engage in them or to take reports of quick successes on a large scale at their face value. The public is learning to discriminate as qualified observers acquainted with the history of various enterprises of this kind have always done between the real and the fictitious successes. There are many large poultry farms in the United States and the number may greatly increase, but too many of those kept prominently before the public as practical poultry farms have used the publicity that could be thus secured to advertise something that they had to sell not to consumers of poultry produce but to producers.

<sup>1</sup> Bulletin No. 114, Pennsylvania Experiment Station.

The lines in which operations on a large scale have been undoubtedly successful for long periods are the growing of ducks for the market and sale of exhibition and breeding fowls. Duck growing has been developed on a very large scale on independent farms. Several of these for many years have produced about 50 000 ducks a year. One grower who operates two large farms some miles apart produces from 70 000 to 80 000 ducks a year. Farms producing from 10 000 to 15 000 ducks a year are much more numerous than those making a larger output. The successful farms are all operated by owners who have built up from small beginning. The plants established on a large scale at the start as investments invariably fail.

The larger plants doing a business in exhibition and stock fowls grow only a part (sometimes a small part) of the birds that they sell. This is a necessary condition because selling ability and judicious advertising develop a demand far greater than can be supplied from the stock grown upon one farm. This class of poultry cannot be crowded but must have ample range. So as the business grows the breeder usually puts out as much stock as possible on other farms and often also buys stock from smaller breeders. The latter practice leads to some abuses, but on the whole is to the advantage of all concerned. Very large plants of this type are not numerous.

By far the greater number of poultry farms of all types are small, requiring the services of only one or two men. The plants for growing roasting chickens are on this scale or smaller. Only a few of these have an annual output exceeding 1 000 or 3 000 chickens. The special egg farms of Petaluma, California, are on about the same scale. In the roaster growing section of Massachusetts and on the egg farms of Petaluma troubles due to carrying large stocks of fowls continuously on small areas of land are increasing. The same condition is apparent on many of the scattered farms. This and the gradual increase of interest in poultry among general farmers and those residents of towns who have room to keep poultry constantly tend to restrict the growth of exclusive poultry farms. With variations due to differences in customs and economic condition in different countries the conditions of poultry production are much the same the world over. With the decline of confidence in mammoth poultry projects an unusual interest arose as if in reaction in methods of keeping small flocks of fowls in very close confinement. This plan was exploited largely by the sale of books, each of which described a system devised by its author whereby a very small number of fowls might be made enormously profitable. Such ideas had often before been exploited in a small way. At this time skillful advertising on a very large scale enabled some of the promoters to realise very large profits. In America where the movement started it made quite a sensation for several years. In England it was at first ridiculed as characteristically American but before long English promoters were exploiting similar ideas. The interest in these highly intensive methods still continues but greatly abated. The indications are that the net result of the movement will be to add many recruits to the number of poultry keepers who use more rational methods.

*Production and Distribution*—The increased production of poultry and eggs in all progressive countries is marked. Statistics for the United States attract most attention because of the magnitude of the totals and the impression is often conveyed that progress is more rapid there than elsewhere. A more correct view is that most progressive movement acquire an initial impetus more easily in America than elsewhere. Comparisons of production in the United States with that of different European countries does not fairly represent progress in Europe. Comparing Europe as a whole with the United States and Canada there is a remarkable parallelism. In Europe England has been the principal market for the surplus of the Continental countries just as in America the New England and Middle States have furnished a market for the surplus of the West and South. The general history of the extension of interest in poultry culture in recent times on either continent is in nearly all essential particulars very like the history of development on the other. In the United States as a whole production and consumption have been very evenly balanced but within the United States too there have been backward regions—just as there have been in Europe.

## POULTRY FARMING

The tariff on imports restricting movement of poultry produce from Canada to the natural market in the States for a time prevented the development of poultry culture in Canada. It was well advanced in Ontario but backward in other parts of the Dominion. Efforts to build up an export trade with England had the unexpected result of stimulating home consumption to such an extent that although production greatly increased the surplus which could be profitably exported dwindled to exceedingly small proportions.

In England and Scotland the question of future supplies of poultry produce has become important because it has long seemed plain that without some concerted effort for a general increase of production on farms the falling off in imports would not be offset by increased production at home. Within the last year the figures for the census of poultry on the farms of Great Britain taken in June 1908 have been published. These show a total of 36 728 000 head of poultry of all kinds divided as follows: fowls 32 356 000 ducks 2 061 000 geese 711 000 turkeys 60 000. Statistician, writing in the *Illustrated Poultry Record* August 1911, observes that the number of fowls is almost precisely one to the acre of cultivated land in Great Britain and that an average of three fowls per acre might be kept without the displacement of any other crop.

In Germany the consumption of poultry and eggs is increasing much faster than the home production. The increased demands of Central and Western Europe have especially stimulated production in Russia, and it seems apparent that that country will soon occupy a position in poultry production in Europe like that of the agricultural regions of the West in America.

The figures for the number and values of poultry in the United States as obtained in the census of 1910 were also issued during 1912. Those showing egg production have not yet appeared. According to this census the number of fowls of all kinds has increased from 30 624 038 in 1900 to 205 880 100 in 1910, an increase of 185% and the values have increased from \$6,80,818 to \$154,663,200, an increase of 500%. The increase in population in this period was 10%. It would appear that the poultry population had not increased as fast as the human population, but as the rules of enumeration of poultry in 1900 and 1910 were not the same, close comparison is not possible. The conditions under which the enumerations of poultry have been made are not favourable to accuracy, and as no account is taken of the poultry not on farms, it is apparent that a great deal of poultry is not enumerated. In Buffalo, N. Y., a canvass made by a local poultry association discovered that there were over 5000 persons keeping poultry within the bounds of the city of 423 000 population. The ratio for all cities and towns would undoubtedly be found higher than this.

With progress general and the total of supplies well maintained, the years 1911 and 1912 have been poor years in poultry production both in Europe and America. The increased numbers of those giving special attention to poultry account for the fact that there has not been a reduction of products over wide areas. Climatic conditions are commonly considered the fundamental cause of the poorer winter egg yields and bad hatches in the spring. Unseasonable and extremely changeable weather affects egg production unfavourably and impairs the vitality of the breeding stock. Lessened yield was in part made up by higher prices for market products, but these seasons were very discouraging to novices. In America the year 1911 is likely to be memorable as a year of hard times for breeders of exhibition poultry, manufacturers of and dealers in poultrymen's supplies, and poultry journals. There was some depression in Europe, but it was most severe in America where all lines dependent upon advertising have been greatly overdone. The close of the year gave many indications of improvement, but it is the consensus of opinion that healthy conditions will not be fully re-established until the elimination of weak concerns and the natural increase of business bring about a more even balance of supply and demand in these lines.

*Education*—The most important factor in poultry culture at the present time is the educational movement. This includes not only the work of instruction at colleges

and schools and the work of experiment stations but the work of government departments of poultry associations of many different types, and even of associations of other kinds which are in various ways engaged in education. This movement began to take definite form when poultry courses were introduced into colleges and schools and to show continuous growth soon after the first such course was established in America in 1898. It did not, however, make strong headway until near the end of the last decade and even then many believed that it would soon decline. Within the last few years the permanence of this movement has become assured. Nearly all states and provinces in the United States and Canada now provide instruction in poultry culture at their agricultural colleges and there are poultry departments at many secondary agricultural school and industrial schools. Some privately endowed universities are preparing to establish poultry departments. In a number of states poultry culture is taught in special high schools and in a few some instruction in the subject is given in all schools of certain grades. It is generally recognized that this is the branch of animal husbandry best adapted to school work. The wider introduction of practical courses halts for want of qualified instructors and suitable text books. In other parts of the world the movement is not so marked, yet in nearly every country where poultry production is an important interest beginnings have been made—in some cases earlier than in America. It will not be long before opportunities for instruction in the subject in all progressive countries are nearly equal.

The most notable events in the educational field in 1911 were the organisation at London of the International Association of Poultry Instructors and Investigators and the completion of the administration building of the Department of Poultry Husbandry of the New York State Agricultural College at Cornell University erected at a cost of \$90,000. The reports of experimental work with poultry which in recent years have attracted most attention are those on the inheritance of egg production from the Maine experiment station and those on white diarrhea in chicks from the Connecticut experiment station. In these experiments popular interest in the subjects allowed a concentration and continuity of effort which are not often permitted to station workers.

Another example of the results of concentration of force has been given in the work of the United States department of agriculture for the improvement of commercial eggs. This work developed several years ago from investigations of the bureau of chemistry in connection with problems of legislation relating to cold storage. The department of agriculture has used both the bureau of chemistry and the poultry experts of the bureau of animal industry in it. It has been found that there is an annual loss estimated at \$45,000,000 due to improper handling of eggs, especially in hot weather. Through both the bureaus mentioned a campaign of education to check this loss is carried on by the department.

*Current Discussion*—The matters of greatest fundamental importance to poultry keepers which have been prominently discussed in recent years and especially within the past year without definite results are—the fox question, efficient organisation of poultry interests and international standards for exhibition poultry. The fox question has become more acute in England because of the general increase of interest in poultry on farms and the special increase due to the recent multiplication of small holdings. In America it has not had much attention except in Massachusetts. In England the Poultry Club and in America the American Poultry Association are subjects of constant controversy because of their alleged failure to adapt themselves to the needs of the poultry interests which they are respectively to represent. The discussion of international standards has been rather a question of Anglo-American standards. The absurdity of having different standards for the same breed in different countries is on all sides admitted but as they exist the possible effects of changes of standards upon business have to be considered. While there does not appear to be any prospect of immediate action interest in this question is significant as an indication of the tendency to standardise poultry culture throughout the world. (J. H. ROBINSON)

HORTICULTURE<sup>1</sup>

The most important event during 1912 in the horticultural world was the great international Exhibition held in the grounds of the Chelsea Hospital, London from May 22nd to May 30th. The exhibition embraced every phase and every department of modern horticulture with the important exception of market gardening which however was represented in some fine exhibits from Belgium and Holland. As an exhibition of the marvellous skill possessed by the British gardener in bringing fruits, flowers and vegetables to the highest perfection nothing has ever been seen like it before. The exhibits were divided into eleven main groups and four hundred and twenty eight different classes. A large area under canvas contained the more tender stove and greenhouse plants from all parts of the globe as well as roses, carnations, orchids, aroids, crotons, dracænas, palms, ferns, begonias, foliage plants, hardy herbaceous perennials and alpine choice fruits and vegetables etc.

*Rock Gardening* — Although specimens of rock gardening have become a feature at exhibitions of late years no one had any conception of the marvellous popularity of this kind of gardening until the International Exhibition at Chelsea. Several acres were devoted to rock gardens and hundreds of pounds were spent in their formation. Thousands flocked to admire the rockeries and the charming alpinists growing in them and it was evident that other classes of plants were for once put in the background by the public. At last people are beginning to recognise that it is possible to beautify with appropriate vegetation any piece of land whether large or small in area. Indeed it is possible to make quite a charming rock garden in the back yard of the humble suburban dwelling providing one has taste and a certain amount of knowledge of the right kind of plants.

*Wall Gardening* — This is of even more recent development than rock gardening of which however it is a variety. It consists in building loose walls with slabs or boulders of stone filling up the central space between the outside walls with soil and then filling the outer spaces with plants that naturally flourish in the chinks and crevices of walls. The tops of the walls are of course also furnished with suitable flowering subjects and a quite new garden may be given an ancient appearance by the judicious erection of a wall garden.

*Water Gardening* — This may be looked upon as a modern adjunct to the rock garden and has become very popular during the past few years. At exhibitions by means of water tight tarpaulins and a stream of artfully concealed water from the tap some exquisite water gardens have been made and have attracted much admiration. A great trade is now done in the beautiful hardy hybrid water lilies of various shades and in other water loving plants that have hitherto been sadly neglected. Closely associated with the water garden is the bog garden and many plants that love swampy or marshy soil are now grown on the margins of the water garden.

*Moraine Gardening* — This is a still more modern phase of rock gardening. It indicates a style of growing alpine plants amidst rocky debris as seen at the foot of glaciers etc. on the Alps. To make a moraine garden the natural soil is deported and its place is taken by a mixture of rock, sand, loam, peat, chalk, lime etc. so that plants which naturally flourish in one or other of these soils may be accommodated as near as possible to their natural surroundings. Moraine gardens are made on slopes or terraces and the gritty or rocky soil is prevented from being washed down by having the bottom of each slope or terrace shored up with larger boulders of rock. While stagnant water would be fatal there must however be a good supply of moisture the idea being to secure a kind of subterranean trickling as from the melting of ice during the summer months.

*Japanese Gardening* — This name has now become attached to a particular style of gardening in which an attempt is made to reproduce the peculiarities of Japanese landscape gardening. Thousands of dwarfed specimens of conifers, oaks, maples etc., are

<sup>1</sup>See generally *E. B.* XIII 741 *et seq.*

exported annually from Japan, and are employed in the formation of Japanese gardens in England and elsewhere. In landscape gardening eastern and western ideas are quite dissimilar. The western idea is to clothe the landscape with vegetation suitable to its aspect, altitude, soil, undulations, etc. In the Japanese style Nature is copied in such a way that plants from the mountain tops are never planted in the plains or valleys and vice versa. In a small garden therefore everything is dwarfed to such a degree to represent as it were in scale trees, shrubs, buildings, etc. reduced to corresponding dimensions. Hence pigmy trees, the miniature bridges of bamboo, the stone lanterns, the kiosks, the rivulets, rocks, and other objects on the landscape are all arranged to accentuate the governing idea. Deciduous trees are rarely used, the principal exception being in favour of the double flowered cherries and the wistaria—both conspicuous objects in Japanese gardens. Water or bog plants like the Japanese iris (*Kämpferi*), the water lilies, the lotus, etc. are much in evidence in and at the sides of streams and lakes, while clumps of bamboos give a luxuriant and subtropical effect.

*Idiote of the American Carnation*—Notwithstanding the many admirers of the hardy border and the Malmaison carnations, these sections are becoming more and more eclipsed by the American or perpetual flowering varieties. These are now grown in hundreds of thousands and are actually pushing out other crops that have long held a place in the high esteem of cultivators. From a purely market point of view the American carnation has signed the death warrant of the orchid, many kinds of which had just begun to be grown rather extensively for the floral trade. The extraordinary popularity of the American carnation is due to the ease with which it may be cultivated, its long stems and the beautiful shape of the blossoms, its many shades of delicate colour, its delicious fragrance, its cheapness, and to the fact that it blooms profusely during what in England are the worst months of the year, from October to April (but also during the summer months) and that it may be and is used for such a great variety of floral decorative purposes. At present it stands without a rival in these respects, added to which is the fact that the colours always seem pleasing under any condition of light, natural or artificial.

*Development of the Dahlia*—In addition to the older sections like the singles, the show, fancy, pompon and cactus varieties, the last year or two have seen the rise of quite new forms—or what are claimed as new, for it is probable that they, or something like them, may have been seen by the first dahlia raisers nearly a century ago, but were discarded because they did not conform to the hard and fast outlines that were regarded as ideals in those days. The cactus dahlia is still perhaps the most popular of all sections, but even it is undergoing a change from the original types that were so fashionable a few years ago. Now there is the 'miniature' or pompon cactus dahlia in which the blooms, although retaining the perfect cactus shape, are much smaller, about 3 inches across, and are borne on long stiffish stems in great profusion. The plants are also much dwarfier than the ordinary kinds, being only about 3 feet high. They flower profusely and embrace every shade of colour almost except blue.

Another new section of the dahlia is that known as the 'collarette'. The flowers resemble those of the ordinary single varieties in general appearance, but they differ conspicuously in having a secondary row or 'collarette' of small forked petals interposed between the large outer ray florets and the small tubular ones in the centre or disc. The little petals forming the collarette are usually distinct in colour from the others. The 'giant flowered' dahlias with huge double flowers and the 'paeony flowered' dahlias having very large single blooms are both making headway in popular favour, as newer and better forms are being developed.

*Evolution of the Gladiolus*—Since the appearance of the first hybrid gladiolus in 1837 under the name of *gandavensis*, gardeners have worked unceasingly to evolve other new strains. At first the work was slow and spasmodic and the second hybrid of note, the still popular scarlet flowered *brenchleyensis*, did not appear till 1848. The *Lemoinei* hybrids were put into commerce in 1873, and were followed in 1882 by the *Childsi* section, and in 1889 by the *Nanceianus* group. Since that time British, Conti

mental and American raisers have been busily engaged in mixing up the bloods of these different groups all of which originated in the first place from South African species far inferior to their descendants in size shape, colouring and vigour. At first only a few well defined colours appeared but now there seems to be no limit to the shades and blendings and hundreds of exquisitely tinted varieties are in cultivation. It was not however until 1911 that experts came to the decision that the time was ripe to establish a special society to encourage the more extended cultivation of the gladiolus and to arrange and classify in some systematic manner the varieties already known as well as to improve still further the various strains. In America a gladiolus society has been established some time and growers are taking the keenest interest in this lovely bulbous plant in conjunction with British and Continental holders of stock. To give some idea of the trade or the developing craze for the gladiolus it may be mentioned that a Dutch grower recently gave £1 666 for two corms (bulbs) of a variety with yellow flowers called

'Glory of Noordwijk' and there is no doubt that we shall soon be in the midst of a great gladiolus boom. At present the best white-flowered varieties include Albion Europa Duchess of Wellington Prof Hauber and l'Immaculee. The finest yellow flowered forms are Sulphur King Golden Measure, Goldfinder in addition to which there are many other lovely varieties.

*Herbaceous Phloxes*—Amongst purely hardy flowers perhaps there is none making such progress of late years as the herbaceous phloxes. These plants now have thousands of admirers again—dozens not many years back. The ubiquitous hand of the hybridist and cross breeder is seen in these days among all classes of plants and the phlox has readily responded to his art. There are now some magnificent varieties in cultivation. The colours vary from the purest white as in Frau Anthony Buchner and Frau von Lasberg and the pink mauve, heliotrope and the violet purple of Le Mahdi to the fine scarlet of G. A. Stroheim and Baron von Dedem. These belong to the *decussata* section and flower in the late summer and during the autumn. The earlier and dwarfier varieties belong to the "*suffruticosa*" section. Both groups are handsome and when grown in rich and deeply dug soil they produce immense trusses of blossom.

*Exportations of British grown Apples*—The excellence of the British apple is at last beginning to make itself felt thousands of miles away from home. For many years the British grower has seen the large and increasing importations of apples from the United States British Columbia Canada Australia Tasmania etc. and was beginning to think not unnaturally that his home markets were about to be swamped. Now however owing to the increasing prosperity of South Africa and Buenos Aires in South America, exportations of British apples are being made to these far off climes. At present the industry is only in its infancy but it is hoped that the solidity and flavour of the British apple both due no doubt to a much milder climate will enable it to travel long distances and hold its own against all comers.

The season of 1912 completely upset long cherished views as to the necessity of a hot dry summer being essential for the development of high and rich colours in apples. Notwithstanding the cold and excessive wet the fact remains that apples were if anything better coloured than they were in the hot season of 1911 while the flavour is quite up to the standard. Other plants besides apple trees have been remarkable for their more than usually rich colouring and the Virginian creeper may be cited as a particularly fine example. It is possible that the rains of 1912 were much needed after 1911 to give the soil a thorough good soaking, to liberate those earth salts that go to produce richness of colour.

*Potato Growing in America*—According to the latest official returns, 3 689 000 acres of potatoes were grown in the United States in 1912 and the estimated yield is put at 108 bushels per acre that is, 2 tons 14 cwt if a bushel is reckoned at 56 lbs. In America this is considered a "bumper" crop, and "much above the average." The total crop for the United States in 1912 is estimated at 308 millions of bushels, that is 9 950 000 tons. The price is estimated at 25 cents a bushel or at the rate of just over £2 per ton. The gross yield is therefore at the rate of about £5 10s 0d per acre—such a curiously low

figure that the foreigner may wonder how it is possible to pay for labour rent manure etc., and still yield a profit to the American grower. Against the American figures it may be stated that the British potato average works out at 6 tons to the acre and the average price at £3 per ton making a gross revenue of £18 per acre against the American £5 10s. 0d. Under proper and intelligent cultural conditions it is possible to obtain from 15 to 20 tons of potatoes to the acre. Evidently there is much to be learnt from modern scientific methods by practical potato growers on both sides of the Atlantic, but especially in the United States.

*Sterilisation of the Soil*—Amongst large growers of plants under glass this question is often discussed and several carry out experiments in various ways to prove the advantages or otherwise of sterilising the soil the object chiefly in view being to destroy eelworms and those bacteria that are said to be injurious to vegetation. To secure immunity from these evils the soil is roasted in iron pipes or trays over a furnace fire the heat of which is calculated to destroy the organisms referred to as well as the seeds of weeds and the grubs of more conspicuous insect pests. Some cultivators attach great importance to the sterilisation of the soil for some of their crops while others look upon the process as a fad and not worth the time and trouble and expense of doing it. It is possible that when a soil is overdosed with rich organic manures, as it often is under glass eelworms and injurious bacteria develop as a result of the soil becoming sour. Therefore when heated a good deal of the unnecessary organic material is driven off by combustion and the soil is once more reduced to a clean and healthy condition and will grow plants to perfection.

Some interesting examples of soil sterilisation were exhibited at the International Exhibition at Chelsea from the Rothamsted Experimental Farm. Eight specimens of tomato plants were grown in pots the soil in which had been sterilised in various ways. The agents used were petrol phenol pyridine formaldehyde toluole and calcium sulphide in addition to which one pot contained steam heated soil and one unheated soil. The plants treated with phenol and toluole were very poor indeed. There was little to choose between those treated with formaldehyde calcium sulphide and steam and although the weakest plant of all was in the untreated soil the outstanding fact was that there was not a good tomato plant among them all. (JOHN WEATHERS)

### BEE-KEEPING<sup>1</sup>

Such rapid progress has been made in bee keeping during the last sixty years that it is not surprising to find that the advance has been maintained during 1909-1. In Great Britain the most efficient means of advance both in the art and science have resulted from the institution of the British Bee keepers' Association 38 years ago. Among its objects were the advocating of more humane and intelligent treatment of the honey bee the improvement and advancement of bee culture and the increase of the home supply of wholesome honey. The purposes thus set forth have been strictly kept in view and have been successfully brought out. Help and advice have been given in the formation of county associations of bee keepers and forty four of these are at the present time in affiliation with the parent association. Encouragement has been given to increasing the number of persons keeping bees for although it is computed by the best authorities that there are over 90,000 bee keepers in the British Isles, the honey imports from abroad amounting in value to more than £50 000 per annum show that the home production is not equal to the demand. The low price of the foreign product proves the superior quality obtained from British bees. The passing of the Small Holdings Act has opened a new field for bee keeping.

The value of the industry has now been recognised by the British Government which has made a grant to the British Bee keepers' Association for the purpose of establishing an experimental apiary where courses of lectures, illustrated by practical manipulation of hives containing bees are given out of doors during the summer months. In winter the lectures are indoors, and are illustrated with suitable lantern slides. In addition

<sup>1</sup> See *E. B.* in 628 *et seq.*

scientific lectures by specialists are given from time to time. The Government also make a grant for pioneer work and promoting bee associations, which the British Beekeepers' Association is able to do by sending its certificated experts and lecturers all over the country. Thirty-six county councils also make small grants in aid of technical instruction in bee-keeping; ten of them at their own agricultural colleges.

On the practical side progress has been made in queen rearing and by the adoption of Mendelian methods bees have been improved both as regards hardiness and working qualities. The principal improvements in appliances have been for making old combs render a better quality and a larger quantity of wax.

The value of bees in the pollination of fruit blossoms is now fully recognised and the importance of having a sufficient number of them for this purpose has been brought prominently before the public owing to a serious epidemic which has destroyed not only whole colonies of bees, but has also devastated entire districts, causing fruit growers anxiety with respect to their future crops. The United States of America, Canada, New Zealand and many other countries have legislated with respect to the control of bee diseases and the British Government, realising the necessity for similar action, have introduced in Parliament a Bee Diseases Bill which it is hoped will enable them to cope with the two diseases which have caused such mortality among bees.

Respecting the disease known as foul brood, recent investigations by Dr. White have shown that in one of the two forms of the disease, viz. the one known as foul smelling, in which *Bacillus alvei* is usually present, the cause of the disease is not this microbe as has hitherto been supposed, but one of several others found associated with it, to which Dr. White has given the name of *Bacillus pluton*.

An epidemic disease broke out in the Isle of Wight in 1906, about which little was known up to 1900. Since then it has spread to the mainland and has caused great losses of bees in many districts. The cause of the malady has been under investigation by the Board of Agriculture and Fisheries and a full report has been recently issued showing what has been done and the nature of the disease. European bacteriologists have also been investigating the cause of the great mortality among bees in various parts of the continent and Dr. Zander in Bavaria, who made a very careful study of bees suffering from 'infectious dysentery' in June 1907, discovered as the infecting agent a protozoal parasite to which he gave the name of *Nosema apis*. His findings have been confirmed by other scientists in Germany and Switzerland and in England it has been found by Dr. Graham Smith and others associated with him that the same parasite is the cause of

Isle of Wight disease which is now called *Microsporidiosis* since *Nosema apis* is a member of the group named the *Microsporidia*. Drs. Fantham and Porter had already observed a protozoan in the digestive tract of some bees obtained from the Isle of Wight in 1906 and in subsequent years *Nosema apis* was found in bees from Hampshire, Surrey, Middlesex, Cambridgeshire and Hertfordshire. By feeding experiments they were able to reproduce the fatal disease, both in bees and in wasps.

The life history of *Nosema apis* shows that it proceeds from a tiny germ which issues from the resistant spore and gives rise to uninucleate daughter forms known as plasmonts because of their migrating or wandering habit. They increase by division and when they have penetrated between the epithelial cells they may remain there in a resting condition for some time or penetrate the gut direct from the lumen or from between the epithelial cells. The parasite is now called a meront and is at first uninucleate. It has now entered upon the feeding stage, rapidly increases in size and multiplies by fission, ultimately forming spores. The main alimentary tract of the bee, particularly the chyle stomach and intestine, are the chief parts affected, although *Nosema* may occasionally be found in other organs.

The disease is one of the adult bees, larvae and young bees remaining healthy. The queen also appears to be exempt and is frequently found as the last survivor of a colony. Bees suffering from the disease appear heavy and disinclined to move; the wings are frequently dislocated and the abdomens swollen. They lose their power of flight; large numbers drop on the ground and as the bees are unable to rise it is not long before they perish. The disease is infectious and is introduced into healthy colonies by infected foragers or infected foods. Affected bees void excrements which contain the spores while on the wing. Infected water, grossly contaminated with excrement and honey present in the hives in which bees have died, are stated to be the most important infected foods.

The introduction of the parasite into the hive is not necessarily followed by the appearance of the disease and some stocks remain healthy while the infected bees are gradually eliminated. At present no remedy is known and it is recommended that where a stock exhibits a heavy continuous mortality it should be destroyed as it never completely recovers and is a continual and serious source of danger.

All dead bees should be picked up and burnt and the ground disinfected. Hives that have contained diseased bees should likewise be disinfected.

*Nosema* has also been found in humble bees and wasps but it is not yet conclusive that it belongs to the species *Nosema apis*. New light has been thrown on the life history of humble bees and their parasites by Mr Sladen who has succeeded in domesticating and keeping under observation species of *Bombus* in artificial domiciles to which queens were attracted.

The following are the most important works which have appeared during the last three years bearing on the subject: Dr E. Zander's *Der Bau der Biene und die Krankheiten und Krankheiten der erwachsenen Bienen*; T. W. Cowan's *Wax Craft: all about beeswax, its history, production, adulteration and commercial value*; The *Report on the Isle of Wight disease* by Dr Graham Smith and others issued by the Board of Agriculture & Fisheries; and F. W. L. Sladen's *The Humble Bee: its life history and its use to domestication*. (THOS. WM. COWAN.)

### THE FUR INDUSTRY<sup>1</sup>

So far as concerns the preparation of fur skins for the market there is nothing new of importance since 1910. One great change however has occurred in the primary conditions of the fur supply. In connection with the great importance and necessity of enforcing close seasons and restrictions to prevent the total extermination of fur bearing animals a notable event has taken place as the result of the International Fur Seal Conference between the United States Great Britain Japan and Russia which was in session at Washington from May 11 to July 7 1911.

The conference concluded its labours on the latter date by the signature of a convention which was ratified and went into effect on December 15 1911 and is to continue in force for a period of fifteen years from that date and thereafter until terminated by twelve months written notice given by one or more of the parties to all of the others. This convention was for the preservation and protection of the fur seals and scoter which frequent the waters of the North Pacific ocean its essential object being to stop pelagic sealing which was an international question. 'Pelagic sealing' means the killing and capturing fur seals at sea which had long prevailed in spite of the constant and earnest efforts on the part of the United States Government to have it discontinued.

The Pribiloff Islands which are the natural home and breeding places of the fur seals were in former years leased by the United States to companies who had the right to engage in taking fur seals on these islands. These leases expired by limitation on April 30 1910 and it was found advisable to abandon the former system of leasing the Government of the United States taking over entire control of the islands and the seal herds. It appeared that the seal herds on the islands have been reduced to such an extent that their early extinction had to be looked for unless measures for their preservation were adopted. A herd numbering 375 000 twelve years ago was reduced to 15 000 and it was estimated that the breeding of seals had been reduced in the same period of time from 150 000 to 50 000. The rapid depletion of these herds was undoubtedly to be ascribed to the practice of pelagic sealing and by the convention signed by the four countries above named pelagic sealing is prohibited for 15 years from December 1911.

The countries who were until recently engaged in this wasteful and indiscriminate slaughter of fur seals have been induced after difficult and protracted negotiations to agree to abandon pelagic sealing on condition that they shall receive compensating interest in the skins taken by the United States Government on land.

In killing seals at sea all ages and sexes are killed indiscriminately and a great waste thus takes place as many upon being shot sink and are lost before the hunters can reach them. In fact it is well known that of all killed fully one half are lost.

The seals leave the islands in the autumn and make a most wonderful migration, it

<sup>1</sup> See E. B. xi 346 et seq.

scientific lectures by specialists are given from time to time. The Government also make a grant for pioneer work and promoting bee associations which the British Beekeepers Association is able to do by sending its certificated experts and lecturers all over the country. Thirty six county councils also make small grants in aid of technical instruction in bee keeping, ten of them at their own agricultural colleges.

On the practical side progress has been made in queen rearing and by the adoption of Mendelian methods, bees have been improved both as regards hardiness and working qualities. The principal improvements in appliances have been for making old combs render a better quality and a larger quantity of wax.

### THE FUR INDUSTRY<sup>1</sup>

So far as concerns the preparation of fur skins for the market there is nothing new of importance since 1910. One great change however has occurred in the primary condition of the fur supply. In connection with the great importance and necessity of enforcing close seasons and restrictions to prevent the total extermination of fur-bearing animals, a notable event has taken place as the result of the International Fur Seal Conference between the United States, Great Britain, Japan and Russia which was in session at Washington from May 11 to July 7, 1911.

The conference concluded its labours on the latter date by the signature of a convention which was ratified and went into effect on December 15, 1911 and is to continue in force for a period of fifteen years from that date and thereafter until terminated by twelve months written notice given by one or more of the parties to all of the others. This convention was for the preservation and protection of the fur seals and sea otter which frequent the waters of the North Pacific ocean, its essential object being to stop pelagic sealing which was an international question. Pelagic sealing means the killing and capturing fur seals at sea which had long prevailed in spite of the constant and earnest efforts on the part of the United States Government to have it discontinued.

The Pribiloff Islands, which are the natural home and breeding place of the fur seals, were in former years leased by the United States to companies who had the right to engage in taking fur seals on these islands. The leases expired by limitation on April 30, 1910 and it was found advisable to abandon the former system of leasing the Government of the United States taking over entire control of the islands and the seal herds. It appeared that the seal herds on the islands have been reduced to such an extent that their early extinction had to be looked for unless measures for their preservation were adopted. A herd numbering 375,000 twelve years ago was reduced to 13,000 and it was estimated that the breeding of seals had been reduced in the same period of time from 1,500,000 to 56,000. The rapid depletion of these herds was undoubtedly to be ascribed to the practice of pelagic sealing and by the convention signed by the four countries above named pelagic sealing is prohibited for 15 years from December 1911.

The countries who were until recently engaged in this wasteful and indiscriminate slaughter of fur seals have been induced after difficult and protracted negotiations to agree to abandon pelagic sealing on condition that they shall receive compensating interest in the skins taken by the United States Government on land.

In killing seals at sea all ages and sexes are killed indiscriminately and a great waste thus takes place as many upon being shot sink and are lost before the hunters can reach them. In fact it is well known that of all killed fully one half are lost.

The seals leave the islands in the autumn and make a most wonderful migration, it

<sup>1</sup> See *E. B.* vi 346 et seq.

goes on for nine months in the year and covers about 2 000 miles. The seal gets all its food in the open sea at great distances from land. It resorts to the land only to bring forth and nourish its young to self dependence. It is resident for this purpose on certain islands in Bering Sea from May to November. The mother seal goes 150 to 200 miles from the rookeries to find her food, leaving her young behind, returning to nurse it and again going away to feed. With the storms of winter all classes of animals leave the islands and make a long migration down through the Pacific ocean to the latitude of Southern California, the farthest point south reached by the fur seals about the month of January, when the course of their migration turns again northward along the western coast of Alaska, ending at the Pribiloff Islands sometime in the month of July.

It has been the custom of the Indians of the north west coast of America from the earliest times to go out in their canoes a day's journey to hunt with the spear stragglers from the migrating herd on its northward journey. It was a precarious business and the number of animals taken was unimportant. In 1879 however sailing vessels began to be used to take the Indians and their canoes out to the main body of the herd and to enable them to follow its course. This new form of sealing was very successful. The fleet grew in numbers and the catch multiplied until it reached the total of 140 000 skins in a single season. The operation of the fleet gradually extended over the entire migration route of the seals and included their summer feeding grounds in Bering Sea. Until very recently at least the pelagic fleet contained about thirty vessels manned by about twelve hundred men using about three hundred boats. The sealers knew in general the locality of the fur seals at different periods of the year, the migration route has been determined by the logs of the various pelagic sealing vessels that have taken fur seals at various times of the year throughout that great course.

Between 1883 and 1897 a total of 304 713 skins of seals killed at sea were marketed and undoubtedly an equal number were lost. The moment the mother seals left the islands the sealers were after them and a mother seal in order to get her food with which to suckle her young was obliged to run the gauntlet of the vessels. The destruction of the mother seal meant the starvation of the offspring on shore and uncounted thousands of young seals have perished on the islands from that cause. The males being reduced in numbers by land killing, the females predominated in the herd as found at sea. On land the young males are forced to herd by themselves through fear of the adult males. They can be readily distinguished and handled without disturbance to the breeding herd. At sea the sexes cannot be distinguished. On the spring migration the mother seal is heavy with young and hence less swift in her movements. On the summer feeding grounds she must feed regularly and heavily through necessity of nourishing her young and as a result the pelagic catch is made up chiefly of the breeding females. From 1879 to the present time this hunting of gravid and nursing females has gone steadily on with the consequence that the herd of fur seals belonging to the United States has been reduced enormously.

This decline of the seal herd was established for the United States Government in 1808 by a commission of scientific experts. It was pointed out that only by the establishment of an international game law for the high seas which should protect the female fur seal—in other words the abolition of pelagic sealing—could the herd be preserved and restored. The property involved is a very important one. With regard to the practice of killing bachelor seals for the natives' food it was decided that this should not be abandoned unless a cogent reason presents itself. No harm to the herd can result from the killing of surplus males. No benefit to the herd could accrue from the maturing of males unnecessary for purposes of reproduction which when of adult age would have no female consorts but which by incessant and furious fighting would destroy or cripple the breeding bulls and themselves as well.

Since signing this convention, the United States Government has passed a new measure with regard to killing fur seals on the islands and has decided on a close season for five years from 1915. The section of the bill giving effect to the convention has therefore been amended to read as follows:

That from and after the approval of this act all killing of fur seals on the Pribiloff Islands or anywhere within the jurisdiction of the United States in Alaska shall be suspended for a period of five years and shall be and is hereby declared to be unlawful and all punishments and penalties heretofore enacted for the illegal killing of fur seals shall be applicable and inflicted upon offenders under this section provided that this prohibition shall not apply to the annual killing on the Pribiloff Islands of such male seals as are needed to supply food clothing and boat skins for the natives on the islands as is provided for in article 11 of the said convention The skin of all seal so used for food shall be preserved and annually sold by the Government and proceeds of such annual sales shall be covered into the treasury of the United States

With regard to fur seals killed on the islands so called 'Alaska fur seals' it is interesting to note that from 1870 when the Alaska Commercial Company took charge of the islands under a lease for 20 years 100 000 skins were taken annually

With regard to the future of the so called 'South Sea seals' taken in the Southern Pacific and Indian oceans it was reported in 1912 that the fleet which had been sailing from Halifax regularly for 7 years would abandon the enterprise in the coming season and that no ships would proceed to these regions probably for several years

*Sil er Fox*—During the last few years considerable progress has been made in the rearing of these animals in captivity in the United States and Canada The fur has been found to compare favourably with those trapped and the skins are bringing very good prices

*Russian Sable*—In order to preserve the Siberian sable from entire extermination the Russian Government passed a law in 1912 prohibiting sable hunting and trapping from February 14 1913 to October 28 1916 provision being also made for making it illegal between February 1 and October 15 in subsequent years It is doubtful however whether this action will be sufficiently effective to attain its object as there are great possibilities in a vast country like Russia for smuggling the fur and exporting under an assumed name

*Chinchilla*—The animals are becoming so scarce that the Government of Bolivia has prohibited the exportation and killing of chinchilla In Chile killing is also forbidden for a period of two years but in spite of these restrictions the killing still goes on and the catch is smuggled out of the country The collection of bastard chinchillas has been as high as 360 000 per year the real chinchillas as high as 10 000 and chinchillonas 18 000 In 1905 a total of 220 000 skins were exported from Bolivia alone in 1906 13 000 in 1907 58 000 and in 1908 38 000 In 1911 the collection was as follows—Bastard chinchilla 30 000 Real chinchilla 1 200 Chinchillonas 2 400

*Australian Opossum*—The number of these animals has also been considerably reduced of late and in consequence the Government of New South Wales Queensland and Western Australia have passed a law for a temporary close season the duration of which however is uncertain (S. POITZER)

### THE COTTON INDUSTRY AND TRADE<sup>1</sup>

*The Cotton Industry*—It was declared some year ago that the world's cotton spinning spindles were in excess of the world's requirements But in consequence of the fall in real cost of production which is constantly taking place as a result of progress combined with the development of backward places the demand for cotton goods steadily expands for they are the cheapest of textiles and therefore the first to feel the effects of advancing civilisation Hence considerable additions have been made to the world's facilities for spinning of late years as the following figures show

Spinning Spindles in Millions			Spinning Spindles in Millions		
	1908	1911		1908	1911
Great Britain	52.8	54.5	Portugal	4.5	4.8
Germany	9.9	10.5	Holland	4.0	4.3
France	6.7	7.5	Sweden	3.9	5.3
Russia	7.9	8.7	Norway	0.7	0.7
India	5.5	6.3	Denmark	0.8	0.8
Austria	4.0	4.6	United States	27.8	28.9
Italy	4.2	4.6	Canada	8.0	8.6
Spain	1.9	1.9	Other Countries	1.0	2.8
Japan	1.6	2.1			
Switzerland	1.5	1.5	Total	128.9	137.3
Belgium	1.2	1.3			

These figures are rough estimates only but they are put forward with the authority of the International Committee of Master Cotton Spinners and Manufacturers Association and are founded to some extent on collected statistics

<sup>1</sup> See E. B. VII 256 et seq

## THE COTTON INDUSTRY AND TRADE

It is notable that while spinning spindles would seem to have advanced in the world by more than 6 per cent between 1908 and 1911, those in the United Kingdom only advanced by a trifle over 3 per cent. This result was however to be expected. In the course of the industrialising of the world textile industries less developed than the famous Lancashire industry have been rapidly improving and increasingly satisfying home demands in the countries where they are placed while spinning mills have been appearing in other countries where until recent times spinning was unknown. There is no reason to apprehend that the hand of the Lancashire operative is losing its cunning or that slackness of management is preventing costs in English mills from being as low as they might and it is beyond question that Lancashire still continues to enjoy differential advantages for the prosecution of the cotton industry. A cheap substitute for her climate is yet to seek and nowhere else is an approach to be found to the systematic arrangement of her industry around marketing centres in consequence of which a high degree of business specialism is rendered possible and the locking up in raw material of a great deal of capital is avoided. How great Lancashire's gain is with respect to the latter point is indicated by the mill stocks of cotton. The average mill stock in bales per 1 000 spindles held on the 31st of August in the five years 1907-11 amounted to Great Britain 6.6 Germany 3.5 France 4 Russia 6.5 India 0.3 Japan 19.2 United States 6. Russian bales are mostly of about 300 lbs. American of 500 lbs.

It is remarkable that the cotton industry in the land from which most cotton comes must hold mill stocks four times as great as those held in the British industry which is divided from its supplies by the mighty Atlantic. One leading reason is that the American industry does not approach the Lancashire industry in completeness as an organic whole and that the former is not peculiarly well placed with respect to means of transportation. The chief port of Lancashire Liverpool and one might add the secondary port of Manchester<sup>1</sup> lie so close to the spinning districts and are so well connected with them by rail that supplies of cotton can be obtained on the shortest notice as they cannot elsewhere and Lancashire's cotton market is so highly organised with its expert dealers and brokers and its system of futures that spinners can easily make arrangements for cotton to flow into their mill as they require it. Reservoirs of cotton so to speak need not be maintained in Lancashire mills. We may see in Lancashire as nowhere else in the world as yet cotton supplies travelling to the various mills according to almost immediate requirements much as the blood in the body flows to the parts where it is needed when it is needed and in the proportion in which it is needed.

It must be remembered moreover when the number of spinning spindles in the United Kingdom is compared with the numbers elsewhere that a year's working of an English spindle represents on an average a greater value than a year's working of any foreign spindle because English spinning as a whole is becoming finer and the value of the fine work is greater than of the coarse work. Thus in the five years 1907-11 the average consumption of cotton per spindle in different countries was

Gr. Brit.	Germany	France	Russia	India	Japan	U.S.A.
71	173	137	250	371	685	170

England has been steadily driven into undertaking more fine spinning (for which she enjoys special advantages) by foreign competition. It goes without saying that early attempts at spinning are made on the coarser and easier work.

It is impossible to put forward figures showing recent increases in looms, but they certainly still continue to increase enormously. In Lancashire and contiguous districts cotton looms were augmented by nearly 40 per cent between 1884 and 1911 despite the extension of manufacturing in other countries and it will be realised that countries which embark on the production of cotton textiles invariably begin with manufacturing

<sup>1</sup> The total imports of cotton into the United Kingdom amounted to (1907) 2387 million lbs. (1909) 2189 million lbs. and (1911) 2207 million lbs. The amount shipped direct to Manchester via the Ship Canal was (1907) 300 million lbs. (1909) 340 million lbs. and (1911) 350 million lbs. Nearly half the cotton consigned direct to Manchester came from Egypt.

(as weaving is technically termed) and then pass on to spinning. It is notable as regards manufacturing that there are still no signs of an extensive adoption of the automatic loom in Lancashire though its success in America appears to be assured. It is hardly conceivable that the main explanation is any lack of enterprise on the part of Lancashire manufacturers. The main explanation is far more likely to be (as is commonly alleged in Lancashire) that the automatic loom is not—at any rate under the conditions now prevailing—suited to the character of the bulk of the British output.

The results of the British census of 1911 with respect to occupations are not yet available but in considering the changes in numbers employed in the cotton industry in the United Kingdom we have factory inspectors' returns to fall back upon. The results show as follows—

<i>Cotton Operatives in the United Kingdom in Thousands</i>					
	Half timers	Under 18	Over 18	Males	Females
1890	29.5	121	362	204	229
1901	21.0	115	367	194	229
1904	17.7	109	396	196	227
1907	19.1	131	426	218	250
					577

The advance since 1904 is substantial and bears out the view that recent years have witnessed an accelerated growth of the British cotton industry. The inspectors' returns for 1907 are corroborated by the returns made for the census of production which reveal a total of 560,500 wage earners occupied on an average on the last Wednesdays of January, April, July and October. Of the 560,500 wage earners about 14,000 were at work in Scotland. The return of the census of production shows that the number of salaried persons engaged in the cotton industry in the United Kingdom was 12,400.

Among the operatives the proportion of males to females has remained about the same, males being in each period between 37 and 38 per cent of the total. Under 18 the proportion of male is less which is of course to be explained by the fact that many women give up factory work when they marry. The augmentation of numbers between 1904 and 1907 is naturally most marked among those under 18. This does not necessarily mean that the young are substantially displacing adult for as a rule when an industry suddenly requires more labour the bulk of the new recruits are of the plastic age. Those already in the industry get promoted younger than they would have been otherwise and fresh labour new to the industry tends to take the place vacated at the bottom.

*The Cotton Trade*—In 1908 the cotton trade of the world was thrown into a state of collapse for by that time the trade boom of the previous years had worked itself out and reaction had set in particularly in the United States where a severe financial crisis occurred in the autumn of 1907. From this collapse however the cotton trade had by 1911 recovered entirely with the result as regards the United Kingdom that the high figure of exports of cotton goods in 1907 was actually surpassed in 1911 (and again in 1912). The fact must be allowed for that all over the world the general level of prices has been rising so that values for 1911 must be somewhat reduced to bring them into relation with those for 1907 but they still show an appreciable excess. The following figures represent approximately the recent foreign cotton trade of the four leading countries.

<i>Foreign Trade in Cotton Goods in Millions Pounds Sterling</i>								
	United Kingdom		United States		Germany		France	
	Imports less re-exports	Exports of home manufacture	Imports less re-exports	Exports of home manufacture	Special imports	Special exports	Special imports	Special exports
1904-6 (average)	6.2	91	10.6	7.9 <sup>1</sup>	5.8	19.8	2.7	10.8
1907	6.8	110	14.5	5.7	10.7	23.9	3.7	14.8
1908	7.7	95	13.3	4.6	7.4	19.7	3.0	11.6
1909	7.3	93	12.3	6.0	8.2	18.9	2.9	13.7
1910	6.5	106	13.0	6.0	9.1	21.7	3.5	13.7
1911	9.0	120	13.1	4.4	8.6	23.4	3.4	14.0

<sup>1</sup> The pinnacle was reached in 1906 in America with exports over £10,000,000.

In connection with the varying trade of the world it is worthy of mention that it is usual in the British cotton industry for short time to be agreed upon when margins be

tween the prices of the product and the cost of material drop and show no sign of immediate recovery the operatives as a rule, readily falling in with the arrangement. The same policy is practised in countries other than England but an attempt made in the late depression to secure concerted action throughout the world failed. The method of short time when judiciously applied is generally favourable to the interests of operatives as well as employers as it raises under employment to be spread over the industry instead of unemployment being concentrated on a section of the working class.

Since the issue in 1909 of the report relating to the cotton industry of the British census of production (taken in 1907) it has become possible to arrive at something more than intelligent guesses with regard to Great Britain's annual consumption of its own products. Taking the estimates put forward by the director of the census of productions based on these returns instead of the returns themselves so as to avoid such sources of error as duplication and placing side by side with their export returns for the same year we have—Yarn spun 1826 million lbs (£98 000 000 including about £1 700 000 for dyeing) Yarn exported 241 million lbs (£15 250 000). So the proportion exported is about 13 per cent in quantity and 16 per cent in value. But the value of yarn exported includes the profits of the exporter. Consequently its value when it left the spinner would have been about £14 600 000 if the profits amounted on an average to 5 per cent. This is 14.5 per cent of the value of the total output as compared with an export in quantity just over 13 per cent. The discrepancy seems only natural in view of the known fact that the yarns exported contain a large proportion of the fine counts in which Lancashire far excels its competitors.

Coming to piece goods we find an output of 7091 million yards (value £95 000 000 including £12 000 000 for bleaching dyeing and finishing) and an export of 6.98 million yards (£81 000 000). The exports were nearly 89 per cent in quantity and about 85 per cent in value. But the export values include merchants' expenses and profits and if we allow about 5 per cent for these we get a percentage of export in value of about 81. The probable explanation of the discrepancy between the quantity and value percentages of export is that the average value of the goods retained for home consumption is much higher than that of the exports. A large proportion of the exports are unbleached and unprinted and the average quality of exported prints is pretty certain to be below that of prints for home use. Admittedly there are sources of error connected with the census of production and with the collection of export figures but they are not likely to have vitiated the results seriously.

*Cotton Supplies*—The question of cotton supplies continues to agitate the English spinning world. It is still felt that dependence on the American supply is too great and it is feared that the output of long staple cotton in America is much nearer its limit than the output of other kinds. Peculiar apprehension has been excited as regards the conditions of cotton growing in Egypt. It is maintained that the yield of the plants is falling in quantity and quality. The yield of kantars (1 kantar = 98 lbs) per feddan (1 feddan = 1.110th acres) was on an average 5.9 in the period 1896–1901 4.55 in 1901–06 and 4.24 in 1906–11 according to statistics published by the Egyptian survey department. It is contended that the cause of the fall includes some or all of the following: (1) careless seed selection (2) over cropping as a result of the reduction of customary rotation from three years to two and also of the squeezing of the plants together (3) insect pests and (4) the water logging of the soil. Some authorities are particularly insistent as to the gravity of the fourth case. Information was laid before a cotton commission in 1909–10 which reported in due course made twenty six recommendations and nominated a committee with a view to the carrying out of its recommendations. The committee had not met up to the time of the visit of Mr. Arno Schmidt (the secretary of the International Cotton Federation) to Egypt in 1911 but he states that he was informed by Lord Kitchener of an intention to institute a permanent cotton committee to take up the whole matter. Since then a committee to investigate the ravages of the cotton worm has been appointed. The question of the Egyptian supply is a serious one for England at the present time for it has been estimated that of some twenty one million spindles which are dealing exclusively with Egyptian cotton fifteen millions are in England—there are supposed to be no more than one million and a half in Germany about one million and a half in France and in no other country as many as a million. But the matter will become an increasingly important one to countries other than England as they push their way further into fine spinning.

The British Cotton Growing Association which is specially concerned with the question of increasing cotton supplies has now almost raised the capital of £500 000

which it first set out to obtain. In addition several subsidiary companies in which the Association is interested have been formed some with the Association's assistance. Such are the *British Cotton Ginning Co Ltd* (capital £100,000) *British East Africa Corporation Ltd* (capital £100,000) *Sudan Plantations Syndicate Ltd* (capital £50,000) *East African Cotton Co (1911) Ltd* (capital £35,000) *Rhodesia Cotton Co Ltd* (capital £30,000) and *Ernest Thorne Ltd Barbadoes* (capital £10,000). The table appended shows the amount of cotton which has come forward from new fields in the British Empire to which the Association has given its attention.

*Cotton Grown in New Fields in the British Empire Bales of 400 lbs*

	1906	1907	1909	1911
Sierra Leone	150	100		
Gold Coast	200	250	200	100
Lagos	6,000	9,500	12,100	5,800
Southern Nigeria	150	250	300	300
Northern Nigeria	1,000	1,500	400	600
<b>Total West Africa</b>	<b>7,500</b>	<b>11,600</b>	<b>13,000</b>	<b>6,800</b>
Uganda	500	2,000	5,100	20,000
British East Africa	200	200	300	500
Nyasaland	2,200	2,300	2,400	5,000
Rhodesia	100	200	400	500
<b>Total East Africa</b>	<b>3,000</b>	<b>4,700</b>	<b>8,200</b>	<b>25,800</b>
West Indies	5,500	6,500	6,400	6,500
Sind	1,000	1,400	2,000	500
Sundries	200	300	500	700
Sudan				21,000
<b>Total</b>	<b>17,200</b>	<b>24,900</b>	<b>30,100</b>	<b>61,300</b>

The present total is only a minute fraction of the world's crop but it is approaching one and a half per cent of the imports into the United Kingdom and though the amount of cotton raised from the new field is relatively small it is absolutely large and is increasing by substantial percentage. High expectations have been formed of the possibilities of the Sudan. The total amount of cotton which passed through the hands of the Association (apart from that sold through other channels) in 1908 and the three succeeding years was respectively in bales and in value—(1908) 17,700 (£24,900) (1909) 20,000 (£25,100) (1910) 21,400 (£29,600) (1911) 27,700 (£37,300) (S. J. CHAPMAN)

### LINEN AND LINEN MANUFACTURE<sup>1</sup>

As indicated by the British Board of Trade returns the linen trade is in a comparatively healthy state and there has been a large increase in the number of acres in Ireland devoted to flax growing. This increase is due mainly to the gradual increase with in the last few years and the rapid rise in 1910 in the price of the better qualities of flax. A glance at the average prices of flax in pounds per ton as supplied by the Flax Supply Association indicates that the cultivation of flax may prove remunerative.

Year	Belgian	Irish	Dutch	Russian
1902	£64	£50	£49	£37
1905	67	50	52	35
1908	69	48	56	30
1909	68	61	58	32
1910	73	80	60	36
1911	87	64	63	44

A rapid rise in the price of flax may be a healthy sign from an agricultural point of view but it often checks not only the production of yarn but also that of cloth. It is all the more satisfactory to find that the trade has assumed such large dimensions.

The following table indicates the approximate number of acres under flax cultivation in the principal flax growing centres.

<sup>1</sup> See *E. B.* xvi. 7-4 *et seq.* x. 484 *et seq.*

## THE JUTE INDUSTRY

Country	1906	1907	1908	1909	1910	1911
Russia including Caucasus and Poland	4 294 000	4 368 000	4 190 000	4 090 000	4 739 000	
Austria Hungary	227 000	203 000	169 000	154 000	135 000	
France	68 000	63 000	71 000	51 000	54 000	
Belgium	52 000	56 000	51 000	39 000		
Ireland	55 000	60 000	47 000	38 000	46 000	67 000
Holland	38 000	42 000	36 000	23 000	29 000	39 000

Within the last decade there has been a considerable development in the manufacture of linen cloths intended to be embellished by some form of hemstitch or embroidery. Although this type of cloth does not as a rule require a large weight of flax it nevertheless creates a demand for the finer qualities and moreover provides work for a considerable number of operatives in the fine spinning departments and in those departments where hemstitching and embroidery are performed. This branch of the trade is now a very extensive one the work being done mostly by mechanical means. Handkerchiefs, table covers, bed spreads and small fancy cloths of all descriptions are adorned more or less by this method. A considerable amount of labour may be expended in comparatively short lengths of material and hence a mere statement of the number of yards of cloth manufactured may not be a proper criterion of the extent of the trade. Nevertheless, along with other developments in the finer end of the trade the British exports of linen goods show a satisfactory record.

*British Exports of Linen Goods*

Description	1906	1907	1908	1909	1910	1911
Weight of linen yarn in pounds	14 978 00	10 44 000	1 0 2	13 5 000	8 48 20	9 003 000
Length in yards of linen piece goods plain bleached or unbleached	1 3 334 00	6 364 600	13 0 7 00	11 0 00	11 000	16 0 00

Total length in yards of all kinds of linen cloth	190 95 00	91 990 100	51 11 0	2 4	1 000	9 014 900
Weight in pounds of linen thread for sewing	2 121 100	8 702	20		1	25 400

The improvements in methods of manufacture which are mentioned with reference to Jute are applicable to flax machinery and to all other where similar conditions obtain in regard to the roving spinning and twisting of long vegetable fibres.

Numerous attempts have been made from time to time to introduce quicker and if possible more satisfactory methods of bleaching flax and a new method which claims to be a simple and inexpensive chemical process of preparing flax straw for spinning is the invention of Dr R. R. Roberts of Washington. It is stated that in this new process five hours are quite sufficient for the purpose and that since the material is under complete control during the operation there is no danger of the fibre suffering from ineffective treatment. The fibre bleached by this process has we understand been spun into yarn and woven into cloth for use as table cloths napkins towels and similar articles and compares well with Russian flax. (F. WOODHOUSE)

JUTE AND JUTE MANUFACTURE<sup>1</sup>

The state of the jute trade during 1910 and 1911 was not very satisfactory. During 1912 however a great improvement took place and towards the end of the year mills and factories were everywhere as busy as possible. The following table indicates the respective Dundee prices per ton of jute per spynkle<sup>2</sup> of weft, and per yard of cloth which were ruling in the middle of October in the years 1901-12.

<sup>1</sup> See E B xv 603

<sup>2</sup> A spynkle is a length of yarn equal to 14 400 yards not to be confused with spindle the rod used in spinning.

# THE JUTE INDUSTRY

8 lbs. per pynkle wett in cop	1s 9½d	1s 6½d	1s 6d	1s 8½d	2s 0d	2s 6d
11 Porter 40 inches 10 ounce Hessian	2s 7½d	2s 1d	2s 0d	2s 1d	2s 4d	3s 2d

The fluctuation in the price of the raw material is often influenced by the size of the crop but in spite of a forecast of practically a 10 000 000 bales crop the prices for 1912 were very high. New uses are continually being found for the jute fibre so that the whole of the large crop is not available for what were originally the few typical types of simple yarns and fabrics. The crop in 1906 was a record one but the figures compiled by Messrs W F Souter & Co show that this has been exceeded since

	1906	1907	1908	1909	1910	1911	1912
Acres	3 336 400	3 974 300	4 567 700	2 476 600	2 842 600	3 106 400	3 353 800
Est. crop in bale	8 716 000	9 867 000	6 360 800	7 29 380	8 032 000	8 339 700	9 621 800

A good idea of the expansion of the jute trade in various countries can be gathered from the estimated consumptions in 1906 and 1912.

Country	Bales per annum		Country	Bales per annum	
	1906-07	1912-13		1906-07	1912-13
Scotland	1 50 000	1 300 000	Norway and Sweden	6 500	60 000

Austria and P h m u a	26 000	30 000	India	4 400 000	4 900 000

The figures shows clearly that over half the total jute is used in India. Although the expansion in India was checked somewhat a few years ago the new factory act has probably been the cause of many extensions which have been and are still being made in that country. In 1906 there were 6 799 looms and 5 0980 pindles for jute where as at present there are over 32 700 looms and 650 000 spindles.

Within the last few years there has been a development in the spinning of finer jute yarns in the Dundee district and it is hoped that this development will lead to a corresponding movement in the manufacture of cloths from these yarns. They are used already for cloths intended for ladies hats and might well be adopted for other articles of clothing.

A new textile thread or at least a combination of paper and fibre termed textilose has recently been introduced for uses similar to those in vogue for jute yarns. So far as cloth is concerned it appears to be used only for coarse sacking.

In the methods of spinning and weaving jute improvements are constantly being introduced with the object of consuming less power of improving the quality of the work and of facilitating the operations generally so as to increase production.

A circular loom on an entirely new principle has been invented by Mr C Whalley of Clitheroe but has not yet been tried so far as we know for the manufacture of jute fabrics. Ball bearings have been used for a small number of spinning spindles but the expense of a really satisfactory arrangement of this kind appears to stand in the way of a general adoption. A great improvement and one which results in the saving of from 30 per cent to 40 per cent horse power has resulted from the introduction of the Boyd and Phillip patent automatic tension cylinder or the fixed tension cylinder to spinning frames. The former maintains an equal tension on the driving bands under all varying atmospheric conditions and at the same time leads the driving side of the band off the spindle whorl almost perpendicularly to the axis of the spindle the fixed cylinder performs the same function of directing the bands at right angles to the spindle and it is this desirable condition which accounts for the great saving in power. A spindle drive is now being introduced which dispenses with the use of a guide cylinder. It consists of a solid drawn tube of small diameter suitably supported in ball bearings and rotating at about 1000 revolutions per minute. The bands pass direct from the tube to the spindle whorls. Since the driving tube is mounted on radial arms and balanced by hanging weights it also acts as a tension cylinder and thereby maintains an equal and uniform tension on the band.

For a considerable number of years endeavours have been made to simplify the method of imparting the necessary drag to the spinning bobbin as it is being filled. The latest invention and one which appears to justify all that is claimed for it is that by Mr J M Mallock termed the Turbo Drag. It consists of an annular disc of thin steel in the inside of which are flexible vanes. Its underside is provided with a renewable leather washer which rests on the bobbin board while a loose leaden ring on the top supplies just the amount of weight which is essential for the empty bobbin. The drag is driven by the bobbin to which it acts as a carrier and as the bobbin is filled a uniform tension is maintained on the yarn by the combined action of plane friction (due to weight of drag bobbin and yarn) the air resistance induced by the vanes and the increase of plane friction caused by the weight of the column of air in motion. There is no side pressure on the bobbin such as is always caused by the temper band and weight hence the bobbin and spindle run more smoothly. With this drag the spinner is free to give her whole attention to the yarn since the tension or drag is applied automatically—this is a distinct advantage and one which is sure to appeal to employers of labour. The turbo-drag is capable of being utilised on all frames which are used for the roving spinning or twisting of long vegetable fibres.

Another recent invention is an electrical rove stop motion by Mr P Sharp. The apparatus is ingenious and successful as the rove is arrested immediately the yarn breaks. It has been in operation for some time in America and is being experimented with in one or two Dundee jute mills. (T. WOODHOUSE.)

### ROPE AND ROPE MANUFACTURE<sup>1</sup>

Recent changes in rope manufacture are of only minor importance. As in all other trades involving mechanical processes there have been various slight improvements in the machines employed. The price of the raw materials used has shown the same tendency as other fibres to rise, and in consequence, attempts have been made to use larger quantities of the cheaper fibres. All sizes of ropes and twines from one inch downwards are now made of jute and these are quite satisfactory where great strength is not essential but the best ropes are made from the superior fibres.

The introduction of jute ropes and twines has caused a great development in the twisting of these yarns. In addition to being used alone the twisted yarns are extensively used in connection with cables for all kinds of electrical purposes.

A new form of driving rope made from 8 strands of sisal or similar fibre is now being manufactured by plaiting—a process somewhat similar to that employed in the manufacture of box cords and the like. In some cases each of the 8 strands is composed of a large number of individual threads whereas another style consists of 8 strands each of which is in the form of a smaller rope. Although driving by means of ropes has been and is still a very successful method its position is being seriously threatened by the electrical method. Both the group drive and the individual drive by electrical motors appear to be making satisfactory progress. (T. WOODHOUSE.)

### WOOL AND WOOL MANUFACTURE

*Sheep and Wool*—In the British Home Wool Industry a freer interchange of opinion among sheep breeders has resulted since 1909-10 in a more perfect adaptation of the animal to its environment or rather the development of the various sheep districts to their utmost capacity through the introduction of the breeds yielding the most profit. Thus the rounded short grassed downs of the southern counties are now frequently

<sup>1</sup> See E. B. xxiii 713 *et seq.*

See E. B. xxviii 805 *et seq.*

stocked with the Cheviot breed of sheep reared in a similar environment on the hills bordering England and Scotland while the heavier sheep of the Down class have made more headway for crossing purposes in the richer pasturage lands of the northern counties. With wool fetching a better price more attention has been given by the farmer to its growing and get up to the benefit of both himself and the manufacturer.

Reference must here be made to the attempts of the Wool Section of the Bradford Chamber of Commerce to impress upon both home and colonial wool growers the necessity for greater care in the packing of wool in order that the 'vegetable fibre difficulty' may be eliminated. After experimenting with various wool packs the Chamber have made definite recommendations and it seems probable that in the near future wool packed as recommended will fetch top price at the wool sales. The Chamber has also faced the difficulty of grey hairs in otherwise white fleeces and has made certain recommendations to sheep breeders which may help to clear flocks of this defect.

In Australia also some most interesting questions have been decided. Years ago the question of shipping wool in the greasy as opposed to the scoured state was hotly debated in the press and a perusal of the correspondence on the matter left one absolutely in the dark as to which was the better method. Actually there was never a doubt with few exceptions shipping in the grease being distinctly preferable. The question of the value of the Vermont breed in Australia has been fought out on very similar lines and although from the correspondence of a few years ago in the Australian press it was impossible to decide for or against the Vermont the past few years have shown that the Vermont is practically doomed so far as Australia is concerned. In the drought of 1901 the inability of the breed to withstand heat and dryness was only too painfully in evidence but it has needed the experience of the past three or four years in washing, combing, spinning and manufacturing Vermont wools to bring the matter to a climax. Bradford after trying to institute a coating trade based upon low and strong qualities of merino wools has had a sudden awakening and now demands nothing lower for these fabrics than a 64s or preferably a 70s quality. This has been the deciding factor and so it comes about that the tendency of to day is to grow a finer rather than a coarser merino and for this purpose the Vermont strain is practically useless.

The following particulars taken from the *Textile Mercury* still show a result in favour of growing the strong merino but a slight rise of price in the fine and a downward tendency in the strong would leave the advantage with the fine.

<i>Fine (7½ lb) — 2½ locks at 4s per lb</i>	s	d
1½ lb bellie and 2nd pieces at 8d per lb	0	3
1 lb 1st pieces at 10d per lb	1	0
¾ lb fleece at 1s 2½d per lb	0	7½
	5	5
Total weight 7½ lb Value	7	4
<i>Medium (10 lb) — 1 lb locks at 3d per lb</i>	0	3
¾ lb bellies and 2nd pieces at 7d	1	2
1 lb 1st pieces at 9d	0	9
6 lb fleece at 1s 1d	6	6
Total weight 10 lb Value	8	8
<i>Strong (11 lb) — 1 lb locks at 3d</i>	0	3
2 lb bellie and 2nd pieces at 6½d	1	1
1½ lb 1st pieces at 8½d	1	0½
6½ lb fleece at 1s 0½d	6	9½
Total weight 11 lb Value	9	2½

Another most noticeable feature in the Australian flocks is the wonderful increase in numbers. The maintenance of the prices paid for the leading Australian brands in view of the large increase in wool shipments can only be explained by the vastly increased demand by a more numerous and wealthier world population for better clothing.

Wherever sheep are reared as wool producing rather than mutton producing animals at least some endeavour is made to improve the fleece in one or more of its characteristics. Of late some attention has been paid to the breeding of uni fleeced sheep i.e. sheep producing wool of one or two qualities only, as distinct from the five or six qualities frequently to be found even on well bred sheep. This tendency is usually in evidence wherever attempts are being made to improve the merino or other breeds.

Attempts have been made to improve the breed of sheep in South Africa and in the West Indies. The connection of both these localities with Australia in the early days of Australian colonization adds interest to the recent importations of Australian merinos from accredited Australian stocks and in the near future these localities may forward to Europe considerable quantities of the finer qualities of merino so much in demand.

Professor T. B. Wood on the Cambridge University Farm has applied Mendelism to sheep breeding, an endeavour being made to reshuffle the Shropshire and Merino characteristics and select the combination Merino wool and Shropshire carcass. By October 1912 Professor Wood had the third generation of the cross showing marked segregation in wool characteristics. The effect of environment on the wool of Merino sheep kept for some years in England is also being investigated.

This attempt has stimulated other wool growers to work upon Mendelian lines and it is more than probable that in the near future much better control of flocks will result.

*Wool Washing Processes*—In the preparation of wool for the subsequent manufacturing processes perhaps the most noticeable event since 1909-10 has been the *débâcle* attendant upon the attempt of a Bradford firm to introduce the solvent method of wool scouring on a large scale. Although the case was never proved against the firm in question the Bradford Beck explosion so clearly showed the dangers attendant upon the use of any of the volatile agents that on their own initiative the firm referred to gave up the attempt and dismantled their machines. This failure is to be regretted from more than one point of view. The solvent method is so useful for dealing with tar lots and various stain on wools that its suppression almost amounts to the elimination of such special lots from the market.

From time to time new methods of scouring or revival of old methods keep appearing. Solvent earths appear, disappear and re-appear again. Upon the whole it appears impossible to improve upon the emulsion method especially if suitable emulsifying agents and well thought out machines are employed. The most recent emulsifying agent introduced is

Sapon for which the following advantages are claimed: (1) The scoured wool dyes better. (2) While dirt etc. is cleared away the wool wax is left in and gives the wool a most desirable handle and lustre. (3) There is no liberating of free caustic alkali and consequently no production of sticky insoluble soap on the wool fibre. (4) Economy in the scouring agent. (5) Washing at 96 to 100 F. and consequently no clotting of blood carrying anthrax and a consequent minimising of liability of the workers to contract anthrax. Up to the present Sapon has proved its worth from the economical and efficiency point of view for the longer wools but it has yet to prove its value for the shorter merino wools.

Attempts are being made to treat wool combers' sud, washwaters, etc. Several methods have been or are being tried and although it can not be said that any one has proved a marked success it seems probable that in the near future much will be done towards the purification of certain of the Yorkshire rivers from these deleterious substances and that this may be effected along with a substantial financial gain.

*Wool Preparing Processes*—The efficiency of carding engines has recently been improved by designing the framework to come close up to the revolving rollers with driving wheels and pulleys on the outside. This arrangement is more efficient owing to the absence of varying air currents towards the ends of the carding rollers. The hot air backwasher has firmly established itself in the worsted industry, humouring the wool more and producing a better yield and a better top than that produced on the old ironing type of machine. Attempts continue to be made to improve the Noble comb but little headway is to be recorded. The attempt to place three or four small circles within the large circle has not met with marked success while mechanical dabbers to supplant the ordinary dabbing brush have been tried again and again and apparently found wanting although there is one type making some headway. French combing has established itself for special types of work but for bulk lots the Noble comb is still holding its own.

*Spinning Processes*—French drawing and mule spinning are claiming increased attention in Yorkshire, and as a result drawers and spinners upon the ordinary English machines are being forced to study and if possible extend the capacities of their machines to meet the demand for soft spun yarn. A Yorkshire machine making firm has put a useful gill box (the O.P.S.) upon the market for dealing with short fibred material to advantage and various combinations of French and cone drawing boxes are being tried in connection with ring and cap spinning and twisting.

The most interesting development to be noted in the woollen trade is the attempt which is being made to introduce a continuous frame spinner in place of the woollen mule. Some remarkable yarns are being produced on this machine and it seems probable that for at least a section of the trade the mule will be superseded by this simpler and quicker spinner.

Perhaps the most important development to note with reference to both cap and flyer spinning is the marked development of the self doffing mechanism. Three years ago the self doffing machine was considered a questionable advantage to day, owing in England to the shortage of half time labourers and also to certain incidental advantages it is being adopted as the only possible solution to the difficulties by which the spinner is surrounded. The Arnold Forster self doffing flyer frame led the way and is now closely followed by Lister's, Prince Smith's and others for the flyer frame and by Prince Smith and Hall and Stall self doffers for the cap frame. When the self doffer was first suggested its mechanical advantages were considered nil and it has needed some years of experience to find out that there undoubtedly are such advantages. The latest cap frame doffer for example is so designed that there is no nicking of bobbins and no wearing away of cap spindles and there are other advantages which are slowly being realised. Strange to say, cap doffing which for some time after the introduction of flyer doffing was considered impossible is now the simpler of the two and further has not necessitated that change in the construction of the frame which is noticeable in the flyer frame. The ring and mule self-doffers have yet to appear but the demand for them seems inevitable.

Various attempts have been made to increase the production of wool spinning machines by the adoption of a variable drive. At present each machine is driven at the speed which will just yield a satisfactory result when the machine is spinning at its worst, say when the yarn is being wound upon the thin part of the bobbin or tube. Under the new arrangement the speed is not changed for this portion of this spin but the machine is automatically speeded up for the easier part. Possibly the extra expense of the variable speed motors has militated against any wide adoption of this method of increasing production.

The winding of yarn on to bobbins, tubes or spools seems unimportant but the International Winder has proved its value for by its means a layer after layer of yarn can be so closely laid that about double the length can be got on to the spool or bobbin as compared with ordinary winding. Thus when such spools or bobbins come to be woven there are but half the stoppages for reshuttling with a consequent greater production.

Reference should here be made to the difficulties often to be faced due to the electrification of wool while passing through the various machines. Two main systems to meet this difficulty have been tried. The most successful method seems to be to introduce humidity into the atmosphere and thus carry off the electricity. The other method is to employ a neutraliser throwing a continuous stream of the opposite sort of electricity into the electrified wool. The use of radium has also been suggested but is too expensive.

*Warping Weaving etc Processes*—In the weaving section some few improvements are to be noted. The Scotch Warping Mill and the Warpers Beam Systems are undoubtedly taking the place of the old upright mill and more perfectly tensioned warps result. The tedious operations of drawing and twisting or tying in have naturally claimed the attention of the inventor and all the operations are being systematically and efficiently attacked. The ease with which the Barber warp-tying in and the automatic warp drawing in machines work is a revelation in mechanical possibilities.

The most interesting loom development to note is an automatic shuttling mechanism introduced by Messrs Robert Hall & Sons, Bury. The warpstop motion shuttling mechanism etc. is so connected up to the lighting up of the loom that the moment anything goes wrong and it stops in coming the lights the moment the loom is put to rights and set running down go the lights and the loom does its work in an economical darkness.

In both automatic and ordinary looms a marked extension of the warp stop mechanism is to be noted. Such a mechanism ensures greater perfection in the resultant pieces.

A shuttle box control mechanism has been put on the market by two firms. Traps or double shuttling are here obviated by the empty box controlling the picking.

The question of mechanical as against electrical driving of looms has been strongly fought. More electrical driving is certainly being introduced but upon the whole under special circumstances only. It seems probable that if current can be supplied at  $\frac{1}{4}$ d (25d) per unit then electrical driving is as cheap as mechanical driving. Both the group and individual drive systems are advocated but the group system seems to be gaining.

*Dyeing and Finishing Processes*—In the dyeing industry marked advances seem to have been made in the dyeing of tops or wool in the combed state. Regularity of the dye has been considered an impossibility until quite recently but the latest machines have certainly suggested the possibility of success. The Permutet water softening apparatus is worthy of note a good water supply being a desideratum both for scouring and dyeing.

In the designing section of the industry the two most noticeable features are the development of the worsted tweed trade—no doubt largely due to the introduction of the hobbie skirt—and artificial silk. In 1912 tons of artificial silk were being employed in the Yorkshire manufacturing district alone and the manufacturing firms were months behindhand with deliveries.

(A. F. BARKER)

NEW FIBRES<sup>1</sup>

Through the fibres " of the organic world mankind exhibits in a striking way his direct dependence upon natural products both for the useful and the decorative and aesthetic elements of his life. It is in such regions of activity that we become aware that the arts have antedated ' Science ' by centuries and moreover that our modern Science is contributing no few factors of primary importance. It might be presumed that the application of scientific investigation to the wealth of material presented by the organic world would certainly lead to the selection and industrial application of fibres outside the range of staple materials of natural empirical selection. The presumption however is not justified by the facts, and there are few elements of material and fundamental novelty in the present development of the textile and allied industries.

The only noteworthy exception is in the *artificial fibres*, which are chemical transformation products of the natural celluloses. These are manufactured in a large variety of dimensions from a " monofil " of 0.5 mm diameter to a unit thread of 0.5 mgr per metre. The ' artificial silks ' are assemblages of the finer units suitably twisted. The world's production of these yarns has steadily grown, and is advancing to 10 000 tons per annum. Hitherto, the artificial silks have not seriously competed with or displaced the true silks; they have rather made for themselves new applications. With increasing perfection of the product however the situation may be different. The industrial applications of cellulose derivatives have followed the lines of development indicated in *E. B. v.*, 609. The viscose process is supplanting the nitrocellulose and to a certain extent the cuprammonium process for the production of artificial fibres. The acetates of cellulose are in certain directions supplanting the nitrate for films and massive solids. The pure cellulose sheet or film in continuous length has developed into an important industry, and the product is on the market as Cellophane.

The production of *Phormium* fibre (New Zealand flax " ) is again engaging the attention of the colonial authorities and the New Zealand Government offers prize money to the amount of £12 000 to inventors who shall improve the yield or quality of the fibre or cheapen the production by utilisation of wastes or by products.

In papermakers' raw materials there are supplies of new fibrous products on the market. The most important is the *cotton hull fibre*. Cotton hulls are the envelopes of the cotton seed and they retain a residual proportion of cotton fibre which escapes the ginning process of separation of the textile cotton from the seed. The treatment of the waste hulls after removal of the endosperms for the purposes of oil and feeding cake manufacture, has been the subject of various inventions for the separation and concentration of the fibre (see Beadle & Stevens *J. Soc. Chem. Ind.* 28 1015). The machines invented by De Segundo (English Patent 5,68 and 11 137 of 1908) effect a very complete separation of the fibre from shell residues giving a raw material of 85 per cent cellulose concentration and on a low rate of working costs. By this process a supply of 5000 tons of fibre per annum is already rendered available for European consumption, and bought at " rag " cellulose prices.

*Bamboo* has long been recognised as a potential source of papermakers' half stuffs and cellulose. An important report has recently been published by Mr W. Raitt describing investigations carried out for the Forest Research Institute at Dehra Dun. This report puts the cost of production of unbleached bamboo pulp at £6 5s 0d per ton (in India). It is also to be noted that a bamboo half stuff is offering in the London market and the present available supply is stated to be 1000 tons per annum. This is produced in Tongking, where work has been started on a unit plant of 10 tons per day capacity. The undertaking is an Anglo-American capitalisation and is projected for a possible extension to 100 tons a day.

*Papyrus (Cyperus)*—The massive reed growth on the Nile river is attracting attention as a possible source of paper making cellulose. Practical investigations under the auspices of Sudan Industries Ltd, and Sudd Fuel (Suddite) Ltd, have established the

<sup>1</sup> See *E. B. x* 309 et seq.

industrial value of the compressed material in briquette form as a fuel large shipments of the raw material to England have been worked up into paper, and the results establish an all round utility as a papermaking material. It remains to establish the important question of steady supply in convenient form for economical freights and minimum rates of sale in European markets (C F CROSS)

## SECTION VIII

## SPORT AND GAMES

*Internationalism*—In explaining the aspirations of his country towards sea power, the new German Ambassador to England Prince Lichnovsky remarked at the end of 1911 that Germany had already adopted British manners dress and sports. The assimilation of these and other features of social life throughout the portion of the world that affects the European form of civilisation is of course, mainly the consequence of extended international intercourse and the growth of towns and commerce. It is a commonplace observation that nowadays the inhabitants of great cities in Europe and the countries colonised by Europeans are superficially very much alike and it could easily be shown that their uniformity is no longer confined to appearances. But in the matter of sports and games which reflect besides modifying character, other influences than the mere imitation of fashion have to be recognised.

In Great Britain it may be asserted that the passion for outdoor recreation is essentially hedonistic. While publicists preachers and philosophers have for many years kept up a fierce controversy the natural practice has been little if at all influenced by the questions whether games in moderation or excess waste the time and pervert the energies of school boys or squires whether physical culture is better advanced on the cricket ground or in the gymnasium whether University oarsmen for the most part die prematurely of cardiac hypertrophy whether the prevalence of football absorbs enthusiasm which ought to be given to national defence. There are of course, thoughtful unprejudiced and experienced educationalists who advocate athletic games as a necessary part of juvenile training and are able to command practical assent to their views while there are many thousands of sportsmen and players of games who are convinced by their experience of the immense utility of their favourite diversions. But on the whole it must be confessed that the general adoption during the last half century of rural amusements by the British urban population has been caused not by a conscious desire for culture but simply by a desire for enjoyment while the main retarding force has been a fast decaying puritanism. The thing is first done and afterwards defended. At this point both the practice and the defence are seriously reinforced by the imitation of foreign nations. And it would seem that in their case the movement is to a considerable extent deliberately undertaken from a conviction that their own educational methods can be advantageously supplemented by a selection from the recreative customs of their neighbours. While increasing recognition is paid to the value of physical culture and curative exercise, it is now also understood that in sports of most kinds the senses are sharpened and a mental as well as bodily kind of alertness and dexterity fostered. Further the element of competition—together with that conflict with the luck of a contest which to the Anglo Saxon race has so much to do with the pleasure of games—is admitted to be in a high degree formative of character. In short games and sports are in times of peace more or less useful substitutes for the normal military struggle for existence by which the nations have reached their present development.

Whether as an effect, as a cause or as a concomitant of this new attitude on the part of the nations the modern Olympic Games must be taken into account. They have certainly accelerated the growth of internationalism in sport. The celebration of the games in London in 1908 was practically the first revelation to some European peoples of a national opportunity. They found that they possessed champions worthy to stand up in an international arena and thus was originated a new competitive

patriotism a kind of national consciousness similar to that which is generated by warfare though of much less intensity. At Stockholm in 1912 international rivalry was even more vivid. The conviction that the credit of a state could be served by success in the Games had become so firmly established that Government subventions were granted to some of the competing teams, while others were assisted by public subscription or donations from wealthy patriots.

That international sport will occupy a still more important place in the future provided that the general peace of the world is maintained may be confidently asserted. At present the obstacles to free and universal sporting intercourse are considerable but they are not entirely insuperable. One of the greatest difficulties to be overcome is the establishment of an international code—perhaps necessitating international legislative conferences. It is only necessary to instance the defects of the fencing, rifle shooting and wrestling contests at Stockholm in order to show what has to be accomplished in this direction. There also remain the vestiges of political barriers to be obliterated before French and German, Russian and Finnish, Austrian and Bohemian teams for example, can freely engage in matches at such games as hockey and football.

At Olympic meetings hitherto the strictly athletic part of the programme has been the simplest to arrange and the most favoured as well as the most conspicuously successful. Of what are called games in the limited sense of the word the most cosmopolitan, because most independent of different geographical conditions are lawn tennis, golf and football of the Association type. Both golf and lawn tennis are finely adapted for the recreation of townsmen of sedentary occupations and restricted leisure. Association football besides being simple, inexpensive and easily learned (though giving scope for great skill and speed), is assisted in its extension by attractiveness as a popular spectacle since it affords the excitement of a combat to the spectators while demanding the smallest amount of practical comprehension of its technique. It would be tedious to catalogue the places where the game is played—let it suffice to mention that it has recently taken root in the United States, it pervades South America and has been played by native Asiatic teams in Jerusalem besides affording a moment of patriotic and ungrudging triumph to a Calcutta crowd when a native eleven defeated a British regiment. Similarly it may be recalled that lawn tennis flourishes in St. Petersburg and in the Spanish Peninsula, that a journey across Africa has actually been described in the guise of a golfing tour, that a course has been laid out at Kabul for the Amir of Afghanistan. Both golf and lawn tennis in spite of the peculiar demands of foursomes and doubles are essentially games for the individual. International competition in these games is accordingly carried on largely through the private enterprise of players who compete in the open tournaments and championships of foreign countries. But lawn tennis matches besides the Davis Cup contest have recently taken place between teams representing London, Berlin and Paris and the Dulwich Covered Court Club has received a visit from a Bremen team. In football, as in cricket, what are termed international matches are almost exclusively played by teams belonging to different sections of Great Britain with occasional interchanges of visits between British and Colonial teams. But the Football Association has for some years chosen amateur elevens for matches with several Continental countries and English clubs have undertaken tours in the United States, Canada, South Africa, France, Belgium, Holland, Germany, Austria and Bohemia. The one Continental European country which enters largely into competitions in many kinds of sport with Britain is France but Belgian rowing has been exemplified with great effect at Henley. Particulars of international contests in many sports and games will be found under the separate headings below.

The new movement towards competitive athletic games has been more highly exemplified in France than elsewhere. Though French athletes were not as numerous or as prominent at the Stockholm Olympic Games as might have been expected the progress made in running on the track and across country has been sufficiently shown.

in matches between English and French clubs and in the performances of French teams in the international cross country championships. French lawn-tennis players are capable of holding their own with All England champions on grass courts and on hard courts have the advantage. But it is especially in Rugby football that the new French athletic spirit is most impressively declared. *A priori* no game seemed less likely to become acclimatised on the French side of the English Channel. A few years back when the Parisian clubs Stade Français and Racing Club de France took up this form of football the deficiency of school training, the want of personal dexterity and the apparent ineptitude of the players for concerted play were the most obvious features of their matches. A sufficiency of courage and something more than a sufficiency of combativeness did not seem to hold out great promise for the future. Nowadays Rugby football is popular throughout the country and the Southern towns Bordeaux, Nantes, Bayonne, Toulouse, Tarbes and Lyons possess very strong clubs backed by a local enthusiasm which is indicated by the large crowds of spectators at their matches. English club fifteens even of the highest reputation no longer play French teams in France with confident assurance of victory; international matches with the picked teams of France are considered to require the full force at the Rugby Union's disposal; a strong Scotland team has actually been defeated. In football is exemplified the modern French earnestness, the striving towards efficiency, the consciousness of the necessity for sustained national effort and sacrifice, that the present military phase of development has produced. But further the practice of the game has already developed a genuine sporting love of it. Something like the old spirit of the knightly tournament is now discernible in the play of French fifteens: the delight in a fierce and headlong onset and the concentrated endeavour towards victory are now tempered by an appreciation of the technique of the game. Accordingly the self-possession and mutual reliance on which the concert of a team depends have been evolved, and a game is more likely to be won when the whole sum of enjoyment is not staked on victory. Probably the favour in which boxing is now regarded in France may be attributed to the national change of temperament. The acceptance of professional pugilism came about in spite of a fatal accident in the ring which might have been expected to prejudice the sport in the eyes of the public. The ordinary Continental European attitude towards boxing is such that no amateur contests were held at Stockholm in 1912 because of a doubt as to their legality. Pugilism is now so attractive that a sum of more than 100,000 francs has been produced in Paris at one of Carpentier's matches. Boxing in the army and in amateur circles is also prospering under the impetus of a popular taste which is perhaps now at its climax.

Athletics—or competitive running, jumping and throwing—may be classified as lying between ordinary ball games and gymnastics. The readiness with which the athletic part of the Olympic programme was taken up by the Scandinavian nations was due to their excellent gymnastic discipline based on the methods of P. H. Ling.<sup>1</sup> This system though it has made its way into all countries is still cultivated more extensively and in higher perfection in Sweden than elsewhere, but an excellent gymnastic drill of the same type is used in Italy. It is significant of the expression of national feeling by the way of physical culture that the Bohemian *Sokol* societies, whose object is to preserve Slav nationalism, make a peculiar mass drill the chief feature of their meetings. Nothing was more striking in the results of the Olympic competitions than the progress made in athletics by the Swedes and Finns, the latter excelling especially in wrestling and feats of strength. The Swedish National Union subsidised by the state is a great federation of clubs having for its aim the enlisting of all adult citizens in an athletic discipline. Swedish citizens are encouraged to qualify for bronze, silver and gold badges by passing tests in five groups of exercises which include jumping, running, swimming, fencing, weight, discus and javelin throwing, bicycling, skating and ski running. There is no other country in which so near an approach is made to the old Spartan regimen. Hockey, football and lawn tennis are

<sup>1</sup> See *E. B.* xvi, 728.

also flourishing in Sweden and not only are Swedish yachtsmen now famous but considerable progress has been made in designing yachts of the smaller classes.

It would not be impossible to construct a scale of the nations arranged according to the degree in which active popular interest was taken in the despatch of competitors to the Olympic Games. This list would in no way represent the total amount of each country's devotion to athletic games and if Sweden were placed at the head of the table Britain would occupy a low place. In Belgium for instance a taste for sport is very prevalent but as in England it is not corporately manifested. It will probably however, find its opportunity at the Ghent Exhibition. In America the doctrine of physical culture inspires a large amount of organised endeavour the Athletic Union co-operates with the clubs in encouraging the systematic study of athletics and it is supported by public interest and on occasion by private munificence.

*Olympic Results 1912*—The Olympic Games were carried out in Stockholm in July 1912 during exceptionally hot weather. Although the resources at the disposal of the Swedish committee did not admit of so large a programme as had been undertaken in London in 1908 the whole festival was exceedingly successful. In regard to the presentation of internationalism the Swedish capital had the advantage of not being so large as to engulf its visitors and the spectacle of diverse nationalities was therefore most impressive. The stadium and its ornamentation were of striking and beautiful design and were situated in picturesque environment. There were several points in which the arrangements showed an advance on those of 1908 and though there were a few failures in the management of the competitions—partly through unavoidable defects in the programme the conditions and the judging—very little cause was given for dissatisfaction. One of the most noteworthy innovations was the electrical timing of the foot races and in view of the extraordinary speed attained by the runners it should be recognised that the use of mechanical apparatus for this purpose can hardly have favourably misrepresented their performances in comparison with the old way of time keeping with a stop-watch. The foot races on account of the facility with which they are exhibited in a stadium once again were invested with a larger importance than they ordinarily attain in public esteem. By far the best results in this part of the games were secured by the United States contingent who were also prominent in what are called held events but not without strong rivalry from Sweden and Finland.

Comparison of the aggregate number of points gained during the whole series of contests by different nations is of no great utility for the reasons that success in a team competition counts no more than the victory of an individual in a single race and that the Olympic programme includes contests which are not in vogue in all the competing nations while omitting others like cricket baseball Rugby football and (at Stockholm) boxing on which hundreds of thousands of sportsmen concentrate their energies. There are slight discrepancies in the published returns but it is substantially accurate to state that three points being counted for a winner or winning team two for a second place and one for a third the United States team gained 85 points in athletics and 45 in all other events. Sweden scored 30 points in athletics and 130 in other events. Great Britain 15 points in athletics or rather foot races and 61 in other events. The British Dominions scored 13 and 29 points. Finland 29 and 3 points. That Sweden was able to make the best total was mainly attributable to ability to undertake a greater number of competitions and to place in the field a greater number of competitors than any other country on account of the locality of the Games but largely also to organised preparation. The United States had better results in proportion to the number of entries and actually held the lead until the yacht races at the close of the meeting. These races from geographical and other considerations were practically limited to a very few countries. The Americans took no part in rowing or football and sent in but one competitor for the gymnastics the British were not represented in open air lawn tennis the javelin the discus and the weight—events which have never interested Englishmen,—the athletic decathlon and pentath.

lon certain of the shooting, wrestling and gymnastic competitions etc. It is curious that while little or no public support was extended to the British Olympic Committee and while the state of athletics in Great Britain furnished hardly any hope for success in the races disappointment was loudly expressed by the British press and public when the anticipated results duly came to pass. The Swedish successes were widely distributed points being gained especially in some of the less universally practised forms of athletics. In Swedish gymnastics horse riding cycling shooting driving, wrestling and yachting. Finland, who came fourth in the order of aggregate with 52 points profited by the assistance of the greatest long distance runner of modern times (Kolehmainen) and did well in discus-throwing and wrestling. Germany gained 47 points Australasia Canada and South Africa 42—South Africa producing the winner of the much esteemed Marathon race as well as the second man and the winner of the curious cycling road-race. France scored only 31 points Austria Hungary 2 Denmark 19 Norway 16 Italy 13 Belgium 11 Russia 6 Greece 6 Holland 3. Entries were sent in but no successes were obtained by Iceland Switzerland Portugal Luxembourg Monaco Serbia Egypt, Turkey, Argentina Chile and Japan.

In the following sections on the progress of particular sports and games<sup>1</sup> in 1911-12 they are taken for convenience in alphabetical order with the exception of the final section on American sport.

#### Angling

Within the last few years there has been one remarkable development in the field of salmon investigation. It has been discovered or rather re-discovered (for Anthony von Leeuwenhoek late in the seventeenth century was the first to suggest it—a fact which seems to have escaped notice until it was lately pointed out by Dr W. J. Turrell in *The Fidd*) that it is possible to tell a fish's age from the markings of its scales. This has proved to be easier with salmon than most fish, and the results obtained by investigations have been noteworthy. Messrs H. W. Johnston and W. L. Calderwood in Scotland, Mr J. Arthur Hutton and Dr H. Turnbull in England and Dr Knut Dahl in Norway are the workers to whom the new knowledge of salmon is chiefly owed. Mr P. D. Malloch of the Tay Salmon Fisheries Company has also done good service and much interesting information is to be found in his book (see below) though some of his conclusions do not find general acceptance with other observers. The result of salmon scale reading briefly put is the following view of the fish's life history. The parr usually stays two years in the river (in Norway the river period is sometimes longer—a fact which may be accounted for by differences of climate) after running down to sea as a smolt the fish spends at least a year in salt water and it may spend two, three or even four years there ascending a river again for the purpose of spawning as a three year old, four year old, five year old or six year old as the case may be. This quite upsets the old idea that a grilse might return after only a few months in the sea. Another old idea must also be relinquished that salmon spawn every year of their lives. All the data so far obtained go to prove that most of them spawn only once. A proportion (which has yet to be clearly determined) may spawn a second time, at present the data seem to show that this proportion is not more than 10 per cent. A very few may spawn three times in their lives but so far fish bearing evidence of three spawning seasons on their scales have been very rare indeed. There is obviously a good deal more to be learned but the main facts cited may be considered proved. When the investigation has gone somewhat further doubtless fresh problems of a practical nature such as the treatment of kelts will arise but the time for them and for new legislation based on the new knowledge has hardly arrived yet.

In other fields of the angler's interest perhaps the most interesting is a revival of wet fly fishing on chalk streams. The practice as now carried on is really a development from the dry-fly and those who practise the method go a step further than dry fly men by imitating the nymphs of the Ephemeridae and using them under the surface. The book by Mr Skues mentioned below is the chief authority for the method.

<sup>1</sup> See the corresponding E. B. headings for general accounts up to 1910.

The following is a selection of recent angling literature worth noting

Dr W J Turrell's *Ancient Angling Authors* (London 1910) dealing with angling literature down to the end of the eighteenth century is a carefully compiled and useful book. Dr H M Hall's *Idylls of Fishermen* (New York 1912) a study of piscatory eclogue literature (of which there is a considerable mass dating from Theocritus onwards) is the first attempt to deal with it at all fully.

On Salmon and trout fishing A. H. Chaytor's *Letters to a Salmon Fisher's Sons* (London 1910) is an excellent book of practical instruction. H. Lamond's *The Gentle Art* (London 1911) contains useful chapters on legal and economic questions. G. E. M. Skues in *Minor Tachys of the Chalk Stream* (London 1910) deals with the use of wet fly on dry fly streams with this may be mentioned F. M. Halford's *Modern Development of the Dry Fly* (London 1911). L. West's *The Natural Fly and its Imitation* (St Helens 1912) is perhaps the best book on practical fishing entomology since Ronald's it contains excellent coloured plates.

H. T. Sheringham's *Coarse Fishing* (London 1912) and C. O. Minchin's *Sea Fishing* (London 1911) are excellent on their respective subjects.

C. Tate Regan's *British Fresh Water Fishes* (London 1911), W. L. Calderwood's *Salmon Rivers and Lochs of Scotland* (London 1909), and *Life of the Salmon* (London 1907), P. D. Malloch's *Life History of the Salmon etc.* (London 1910), J. Arthur Hutton's *Salmon Scales* (London 1909) and *Salmon Scale Examination* (London 1910) and Dr Knut Dahl's *Age and Growth of Salmon and Trout in Norway* (edited by J. Arthur Hutton and H. T. Sheringham and published in English by the Salmon and Trout Association 1911) all deal more or less with the new science of salmon scale reading. Important papers on this subject by Mr H. W. Johnston are also to be found in the twenty third, twenty fourth, twenty fifth and twenty eighth Annual Reports on Scottish Salmon Fisheries. Dr Francis Ward's *Marvels of Fish Life* (London 1911) is a remarkable study of fish as observed under water both with the eye and the camera. Dr J. de Bellesme's *La Pisciculture en France* (Paris 1910) is a study of French fish culture with particular reference to the work of the Trocadero Aquarium.

### Archery

In spite of much unfavourable weather several fine scores were made in England in 1912 by both ladies and gentlemen. The most notable was that of Mr H. P. Nesham at the Southern Counties Meeting in September when in the double York Round he obtained 1067 with 23 hits. This is the highest score made since 1868 when the late Mr H. A. Ford at Lamington scored 1087 with 219 hits and except by Mr Ford, it has never been beaten at any public meeting. The championships were shot for at the Grand National Meeting at Cheltenham and won by Miss Q. Newall with 716 and Mr R. Brooks King with 829. In 1911 Miss Q. Newall at the Grand National Meeting where she won the ladies championship scored 803. Mr W. Dod who won the gentlemen's championship scored 885. Flight shooting is now rarely practised but a fine shot of 463 yds. was made by Mr Ingo Simon in 1911 with a Turkish bow.

The opportunity may be taken here to correct the *E. B.* article on Archery in some particulars. The bow now used by men is from 6 ft. 1 in. to 6 ft. 4 in. in length, a lady's bow ranges from 5 ft. 6 in. to 5 ft. 8 in. measured between the nocks, these lengths according to the one case with an arrow of 27 in. to 28 in. and in the other with an arrow of 25 in. to 26 in. Exceptionally long arms may render necessary an arrow an inch longer and a corresponding addition of one or two inches to the bow. The weight of a bow is the number of pounds required when appended to the string to draw to the head an arrow of 28 in. for a man's bow or 25 in. for a lady's. The weight of men's bows varies from 36 lbs. to 58 lbs. of ladies' from 18 lbs. to 30 lbs. the lighter weights being sufficient for beginners. Bows are styled self or backed according as they are made of one wood or of two or more glued together. Self bows if of yew are usually made of two pieces joined by a double fish splice at the handle as it is difficult to find a piece of this wood (incomparably the best) of sufficient length while free from knots. If made of lance they are invariably of a single piece. Backed bows may be of yew backed either with the same wood or with hickory, or alternatively of washaba or of ruby lance or other woods backed with hickory the back being the flat side of the bow and the belly the rounded side. Three woods are sometimes employed a thin strip of fustic being interposed between a belly of yew and a back of hickory. There should be an inflexible centre of about 21 inches whence the bow should taper gradually towards each end. It should be straight the back true and when strung the string should appear to cut the belly into two equal parts. Self yew bows are the best. They are light in the hand the sweetest to pull and have the best cast but they require careful handling. They are also expensive costing from £5 to £15 and they are liable to cracks or tiny cracks which gradually spread until the bow breaks. A yew backed yew which is next in merit can be bought for £5 and is somewhat less liable to cracks. Between the others there is little to choose provided that they are properly made and not reflexed as

they are said to be when the ends bend outward for these jar the hand. Their price varies from 25s to 3 guineas. The string for a man's bow should be from 6 in. to 6½ in. from the back of the bow when strung for a lady's from 5½ in. to 6 in. according to the length of the bow. The nock of arrows—it is never called the notch—should not be cut square but rounded. The feathers must be wing and not body feathers which are quite useless. They should be from the same wing i.e. right or left about 1½ in. long and tapering to the front from a depth of ½ in. at the nock. If balloon shaped their greatest depth should be at one third of their length from the nock end.

With regard to target scoring and handicapping it should be noted that a St. George's Round has never been shot at a public meeting or indeed at any meeting held within the last 60 years. Handicapping by the loss of rings has been obsolete for more than 35 years nor is there any system which can rightly be called handicapping by points. Handicapping is now carried out either by dividing the archers into classes according to their powers or by deducting percentages from their scores for previous successes.

As regards the history of archery some corrections may also be made. The bow was used in war at a later date than 1860 viz. by the Japanese against the English at Sumi Nosake September 5 1864. Nor did the Armada year see the last appearance of the English archer. A company of archers was raised for the expedition to the island of Rhé in 1627. There were archers among the Russian troops in the Crimea. Again the relation of Finsbury Archers the Hon. Artillery Company and the Royal Toxophilite Society requires restatement. In July 1676 William Wood Marshal of the Finsbury Archers was sent round with a paper signed by Sir E. Hungerford and others setting forth that the officers and others of the Society of Archers within the cities of London and Westminster have determined that the bearer shall have a silver badge and bear the same as Marshall to the Queen's Majesty's Regiment of Archers. The names of the subscribers were appended (Culldhall MSS. 193). Consequently this badge or shield had no connection with Oxford. The Finsbury Archers became extinct about 1761 but the Royal Toxophilite Society was not founded until 1781 when Mr P. Constable the last captain of the Finsbury Archers joined it and handed to it the shield and other valuables. There was therefore no combination of the two clubs in 1841. It is incorrect to assert that the Finsbury Archers were not connected with the Hon. Artillery Company. They were connected and under their powers shot over the Finsbury Field up to 1657. The Archers Division of the Hon. Artillery Company was formed by members of the Royal Toxophilite Society in 1784.

It may also be mentioned that the Championship is not recognised as a term belonging *par excellence* to any of the public meetings and that the list of public meetings should include the Southern Counties Meeting. The Crystal Palace meeting became extinct in 1902.

#### *Athletics*<sup>1</sup>

It was to be expected that under the impulse of the Olympic Games prodigies of natural speed and strength would be forthcoming from several nations. On the other hand while general improvement and an increase in the number of prominent athletes might be counted upon, the actual displacement of records being apparently a matter of increasing difficulty was considered improbable. In the course of the Olympic Games at Stockholm and of the trial contests held in the United States a number of feats were accomplished surpassing the best performances of exceptional and reputedly unapproachable athletes of former years. For example if any record could be considered unassailable it was the high jump of 6 ft. 5½ in. of M. Sweeney of New York and in another category the long distance times of A. Shrubbs and W. G. George seemed scarcely likely to be equalled. It was however precisely these records together with the wonderful half mile running of Lunghi that were eclipsed either at Stockholm or in preliminary contests among American aspirants to Olympic medals. Systematic study and training in the United States together with the large resources of athletic ability made available by the popularity of inter club inter school and inter university contests have considerably enlarged the athletic horizon. At Stockholm the United States team admirably organised and disciplined carried off a considerable majority of the athletic medals. In many cases the struggle for the first two or three places was confined to the members of this team and in several instances the failure of the expected winner did not impair the American chances of victory. On the other hand Finland besides doing well in feats of strength produced the most remarkable long distance runner of modern times in H. Kolehmainen, and yet even he in the most memorable race of the meeting over a course of 5000 metres, was barely able to beat the French

<sup>1</sup> See also under United States below

runner, J. Boun after running at his side for the whole of the distance. In the shorter races the Americans fully maintained their reputation for sprinting ability and practically had the issue at their mercy, although W. R. Applegarth for Great Britain showed exceptional speed. In the subsequent English meetings of the year this runner achieved further distraction. On the whole the British competitors, who had shown little or no promise at their preliminary trials, acquitted themselves better than had been expected. The ill fortune of G. R. L. Anderson, who might possibly have won the 120 yards hurdle race, but fell when well placed towards the end of the final heat, was compensated by the victory of A. N. S. Jackson in the 1500 metres. A high jump of 6 ft. 4 in. was accomplished by A. W. Richards, U.S.A., and a long jump of 24 ft. 11½ in. by Gutterson, U.S.A., and excellent performances were shown in the weight putting and the throwing of the discus, javelin and hammer, as well as in the hurdle race. Although the American team gained so large a proportion of the Olympic medals, athletic ability of an exceptionally high order was forthcoming from several other countries. The German runner H. Braun like the Frenchman Boun, was unfortunate in meeting men of phenomenal speed. Sweden and Finland produced many fine athletes and Canada, besides producing the winner of the 10000 metres walking race, Goulding, did very well in the long jump and the hammer. In the Marathon race two South Africans, McArthur and Gitsham, finished first and second, showing but wonderful endurance of the tropical heat.

The previous best performances on record were excelled at Stockholm in the 800 metres (J. E. Meredith, U.S.A., 1 min. 51.9/10th sec.) and the 5000 metres (H. Kolehmainen, Finland, 14 min. 36.3/5ths sec.). Meredith ran on and beat the half mile record in 1 min. 57½ sec. and Kolehmainen ran 3 miles in 14 min. 13 sec.—or 4 sec. less than A. Shrubbs's previously unbeaten time—in the course of his great exploit. Perhaps however the most wonderful of the Olympic victors was James Thorpe, an Indian from Oklahoma, who easily won the pentathlon and decathlon. His long jump was 23 ft. 2 in., his high jump 6 ft., and he cleared 10 ft. 9 in. in the pole jump, besides running 400 metres in 51.1/5ths sec., 100 metres in 11.1/5th sec., 1500 metres in 4 min. 40 sec. and 110 metres over hurdles in 15.3/5ths sec., and throwing the javelin 155 ft.

Other amateur record performances accomplished in the past two years may be mentioned here. In the pole jump M. S. Wright has done 13 ft. 2½ in. In the high jump C. Horine has done 6 ft. 8 in. in the American Olympic trial. J. P. Jones at Cambridge, Mass., in May 1911 ran a mile in 4 min. 15½ sec. or nearly 1½ sec. faster than the British amateur record established in 1907, and A. Kiviati at Harvard in June 1912 covered 1500 metres in 3 min. 55½ sec. The hammer was thrown 187 ft. 4 in. by M. J. McGrath (afterwards Olympic winner) in 1911. The Swedish javelin thrower C. Lemming in September 1912 established the amateur record at 205½ ft. for the right hand and 146 ft. 4 in. for the left. At Herne Hill on May 20, 1911, H. V. I. Ross walked 11 miles in 1 hr. 25 min. 48 sec. and surpassed all records from this distance to 17 miles (2 hr. 18 min. 29½ sec.). S. C. A. Schofield walked 22 miles in 3 hr. 9 min. 48½ sec. and 25 miles in 3 hr. 37 min. 6½ sec. At Kennington Oval in September 1912 W. R. Applegarth ran 200 yards in 19½ sec. and at Stamford Bridge a few days later the same runner covered 220 yds. in 21½ sec.

The Amateur Athletic Championships of 1911 in England were undistinguished, but in 1912 H. Braun in the half mile, W. R. Applegarth in the 220 yds., G. H. Patching in the 100 yds., E. Owen in the mile, G. R. L. Anderson in the hurdle race, contributed to make the meeting one of more than average quality. An international university match took place in 1911 at Queen's Club, West Kensington, between a team from Harvard and Yale and another from Oxford and Cambridge. The Englishmen won by 5 events to 4. Cambridge won 6 events to 4 against Oxford in 1911, but the contest of 1912 resulted for the third time in the history of this annual engagement in a draw, each side winning 5 events.

### Aviation<sup>1</sup>

With the advance of mechanical efficiency there came about in 1911 a transition from closed aerodrome contests to cross country races. The Gordon Bennett race was the only important one held under the old conditions, and it was won at Eastchurch by Weyman for the United States. The European Circuit—115 miles of flight, which included a start and finish at Paris and halts at Liège, Antwerp, Brussels, Calais, London and Calais en route—was won by André Beaumont, with Garros second. The

<sup>1</sup> See also *Aeronautics*, p. 339 et seq.

circuit-of Britain race was also won by Beaumont, this time from Védrières, the total distance being about 1,000 miles. In 1912 the principal events were the various military aeroplane tests organised by the French, German and British War Departments. The Gordon Bennett race held at Chicago was won by Védrières for France at a mean speed of 105 miles per hour. Legagneux put the altitude record up to 18,767 feet. The hydro-aeroplane has been considerably developed and a number of competitions for it have been organised.

#### *Badminton*

A steady if not very great, increase in the number of clubs and players has been accompanied by a corresponding rise in the general level of proficiency. In the tactics of the players no change is observable. Success has attended what is called the 'back and front' game in mixed doubles but this depends on the ability of the lady to defend the net and of her partner by means of great activity to take charge of the whole of the back of the court. The mixed doubles championship of the Badminton Association were gained in this manner by Mr G. A. Thomas and Miss Larmie in 1911 and by Mr E. Hawthorn and Miss Hogarth in 1912.

In 1911 Mr G. A. Sautter won the singles. Messrs P. D. Fitton and E. Hawthorn the doubles. Miss C. Douglass and Miss Orr the ladies' double. In 1912 Mr F. Chesterton won the singles. Messrs G. A. Thomas and H. N. Merritt the doubles. Miss Cundall and Miss Gowenlock the ladies' doubles. Miss Larmie (Mrs. Tragett) in both years won the ladies' singles.

For Baseball see under United States below.

#### *Billiards*

Since the prohibition of consecutive spot hazards and the push stroke English professionals have relied chiefly upon the top of the table game. An innovation however was introduced in 1911 by George Gray, a young Australian who repeatedly made huge breaks by means of a series of losing hazards from the red ball. In all he scored twenty-four breaks of four figures of which the highest was 2,196. Gray invariably declined to play matches with ivory balls and these breaks were not made under Billiard Association rules. H. W. Stevenson though not at his best during this season beat M. Inman twice for the championship of the Billiards Control Club.

In January 1912 George Gray met Stevenson and defeated him in two games out of three of 18,000 up. M. Inman beat F. Reece for the Billiards Control championship.

H. A. O. Lonsdale did not defend his title of amateur champion and the cup reverted in 1911 to H. C. Verr. An alteration was made in the arrangements the champions of England, Ireland, Scotland and Wales meeting in competition in the finals.

H. C. Verr beat Major Fleming by only seven points in 3,000 for the amateur championship in 1912. The influence of Gray's example was plainly perceptible in this competition in the use made of the losing hazard. A break of 1016 made by Stevenson in October 1912 in the course of a match with W. Cook is the highest yet recorded as having been achieved without series of spot strokes, anchor cannons or long successions of losing hazards.

#### *Bowls*

In the summer of 1912 a visit to England was made by a representative team from New South Wales which won 30 matches out of 44 played. They were very strong on fast greens in sunny weather but were unable to do themselves justice when during the latter part of their tour rainy days and dull grounds became the rule rather than the exception. In the international matches Scotland won against Ireland and England and England lost also to Ireland. A large extension of bowls as a club game and of club and county matches has recently been noticeable.

#### *Boxing and Pugilism*<sup>1</sup>

Though boxing is cultivated in many English public schools and has been encouraged in the British army and navy with the result that it is more generally practised and appreciated at present than ever before the standard of skill in England would appear to have fallen rather than risen in the past few years. The same thing is true of pro-

<sup>1</sup>See also under United States below.

professional pugilists. English bantam and feather weights have fairly held their own but for weights above 9 st. America and France dispute precedence. The progress of boxing in France is worthy of particular attention. French pugilists were at first trained by Lavigne, the American light weight champion who defeated Burge at the National Sporting Club and later by Erne, also an American. The style of these men can be traced in their pupils of whom Carpentier and Ledoux have been most prominent. Carpentier (b. 1804) is one of the most promising boxers of the day. In spite of his youth he defeated the English middle weight champion J. Sullivan, in two rounds at Monte Carlo, and easily accounted for two of the best English welter weights S. Burns and Joseph. But he lost to F. Klaus at Dieppe in the spring 1912 and in October to Papke in a fight for the middle weight championship. He is a boxer of polished style but not perhaps equal to some of his American rivals in fighting and hard hitting. Ledoux is a sturdy bantam weight who has both stamina and hitting power. After losing to Stanley the English champion he took his revenge decisively. Pugilism is now much in vogue in France and may be said to have completely displaced the savate (*la boxe Française*). In England Bombardier Wells, a man of a remarkable reach of some 80 inches holds a heavy weight championship and the Lonsdale belt. He was not however regarded in 1912 as comparable to the heavy weights of the past such as Jackson, Sullivan, Corbett and Fitzsimmons. His victory over Storbeck a South African who in 1900 very easily won the amateur championship is the chief basis of his reputation. On the other hand in J. Driscoll of Cardiff Great Britain is believed to possess the most skilful boxer of the day. He has won the Lonsdale belt for feather weights three times in succession and has gained convincing victories in America but failed in an ill advised attempt to beat the light weight champion F. Welsh who when insufficiently trained was defeated by Matt Wells an amateur ex champion. This result was reversed in November 1912. Stanley (b. 1882) retains the bantam championship chiefly by his height and reach and the facility with which he is trained for a combat. Whatever else may be said of the heavy weight champion of the world the negro Jack Johnson he is well qualified by physique skill and quickness to compare with any boxer of the past but another American negro Langford who in Australia twice beat McVea without being hit, though at a disadvantage of 2½ st. and 4 inches of stature is perhaps even more wonderful as a boxer pure and simple.

Boxing has certainly suffered from the American use of rough tactics and clinching as well as by the price which is demanded by champions for their appearance in the ring. Stipulations are made for a certain sum to be paid win or lose. In a match at Sydney Burns the loser received £6,000 and Johnson the victor £1,100. Difficulty has also been found in obtaining the services of qualified referees. In the reaction provoked by excessive clinching what is called the "clean break" has been enforced in Australia and America with the effect of preventing quite legitimate in fighting.

The Amateur Boxing Association championships were won in 1911 by W. W. Allen (bantam weights) H. Bavers (feather weights) A. Spenceley (light weights) W. Child (middle weights) W. Hazell (heavy weights). Allen regained his title in 1912 the other winners in the same order of weights were G. R. Baker R. Marriott E. V. Chandler R. Smith.

### Bridge

A modification of the trick values in auction bridge has recently come into general use. The new values are as follows: spades 2 clubs 6 diamonds 7 hearts 8 "lilies" (or royal spades) 9 no trumps 10. The advantages of this method are that (1) speculative declarations of no trumps are discouraged, (2) the preponderating value of red suits is diminished (3) a situation is brought about in which the declaring side is placed at a disadvantage. On the other hand it is objected that in the bidding the strength and nature of the hands are often so thoroughly disclosed as to detract from the interest of the play.

### Chess

While the number of chess players and of professionals entitled to the rank of masters increases continually and international tournaments are becoming common events no very exact proportion exists between the demand for prize competitions and professional

exhibitions and the supply. As a rule European tournaments receive so many applications from candidates that a selection is with difficulty made for the masters' contests and supplementary classes are frequently included in the programme. On the other hand in England, though amateur talent abounds and opportunities for using first class play are eagerly welcomed, professional chess is by no means abundant.

Next to the veteran Blackburne Burn is the most prominent English master. France is not nowadays represented in masters' tournaments but Russia is prolific of players of every degree and so are the Dual Monarchy and Germany. But it is the modern school, fathered by Steinitz, adopted by Dr Tarrasch and brought to perfection by Dr Lasker, the present champion, which has for some years been predominant. It is characterised by academic soundness rather than brilliancy. In the indecisive matches between Lasker and Schlechter and between Schlechter and Tarrasch the players permitted themselves no variety of opening or of tactics but were content with playing variations based on preliminary analysis and with avoiding enterprise or complications in the middle game unless forced upon them in some cases by exigencies of the battle. Of the younger masters Rubinstein who has been conspicuously successful has also of late years made sound position play his principal aim. Masters adhering to the romantic style (Morphy) like the late Turgorn and to a modification tempered to modern demands like Janowsky, Mieses, Spielmann and Marshall—in fact masters with an individuality of style and a capacity for producing interesting games—have the game from degenerating into dull academic precision. Janowsky though he did not do himself justice in his match with the champion is at his best a player of commanding personality and exceptional strategic power. Mieses is distinguished by enterprize and tactical cleverness over the board. Spielmann is capable of producing specimens of both soundness and brilliancy. Marshall's daring verges on recklessness while on a high level of all round efficiency. Nimzovitch has displayed considerable ingenuity and originality.

At the San Sebastian tournament in 1911 J. R. Capablanca a young player from Havana already famous having beaten Marshall in a set match, accepted the place originally reserved for Dr Lasker and won the chief prize from the leading players of the day. His style though at times tempered to the exigencies of the score sheet was brilliant enough to cause him to be hailed as a new Morphy. It was hoped that he might be able to play a match for the championship but hitherto Dr Lasker has declined his challenge under the plea of having been insulted by Capablanca in the wording of a counter proposition to some clauses of the conditions proposed for the match. In the meantime Dr Lasker has accepted Rubinstein's challenge who of late has achieved several successes at San Sebastian, Posten and in the Russian Championship Tournament. Teichmann won the Carlsbad Tournament of 1911 in grand style while Niemzovitch and Spielmann ran Rubinstein at San Sebastian very close. Of younger masters Russia may boast a bevy of whom Alechin is the best while young Breyer of Budapest promises to take high rank among the masters of the day.

### *Coaching and Driving*

Undoubtedly the advent of the motor car has caused a great diminution in the number of horses kept solely for driving. In London in every continental European town and in the cities of the United States mechanical traction has practically taken the place of the horse. But motor cars are still beyond the reach of the countryman who drives a gig and of the small suburban tradesman who sends out his wares in a horse drawn vehicle. In Great Britain few people now breed harness horses except those of the hackney breed the best of which are of considerable value not only for the show ring but because there still exists a small and wealthy public which will pay highly for possession of the smart stepper. The breeding and exhibiting of harness horses possessed of high action both in England and America is now quite a business but it is confined to a not very large number of enthusiasts and is in no way a national affair. In the United States there are the trotters and the standard bred horses and both these breeds are in a flourishing condition, and not in the least likely to undergo a slump.

The pastime of driving as is only natural with the motor car so much to the fore is in the hands of a few but in London and its neighbourhood there has been in the last four or five years a considerable revival of *four in hand driving* due in a great degree to the institution of the International Horse Show at Olympia and to the establishing of the Coaching Marathons and Corinthian Cups. These contests, one of which attracted as many as twenty teams have shown that the coach horses of the present day are better and more valuable animals than those of past generations and that the art of driving four horses has by no means been impaired. Indeed the good whip of the present day has to contend with increased traffic everywhere and with such fresh varieties of road users as the traction engine, the tramcar, the motor bus and the taxicab. Yet the driver of horses can hold his

own and this also applies to those who have charge of the public coaches in which direction there has been some revival both in Great Britain and the United States. All over the world the best harness horses are better and more valuable than they have ever been before, though it is certain that in most countries their numbers are decreasing.

### *Coursing*

Competition between greyhounds of different countries is attended with almost insuperable difficulties. Australians from time to time have sent dogs to the Waterloo Cup, meeting with but little success—perhaps through the effect of the long sea voyage. Coursing has become popular in France. The French Greyhound Club has leased a fine ground at Tremblay near Paris, where many meetings are held every year. Having purchased some of the best English blood for breeding purposes French coursers are naturally anxious to send dogs to Altcar and have more than once approached the Board of Agriculture and Fisheries in England with a view to the relaxation of the quarantine regulations. On the other hand English greyhounds are frequently sent abroad even to countries as distant as Argentina where many meetings have been held and it is very rarely that they do not prove their superiority. In France for instance the majority of the stakes have been won by English bred dogs. Nevertheless some British breeders believe that the dogs now produced, while possessing speed are deficient in stamina, and one breeder at least has decided to make the experiment of crossing with the Afghan hound a slow animal remarkable for staying powers. One of this breed was imported by Lieut. M. H. Lucas of the Indian Army (37th Lancers) who bought him from a caravan of Afghans passing through Zhob Baluchistan. The dog is now at the stud in Northumberland and the career of his produce will be watched with much interest. The pre-eminence of the English greyhound has been proved in Hungary where coursing or at least the pursuit of the hare with greyhounds has been practised from time immemorial. The typical Hungarian dog was undoubtedly slow but he was endowed with wonderful courage and before the National Coursing Clubs (England) rules were adopted, the most sought after greyhound was the one that could bring his hare down no matter what obstacles he might be called upon to negotiate. Since those days the Hungarian coursers have imported many English dogs and the result has been highly interesting for the reason that few stakes are won but by an English bred dog or one possessing English blood. Coursing has also been taken up in Russia with the support of the Grand Duke Nicholas on whose estate at Perchino about 200 miles south of Moscow meetings are regularly held.

No other coursing event of importance in the world is held under such conditions as the Russian Waterloo Cup. After the snows have disappeared the sun exerts such power that coursing during the day is out of the question. It is therefore necessary that a start should be made at about two o'clock in the morning or as soon as there is sufficient light and as a rule eighty courses are decided before nine o'clock. In 1911 Dendromys the winner of the Barbican Cup in England was purchased by the Grand Duke Nicholas and he was beaten in the final by Flower Glen also English bred. In 1912 Bachelor's Ball II a prominent performer in England and runner up for the Barbican Cup was secured by Count Chermetteff and won the Russian Waterloo Cup defeating Thekan in the last round. Thekan was bred in Russia but is by Prince Plausible who ran second for the Waterloo Cup at Altcar in 1905. The borzois are frequently tested in Russia with hares. It has been held by many authorities that the English greyhound would beat the borzois if entered to wolves being certainly much the quicker while possessing quite as much courage but the Russian dog has a great advantage in weight. In addition to the stakes for greyhounds at the last meeting held in Russia by the Grand Duke Nicholas there were several events for borzois.

Considerable interest was attached to the English Waterloo Cup both in 1911 and 1912 owing to the fact that puppies played so important a part. In 1911 the winner and runner up were in their first season Sir R. W. B. Jardine's Jabberwock by Bachelor's Acre from Forrester's Favour beating Mr. P. Storey's Silk and Scarlet by Earl's Court from Cay Feather in the final and in 1912 Mr. E. L. Townshend's Tide Time by Friendly Foe from Fast Waves beat another puppy in Mr. F. Alexander's Adversary by Glenfield from Alter native.

### *Cricket*

For more than two years past public attention has been concentrated on international cricket. The visit of a South African team to Australia in 1910-11 served as

a prelude to the so called triangular tournament of 1912 and in the meantime an English team under the management of the Marylebone Cricket Club carried through a wonderfully successful tour in Australia in 1911-12.

The South Africans in Australia hardly did as well as had been expected. Their strength was considered to be chiefly in their bowling but they were disappointed by the inability of A. E. Vogler on whom much reliance was placed to do justice to his reputation. On the other hand they found Australian batting in its prime. In eleven side matches as many as fifteen Australian batsmen averaged more than 30 runs an innings against the South Africans and eleven of them more than 40 runs. The most formidable were V. I. Trumper who exceeded 75 runs an innings and in Test matches averaged 94.57, W. Bardsley, W. W. Armstrong, C. Kelleway, C. G. Macartney and V. S. Ransford. The Australian bowling was of no very high quality though W. J. White was very consistent and H. V. Hordern who was able to match the South African googly bowling with a similar style had a great share in winning two Test matches. For the South Africans G. A. Faulkner besides bowling well battled with wonderful certainty failing in none of the Test matches to make at least 100 runs in the two innings. The South Africans won the third Test match by 38 runs at Adelaide but they lost the remaining four and they were also beaten once by Victoria and twice by New South Wales. Three of the twenty-two matches were drawn.

The tour of the M.C.C. team was extraordinarily successful. Of 18 eleven side matches the first Test match played at Sydney alone was lost, four were drawn and 18 including four Test matches were won. The strength of the English team was found principally in the bowling of Barnes and F. R. Foster. Both these bowlers are above medium pace and of great accuracy. Barnes has a fine command of the leg break with the other break as a variation and Foster while often causing the ball to swerve in the air has a remarkably quick rise from the pitch and on that account is well suited by fast wickets. The batting of Hobbs, Rhodes, Woolley, G. Gunn and J. W. Hearne contributed much to the success of their side while J. W. H. T. Douglas who acted as captain was of value both as a resolute and patient batsman and as a fast bowler of great precision and a mastery of the swerve. Douglas who took up the captaincy on P. F. Warner being incapacitated early in the tour by serious illness distinguished himself by his correct judgment and his unfailing presence of mind in the important matches. The batting of Hobbs has never been excelled in Anglo-Australian contests. Invariably sent in first he played innings of 187, 178 and 116 not out in Test matches. His first wicket partnership with Rhodes in the fourth match at Melbourne amounted to 3-3 runs—the greatest first wicket partnership for a Test match—and the whole innings aggregated 589. The fifth match was won after the English team had been 144 runs in arrears on the first innings. The Australian bowling again seemed to be less dangerous than in previous years but H. V. Hordern was always formidable. He had a principal hand in winning the first match for Australia and took five wickets in each innings of the last match.

At the end of 1910 a team sent to South Africa by the M.C.C. won two and lost three Test matches. In spite of the brilliancy of Hobbs the batting was weak on the whole and it could not cope with the bowling of G. A. Faulkner and Vogler who took 65 out of 85 wickets. Faulkner was also by far the best of the South African batsmen having an average of 60.55 runs in the Test matches to the 67.57 of Hobbs.

In consequence of the exceptionally bad weather of the summer of 1912 the Triangular Tournament in England was a complete failure. From the first the South African team was unlucky several players and notably Faulkner being at one time or other more or less incapacitated while they also seemed to be more adversely affected by the slow wickets than their opponents. They were without the assistance of Vogler. On the other hand Australia was unable to send to England a representative team. A dispute in which several of the foremost players were at variance with the Australian Board of Control prevented the inclusion in the party of Trumper, Hill, Armstrong and Ransford. The weather however did not permit a convincing trial of strength between the English and Australian teams. Of three matches arranged only one was finished and that one was much interrupted by rain being concluded with difficulty in four days at the Oval on a treacherous wicket. It was decisively won by England, who had the advantage of greater experience of such conditions and bowling much better suited to them. England defeated South Africa at Lords, Leeds and the Oval and Australia had two easy victories at Manchester and Lords. Throughout this series of matches sudden spells of successful bowling were surprisingly common. In more than one of these Pegler (South Africa) was concerned and it was curious that his periods of effectiveness would occur without any apparent cause when the batting had for some time been more or less dominant. In the first match between South Africa and Australia at Manchester J. T. Matthews (Australia) performed the hat-trick in both innings—an unprecedented feat. Pegler took six England wickets at Leeds for 16 runs when 308 had been scored for four wickets. G. R. Hazlett (Australia) against England at the Oval closed an innings in which five wickets were down for 170 for the addition of 5 runs.

A team of Indians visited England in 1911 and played 14 matches losing ten but beating Leicestershire and Lincolnshire. Lord Hawke took a team to Argentina in 1911-12.

## SPORTS AND GAMES

A new method of deciding the English County Championship was tried in 1911 and although not giving general satisfaction was retained in 1912. With the idea of discouraging the players from aiming at drawn matches five points were given for a win and three points (with one point to the losing side) for a first innings victory. This purely arbitrary mode of reckoning which had for some time been the rule of the minor counties assisted Warwickshire to win the championship in 1911 but they probably also profited by having no matches with some of the strongest counties. The fast wickets were favourable to several of the Warwickshire batsmen and still more to the bowling of F. R. Foster and Field. Kent would have been first according to the old reckoning. Middlesex were third and Lancashire fourth. In 1912 the wet wickets were adverse to Warwickshire but suited Northamptonshire whose eleven showed great improvement in batting. This county was second to Yorkshire who had a strong team several of their younger professionals assisting materially in their success. Kent took the third place and Lancashire the fourth.

The Jam Sahib of Nawanagar (Ranjitsinghi) played in several county and other first class matches in 1912 and showed that he had lost little or nothing of his old skill in batting. Oxford beat Cambridge in 1911 through the excellence of P. R. LeCouteur's slow bowling which was of varied style but was classed as belonging to the googly order. Cambridge won a very close match in 1912 largely by the fine all round play and captaincy of E. L. Kidd. Eton in both years won against Harrow.

Good fast bowling is scarcer than ever in first class cricket. Many bowlers have cultivated the delivery of the swerve, the ball being so held that the seam while rotating vertically lies a little to the right or left of the line from bowler to wicket. The googly has made little progress though it was effectively used by H. V. Hordern in Australia. The plan of bowling at the leg stump or even at the batsman's legs originated by Hirst has been perfected by other left handed bowlers notably Dean and F. R. Foster. In batting back play and on side hitting are prevalent and the right foot is shifted without compunction. In consequence of these developments the setting of the field has transcended all the old customs and positions are assigned for which the game has no vocabulary.

*Croquet*

One of the causes to which the decline—amounting almost to extinction—of croquet was attributed some thirty years back was the modification of the conditions of the game to suit the requirements of the most skilful players. When the  $3\frac{1}{4}$  in hoops were introduced the game became too difficult to be popular. The same difficulty has been reasserting itself. For many years the Croquet Association has been continually revising its laws to meet the increasing skill of the foremost players—nowadays by no means a small class. The small hoops no longer constitute any serious obstacle to the making of long breaks. In spite of the provision of 'baulks' in order to secure an open shot for a player as soon as his opponent has finished a turn it is realised that the player who first gets possession of the balls has the chances overwhelmingly in his favour. The laws committee of the Croquet Association has been discussing several proposals for making the game more difficult. The most favoured of these are (1) playing with either ball of the side (2) the reintroduction of a cage in the middle of the ground, (3) the turn to cease if any ball is sent off the ground after the first croquet has been made. The tactics of croquet have undergone but little change of late except that the best exponents (and there is nothing which now shows the quality of a player more than the way the balls are left at the finish of a turn) almost invariably go out for a break thus following the example of the present champion Mr. C. L. O'Callaghan—and that the art of 'peeling'—especially in handicaps—is greatly on the increase.

The principal competitions of 1911 and 1912 resulted as follows.—Open championship (1911) E. Whitaker (1912) C. L. O'Callaghan ladies championship (1911) Miss E. Reid (1912) Miss Simeon gentlemen's gold medal (1911 1912) C. L. O'Callaghan ladies gold medal (1911) Miss N. S. L. Gikhrst (1912) Lady Juhan Parr champion cup (1911) H. Maxwell Browne (1912) P. D. Matthews ladies champion cup (1911) Mrs. R. C. J. Beaton (1912) Miss D. M. Standing.

*Curling*

The winter of 1910-11 was soft that of 1911-12, after beginning badly later afforded excellent sport. During the latter part of January and the first week of February 1911 there was unique activity both in Scotland and Switzerland and at the same time the Scottish team in Canada reached the climax of their tour at Winnipeg.

In Scotland, for the second time since 1903 it was possible to hold the Grand Match

Though it was necessary to wait till the ice was five inches thick before announcing this event and though considerable notice had to be given yet the ice held long enough to enable 2 000 players to take part at Carsbreck on February 2. As usual the South beat the North. The International Match (England v Scotland) fixed a day too late was spoilt by the weather. It had not been played in the open since 1907. The rinks or at least their skips were deliberately selected making the match genuinely representative a place in the team having hitherto depended on inclination to enter and luck in the ballot. After several English victories (including 1911) Scotland won in 1912 at Craigielands Loch by an average of six shots a rink over 24 rinks. Curling facilities have been multiplied not only by the use of sprinkled asphalt rinks but by the opening of ice palaces in Edinburgh and Aberdeen.

In Switzerland curling has increased in popularity, it being possible to play in milder weather than suits most other winter sports. The centre of chief activity has moved from the Engadine to the Oberland partly because of Grindelwald's victories in the Jackson Cup in 1911-12 necessitating the competition being held at Grindelwald (instead of Davos or St Moritz) until they lose it. In the International Botspiel Mr McGeoch's Manchester rink won in 1911 and 1912.

During their tour in Canada the Scottish touring team lost by 16-47-61 and 31 shots on six rinks in their four international matches—an average of six shots a rink.

### *Cycling*

Interest in bicycle racing was maintained with difficulty during 1911 despite the continued increase in the use of the bicycle for utility and recreation. The World's Championships held at Rome early in June resulted in the Englishmen Bailey and Meredith winning the one kilometre and 100 kilometres amateur contests and Ellegard winning the kilometre professional race. In 1912 the World's Championships held at Chicago resolved themselves practically into duels between American and French professionals out of which Kramer the United States representative emerged successful. The fact that the cycling contest at the Olympic Games was a road race gave a great fillip to that form of the sport and led to quite unexpected results. As the leading road racing country England was looked upon as the inevitable winner but anticipations were entirely falsified for Lewis a South African accomplished the fastest time and the Swedish team (Friberg, Malm and Persson) placed their country first. The race however, was greatly influenced by the order of the draw for places.

Motor cycling made great progress in 1911 but mostly in Great Britain. Germany being a fair second. The only international events of sporting importance were the Tourist trophy races held by the Auto Cycle Union of Great Britain in the Isle of Man on June 30th and July 3rd. On the former date Evans won the junior event for engines of less than about 3 H.P. and on the latter Godfrey won the senior race in which the power practically was limited to about 4 H.P. The expansion of motor cycling in 1912 was much more rapid, and general and international contests are likely to be multiplied. The chief sporting events however were again the Tourist Trophy races in the Isle of Man. The junior event was won by Bashall and the senior by Applebee. The chief mechanical development of the year was the evolution of the cycle-car—a four wheeled motor cycle which formed the feature of the London Olympic Motor Cycle Show in November 1912.

### *Fencing*

For the advancement of international intercourse it is desirable, as recent events have demonstrated that an effort should be made to assimilate both the rules and the accepted canons of foil and épée fencing as practised in different European contests. For instance the rule as to the 'target' adopted by the Swedish committee was regarded in France as so unsatisfactory that, by way of protest, no French team was sent to Stockholm for the Olympic contests, nor in fact was France even represented in the épée and sabre competitions. The Italians also declined the épée matches because the longer weapon which they affect was not admissible. In the French rules the upper part of the sword arm is assailable. The new rule adopted by the Amateur Fencing Association, but not yet applied to the foils championship counts hits on the upper part of the sword arm, if in the judge's opinion it has intercepted the point when this would otherwise have reached the chest. Under the Swedish Olympic rule the sword arm was

completely excluded except that the jury could count a hit on the head, arm, or hand as valid, if the recipient had effaced the target by adopting an ungainly or irregular position or instead of making a parry, covered the target with head, arm or hand. Much of the fencing at Stockholm was open to the charge of being rough and ungainly. The gold medals were won as follows: individual foils, N. Nadi, Italy; individual épée, P. Anspach, Belgium; individual sabre, Fuchs, Hungary. The épée team contest was won by Belgium, with Great Britain second, and Holland third, the sabre team by Hungary, with Austria second and Holland third.

The Grande Semaine of 1911 was held in Rouen instead of Paris. France retained the International Cup by beating Belgium (24-18) and Great Britain (26-12). In the Ostend week Great Britain beat Holland (15-14) but lost to Belgium (16-11) and France (17-11). A representative British team for the first time took part in the sabre contest and did well, losing to Bohemia, who took the first place (5-4), Holland (5-3) and Belgium (4-2). No British team could be sent to the Grande Semaine of 1912 on account of the Olympic Games. France beat Belgium for the International Cup (22-18). Baron de Eynde carried off the épée championship and Lœut Perrodin the sabre championship. With the épée at Ostend France beat Belgium (16-11) and Great Britain (22-5). With the sabre Belgium defeated France and Italy, and France defeated Italy. M. Gravier, France, was first with the épée, M. Hennet, Belgium, with the sabre.

The British amateur foils championship fell in 1911 to E. M. Amphlett, in 1912 to P. G. Doyne, after a tie with G. R. Alexander, R. M. P. Willoughby, and P. M. Davson. The amateur épée champion of 1911 was J. P. Blake; in 1912 the title fell to R. Montgomerie. W. Hammond, sabre champion of 1911, was replaced in 1912 by Captain C. Van der Byl. Miss G. Daniell won the ladies' championship in 1911 and 1912, after fighting off with Miss J. Johnstone in 1911 and with the Misses C. A. Walker and A. B. Walker in 1912.

#### *Football*<sup>1</sup>

*The Rugby Game*—Although no distinct new phase has lately been observable in the manner in which Rugby football is played, the method of attack by means of concerted runs by half backs and three quarter backs becomes yearly more indubitably stereotyped. The play of the forwards is subordinated to this leading idea. Even when the ground and the weather make the passing of the ball extremely difficult, while enhancing the effectiveness of dribbling, the same style of play is generally attempted, and often with some success. On the other hand, as the counter moves are better understood, the attack has been varied by the artifice of kicking across the ground, and the forwards get some opportunity of using their skill in dribbling in the scrambling play thus brought about. So much depends on the first possession of the ball in the scrum, whether for the purpose of heeling or wheeling, that various tricks and manoeuvres have been attempted. By an improvement on the tactics of the famous New Zealand team, the forwards on forming a scrum sometimes bring up a man suddenly into their front row on the side nearest to the player who is about to put the ball in play. This forward, being unobstructed, is said to gain the 'loose head' and is at an advantage in getting the ball with his feet. In order to check this trick, the International Board has declared that the ball is not fairly in a scrum until it has passed a player on each side. It follows that the leading row of forwards must contain at least two, if not three players, though no rule exists to this effect, also that the out side forward who has the first chance of playing the ball may be penalised if he does so for preventing the ball from being fairly placed in the scrum. This consequence, though logical, is not universally accepted. By new legislation penalties have been enacted for wilful knocks-on and throws-forward, and for wilful throws into touch.

The Rugby game, though exceedingly popular in some districts, has lost ground in the west of England and even in South Wales, through the rivalry of Association football. Its progress in France, however, has been unchecked. Early in 1911 a French team for the first time was victorious in an international match, beating Scotland in Paris. French players are remarkable for impetuosity, speed and quickness in starting, which last quality makes them strong in defence. In the same season Wales beat England, Ireland, Scotland and France, Ireland beat England, Scotland and France, England at Twickenham beat Scotland and France. In 1912 all the international matches took place in the United Kingdom.

<sup>1</sup> See also under 'United States' below.

were won by the fifteen playing in its own country. England defeated Wales and Ireland but narrowly lost to Scotland. Ireland beat Scotland and Wales and Wales beat Scotland. In no match was France victorious. The University match went in favour of Oxford in 1910 and 1911, the disablement of a Cambridge three quarter back B. R. Lewis apparently turning the scale in the first match. Cambridge won by 2 goals to a try in 1912. Rugby football was omitted from the Olympic programme at Stockholm. A strong South African team began a tour in Great Britain in the autumn of 1912. After gaining several decisive victories over counties the South Africans lost to Newport, were with great difficulty victorious over Llanelli, the United Services and London, beat both the universities, were narrowly beaten at Twickenham by another London fifteen and easily beat Scotland at Edinburgh, avenging the defeat sustained by the South African team in 1906. They next gained their most decisive victory at Dublin, securing 36 points against Ireland, and beat Wales by a try at Cardiff but lost to Swansea by the same margin.

*Association Football*—The wide dissemination of Association football not only in Europe but also in the other continents is illustrated by the fact that a tour was undertaken in Brazil in 1910 by the Corinthian F. C. and another in North America in 1911-12. There are now many clubs in Argentina, Uruguay, Brazil and Chile. Amateur international football has been affected by a dissension among English clubs dating from 1907. In consequence of the Football Association insisting upon the admission of professional clubs (so called) to the district associations, a large number of amateur clubs, including the University College and public schools clubs, seceded to form the Amateur Football Association. The officers of the army, while sympathising with the seceders, considered it advisable for the sake of regimental football to retain their connection with the Football Association. But in 1911-12 they used their influence to promote a reconciliation. A conference was held at which the delegates of the two associations only failed to arrive at an agreement because the older body would not accept an arrangement by which the younger could receive the adherence of newly formed amateur clubs. The Federation Internationale de Football Associations, commanding the support of most of the countries of Europe, including the Football Association, is necessarily cut off from intercourse with the Amateur Football Association. This, however, is in alliance with the Bohemian Football Association and with many French clubs belonging to the Union de Sociétés Françaises de Sports Athlétiques.

International matches played by England with other countries are no longer representative of English amateur football. The A. F. A. although allowed a representative on the British Olympic Council was debarred from sending an eleven to the Olympic Games. Nevertheless an amateur team organised by the Football Association was able to win the Olympic trophy, beating Denmark in the final round by four goals to two, after easier victories over Finland and Hungary. The Holland eleven gained the third place. The matches were played in very hot weather in July. The playing strength of the English Football Association is largely professional and therefore cannot be exhibited in contests with continental players, though occasional visits to the continent have been paid by professional teams. The amateur elevens of the Football Association won matches with Wales, Belgium, France and Holland in 1910-11 but lost to Ireland and could only draw with Germany. In 1911-12 besides their victories at the Olympic Games they defeated Ireland, Wales, Denmark, Holland and Belgium. The Amateur Football Association teams were consistently victorious, beating Wales and France in both seasons and in October 1911 winning a close match with Bohemia in Prague by 2 goals to 1. The full representative elevens of the Football Association defeated Ireland and Wales in 1911 and drew with Scotland. Ireland lost to Wales and Scotland and Scotland drew with Wales. In 1912 England and Scotland again played an indecisive match but both beat Wales and Ireland. Wales lost three matches. As an entertainment professional football is as popular as ever. More than 127,000 spectators attended the England v Scotland match of 1912 in Glasgow. The Football Association Cup was won in 1911 by Bradford City after a drawn match with Newcastle United, in 1912 by Barnsley after a drawn match with West Bromwich Albion. The championship of the Football League was carried off by Manchester United in 1911 by Blackburn Rovers in 1912. The principal trophy of the Amateur Football Association was won in 1911 by the Old Malvernians, in 1912 by Oxford City. The Arthur Dunn Cup for public school clubs fell to the Old Reptonians in 1911 and to the Old Malvernians in 1912. Oxford won the University match in 1911 somewhat unexpectedly but lost to Cambridge in 1912. No substantial alteration has been made in the laws of the game or in the tactics of the players except that the goal keeper in Football Association matches is now prohibited from using his hands outside the space called the penalty area.

*Golf*

By the introduction of the rubber-cored ball a phase in the evolution of golf was initiated which cannot yet be safely said to have culminated. The ingenuity of inventors has supplied balls with heavy cores of various materials, and these are tightly bound with rubber thread and an outer casing of gutta percha. A small ball of high specific gravity combined with great elasticity is now in general use and is of course found particularly advantageous in a strong adverse wind. Not only have clubs and courses been modified to meet the development of the ball but attempts have been made to obtain a reversion to the 'guttie' or at least the adoption of a standard ball for important competitions. A memorial addressed to the committee managing the British amateur championship in 1912, though signed by a large number of leading players, failed to effect a reform because the committee did not consider itself to be competent to pass what amounted to a legislative measure. There is a consensus among the most authoritative professionals, as well as amateurs, concerning this question. It is held that the new ball does not sufficiently penalise and in fact does not invariably penalise to any extent the not quite perfectly delivered stroke. In this way it directly impairs the game as a test of skill. Indirectly the action of luck is favoured by the elaborate hazards with which courses are often embellished and the somewhat fantastic slopes given to putting greens in order that they may not be too easy. It is further argued by Vardon and other teachers that an undesirable kind of stroke is fostered by a ball which when driven low and 'pulled' can be made to travel a great distance after pitching. On the other hand it can hardly be maintained that the worse player is enabled habitually to defeat the better and it is undeniable that the majority of golfers would be reluctant to abandon a ball which appears to flatter their skill. The rubber cored ball indeed may be credited with much of the universal popularity of golf. In America the wonderfully rapid spread of the game has induced municipalities to lay out public courses, of which the long course in Jackson Park, Chicago—one of four belonging to the city—may be taken as an instance.

International intercourse is encouraged by open championships. After winning the British amateur championship in 1911 Mr Harold Hilton successfully essayed to carry off the amateur championship of the United States. He was less fortunate in 1912 when the competition took place in very hot weather and Mr J D Travers won. The American open Tournament was gained in both years by J J M Dermott. The French amateur championship was captured by Hon. M. Scott. M. Castel being the foremost native competitor but in spite of an invasion of British champions—Ray, Vardon, Taylor and Braid among them—a French player, Jean Gasnat of Chantilly, was first in the professional championship of 1912 at La Boule with a score of 289 for four rounds of the course. A competition at Baden Baden for which the title of championship of Germany was assumed attracted a number of British and French professionals and ended in Taylor beating Ray after a tie. H. Vardon was the British champion of 1911, E. Ray of 1912 and Vardon in the latter year beat Ray in the final round of the *News of the World* competition. Mr John Ball supplanted Mr Hilton as amateur champion winning the title at Westward Ho in 1912 for the eighth time in his unparalleled career. The ladies' championship which fell to Miss D. Campbell in 1911 was won at Turnberry in the following year by Miss Gladys Ravenscroft.

Of the many noteworthy additions which have been made to the literature of the game it must suffice to mention *The Royal and Ancient Game of Golf* by H. H. Hilton and Gordon G. Smith (1912), *The Book of the Links* edited by Martin Sutton (1912), *How to Play Golf* by Harry Vardon (1912), *The New Book of Golf* edited by Horace G. Hutchinson (1912).

*Hockey*

Scarcely a year passes without some small alteration in the laws of hockey if it be only the regulation of flag posts which are now obligatory. They must be four feet in height and must be placed at the centre points of the side-lines and at the corners of the ground one yard outside the line. In the 'bully' each player must strike the ground on his own side of the ball and his opponent's stick alternately. Some latitude has been accorded to the goalkeeper who except in a penalty bully is allowed to kick the ball from the circle and is not penalised, if, when he has stopped the ball with his hand, it falls so as not to fall perpendicularly to the ground. It is no longer necessary in setting a corner hut for an attacking player to make the ball absolutely motionless.

Though hockey is largely played in several European countries it was excluded from the Olympic Games at Stockholm. To repair the omission a tournament was held at Hamburg in October 1912 but this was only partially successful as but four teams took part in it. An English team found strong opponents in a German team but defeated it besides easily accounting for an Austrian contingent. In 1911 England beat Wales (7-0) Scotland (5-0) France (4-0) and drew with Ireland (2-2). In 1912 England beat Wales (6-3) Ireland (10-3) and France (9-1) but lost to Scotland (1-2). Though Scotland defeated England for the first time Ireland beat Scotland (1-0) and Wales drew with Scotland (2-2). Cambridge won the University match in 1911 (4-1) but lost in 1912 (1-3).

*Ice Hockey* so popular in Canada is increasingly played on the Continent of Europe. In 1909-10 a team composed of Canadians at Oxford took part in a tournament at Les Avants and they have since made an annual tour through Europe during the Christmas vacation visiting Belgium Germany Bohemia Austria Switzerland France. On their last tour they noticed a vast improvement in the standard of play. In December 1911 and December 1912 Cambridge teams beat Oxford teams at Murren by 2-0 and 1-0 respectively. International tournaments are frequently held at Swiss winter resorts but the contesting teams are rarely representative.

#### *Horse Racing*

The most important changes which have occurred in connection with international turf matters of late are the suppression of racing in nearly every part of the United States (see under United States below) and the extraordinary rise in the value of blood stock in the Argentine Republic. Doubtless there was room for improvement as regards the great meetings formerly held in the Northern States of America and it is generally thought that some of the laws forbidding the meetings may be rescinded at an early date. Meantime there has been a fall in the value of thoroughbred stock in the United States and valuable English and French stallions which had been sent to America at big prices not many years ago have now been brought back to Europe, while a fair number of American bred yearlings are also imported to England and sold by auction at Newmarket every year. The breeding industry in the United States is quickly dying out but would be even more quickly resumed if racing were once more legalised. In the Argentine Republic four figure yearlings are even more common than they are at Doncaster and yet in September 1912 Messrs Tattersall sold by auction at the annual Doncaster sales yearlings of the value of £110 000. In every part of Europe the value of the highest class of stallions has enormously increased and now the possessor of a really great performer can always be sure of £30 000 and more if he desire to sell. In other respects the English turf is pursuing the even tenour of its way. Every year there are more runners and more money to be run for and though it is only occasionally that horses of the very highest class are forthcoming it is probable that the average standard of excellence is thoroughly maintained. On the continent of Europe and especially in France Germany and Austria the thoroughbred flourishes and racing becomes more popular everywhere but whereas in France there is every encouragement for the long distance runner the tendency in England is towards the development of speed and important long distance races are by no means numerous.

The form of the most prominent horses on the English turf during the season of 1911 was more consistent than in 1912. In the first place Sunstar, by Sundridge Doris held his own against the best of the three year olds and it is probable that he would have won the three leading events of the year but for breaking down after taking the Epsom Derby. He carried off the honours in the Two Thousand Guineas and the most important race of the year at Epsom after which he was sent to the stud much to the regret of his owner who was justified in the hope that the colt would win the so called triple crown. In consequence of Sunstar's inability to compete in the St Leger this race at Doncaster was deprived of much of its usual interest and Mr T. Pilkington's Prince Palatine by Persimmon Lady Lightfoot won easily from what was undoubtedly a mediocre field of opponents. A noteworthy incident in connection with the leading three year olds of 1911 was that Stedfast the second in the Epsom Derby and Prince Palatine the winner of the Doncaster St Leger should have provided some of the most interesting racing of 1912. As a matter of fact the meetings of Stedfast and Prince Palatine were the leading features of the season and it was a moot point which was the better four year old. The exciting racing provided by these two horses was very welcome especially as the three year olds in 1912 ran in so inconsistent a manner that in no case was any outstanding merit shown. Tagalie a grey filly by Cyllene-Tagale after securing the first place in the One Thousand Guineas won the Epsom Derby,

a performance which led many excellent judges to the belief that she was likely to prove an exceptionally smart racehorse, but she failed unaccountably in the Oaks a race after her Derby victory, considered to be at her mercy. It was remarkable that in the Derby Tagalie lost all the way and won with such ease that stamina was considered to be her strong point yet in the Oaks she led for a part of the course and then failed to stay finishing last. Tagalie also ran in a very disappointing manner in the St Leger which was won by Tracery who had finished third to her in the Derby. It may be mentioned that Tracery was bred in America as also was Sweeper II the winner of the Two Thousand Guineas. The former was however of English parentage. During the season of 1912 as many as eight owners won over £10 000 each in stakes, Mr T Pilkington mainly by the aid of Prince Palatine heading the list with £20,822 and Lord Derby coming second with £17 333.

### *Hunting*

British fox hunting still holds its own, in spite of such modern developments as barbed wire increase of railways, excessive pheasant rearing and the greater cost of maintenance of hunt establishments. In some districts the scene of operations of various hunts has been curtailed owing to the expansion of the country towns to the institution of small holdings near the towns and to the fact that coal mining has greatly extended. But nevertheless every part of the country where hunting is possible has its pack of hounds whether they be foxhounds staghounds harners or beagles and everywhere there are more people hunting every year while the great expansion in the size of the fields is chiefly caused by the ever increasing number of ladies who hunt. In this connection it can truthfully be said that there are a dozen lady foxhunters for every one that followed hounds a generation ago. Foxes are more plentiful than formerly hounds are faster, and much of the hunting especially in the most famous countries is carried on at a higher speed than formerly. This means that hounds are taken from one covert to another at a canter that there is no dawdling between the hunts and that—at times—hounds are unable to do justice to their own hunting powers, because of the crowd pressing on from behind.

Great Britain still takes the lead in foxhunting but many hunt clubs have been established in the United States in recent years there are in France over 300 hunts the quarry for which is deer wolf hare and occasionally fox and in the British colonies and in India hunting is carried on wherever it is possible. The price of the best English foxhounds has risen enormously and good hunters are only to be secured at high figures.

### *Lacrosse*

It is generally held that the use of the lighter crosse with less rigid strings, introduced by Canadian teams into England a few years back has made lacrosse a less difficult game to acquire and has improved the general quality of team play. In the north of England several clubs have attained a high standard of attack play but defence seems to have slightly deteriorated mainly through the disuse of the body check and this may tell against English sides when international matches are undertaken.

The north of England is still uniformly superior to the south. The North and South match in 1911 and 1912 produced the identical score of 16 goals to 7. The Stockport Club having won in both years the Northern Flags beat Lee in the Club Championship by 15-5 and 18-8 and the County Championship was twice taken by Cheshire. The runners up to Stockport in 1911 were the Old Hulmeians, who lost only after a tie in 1912 Albert Park were beaten in the final by 7 goals to 3. For the Southern Flags Oxford University fought out the final match with Lee in 1911, and West London reached the final in 1912. The University match of 1911 was won by Cambridge at 8-3, in 1912 Oxford won at 9-4.

The competitions among the professional clubs of Canada ended in Vancouver winning the Minto Cup in 1911 after having beaten the holders (New Westminster) and the champions of eastern Canada (the Tecumseh team). In 1912 New Westminster regained the Cup defeating Vancouver and Victoria and then easily answering the challenge of Cornwall. The Manx Cup for amateur lacrosse is held by the Vancouver Athletics who in 1911 beat Toronto Juniors and in 1912 defeated Winnipeg (champions of the north west) and St Catherine (champions of the east).

### *Lawn Tennis*<sup>1</sup>

In the countries where good turf is not generally available lawn tennis is satisfactorily cultivated on hard courts. The covered court form of the game was recognised by

<sup>1</sup> See also under 'United States' below

inclusion in the Olympic programme in 1908, and the existence of a good covered court in Stockholm enabled similar competitions to be carried out in 1912. Further, an open covered court championship has been instituted in Paris. French and German players, who are now able to hold their own with British champions on grass, have proved themselves superior in the hard court.

In Paris O. Froitzheim carried off the French championship in singles, and (with O. Kreuzer) the doubles. A. H. Gobert took the Olympic medals at Stockholm in singles and doubles, partnered by M. Germot, although the British champion A. F. Wilding competed as the representative of New Zealand. Gobert visited London and won the Covered Court Championship in 1911 and 1912. In the former year he was also victorious in doubles with M. J. G. Ritchie, but in 1912 A. F. Wilding and S. N. Doust took the doubles championship. On the other hand, though Gobert and Decugis carried off the British doubles championship in 1911 at Wimbledon, no other successes fell to foreign competitors: the singles championship being retained by A. F. Wilding, who was again victorious in 1912, when C. P. Dixon and H. Roper Barrett won the doubles.

The grass championships at the Olympic Games were fixed for a date which conflicted with the All England tournament, and the latter was preferred even by most of the leading foreign players. The medals were accordingly captured by Winslow (singles) and Winslow and Kitson (doubles), representing South Africa. Another international test of play on grass was afforded by the preliminary round of the Davis Cup, in which the English team beat the French in the summer of 1912 at Folkestone. But in two matches between England and Germany in 1912 each team was successful on its own ground: the English match being played on turf and the German on an artificial surface. In the previous winter Australasia, represented by N. E. Brookes, R. W. Heath and A. W. Dunlop, had retained the Cup by beating an American team at Christchurch, New Zealand. England unexpectedly regained the Davis Cup at Melbourne on November 28-30, 1912. C. P. Dixon and J. C. Parke beat R. W. Heath and N. E. Brookes respectively on the first day, and on the third Parke beat Heath, but Dixon lost to Brookes. The Australian pair Brookes and Dunlop beat Bramish and Parke, so that England won by the odd match. A team enlisted by the Drive L. T. C. (Fulham) made a tour in South Africa in 1910-11 and won two out of the three Test matches. A mixed team of men and ladies sailed from England for South Africa in the following winter and played three test matches, but unexpectedly lost one of them. The university matches of 1912 went in favour of Cambridge. In 1911 Oxford won the singles and Cambridge the doubles. A young Russian player, Count Saumarakoff Elton, gained distinction by defeating C. Setterwall, the Swedish champion in the Olympic tournament, and made a close match with Kreuzer, a German player of the first rank. Many hard courts for autumn and spring play have been recently constructed in England, and a new covered court is used for winter play at Dulwich. The difficulty of enforcing the foot fault rule is still receiving attention. At an International Congress held in Paris in October 1912 preliminary measures were taken for a common understanding with regard to international championships.

The American lawn tennis championships were won as follows—men's singles, 1911 W. A. Larned, 1912 M. E. McLoughlin; ladies' singles, 1911 M. S. H. Hotchkiss, 1912 Miss M. Browne; men's doubles, 1911 R. D. Little and G. F. Touchard, 1912 M. E. McLoughlin and Thomas C. Bundy.

### *Motoring*

The sport of motor racing, as distinguished from the competition of manufacturers in races for testing mechanical qualities, is best seen in France and America.

The chief French event of 1911 was the Light Car Race, competed over the Dieppe circuit on June 25. The distance was 387 miles, and the contest was won by Bablot from Boillot at an average speed of about 55 miles per hour. In America some serious accidents caused a considerable restriction of high powered racing. The principal event there—the Vanderbilt Cup—was won by Mulford. In 1912 the revival of the French Grand Prix race and its fusion with the Small Car Contest—the Coupe de l'Auto—formed the chief event of the season. The Grand Prix was a race without any limitations of engine power, and was won by Boillot on a car of 175 H.P. from Wagner on a still larger car. Behind the pair came three small cars of 12-16 H.P. driven by Regal, Resta and Medinger. The winner's speed was 70 miles per hour, while Regal and Resta, who were first and second in the Coupe de l'Auto, averaged about 66. In America Hunery drove a 200 H.P. car at a speed equal to 141 miles per hour. The American Grand Prix was won by C. Bragg, and the Vanderbilt Cup Race by Ralph de Palma.

### *Mountaineering*

For the purpose of Swiss Alpine climbing, never were two successive summer seasons more unlike than those of 1911 and 1912. The latter was perhaps the very worst within the memory of the oldest climber, and the former was certainly the finest.

1911 will always be remembered for four great climbs carried out by Messrs G Winthrop Young and H C Jones. Mr Todhunter joined these on the new route up the Grepon. Altogether this victorious party carried out six new expeditions of which the Grepon marks the high water mark of rock climbing though the two ridges of the Jorasses are only a little less severe. The Jorasses had previously been climbed by its south face and the first object of this party was to find a route up the terrific wall that stoops down to the Col des Hironnelles. The ascent of this ridge was proved to be utterly impossible but the descent was accomplished by an ingenious and daring combination of fixed ropes and pitons. On this climb Joseph Knubel was the leading guide and Laurent Croux represented Courmayeur. The same party climbed for the first time the west ridge which had defied so many previous assaults. On this occasion Knubel was the only guide. Not content with this triumph Young Jones the famous Austrian climber Dr Blodig and Knubel defeated one of the last virgin ridges on Mont Blanc the great Brouillard *arete*. And finally this unconquered party with Todhunter in place of Dr Blodig and an extra guide Brocheret forced a new direct route up the great northern face of the Grepon. The Grepon by the ordinary route is as hard as most climbs in the Alps or elsewhere and it is scarcely a peak on which to look for variation routes. Knubel's ascent of the last mentioned slab wrote Mr Jones relying solely on an axe with its point inserted into a minute crack as hand hold and merely on friction for the rest is one of the most remarkable climbing feats I know of. As a member of the Alpine Club remarked after Mr Jones had finished reading his paper this kind of climbing can only be appreciated by about a dozen British mountaineers and can be eclipsed by no living cragsman. The only other climb yet made which can be mentioned in the same category with these achievements was Dr Piacenza's desperate ascent of the Matterhorn by the Furggen *arete*.

Other interesting new ascents of 1911 may be mentioned the direct ascent of the Jungfrau from the Jungfraujoch by Herr Weber with the guide Schlunegar of Wengen and the first passage of the Gletscherjoch by Dr O K Williamson. This climb roused some comment as Dr Williamson introduced a practice which was first made use of in Welsh gullies. He climbed the pass from the easy side and let down a rope on the top of the difficult section to facilitate the traverse of the pass on another day.

Beyond the Alps Captain Corry and Lieut Squires did some interesting new climbs in the Himalaya of which the North Peak of Kolahoi was perhaps the finest and in the Andes Dr Helbling made the first ascent of a virgin peak over twenty thousand feet in height.

The winter of 1911-12 was as disappointing as the summer was satisfactory. British climbers as usual did very little and such ascents as were recorded fell to foreign mountaineers. The Alpine Ski Club claimed the three ascents made by British ski runners and one of these the *Lauterbrunnen Breithorn* was probably a first winter ascent. It was climbed at the end of January by Mr Edward Tennant and Mr Arnold Lunn.

The summer of 1912 was remarkable for persistent bad weather. The indefatigable Mr Young climbed the last of the Dames Anglaises and Messrs Mallory, Pope and Portman made without guides a fine variation ascent of the Dent Blanche perhaps the finest guideless climb as yet accomplished. The season was marred by an accident in which the brilliant young Cambridge professor and expert climber Mr H C Jones was killed with his wife and the guide Truffer on Mont Rouge de Peuteret not as originally stated on the Aiguille Blanche de Peuteret. Mont Rouge is not a difficult mountain and the climb was well within the powers of Mrs Jones. Truffer came away with a detached boulder and the whole party were dragged from holds and killed. An unroped Austrian climber ahead escaped.

At the end of the season Hugh Pope (perhaps the finest rockclimber known) was killed on the Pic du Midi d'Ossau. He was climbing alone and death was caused by rotten rock. The search party organised by Mr Young found his body after a day's search.

### Polo

A noteworthy change in connection with polo in 1912 was the definite adoption by the Hurlingham authorities, who make the rules and govern the game in Great Britain of the system of playing without penalty for offside, and with eight periods of seven and a half minutes each instead of six of ten. This system had been given an exhaustive trial the year before but the change in the rules is directly traceable to the influence of the Meadow Brook team in 1909, when the International Cup, which for twenty three years had rested on the English side of the Atlantic, was regained by the Americans. English players then learned that there were possibilities of the development of greater pace and greater accuracy of hitting without real loss of combination in the less restricted American game, and the victory of Mr Whitney's team and their success in retaining the trophy against the challenge of the Hurlingham team under Captain Lloyd in 1911 have otherwise been far reaching. In the United States indeed, polo has received a decided stimulus, and there has been a marked increase of players and clubs especially

in the army. In 1912 new clubs were formed at Cincinatti, Lexington and Islip (Long Island) among other places and even American ladies have taken to playing polo. In England there has been a notable accession to the list of provincial clubs by the formation of the V W H (Swindon), which had the rare success of winning the County Cup in its first season. In France a new club has been started at Le Touquet, sixteen miles from Boulogne. The Austrian Jockey Club in order to encourage the game has laid down a new ground in the centre of the racecourse at Kottlingbrunn, near Vienna, and among the most recent additions to clubs and grounds in India is that made by the Maharajah of Gwahor at his 'rains' station of Sipri. Polo is now played in almost every European colony in Asia and Africa. It has spread to Northern Nigeria, Morocco, Rhodesia, Abyssinia, Arabia and each year it finds fresh security in such countries as Canada, Australia, New Zealand, South Africa and Argentina.

The most pronounced feature of the London polo season of 1912 was the success of the Old Cantabs in winning the Champion Cup at Hurlingham and the Open and King's Coronation Cups at Ranelagh, and no surprise was occasioned when the Duke of Westminster, under taking the organisation of the challenging team to visit America in 1913, invited Mr. Walter Buckmaster (the captain of the Old Cantabs) and Mr. F. M. Freake and Captain George Bellville (members of the side) to accompany him. Captain Leslie Cheape, who ranks with Mr. Buckmaster highest in the official handicap list of British players, Captain R. G. Ritson and Captain Hardress Lloyd were also among the players invited.

As regards the international polo matches in 1911 it may be recalled that America (represented by the brothers L. and M. Waterbury, Mr. H. P. Whitney and Mr. D. Milburn) beat England (Captain Leslie Cheape, Mr. Noel Edwards, Captain Hardress Lloyd and Captain Herbert Wilson) by 4½ goals to 3 in the first match, and by 4½ goals to 3½ in the second. Many who witnessed those two games were convinced that if the Englishmen had had half a dozen more first class ponies, their narrow defeat might have been turned into a narrow victory. England's goals were all scored by Mr. Edwards. In spite of the fact that several of the leading players were away in America during the major portion of the London season, English polo in 1911 was highly successful. A feature of the season was the brilliant success to begin with of the Royal Horse Guards (Captains G. V. S. Bowley, Harold Brasey and Lord A. Innes Ker and Mr. J. F. Harrison). They won the Whitney Cup at Roehampton and the Open Cup at Ranelagh, but by trying themselves and their ponies too highly they fell between two stools, just losing the Inter Regimental Cup to an admittedly inferior team of the 4th Dragoon Guards and the Champion Cup to a splendidly mounted Eaton combination comprising Messrs. C. P. and P. W. Nickalls and G. A. and C. D. Miller. The King's Coronation Cup went to a powerful side representing the Indian Polo Association (Captains L. St. C. Cheape, Shah Mirza Beg, R. G. Ritson and V. N. Lockett). Another interesting feature of the London season of 1911 was the playing of King Alfonso of Spain at Hurlingham and of the Crown Prince of Germany at Roehampton.

#### *Rackets*

Having taken measures to limit the ever-growing size of the racket ball, the Tennis Rackets and Fives Association has recently made a few amendments in the laws of the game. A ball which in the course of a rally passes over without touching the cross bars of the roof remains in play. A player's right to try to return a ball which he has missed at the first attempt is expressly recognised, but he may not claim a "let." In important matches an umpire is deputed to call the footfaults.

A match for the championship of the world was played in April and May 1911 at Queen's and Prince's clubs by Jamsati of Bombay, the holder since 1903, and C. Williams, the Harrow school professional, and was easily won by Williams. The English amateur championships were won as follows—singles (1911) E. M. Baerlein (1912) B. S. Foster, doubles (1911) B. S. Foster and the Hon. C. N. Bruce (1912) H. W. Leatham and H. A. Denison. The Public Schools Challenge Cup was won by Rugby (C. T. B. Simpson and W. H. Clark) in 1911 and by Charterhouse (G. A. Wright and C. A. Leatham) in 1912. In both years Cambridge won the University matches—singles and doubles.

#### *Rowing*<sup>1</sup>

International interest in oarsmanship has been considerably stimulated by the success of Belgian crews in the races for the Grand Challenge Cup at Henley. In May 1911, an eight drawn from past and present members of Jesus College, Cambridge, defeated at Ghent a combined crew of the Ghent clubs, *Sport Nautique* and Club

<sup>1</sup> See also under United States below.

## SPORTS AND GAMES

**Nautique** over a course of 2 111 metres. The winners' time of 6 m 43 s was estimated as equivalent to 6 m 55 s or 7 m on a calm day at Henley. The English victory was made the occasion of an extraordinary ovation by the Belgians. The winning crew was composed of E C Henty, H J Shields, C Hudson, H E Swanston, S Hudson, H M Goldsmith, G E Fairbairn, T M Crowe (str) and C A Skinner (cox).

In the University Boat Race of 1911 Oxford won by 2½ lengths in record time. 18 m 29 s. Cambridge also beat the old record 18 m 47 s held by Oxford 1893 and Cambridge 1900. The names of the crews were—*Oxford*: C E Tinné, L G Wormald, R E Burgess, E Millington, Drake, C W B Littlejohn, A S Garton, D Mackinnon, R C Bourne (str) and H B Wells (cox). *Cambridge*: S E Swan, P V G Van der Byl, F E Hellyer, C F Burnand, R le Blanc Smith, J B Rosher, G E Fairbairn, R W M Arbuthnot (str) and C A Skinner (cox). The contest of 1912 took an unprecedented course necessitating two races. In the original race both crews sank and though Oxford re-embarked and reached the winning post the umpire, Mr F I Pitman, in the exercise of his discretion declined to award them the victory. A second race was rowed two days later in almost equally rough weather and resulted in a victory for Oxford by six lengths in 22 m 5 s. It was R C Bourne's fourth year of stroking the winning crew, a record unparalleled in the history of the race. The crews were—*Oxford*: F A H Pitman, C E Tinné, L G Wormald, D D Horsfall, A H M Wedderburn, H F R Wiggins, C W B Littlejohn, R C Bourne (str) and H B Wells (cox). *Cambridge*: R W M Arbuthnot, D C Collins, H M Heyland, R S Shove, J H Goldsmith, R le Blanc Smith, L S Lloyd, S E Swan (str) and C A Skinner (cox).

At Henley Regatta both in 1911 and 1912 the standard of oarsmanship was high. In the latter year the width of the course was reduced by ten feet and the additional outside margin was located on the Bucks shore with the object of equalising the value of the two stations by moving the boats to leeward of a bushes wind. The King and Queen visited the regatta and the Queen distributed the prizes. The most noteworthy feature of the racing was the capture of the Grand Challenge Cup by an Australian eight. The following is a list of Henley results—*Grand Challenge Cup*, (1911) *Magdalen*, (1912) *Sidney*, R C NSW, *Ladies Plate*, (1911 and 1912) *Eton*, *Thames Cup*, (1911) *First Trinity*, (1912) *Rowing Club de Paris*, *Steward's Cup*, (1911) *Thames R C*, (1912) *New Coll*, *Visitors' Cup*, (1911) *Third Trinity*, (1912) *Christchurch*, *Wyfold's Cup*, (1911) *Pembroke Cam*, (1912) *Queen's Cam*, *Silver Goblets*, (1911) *J Beresford* and *A H Cloutte* (Thames R C), (1912) *Bruce Logan* and *C G Wright* (Thames R C), *Diamond Sculls*, (1911) *W D Kinnear*, (1912) *E W Powell*. Of the *Wingfield Sculls* *W D Kinnear* remains the holder.

The professional sculling championship of the world returned to England after many years through the victory in 1912 on the Thames of E Barry over R Arnst who had beaten him in 1910 on the Zambesi. In 1911 R Arnst defeated H Pearce on the Paramatta. Barry was challenged by Durnan, a Canadian, but easily defeated him on October 14, 1912 over the Putney Mortlake course. Barry had twice rowed successfully in 1911 for the professional sculling championship of England.

At the Olympic regatta in Stockholm over a course of 2000 metres a Leander eight took the chief honours defeating their Henley conquerors, the Sydney crew. England was less successful in the fours rowed with coxswains, the Ludwigshafen Club being victorious, but Kinnear secured the Olympic trophy for sculling without great difficulty.

### Shooting

**Game Shooting**—The report of the British Grouse Disease Inquiry Committee published in 1911, furnishes an important addition to the knowledge necessary for the proper management of a grouse moor. The committee appointed in 1905 was never empowered to draw public money but its members gave voluntary work through six seasons and succeeded in tracing beyond reasonable doubt the origin of the mysterious disease which at intervals has decimated the stock of grouse on many moors.

This grouse disease is due to a threadworm *Trichostrongylus pergracilis* with which all grouse are infected. Healthy grouse in a year free from disease throw off the attack but there is a point at which infection becomes too strong for the bird and it succumbs. The predisposing cause to an outbreak of disease is a shortage during the winter and spring months in the supply of the young heather shoots which form the staple food supply of the grouse. At the end of a good shooting season it may happen that too many grouse are left on the moor in proportion to the heather supply. The grouse become crowded, the larvae of the threadworms accumulate from the droppings of the grouse on the patches of heather left uncovered by snow where the birds must congregate for food. These patches become intensely infected and the tips to which the larvae find their way are eaten by the grouse. These when weakened by insufficient food are unable to throw off the aggravated infection. The remedies are prophylactic—(1) reduction of the stock by harder shooting, (2) increase of food supply by burning old heather, (3) extensive draining since the threadworm flourishes

in damp soil. It remains to be seen whether the cause being known, the disease can be checked with certainty.

Some progress has also been made in the study of the parasitic diseases of pheasants especially coccidiosis which often ravages the rearing grounds. Experiments have been tried in the administration of drugs by which the coccidia are apparently to some extent repressed and the young pheasants are fortified and made sufficiently resistant to survive the attacks. If further trial confirm these expedients one of the chief difficulties in the artificial rearing of pheasants will be considerably diminished.

*Rifle Shooting etc.*—To a considerable extent the shooting competitions at the Olympic festival at Stockholm were dominated by the conditions which were more favourable to some of the national teams than to others. In the military rifle shooting the United States team took the first place. They not only possessed the best weapon but were the only team to use aperture sights. Great Britain was placed second and Sweden third. The team shooting with any rifle was at the 300 metres range and this produced the result that Sweden, Norway and Denmark occupied in this order the leading places. However Paul Colas (France) took the gold medals for the individual score both in the 600 metres military rifle and the 300 metres any rifle competition. The 300 metres military rifle individual competition was won by A. Prokopp, Hungary. In the miniature rifle matches no range of more than 50 metres was employed. At this range the United Kingdom team of four were first with a total of 76 out of a possible 300. P. J. Lessimore making the fine score of 19. Sweden won the 25 metres disappearing target competition with the United Kingdom only 8 points behind. The individual prizes fell to F. W. Hird, U.S.A. in the 50 metres and Lieut. Carlberg, Sweden in the 30 metres. The United States carried off the honours in the pistol and revolver shooting winning the 50 yards team and individual contests. A. P. Lane took two gold medals, the second being in the duelling matches in which Sweden was first in the team event. Sweden swept the board in the running deer competitions. The standardisation of rules is an essential preliminary if international contests are to be a perfect test.

At Bisley the chief trophy for the military rifle, the King's prize, was carried off in 1911 by Private W. J. Clifford with a total score of 319. In 1912 the winner was A. G. Fulton, the son of a previous victor and although but 24 years of age a mark-man of great experience in important matches, having gained a place in representative British teams and regularly made his way into the last hundred for the prize which he at last secured. Mr M. Blood took the grand aggregate (Hopton Challenge Cup) in 1911. In 1912 it was captured by Corporal Mortimer (Canada) by the aid of the .280 Ross rifle, a remarkable weapon produced by a Canadian factory under the initiative of a well known Scottish landowner.

*Clay, Bird and Pigeon Shooting.*—The rules at Stockholm were not adverse to the chances of the British team except in so far as the permission of a heavy shot charge may have handicapped competitors unable to use it. They were beaten for the first place by the United States team but J. R. Graham, one of the members, made the best individual score of 96 birds out of 100. The shooting was of a very high standard.

The Clay Bird Shooting Association champion is W. Ellicott, who is also well known for his skill with the rifle at the running deer range and is probably both with gun and rifle the best all round shot in the United Kingdom. In 1911 A. Maunder, who had twice previously held the championship, regained it with a score of 34 points out of a possible 35. The Pigeon Shooting Grand Prix du Casino at Monte Carlo fell to an Englishman, F. Moore of Newmarket, in 1911 after a most exciting contest. In 1912 M. Des Chaux was the winner.

#### Skating

The winter of 1910-11 was unfavourable to skating throughout Europe. In England it was impossible to hold any of the speed championships. But it saw a notable extension of artificial ice facilities in the opening of the Manchester Ice Palace with a skating surface of 100 ft. by 140 ft. enabling the National Skating Association to revive the championships in the English style of figure skating abandoned since 1904. Ice palaces have since been opened in Edinburgh and Aberdeen.

The international style of figure skating continues to make progress on the continent of Europe especially in Germany and among English visitors to the Engadine and habits of artificial rinks. A short but hard frost in February 1912 allowed the English

## SPORTS AND GAMES

Speed Championships, both amateur and professional to take place, a new record (4 min 44  $\frac{4}{5}$  sec), being set up in the latter by Greenhall. An open race for amateurs and professionals over a straight course of a mile was held in 1912 for the first time in thirty-one years, with the remarkable result that all the competitors, amateur and professional beat George (Fish") Smart's record of 3 min made in 1881. F W Dix claiming the new record in 2 min 27  $\frac{1}{5}$  sec. The speed skating championships of the world produced two new records, viz 500 metres in 44  $\frac{1}{5}$  sec and 10 000 metres in 1 min 46  $\frac{3}{10}$  sec Oscar Mathiesen being the winner. Roller-skating has not maintained its sudden access of popularity but has left a residue of increased proficiency. Practice on rollers is gaining recognition as useful for the ice skater when ice is wanting.

The winners of the principal championships of 1911-12 were as follows—

*Speed Skating*—English amateur championship (1 $\frac{1}{2}$  miles with three turns) 1912 F W Dix. English professional championship (same course) 1912 Sidney Greenhall. Both the winners were the holders. One mile straight away 1912 F W Dix. World's championships 1911 N Strunniokoff all four distances (500 1500 5000 and 10 000 metres) 1912 Oscar Mathiesen all four distances. European championships 1911 N Strunniokoff 1912 O Mathiesen.

*Figure Skating*—English championships. English style—Single skater's challenge cup 1911 A J Davidson 1912 H M Morris. Combined skating 1911 Combined Figure Skating Club team (A J Davidson F C Fedden H M Morris R Moxon) 1912 Wimbledon S C team (A J Davidson F C Fedden H M Morris M Terchmann). Pairs 1912 Miss D R Jameson and A J Davidson. English championships. International style—singles 1911 Mrs Greenhough Smith 1912 A Cumming. Pairs (a new championship trophy presented by Mr and Mrs Johnson), 1911 Miss Harrison and Mr G B Krabbe 1912 Miss Harrison and Mr Basil Williams. World's championship—1911 V Salchow 1912 Fritz Kachler. European championship—1911 P Thoren 1912 Costa Sandthal. Ladies' championship—1911 Fri L Kronberger 1912 Fri Opika von Meray Horvath. Pairs championship—1911 Fri L Eilers and W Jakobsson 1912 Mr and Mrs Johnson. *Roller Skating*—Amateur English championship (International style)—1911 W Strinton 1912 D Resta. (English style) 1911 and 1912 R S Hewett.

*Skiing*

As a competitive sport running on ski is extensively practised in central Europe during the winter, especially in the Alps the Black Forest and Tirol where there are many clubs and several international open meetings are held. In the neighbourhood of Christiania the older and more famous meetings have for some years been carried out with difficulty the weather having been on the whole exceptionally unfavourable. Skiing is now the favourite amusement of visitors to Alpine winter resorts and has increased in importance as a valuable aid to winter mountaineering. Its military value is recognised by the nations that have Alpine frontiers as well as by Norway and Sweden. The practical side of the exercise has also been illustrated by Amundsen's successful rush to the South Pole.

Owing to the varying nature of the ground and of the condition of the snow no purpose can be served by attempting to compare the times in which long distance races have been run. Jumping records are almost equally devoid of significance as no standard angle of declivity is recognised. But it may be mentioned that in the early part of 1912 the longest standing jump—the jump in which the competitor kept his feet after landing—yet recorded was accomplished at Modum Norway by Gunnar Andersen of Lyn Christiania. The distance was 47 metres.

*Swimming*

After the lapse of thirty six years the feat of swimming from Dover to Calais accomplished by Capt Matthew Webb was repeated on September 4 and 5 1911 by F W Burgess an Englishman resident in Paris. For some years frequent attempts had been made in vain by numerous swimmers. Burgess was fortunate in obtaining calm weather but he was hampered by the tide in such a way as to be carried back over the Vagne sand and his course including a large loop, was thus considerably longer than Webb's. As his time (22 hrs 35 min) was but little inferior, his exploit must be considered equal to that of his precursor.

As a competitive sport swimming has been brought to a high pitch by the Australians, who are favoured by their climate and by Americans. Of the former, J G

Longworthy has shown great speed at distances from 100 yards to a mile and he is not unlikely to accomplish unprecedented performances. A Canadian, G R Hodgson, who won the 1500 metres race at the Olympic Games of 1912, is a swimmer of at least equal promise. At this meeting an Hawaiian D P Kahanamoku, won the 100 metres decisively in time approaching the unparalleled performance of C M Daniels (U.S.A.). Great Britain unexpectedly found a young champion in J G Hatfield of Middlesbrough who profiting by the example of Kahanamoku exhibited sudden improvement and almost succeeded in beating Hodgson. Since that time Hatfield has beaten several records. In Great Britain swimming has made great progress in the public schools of all grades and some degree of proficiency is attained by almost all the pupils. A satisfactory account of the present state of swimming whether as a sport or as a desirable accomplishment is to be found in *The Complete Swimmer*, by Frank Sachs (Methuen).

In the past two seasons new records have been made for the following distances —  
 400 metres (free) by J G Hatfield (England) time 5 min 21<sup>3</sup> sec Shoreditch Baths  
 September 28 1912  
 500 metres (free) by J G Hatfield (England) time 6 min 56<sup>1</sup>/<sub>2</sub> sec Weston Super Mare  
 August 6 1912  
 400 metres (breast) by W Bathe (Germany) time 6 min 29<sup>1</sup> sec Stockholm July 1912  
 1500 metres (free) by G R Hodgson (Canada) time 22 min Stockholm, July 1912  
 100 metres (breast) by E Toldi time 1 min 20 sec Budapest September 17 1911  
 200 yards (breast) by E Toldi time 2 min 39<sup>1</sup> sec Budapest August 20 1912  
 100 metres (back) by A Barony time 1 min 18<sup>4</sup> sec Budapest July 17 1911  
 400 metres (back) by S Wendelin time 6 min 38<sup>1</sup>/<sub>2</sub> sec Budapest August 5 1911

#### Tennis

A match for the world's championship in 1912 between G F Covey and 'Punch' Fairs (holder) ended in favour of the former who had been defeated by the same opponent two years previously. The amateur championship in 1911 was won by the Hon N S Lytton but in 1912 he was defeated by E M Baerlein. The M.C.C. gold and silver prizes were taken in both years by E H Miles and Major Cooper Key. Oxford won the University matches in both seasons, and was represented by the Hon J N Manners and Hon W H Grenfell, in the singles by the Hon J N Manners.

#### Tobogganing

At St. Moritz tobogganing has been somewhat overshadowed by the many other diversions of the place and especially by ski-joring. In Switzerland generally it has given way to bob sleighing. The Cresta run has been modified the banks being built far higher and steeper than formerly with the result that tobogganers especially beginners can make faster times. Throughout the two winters 1910-11 and 1911-12 the record for full bob sleighs on the Schatz Alp course at Davos was continually being beaten. Herr Luders on Porpedo frequently gained and regained the record and finally retained it at 3 min 13 sec (March 15, 1912). A special prize is offered for a bob sleigh taking under 3 minutes.

Grand National — 1911 Captain Webb Bowen 1912 Mr E O Quicke Symonds Cup — \ Antoinetti (1911 and 1912) Manchester Bowl — 1911 Christmas Daisy (H M Jameson) 1912 Vereina II (Th Hew) Coupe de France — 1911 Vereina II (Th Hew) 1912 Taffy (C A Longcroft)

#### Wrestling<sup>1</sup>

To the necessarily limited programme of the Olympic Games at Stockholm in 1912 the Graeco Roman style of wrestling was alone admitted as having the best claims to be cosmopolitan. The contests however proved unsatisfactory. It is the defect of this style that it encourages passive resistance and when a bout lasted for eleven hours and it was considered necessary to allow intervals for rest and refreshment it was felt that something like a *reductio ad absurdum* had been reached. This fiasco however was due in some degree to the intentional omission by the Swedish committee of a time limit such as had been enforced at the London Games of 1908. Some of the members

<sup>1</sup> See also under United States below

## AMERICAN SPORTS

of the jury withdraw, and a protest meeting was held by the competitors. The first prizes were won by Saarela Koskelo and Ware of Finland, with C. E. Johansson of Sweden Ahlgren and Boling of Finland receiving second prizes for the incomplete final round above-mentioned. A German, a Hungarian, and a Russian reached the prize list which was otherwise confined to Finns and Swedes.

Professional wrestlers have assisted towards the present eclipse of this style. Gotch, the American champion, was victorious by a hold which gave his antagonist the choice of surrender or permanent injury. In a public match Gama, an Indian, and Zbysco, a Galician, helped to discredit wrestling as a popular spectacle by remaining on the mat for three hours and doing nothing. In Lancashire and Cumberland wrestling is still cultivated and is seen at its best at the Grasmere and similar Fell meetings.

### Yachting

The progress of international yacht racing in European waters in the last few years has been considerable. The International Rule for yacht measurement and rating was introduced in England on January 1, 1907, and in all European countries on January 1, 1908. Since its introduction up to 1912 about 650 yachts have been built to the classes which race under the rule. 176 of the vessels have been constructed under the survey of Lloyd's Register of British and Foreign Shipping. 117 of this number have been built in Great Britain and 64 have been built abroad. The remainder, about 4/4, have been built in Germany, Norway, Sweden, France, Denmark, Spain, Russia and Finland under the survey of foreign classification societies.

In 1911 the first great European International regatta was held at Spithead; there were 19 events of which Great Britain won 9, Germany 4, Spain 4, and Norway 2. 13 of the events were won by yachts of British design and 6 by yachts of foreign design.

In 1912 the second European International regatta was held at Kiel. 24 events were sailed. German-owned yachts won 11, British 8, and Norway, Austria, Russia, Spain and Belgium one each. 15 of the events were won by yachts of British design, 9 by yachts designed abroad.

All the yachts of the international classes of 23 metres (75.4 feet) and under have been single-masted vessels, and those from 23 metres down to 8 metres have been cutter-rigged. Those smaller than 8 metres have usually carried a triangular form of lugsail. The most successful designers of the cutters have been Fife, Mylne, and Nicholson (British) and Anker (Norwegian), and of small lugsail vessels, in addition to the designers already named, Morgan, Giles, Glen, Coats, Laws and Linton Hope (British). Notable racing cutters have been Shamrock (Fife), 23 metres; Octavia (Mylne), 19 metres; Mariquita (Fife), 19 metres; and Nicholson in 1912 designed a splendid all-round sea-going cutter in the 15 metre class named Istra.

The racing in Class A, above 23 metres, has been carried on by schooners, yawls having gone out of favour. Since the visit of an American schooner, the Westward (Herreshoff) to Europe in 1910, which was most successful, the German schooners have been the best in European waters. Germania and the German Emperor yacht Meteor, both designed by Max Oertz, winning all the prizes in their class at the International regattas of 1911 and 1912. (A. W. BROWNE.)

### SPORT IN THE UNITED STATES

Sport in America is constantly undergoing changes of more or less importance. This may be due in part to the nature of the amalgamated race or it may be due to the fact that sport has had such a short life in the United States as thus far to have no strong traditions. Every game is played by the letter of the rule, and the rules must therefore be exact, and with this exactness comes a pressing necessity for completeness that would hardly be recognised in England, where tradition governs so strongly. For this reason a brief summary of the changes that have affected American sports since 1909-10 will aid the reader in understanding the general situation in the United States.

**Football**—The sport of American intercollegiate football has developed quite materially in method and rules in the last two or three years. First the periods of play from two halves of thirty-five minutes each, separated by an intermission, have been altered into four periods of fifteen minutes each with an intermission of one minute between the first and second and third and fourth periods and an intermission of fifteen minutes between the second and third periods. The field of play has also been quite materially altered. The actual distance between the goal lines instead of 330 ft. as formerly is now only 300 ft., but there is an additional end zone at each end extending 30 feet back from the goal line in which a man may

legally receive a forward pass. It can really be said therefore that the middle line of the field is no longer the 55 yard line but the 50 yard line. Furthermore a change in the rules has been made that makes the 20 yard line the limit of kick out instead of the 25 yard line. Hence the two lines that are marked more heavily than the rest on the field are now the 50 yard line and the 20 yard line instead of as formerly the 55 yard line and the 25 yard line. The longitudinal lines of marking on the field have also been practically eliminated as they are now of no particular service. The latitudinal lines remain to mark the distance gained and lost. The scoring has also been altered a touchdown counted five points and the conversion of this touchdown into a goal added one point more a field kick goal counted four now a touchdown counts six and its conversion one point so that a goal and touchdown together count seven and a goal from the field counts only three.

The method of play has also been somewhat altered owing to certain changes in the rules. It has recently been enacted that a side shall have four trials to advance the ball the required distance of ten yards instead of three as formerly and this has increased the value of the running game. The restrictions upon the forward pass have also been rendered less severe. A man may now pass the ball so that it crosses the line of scrimmage at any point and he may make the pass as long or as short as he wishes provided he stands at least five yards back of the scrimmage line when he makes the pass. The onside kick has been entirely eliminated. The number of officials formerly four has been changed to three but these three have so much to do that it is not improbable that there may be a return to the old method. However the number of officials now stands at three the referee umpire and linesman. With all these alterations the play is more interesting and exciting and tends to an increase of scoring possibilities as well as giving an opportunity for the exercise of greater generalship. On the whole it is safe to say that the rules have been improved from the standpoint of player and spectator.

The contests of greatest interest in 1912 were as usual in recent years those between the three Eastern universities of Harvard Princeton and Yale. On November 2 at Cambridge Harvard defeated Princeton 16 to 6 on November 16 at Princeton Yale and Princeton played a drawn game 6 to 6 and on November 23 at New Haven Harvard defeated Yale 20 to 0. On November 28 the University of Pennsylvania defeated Cornell 7 to 2.

As recreation or Soccer football is being encouraged in the United States and has the support of many athletic directors throughout the colleges. It does not attract the large crowds but is popular as a pastime among those who do not care for the perhaps longer and more arduous training of the intercollegiate. It has added one more to the list of sports that help to attract out of doors during the fall and early winter months the student who otherwise would employ his time possibly in a less satisfactory manner. Rugby as such is not played in the United States except by two of the Pacific Coast universities.

**Baseball**—In baseball the rule have not been materially altered nor has the game taken on such distinct divergence as has football. The commanding feature of the baseball situation is that the public interest has not only been maintained but has increased and the attention given to the World's Series that is the annual contest between the winners of the American League pennant and the National League pennant consisting of the winning of four games out of seven has become a matter of national interest.

The series of 1911 was exciting and ended in the victory of the Philadelphia American League Club over the New York National League Club. The series of 1912 was probably the closest ever known in a series of this nature the Boston American League Club finally winning out in the concluding game of the series after each team had won three games. Public interest in intercollegiate games is also keen. In 1911 on June 13 Princeton defeated Yale at New York by a score of 19 to 6 and won the series between these two universities. Princeton was easily first among all the college teams winning 21 out of 29 games played with other colleges in 1911. On June 19 Yale defeated Harvard at Cambridge 9 to 6 thus winning the deciding game in the series between the two universities.

**Boxing**—Boxing interest saw its height at the time of the Johnson-Jeffries match at Reno Nev. July 4, 1910 but the permitting of the sport in New York state under a certain board of commissioners has led in the last year or two to considerable development of interest in the so called athletic club promotions. On the whole however the meteoric career of Jack Johnson (the negro champion) has been typical of the ups and downs of the pugilistic profession in America.

**Rowing**—Intercollegiate boat racing in the United States is represented by two principal regattas the one at Poughkeepsie on the Hudson river and the other at New London on the Thames. Although Cornell at Poughkeepsie and Harvard at New London have now been monotonously winning for some years there has appeared no diminution of interest and the crowd in the yachts assemble at the courses just the same rendering the spectacle as brilliant as ever. There has continued the everlasting and apparently unending discussion of the merits of various strokes but the subject seems to be one upon which opinions must always differ. Great respect is had in America for the theory as well as the practice of English rowing and occasionally representatives of American rowing interests have as in 1912 visited the English crews and compared notes. Whether the two schools are coming gradually more nearly together is a question. It is more than likely that constant alteration will

## AMERICAN SPORTS

continue although at times emphatically denied and that after all the most successful crews will always be those whose stroke boat and physique are best correlated.

Apart from intercollegiate rowing an annual regatta is held of amateur oarsmen in which crews and boats of many kinds from singles to eight oars are represented and which is gradually gaining in importance and quality. In 1912 the Harvard-Yale race at New London Conn. June 21 was won by Harvard by about 5 lengths. At the Poughkeepsie meet on June 29 in which for the first time the Far West was represented (by a crew from Leland Stanford Jr. University) all the races were easily won by Cornell.

*Athletics*—At the Olympic Games of 1912 (July 6-15) in Stockholm Sweden many records were broken. In the event of perhaps greatest interest the 800 metres run the record was broken by the winner J. E. Meredith (1 min. 51.9 sec.) and by the second and third contestants all of whom were Americans. America was first in 16 out of a total of 31 events and scored 85 out of 184 points. The intercollegiate games held at Philadelphia on June 1, 1912 were won by the University of Pennsylvania with a score of 28 points. Five new records were established.

*Cricket*—Cricket in certain quarters notably the environs of Philadelphia and in some of the schools like Haverford has kept up a specific interest among those devoted to the sport but has not spread to any great extent. The Germantown (Pa.) Cricket Club visited England and Ireland in 1911 they won five games lost five and three were a draw.

*Lawn Tennis*—Lawn tennis has more than held its own and although the Davis cup matches have not proved sufficiently stimulating to draw new blood into tennis ranks in sufficient quantity to build up young players to take the place of the old the general spreading interest in the game has been fully maintained. The chief events of 1912 were the winning of the national doubles title by Maurice E. McLoughlin and Thomas C. Bundy both of California in a challenge match with Raymond D. Little and Gustave F. Touchard at Newport R. I. August 21 and the winning of the singles championship by McLoughlin on August 26 and the winning of the women's championships in single by Miss Mary Browne also a Californian at Philadelphia June 15. An important change made in 1912 was that the holder of the championship in singles was to be required to play through the championship tournament instead of merely playing in a challenge round the winner of this tournament W. A. Larned who had won the championship in 1911 (and in several previous years) was prevented by his health from playing in the 1912 tournament. The year was notable on account of the success for the first time of the Western players.

*Polo*—Polo holds its own even though the cost of equipment is high and the game in consequence confined peculiarly to people of large means. Popular interest was greatly stimulated in the spring of 1911 by the international matches between the American Meadow Brook Club and the English Hurlingham Club at Westbury New York. The Americans won two closely contested matches the score being 4½ to 3 and 4½ to 3½.

*Horseracing*—Horseracing has been placed in an anomalous position in the United States in the last few years owing to legislation. The truth of the matter is that in order to stop the pool room betting which certainly was a detriment to the youth who were exposed to its influence and temptations legislation piled up to such an extent as to affect the interest on the track and the owners. As probably betting has never yet been entirely dissociated from horseracing the attempt to carry through this divorce proved as usual to have unexpected results and one of these has been the cutting down very materially of the interest in this sport.

*Wrestling*—In wrestling the important fact has been the still further victories of Frank Gotch his decisive defeat of the Russian George Hackenschmidt at Chicago Sept. 4, 1911 and his final retirement to his farm. The sport itself has been kept up very well in the colleges although there have been some defections from the Intercollegiate League.

(WALTER CAMP.)

## PART II LOCAL

### SECTION I THE BRITISH EMPIRE

#### ENGLISH POLITICAL HISTORY<sup>1</sup>

##### *I The Crown*

King Edward VII died on May 6, 1910 and was succeeded on the throne by his only surviving son as George V whose consort Queen Mary, by the Regency Act 1910, was at once nominated to be regent in the event of a demise of the Crown before the next in succession arrived at the age of eighteen. As their eldest son Prince Edward was born on June 3, 1894 a Regency Act was a temporary constitutional necessity but he was created Prince of Wales on his sixteenth birthday and before attaining his majority in 1911 he had completed his naval education at Osborne and Dartmouth (gazetted midshipman June 22 1911 and appointed to the *Hindustan* for a three months cruise ending October 26th). The young Prince then returned to private studies paying a visit in the summer of 1912 to Paris with his tutor Mr Hansell as guest of the Marquis de Breteuil and in the October term he went into residence at Oxford as a commoner of Magdalen. The new Civil List for the Crown as approved by Parliament in 1910 was fixed at £470 000 a year but Parliament was not asked to provide for the Prince of Wales his income from the Duchy of Cornwall (£87 000) being sufficient.

An important change which had been mooted but not proceeded with when King Edward came to the throne was made at King George's accession in the alteration of the Sovereign's declaration respecting his religion the terms of which as provided in 1689 by the Bill of Rights had long been resented by Roman Catholics. After other unsatisfactory suggestions had been made the Accession Declaration Act of 1910 finally substituted a short and simple formula for the more detailed no Popery manifesto which it was generally agreed was no longer needed. The following were the new terms provided —

I (name of Sovereign) do solemnly and sincerely in the presence of God profess testify and declare that I am a faithful Protestant and that I will according to the true intent of the enactments which secure the Protestant succession to the Throne of my Realm uphold and maintain the said enactments to the best of my powers according to law.

At his first opening of Parliament according to the practice King George made this declaration and the whole question was removed from further controversy.

At the death of so active popular and influential a sovereign as Edward VII in the midst of grave parliamentary difficulties and a condition of social economic unrest which was soon to be fertile in industrial conflict the country was fortunate at any rate in this that the Throne had already established itself in the hearts of the people as a central and unifying force distinct from all party considerations. The Royal Family without exception were known to be active in all that their position enabled them to do for the furtherance of the public welfare. All classes of the community recognised the value of this factor in English social life and took a proud and affectionate interest in the manifest determination both of the Throne and of individual members of the Royal Family to do their duty and to justify the public trust. The first two years of the new reign made in this respect an auspicious start and it was soon realised that the consolidation of the Monarchy begun under Queen Victoria and so remarkably continued under Edward VII, was being effectually carried on with high ideals and in an earnest spirit under the Sailor King whose exhortation

Wake up England in his speech at the Guildhall when returning from his Colonial tour as Prince of Wales in 1901 had already made history as a general signal to the nation. At King Edward's death there were some who thought that under his succes-

<sup>1</sup> For the course of events immediately preceding this narrative see *Encyclopaedia Britannica* Arts. ENGLISH HISTORY (vol ix pp 532-533) EDWARD VII (vol viii) GEORGE V (vol xi) ASQUITH H. H. (vol ii) LLOYD GEORGE D. (vol xvi) BALFOUR A. J. (vol iii) CHAMBERLAIN J. (vol v) PARLIAMENT (vol xi) and BRITISH EMPIRE (vol iv).

so the country would have a Court of more seventy less inclined to display less sympathetic towards the joyous side of life—high minded and worthy indeed but rather dull. In so far as such doubts represented a fear that the new King and Queen whose pure and happy domestic life was universally recognised and respected would not enter into the amusements of the people and play a Royal part in the social life of the country it was soon falsified and disappeared. As Prince of Wales George V had indeed shown no particular interest in horse racing and some other kinds of national sport and amusement though he was known to be one of the best shots in the country but as King he and his Consort after the period of mourning was over at once removed any misconception in this respect. Not only did they follow King Edward's example in attending race meetings (the Royal training stables entering horses for the principal races) and patronising the theatres but in the summer of 1911 for the first time a state visit was paid to a London music hall (the Palace) and to Henley Regatta and the King went to Lord's on the occasion of the Test match between the Australian and South African cricketers and had the teams presented to him so that the tradition of Royal interest in national sport and games was amply sustained.

The national inclination for pageantry and display which King Edward had done so much to gratify found in King George and Queen Mary sovereigns who were ready at any cost of personal sacrifice and fatigue to go even further in making public ceremony on appropriate occasions the magnificent expression of important acts of State. The Coronation at Westminster Abbey on June 22 1911 a solemnity of unparalleled grandeur attended by representatives from all parts of the Empire and other countries for which London was decorated as it never had been before was followed on June 23 by a Royal procession through the streets both north and south of the Thames on June 24th by a great Naval Review at Spithead on June 26th by a gala performance at the Opera on the 27th by a Royal garden party at Buckingham Palace in the afternoon and a gala performance at His Majesty's Theatre in the evening on the 28th by a Royal visit to the Agricultural Show at Norwich on the 29th by a thanksgiving service at St Paul's and a luncheon at the Guildhall on the 30th by an entertainment at the Crystal Palace given by their Majesties to 100 000 London Elementary school children and by the King's presentation of medals at Buckingham Palace to 500 Indian and 1400 Colonial soldiers. On July 3rd the King reviewed 17 000 officers of the Territorial Army in Windsor Park and on July 4th 30 000 Boy Scouts gathered there from all parts of the country.

In order to complete the public assumption of Royal authority throughout the United Kingdom the King and Queen with the Prince of Wales and Princess Mary then made State visits to Ireland (July 7th–11th) Wales (July 13th) and Scotland (July 17th–21st). The fact that the Dublin Corporation refused to vote an Address and that the leaders of the Nationalist party as usual held aloof while 'Sinn Féin' even got up local demonstrations against any celebration of the new reign only detracted in a very slight degree from what the King himself described as the 'spontaneous and hearty loyalty' of his reception in Ireland. When the Royal party drove on July 8th from Kingstown to Dublin Castle they had a great popular welcome from cheering crowds all the way and in the course of the day the new College of Science was inaugurated and visits were made to Trinity College and to the Phoenix Park races. On Sunday the 9th their Majesties attended Service in St Patrick's Cathedral, and in the afternoon paid a visit to Maynooth College. On the 10th the King held a *levée* and received loyal addresses from deputations sent from various parts of the country a special address of welcome from 165 000 Irish women being also presented to the Queen. In the afternoon their Majesties went to Leopardstown races and in the evening gave a State banquet at Dublin Castle. On the morning of the 11th the King reviewed over 16 000 troops in Phoenix Park in the afternoon their Majesties gave a garden party at the Viceregal Lodge and in the evening they held a Court at the Castle. On leaving Dublin next day the King gave £1,000 for the relief of the poor and the occasion was also taken by Lord Iveagh to distribute £50 000 among the Dublin hospitals.

The Royal visit to Wales had for its central object the Investiture of the Prince of Wales at Carnarvon Castle on July 13th a magnificent ceremony and an imposing demonstration of Welsh nationalist sentiment, in the arrangements for which Mr Lloyd George, who had been appointed Constable of Carnarvon Castle had from the first taken a leading part. In the course of the proceedings a national address was presented to the young Prince by Sir John Rhys Mr Abraham M P and the Archdruid the Prince made part of his replies in Welsh and in the religious services two Welsh Nonconformist ministers were associated with the two Anglican bishops. The whole affair was a great success. On July 14th the King and Queen visited Bangor for the opening of the new buildings of the University College of North Wales and on July 15 they visited Aberystwyth and laid the foundation of the new National Library of Wales.

From Wales the Royal party went to Edinburgh where on July 17th a great procession escorted them to Holyrood Palace. Here again ancient Scottish ceremony and modern Scottish sentiment were duly observed and encouraged. A levee and a state banquet were held on the 18th on the 19th the King and Queen assisted at the dedication of the new chapel of the Order of the Thistle in St Giles's Cathedral and the King laid the foundation stone of the new City Hall and on the 20th reviews of troops and boy scouts were held in the King's Park and a garden party was given at Holyrood. On the 21st the Royal party returned to London, after having brought the whole of the United Kingdom more closely within the ambit of the Coronation festivities by their personal presence in all its capital cities.

But there still remained an important extension of the whole principle of the recognition of Imperial sovereignty in the visit paid by their Majesties to India and the Coronation ceremonies at the ancient capital of Delhi. At the time of King Edward's death the native unrest in India had become a source of considerable political anxiety and it was his successor's own idea that the personal presence of the King Emperor for the first time as such on Indian soil and the compliment paid to his Indian subjects by his being crowned Emperor in their midst would give new life-blood to all the elements that made for loyalty to the British connection and for Anglo-Indian co-operation in the great work of administering India under the British Crown. The announcement that the King would go in person to India for this purpose and that instead of sending a representative as had been done in the case of King Edward he and his consort would themselves be crowned at a Royal Durbar was made in the autumn of 1910. It was understood that the King's decision was assented to at this time by his ministers with considerable hesitation and when the Indian unrest continued to show itself during 1911 doubts were freely expressed as to its being prudent. Prophets of evil as the time drew nearer to November 11th when the King and Queen were to leave England were numerous but the King's own courage and prescience were fully justified by the event and the history of the Empire has included no more epoch making act of State than was involved in all its circumstances. Embarking from Portsmouth on the P & O steamship Medina and attended by Lord Crewe the Secretary of State for India and a numerous suite with an escort of men of war the Royal party arrived at Bombay on December 2nd (see INDIA) and were not back in London till February 5, 1911.

From a political point of view the most remarkable part of the proceedings in connection with the Delhi Durbar was the Royal announcement of certain changes in the Indian administrative system (see under INDIA). In celebration of the Coronation itself various boons were granted, measures of relief and release for certain classes of debtors and prisoners, a large preliminary outlay towards a new scheme for the extension of popular education extra pay to certain classes of native officers and civil servants and the inclusion of native officers and men among those eligible for the award of the Victoria Cross. But all such concessions were overshadowed by the fact that occasion was taken for a public assertion of Royal power and authority in respect of the government of India, by the King's announcement that

in future Delhi would replace Calcutta as the Capital and that Lord Curzon's partition of Bengal which had led to so much contention but which not long since had been described even by ministers in Parliament as *res judicata* would be annulled Bengal becoming a presidency Behar Chota Nagpur and Orissa being placed under a lieutenant governor and Assam being restored to a chief commissionership. Not a word of this impending *coup d'état* had leaked out though now the despatches of the Indian Government recommending it (August 25, 1911) and of the Secretary of State sanctioning it (November 1) were published. Without making any communication to Parliament and without giving any opportunity for discussion—for when once royally announced in this way the step by common consent of all parties in England was irrevocable however much it might be criticised—an English Radical Ministry had deliberately utilised the King Emperor's position and prestige to carry out a great autocratic act of State policy which otherwise certainly could not have been accomplished without considerable friction. So far as concerned the restoration of Delhi: the ancient centre of the Mahomedan Empire as the capital the announcement was undoubtedly an appropriate and effective accompaniment of the inauguration of a new Emperor a dramatic exhibition of monarchical will and it was made in a magnificent spirit characteristic of Oriental ideas. Nobody outside the inner ring of the King's advisers not even among important Anglo-Indian officials had guessed at such a proposal yet it had obvious advantages both sentimental and administrative. Besides gratifying the Mahomedans and others to whom Delhi had immemorial associations with Indian Imperialism, whereas Calcutta represented rather the traditions of John Company it not only moved the seat of government away from the rather disturbing influences of Bengal politics but also provided a central railway position from which the annual migration to Simla in the hot weather could be made more conveniently and at half the cost. This latter point combined with profit from the enhanced value of land available for building sites could be off-set against the lavish outlay (estimated at £4 000 000) required to bring the new capital into existence. Bengal and the Hindus meanwhile were consoled for the removal of the Indian Government from Calcutta by the rearrangements made in partial satisfaction at all events of the opposition to Lord Curzon's partition of the province. From a political point of view this was the part of the announcement specially open to criticism and to Lord Curzon himself it came as a personal rebuff of the bitterest kind but though the opposing views were well expressed by him and others in subsequent debates in Parliament the deed was done in India the King's word had settled it. No single act of Government in the history of the British constitutional monarchy had ever exhibited so promptly the latent resources of the Throne as an extra parliamentary factor in Imperial administration. That a Radical Ministry supposed to stand for 'democratic' methods and the responsibility of the House of Commons should have had resort to the machinery of autocracy was surprising however to a good many of their democratic supporters.

By a curious coincidence just at the time of the Indian Durbar the P & O liner 'Delhi,' with the Princess Royal (the King's sister) her husband the Duke of Fife and their daughters Princesses Alexandra and Maud on board, was wrecked in a gale off Cape Spartel on the Morocco Coast (December 13th) and became a total loss and the boat in which the Royal passengers were taken to shore was upset in the surf so that they had a somewhat trying experience.

*Death of  
the Duke of  
Fife*

It was hoped that the party had escaped with nothing worse than a wetting and a shock but after going on to Egypt whither they were bound for the Princess Royal's health the Duke of Fife fell seriously ill with pneumonia and he died at Assuan on January 20th. His elder daughter now became Duchess of Fife in her own right. He and the Duke of Argyll (husband of the King's aunt, Princess Louise) had been made Knights of the Garter at the Coronation, and his death removed from the Royal circle a Scottish noble of high character and patriotism esteemed by all who knew him.

In any survey of contemporary English history it is only proper to dwell first on matters directly connected with the Crown and Royal Family, because of the interest

attaching not only to the opening of a new reign but to the increasing importance of the activities of the Throne under modern conditions of British social and political life. Much inevitably depends on the extent to which popular respect and affection surround the whole Royal Family and also on the amount of assistance available for the Sovereign, in the varied and exacting functions which the Throne is expected to perform from others among its members. In these respects King George was able to benefit from a continuous growth of mutual confidence, on the part of the Royal Family and the public at large. In his mother Queen Alexandra and his consort Queen Mary the national affection had always been unchangingly concentrated and his aunts King Edward's sisters Princess Christian, Princess Louise (Duchess of Argyll) and Princess Henry of Battenberg remained as they had long been active and popular figures in English social life. His one surviving uncle the Duke of Connaught a man admired and respected throughout the British Army and indeed among all classes not only for his distinguished ability but also for his *camaraderie* and good sense, was still able and willing to take an important and most useful part in public life, he went in October 1910 to South Africa with great success to open the Union Parliament on the King's behalf and in 1911 was appointed to succeed Earl Grey as Viceroy of Canada where he and the Duchess quickly made themselves popular and their charming daughter Princess Patricia not less so. The Duke of Connaught's son Prince Arthur of Connaught was meanwhile chosen by the King to be his representative on several important missions to foreign countries and was appointed one of the four councillors of State (the others being the Archbishop of Canterbury Lord Chancellor Loreburn and Viscount Morley of Blackburn) empowered to transact business in the King's stead while absent on the Royal visit to India. With such supporters among the Royal Family the work of the Throne was ably assisted nor was the support confined only to these. Queen Mary's brother Prince Francis of Teck a gallant officer whose death on October 2 1910 cut short a career of much promise had thrown himself into social service at home by becoming chairman of the Middlesex Hospital and his brother Prince Alexander followed his example. It was generally recognised as being the pride of English Royalty to use the position for public ends and to spare no effort on behalf of national causes.

But the character of the Sovereign himself is necessarily the central factor in the realisation of those potentialities for social and political influence which have become so marked in the democratic development of the British Monarchy. At the very outset of his reign King George found it necessary to vindicate his personal character against certain remarkable aspersions and in doing so he gave a proof of his own confidence in the public which had excellent effect. It is now purely a curious episode in the history of scandal mongering that at the time when he came to the Throne, in spite of the genuine liking which existed in all classes for King Edward's sailor son stories were current in various quarters founded on irresponsible gossip, in the first place that he was addicted to drink and in the second—a still more serious matter—that he had been secretly married before his marriage with the Queen and that this earlier wife was alive though for dynastic purposes the union was ignored. Even while King Edward was alive reports somehow became prevalent that the Prince of Wales drank too much. At 'Grand night' at one of the Inns of Court the Prince bluntly told the Treasurer who was his host that people said so, and asked him how to get the impression removed a question more easily asked than answered. Those more immediately in the Prince's *entourage* know that it was nonsense but the more such things are denied the more publicity they generally get. When King George came to the Throne however it became desirable that the progress of this he should be checked and the Dean of Norwich in July 1910 by the King's desire spoke out plainly with excellent effect. Right minded people felt moreover that a King who was prepared to abandon the usual reticence in such a matter had a straightforward way of acting which was preferable to the arts of diplomacy.

Reports with reference to the second allegation had indeed been spread at the time

supporters in the country behind them had created the problem and its solution still remained for them to find. Between them wherever the fault might lie they had sown the whirlwind, and it must carry them where it blew. Meanwhile the Crown outside domestic politics remained by universal consent an Imperial and social factor of all the more potential value because of the warring of political factions. The consolidation of the Empire was making steady progress irrespectively of the political situation in the United Kingdom and King George though not the personal force in European diplomacy and statesmanship that King Edward had been was known throughout its length and breadth as no English Sovereign had ever been before. In spite of all the political difficulties in the mother country, the British Throne represented in his person a centre of Imperial authority to which other peoples and Parliaments than those of the United Kingdom contributed and whenever opportunity should serve for a judicious exercise of this authority, the extent of its influence both on domestic and on international affairs would not be limited by constitutional theories affecting the British Isles alone.

## II The Empire

“English history to day cannot indeed be written without reference to the British Empire as a unit greater than is represented by home (i.e. English Welsh Scottish and Irish) politics. The course of domestic affairs in the other British Dominions and Colonies is however dealt with in other sections of the *Progress of Imperialism Year-Book* and here it is only necessary to refer to certain matters of common Imperial interest, which are also part of the recent history of affairs in the mother country as the centre of the Empire. The Imperial idea to which Mr Chamberlain's administration of the Colonial Office and the emergency of the Boer War had given such a pronounced impetus has progressed during these later years with rapid strides both in Great Britain and the Dominions. It has done so irrespectively of English domestic politics, in consequence of the increasing consciousness in all quarters that the different parts of the Empire have a common interest in the maintenance of British power, and that this is only possible by mutual support. The persistent advocacy of the fiscal policy of Tariff Reform and Colonial Preference by the Unionist party in the mother country and their agreement in this respect with the trade policy of the statesmen of the Dominions has undoubtedly done much directly and indirectly to popularise the idea of closer union but on these lines no advance was possible while an English government committed to Free Trade<sup>1</sup> was in office.

Since 1909 however the question of Imperial Defence has become acute in consequence of the rapid increase of the German navy and its manifest challenge to British sea power. This new external pressure and the strain it involved on the resources of the mother country at a point where the security of the outlying British Dominions was immediately affected, concentrated attention throughout the Empire on the problem of a fuller co-operation for Imperial defence and during 1911 and 1912 this aspect of Imperial consolidation brought the statesmen of the Empire increasingly into closer touch over a problem which raised no differences of political principle. The most remarkable incident during the Imperial Conference which reassembled in London in 1911 was the confidential discussion of British international policy at which the Colonial representatives were addressed by Sir Edward Grey with a detailed account of the situation in foreign affairs. For the first time it was felt, the Empire as a whole had been taken into the counsels of the statesmen of the mother country in order that a common understanding might prevail. A naval defence scheme was adopted providing for the maintenance of the various naval services and forces under the control of their respective governments but for making the training and discipline uniform with those of the fleet of the United Kingdom and for arranging an interchange of officers and men, while in war time the colonial ships placed at the disposal of the Crown would be under the British Admiralty. The movement for increasing the Colonial naval forces, and combining their provision with the idea of

<sup>1</sup> See *E. B.* xi 88 *et seq.*

an Imperial Navy acting as a single unit was also notably forwarded by the visit to England of the Canadian Premier, Mr Borden with other Canadian ministers in 1911 for the purpose of discussing the whole subject with the home government and the Committee of Imperial Defence. The public speeches made by Mr Borden and his colleagues during this visit and the references made to it by Mr Asquith in the House of Commons showed that in this department of administrative policy at any rate the goal of Imperial federation was appreciably nearer.

In connection with the Imperial Conference of 1911 it may also be noted that resolutions were adopted by it in favour of (1) an Imperial Naturalisation Act, based on a scheme to be agreed upon but still undefined for conferring an uniform British citizenship throughout the Empire (2) the appointment (carried out in 1912) of a Royal Commission representing the whole Empire, to investigate and report on its natural resources and the possibility of their development (3) the establishment of a chain of British State owned wireless telegraphic stations within the Empire (proposed under the Marconi agreement of 1912). A somewhat elaborate scheme proposed by Sir Joseph Ward for setting up an Imperial House of Representatives for Defence, and an Imperial Council of State was withdrawn by him after both Mr Asquith and various Colonial ministers had criticised it adversely.

*Other questions at the Conference of 1911*

### III Domestic Politics

The history of domestic British politics in 1911 and 1912 was dominated by the state of the parties resulting from the general election which was precipitated

*Parties in Parliament.*

in December 1910 when the private conference between the Liberal and Unionist leaders on the constitutional crisis broke down<sup>1</sup>. On the eve of the election at a great meeting in the Albert Hall Mr Balfour introduced a new issue on the Unionist side by advocating a Referendum on great constitutional questions and declaring that he was prepared to refer Tariff Reform to the people by this method if the other side would do the same for Irish Home Rule. It was believed in some Unionist quarters that this declaration in favour of a Referendum on Tariff Reform (which was generally discussed without any question of its depending on the willingness of the Government to adopt the Referendum for Home Rule) would help to secure support among Unionist critics of the Tariff Reform policy but it came too late in the day for that purpose and was not much to the taste of the more ardent Tariff Reformers. Mr Austen Chamberlain for one at once expressed his view of the difficulty of taking a Referendum on a question of finance and after the elections the idea of qualifying the Tariff Reform issue by coupling it with a pledge not to proceed without a Referendum practically disappeared from the Unionist platform though suggestions for its revival were occasionally made by Unionists who thought Tariff Reform unpopular<sup>2</sup>. Its failure for electioneering purposes helped indeed to increase the criticism which was already rife in certain Unionist circles against Mr Balfour's leadership. On the other hand the use of the Referendum for putting large constitutional changes before the electorate and for thus solving the problem of conflicts between the two Houses of Parliament was increasingly advocated on the Unionist side. A bill for this purpose brought by Lord Balfour of Burleigh before the House of Lords in March 1911, made no actual headway, but the proposal in one shape or another became part of the Unionist alternative to the Parliament Bill. The Government, on their side concentrated all their efforts on an appeal to the electorate to give them a majority for the Parliament Bill, as an essential preliminary to any Liberal legislation, and the result showed that the short interval since the general election of January 1910 had made practically no difference in the balance of party power. The distribution of seats and

<sup>1</sup> See *E. B.* xx 846-847.

<sup>2</sup> On November 14 1912 at the meeting of the National Unionist Association in the Albert Hall, at which Mr Bonar Law and Lord Lansdowne both spoke. Lord Lansdowne specifically declared that the Unionist leaders regarded the proposal for a Referendum on Tariff Reform as abandoned. But see further below *ad fin*.

†No Labour candidate at last general election

\*Unionist gain from Liberal

(a) No Unionist candidate Ind candidate polled 2 913 votes

(b) Liberal gain from Labour

(c) Socialist candidate polled 134 votes

(d) No contest in December 1910 Figures compared with January 1910

(e) Independent Socialist and Woman's Suffrage candidate polled 3 291 or 1 024 less than he had polled in December 1910 when standing as a Socialist member of the Labour party with official Liberal support

Behind them in the House of Commons the most prominent members of the Ministry holding major offices were Mr Birrell<sup>1</sup> (Irish Secretary since 1907, b 1850), Mr John Burns<sup>2</sup> (President Local Government Board since 1905 b 1858) Mr Sydney Buxton (President Board of Trade since Feb 1910, Postmaster general 1905-1910, b 1853)

<sup>1</sup> E B III, 989<sup>2</sup> Ibid IV 855

Mr L V Harcourt<sup>1</sup> (Colonial Secretary since Nov 1910 b 1863) Mr Reginald McKenna (First Lord of the Admiralty from 1908 till Oct 1911 and then Home Secretary b 1863) Mr J A Pease (Chancellor of the Duchy of Lancaster from 1910 till October 1911 then Education Minister formerly Chief Whip 1908-1910 b 1860), Mr Walter Runciman (Education Minister from 1908 till Oct 1911, then President Board of Agriculture b 1870) and Mr Herbert Samuel (Postmaster General, previously Chancellor of the Duchy 1909-Feb 1910 b 1810) Mr Charles Hobhouse (b 1862) who was Financial Secretary to the Treasury from 1908 to October 1911 then became Chancellor of the Duchy of Lancaster Colonel John Seely (b 1868) who having seceded from the Unionist party with Mr Churchill was Under Secretary first for the Colonies (1908-March 1911) and then for War succeeded Lord Haldane as War Minister in July 1911 and Mr T M Kinnon Wood (b 1855) formerly *Progressive Leader on the London County Council* having been Under Secretary for Education (1908) Under Secretary for Foreign Affairs (1908-Oct 1911) and then Financial Secretary to the Treasury became Secretary for Scotland in succession to Lord Pentland (who resigned and was appointed Governor of Madras) in 1911 while Sir Rufus Isaacs (Attorney General since March 1910 b 1860) was included in the Cabinet of 1911 Sir John Simon (Solicitor General since Mar 1910 b 1813) had also come to the front as a politician of marked capacity

Minor offices were filled by Mr C F G Masterman (Under Secretary for Home Office since 1909 b 1875) Mr E S Montagu (Under Secretary for India since Feb 1910 b 1870) Dr T J Macnamara (Financial Secretary for the Admiralty since 1908 b 1861) Mr F D Acland (Under Secretary for Foreign Affairs from Oct 1911 previously Financial Secretary to War Office 1908-Feb 1910 b 1844) Mr J M Robertson (b 1856 Under Secretary for the Board of Trade from Oct 1911 in succession to Mr H J Fennant b 1865 appointed Financial Secretary for War) Mr C Trevelyan (Under Secretary for Education since 1908 b 1870) Mr G Lambert (Civil Lord of the Admiralty since 1905 b 1866) and Mr J Herbert Lewis (Under Secretary to Local Government Board since 1900 b 1858) The Master of Elibank (b 1870) was a popular and efficient Chief Whip (since Feb 1910) and among the Junior Whips were Mr P H Illingworth (his successor in August 1911 b 1869) Mr W W Benn (b 1871), Mr Gulland (b 1864) and the Hon F E Guest (b 1875)

Among the Liberal rank and file the men who figured most prominently in independent initiative or criticism were Sir A Mond (b 1868) Mr Chiozza Money (b 1870) Mr J C Wedgwood (b 1872) Mr P Morrell (b 1870), Mr Ellis Griffith (b 1860) Mr A Ponsonby (b 1871) Mr R Harcourt (b 1878) the Hon Neil Primrose (b 1881) Mr E Crawshaw Williams (b 1870) Mr J F L Brunner (b 1865) Mr Silvester Horne (the well known Nonconformist minister b 1865) Mr A J Sherwell (b 1863) Sir A B Markham (b 1866) Sir W P Byles (b 1839) Sir J H Yoxall (b 1851) and Mr T Lough (Secretary to the Board of Education 1905-8 b 1850) while Mr Horatio Bottomley (b 1860) elected as a Liberal but acting as an independent critic of an "unbusinesslike parliamentary regime" pursued an impracticable but lively career until he resigned having become a bankrupt in 1911

Among the Labour party led by Mr J Ramsay MacDonald (b 1866) the most notable figures were Mr J Keir Hardie (b 1856) Mr G N Barnes (b 1859) Mr W Crooks (b 1851) Mr Philip Snowden (b 1864) Mr G Lansbury (b 1859) Mr W Thorne (b 1857) Mr F W Jowett (b 1864) Mr C W Bowerman (b 1851) Mr W Brace (b 1865) and Mr W E Harvey (b 1852)

Mr John Redmond<sup>2</sup> (b 1851) as leader of the Irish Nationalists found his most effective parliamentary support in Mr John Dillon<sup>3</sup> (b 1851) Mr J G Swift MacNeill (b 1840) and Mr T P O'Connor (b 1849) though Mr Joseph Devlin (b 1872) was an even more active force in the organisation of the party Mr William O'Brien (b 1852) and Mr T M Healy (b 1855) meanwhile providing independent criticism from

<sup>1</sup> *E B* xii 940

<sup>3</sup> *Ibid* xxii 968

<sup>4</sup> *Ibid* xiii 273

the point of view of Irish Nationalists who were not satisfied that all was well with the Government policy

In the Upper House Liberalism had but a small following, but was actively represented under Lord Crewe's<sup>1</sup> leadership by Lord Morley,<sup>2</sup> Lord Loreburn (Lord Chancellor since 1905 formerly as Sir Robert Reid, Attorney General 1894, and M.P. since 1886, b. 1846), Lord Pentland (Secretary for Scotland 1905-1912 till 1909 as Capt. John Sinclair M.P. for Fortarshire b. 1869), Lord Beauchamp (Lord Pres. of Council June-Nov. 1910, then First Commissioner of Works b. 1872), Lord Burghclere (formerly as Mr. Herbert Gardner M.P. Pres. of Bd. of Agriculture 1892-1895 b. 1847), Lord Lucas (Under Sec. for Colonies March-Oct. 1911 then Sec. for Agriculture b. 1816), Lord Welby (till 1894 the chief official of the Treasury b. 1832), Lord Sheffield<sup>3</sup> (b. 1839), Lord Weardale (till 1905 Mr. Philip Stanhope M.P., b. 1847), Lord St. Davids (till 1908 Mr. J. W. Phillips M.P. b. 1860) and Lord Ashby St. Ledgers (till 1910 Capt. the Hon. Ivor Guest, M.P. eldest son of Lord Wimborne b. 1875). Lord Rosbery<sup>4</sup> (b. 1848) continued to plough a lonely furrow and Lord Courtney of Penwith<sup>5</sup> (b. 1832) to play the part of a political Aristides. In 1911 the Liberal Peers were reinforced by the elevation of Lord Haldane in March and of Mr. Alfred Emmott as Lord Emmott (b. 1838 Chairman of Committees in the Commons since 1906) in October the latter being appointed Under Secretary for the Colonies.

On the Unionist side, Mr. Balfour<sup>6</sup> (b. 1848) had no rival as a parliamentary figure but the party was sore with unsuccess and the personal affection and admiration with which he was regarded were balanced by misgivings among the rank and file and in the country as to his capacity to lead them out of it. No other *Leading men on the Unionist side*

Unionist leader however was prepared to be put in competition with him and he was loyally supported in the House of Commons by ex-Ministers in Mr. Austen Chamberlain<sup>7</sup> (b. 1863), Mr. Walter Long<sup>8</sup> (b. 1854), Mr. Bonar Law (b. 1858), Mr. H. Chaplin<sup>9</sup> (b. 1841), Mr. G. Wyndham<sup>10</sup> (b. 1863), Mr. A. Lyttelton<sup>11</sup> (b. 1857), Sir R. B. Finlay (b. 1842 formerly Attorney General), Sir L. Carson (ex-Solicitor General and leader of the Irish Unionists b. 1854), Sir W. R. Anson<sup>12</sup> (b. 1843), Mr. J. H. Campbell (formerly Solicitor-General for Ireland b. 1851), Mr. F. G. Pretyman (who had come prominently forward in 1909 as a critic of the new land taxes b. 1850) and Mr. W. Hayes Fisher (fresh from leading the Unionists or 'Municipal Reformers' on the London County Council b. 1853).

In Mr. F. E. Smith K.C. (b. 1871) who had made a rapid and brilliant success both at the Bar and in politics the party had an indefatigable worker and an audacious orator now taking a place in the front rank corresponding more or less to that of Mr. Churchill on the other side, and a variety of political talent or experience was actively represented by Sir F. G. Banbury (b. 1850), Mr. G. Cave (b. 1856), Mr. H. E. Duke (b. 1855), Mr. J. G. Butcher (b. 1852), Sir Gilbert Parker<sup>13</sup> (b. 1862), Mr. Charles Bathurst (b. 1867), Mr. A. H. Lee (b. 1868), Lord Hugh Cecil<sup>14</sup> (b. 1869), Lord Charles Beresford (b. 1846), Mr. E. A. Goulton (b. 1863), Sir A. Griffith Boscawen (b. 1865), Mr. H. Staveland Hill (b. 1865), Mr. J. W. Hills (b. 1867), Mr. H. J. Mackinder (b. 1861), Mr. F. Cassel (b. 1869), Mr. B. E. Peto (b. 1862), Mr. L. Worthington Evans (b. 1868), Mr. H. Page Croft (b. 1881), Mr. George Sandys (b. 1875), Major Archer Shee (b. 1873), Mr. A. Burgoyne (b. 1880), Mr. W. Ormsby Gore (b. 1885), Mr. W. W. Astor (b. 1870), Lord Winterton (b. 1883), Lord Castleragh (b. 1878), Lord Ronaldshay (b. 1876), Lord Tullibardine (b. 1871), Lord Wolmer (b. 1887), and Lord Hunsley (b. 1881). The Irish Unionists included Mr. W. Moore (b. 1864), Sir J. B. Lonsdale (b. 1840), Capt. J. Craig (b. 1871), and Mr. W. Mitchell Thompson (b. 1871).

With Sir Alexander Acland Hood (b. 1854) as Chief Whip—retiring with a pierage as Lord St. Audries in 1911—were principally associated Lord Balfour (b. 1811) who

succeeded him in the post Mr H W Forster (b 1866), and Mr H Pike Pease (b 1867) and as the result of a rearrangement of the machinery of the Conservative Central Office in 1911 (carried still further by the fusion in 1912 of the Conservative and Liberal Unionist organisations under Mr John Boraston as Chief Agent<sup>1</sup>), Mr A H Steel Maitland M.P. (b 1866) was made Chief Organizer<sup>2</sup> of the party, independently of the work of parliamentary whipping<sup>3</sup>.

In the House of Lords Lord Lansdowne<sup>4</sup> (b 1845) was the recognised Unionist leader, actively supported by such ex Ministers as Lord Halsbury<sup>5</sup> (b 1823), Lord Londonderry<sup>6</sup> (b 1852) Lord Curzon<sup>7</sup> (b 1850), Lord Middleton<sup>8</sup> (b 1856), Lord Selborne<sup>9</sup> (b 1850) Lord Cawdor (1847-1911, First Lord of the Admiralty 1905), Lord Salisbury<sup>10</sup> (b 1861) Lord St Aldwyn<sup>11</sup> (b 1837), Lord Balfour of Burleigh<sup>12</sup> (b 1849), Lord Ampthill<sup>13</sup> (b 1869), Lord Derby<sup>14</sup> (b 1865) Lord Onslow<sup>15</sup> (1854-1911), and the Dukes of Norfolk<sup>16</sup> (b 1847) and Marlborough<sup>17</sup> (b 1871, formerly Colonial Under Secretary) Lord Avebury<sup>18</sup> (b 1834) Lord Cromer<sup>19</sup> (b 1841) and Lord Milner<sup>20</sup> (b 1854), were other important figures on the same side, and among Unionist peers of marked political talent and influence were Lord Ridley (b 1874 Chairman of the Tariff Reform League) Lord Malmesbury<sup>21</sup> (b 1870), Lord Willoughby de Broke<sup>1</sup> (b 1869) and Lord Newton (b 1857).

Among the members who were returned to the new House of Commons subsequently to the general election the most notable personalities on the Liberal side were Baron de Forest (b 1879) for North West Ham (July 1911), Mr W G C Gladstone (b 1852) for Kilmarnock Burghs (Sept 1911) Mr S O Buckmaster (b 1861) for the Keighley division of Yorks (Oct 1911) Mr Hemmerde (b 1871) for North-West Norfolk (May 1912) and Mr R L Outhwaite (b 1869) for Hanley (July 1911) in the Ministry itself Mr C F Masterman (b 1813) was returned in July 1911 for South West Bethnel Green after being unseated on petition for North West Ham. On the Unionist side the ablest of the Tariff Reform leaders Mr Bonar Law who had been defeated for North West Manchester at the general election was returned for Bootle in March 1911 and other important additions to the Parliamentary personnel were represented by the return of Sir J Larmor (b 1837) for Cambridge University (Feb 1911) Mr W Joynton Hicks (b 1863) for Brentford Mr L S Amery (b 1813) for South Birmingham Mr Ronald McNeill (b 1861) for the St Augustine's division of Kent (July 1911) Lord Robert Cecil (b 1864) for Hitchin (Nov 1911) and Mr W A S Hewins (b 1865) for Hereford (March 8, 1912) Mr T M Healy defeated as an Independent Irish Nationalist at the general election was in July 1911 provided with a seat for North East Cork by the retirement of Mr Moreton Frewen.

The Unionists were now united after all the troubles over the Tariff Reform movement which started in 1903 by the common bond of resistance to the Radical Socialist programme of their opponents. The Unionist Free Traders had been compelled by the course of events—especially as in their opinion the Liberal Government had under Mr Lloyd George's guidance pursued an economic policy disastrous to the essentials of Free Trade—to accept the fact that Tariff Reform and Colonial Preference now stood officially in the forefront of the constructive programme of the party. In the House of Commons itself when it met in February 1911, Lord Hugh Cecil remained solitary as an Unionist Free Trader in the peculiar conditions attaching to his seat for Oxford University. The precise form which the Tariff Reform policy would take if the party were returned to power—whether the food taxes<sup>2</sup>

<sup>1</sup> Mr Percival Hughes who had been Chief Agent on the Conservative side since 1907, resigned in January 1912. Mr Boraston had been Liberal Unionist Chief Agent for some years.

could be modified or dropped whether the idea of a Referendum should be persisted in — was debated in some quarters according to varieties of opinion on electioneering tactics but it was sufficient for the moment for those Unionist politicians who had opposed it altogether or still wavered as to details to wait events. The solidarity of the party in opposition in the immediate crisis was of more immediate importance. On the other hand while recognising this fact, the convinced Tariff Reformers were satisfied, from their point of view, with the progress of their movement. The party leaders and the party organisation were now identified with the whole policy and its acceptance by Unionist candidates was therefore a matter of party loyalty. In the constituencies it was making continued headway the winning back of eight seats in Lancashire at the general election indicating that an impression was being made on the industrial North of England. Above all the general idea inspiring Mr Joseph Chamberlain's proposals, — the federalisation of the British Empire and its closer union for fiscal as well as other purposes — was taking more definite shape in the common political consciousness. While a protective national economic policy was advocated by the Tariff Reformers as an essential condition of the improvement of industrial and social conditions at home — and on those lines they were prepared to go considerable lengths to meet the demands of Labour, — its most active supporters had always in their mind its bearing on the policy of Imperialism. Faced with the inevitability of large constitutional and social reforms a new constructive spirit had come to dominate the party changing the whole outlook for democratic Conservatism under the guidance of this vision of systematised Imperial unity. Fighting as they must to defeat the Coalition Government if possible in order to preserve the integrity of the Imperial Parliament menaced by Irish Home Rule and the check of an effective Second Chamber upon Radical Socialist legislation put in jeopardy by the Parliament Bill the most influential Unionist politicians and publicists were looking anxiously to the wider Imperial issues beyond the solution of immediate domestic problems. It would be unjust to the more Imperially minded individuals on the Liberal side to claim a monopoly in this respect for the Tariff Reform Unionists but Liberal and Labour politicians and publicists were naturally engrossed with the purely domestic issues represented in their own party programmes. It was the predominant characteristic of all the Unionist activity both at this stage and afterwards that it centred round the Imperialist policy which was the end in view. The immediate danger to the cause of Imperial commercial unity which was threatened by the reciprocity treaty between Canada and the United States was therefore a matter of special concern hailed as it was on the Liberal side as according with the Free Trade fiscal policy. Grave as the position was for Conservatism and Unionism in English parliamentary politics in Imperial politics as viewed by supporters of Tariff Reform and Colonial Preference this seemed even a more momentous development. Meanwhile hopes were still entertained that either by agreement between the parties or through the failure of the Ministry to obtain the King's consent to actual coercion of the House of Lords the immediate constitutional crisis might be solved or the Government forced to resign or once more dissolve in circumstances more favourable than before to a Unionist success at the polls. After the last two elections further defence of an unreformed House of Lords was out of the question.

It was clear from the first that the Government could rely on the support of the Irish Nationalist party. The passing of the Parliament Bill was an essential preliminary to the successful accomplishment of Home Rule, and it had been Mr Redmond's policy ever since the elections of January 1910 to press the de-  
**The position of the Government.** struction of the peers' veto to its final issue for that purpose. The only doubtful element in the coalition was the Labour party,<sup>1</sup> whose parliamentary independence — partly as directly representing the Socialist movement, partly as representing the economic policy of the trade unions and partly as advocating equally against Tory or Liberal "capitalists" and against the whole public of "consumers" the claims of the wage-earning classes as such, — was shown in the promotion of third party candi-

<sup>1</sup> See *E. B.* xv. 28

dates at some of the by-elections. Its parliamentary programme included a 'Right to Work' Bill which the Liberal party could no more support than the Unionist, whatever individual members of either might do, and at the present moment having successfully extorted the Trade Disputes Act from parliament in 1906, it was set on obtaining from the Government a bill for reversing the Osborne judgment,"<sup>2</sup> and freeing the employment of trade union funds for political purposes. The fact however that the "independence" of the Labour party was dominated by reluctance to put Liberalism in a minority in so far as it stood for causes with which the Labour party also identified itself,—Free Trade, the Parliament Bill, Irish Home Rule and Welsh Disestablishment—made its parliamentary position more or less of a sham, and one over the manoeuvring of which the Government's Whips had the upper hand. The result was that the idea which had begun to prevail in 1906 that the power of the Labour party in Parliament (as distinct from the Labour movement outside) was likely to have a rapid growth was considerably modified. The industrial troubles of 1911 and 1912 notably the railway strike, the coal strike and the London dock strike (see IV below), were seen to be beyond their guidance or control—they were indeed largely the consequence of a widespread feeling shown in outbreaks of syndicalism that the Labour members in parliament were impotent because their action was subject to their maintaining the Liberal Government in power. Moreover the wind was taken out of their sails by the extreme radicalism of Mr Lloyd George and other Liberal electioneers, whose object naturally was to show that Liberalism could do all that Labour wanted. On the other hand a considerable section of the Liberal party was either apprehensive of the alliance of Labour and Socialism or jealous of surrendering to the Labour party seats which were considered to be within the Liberal preserve. Between the claims of Liberalism and Labour the Liberal party managers were unable to avoid friction in the constituencies as this situation developed and though the Whips kept a majority for the Government together against every sort of Unionist attack up to the adjournment of Parliament in August 1911 the possibilities of a serious breach between Liberalism and Labour were towards the end of that period clearly shown in the by-election at Hanley (July 13th) where a Liberal displaced a Labour member followed by that at Crewe (July 26th) where the Unionist candidate was returned in a three-cornered fight and still further in the rivalry of Labour and Liberal candidates for Midlothian (Sept 10th) resulting in a Unionist victory. In this last instance the local Liberals flatly declined to accept the Master of Elibank's suggestion—made just when he was retiring from the post of Chief Government Whip and was taking a peerage as Lord Murray—that they should support the Labour nominee. But this particular weakness within the Coalition majority was of no advantage to the Unionists while the Parliament Bill was still under discussion. For their immediate purposes in 1911 the Government had complete control of the parliamentary machine when they started afresh after the general election and they went 'full steam ahead'.

On February 6, 1911 the first Parliament of George V was opened, and its preliminary stages in the way of amendments to the address were soon over. On February 9th, an Opposition Tariff Reform amendment moved by Mr Austen Chamberlain was defeated by 102 votes and on February 15th an anti Home Rule amendment was defeated by 113. On February 21st, the Parliament Bill<sup>2</sup> was reintroduced in the House of Commons and had a first reading majority of 124 next day and the second reading moved on February 27th was carried by a majority of 125 on March 2d. The Committee stage lasted from April 3d with an interval for Easter from the 12th to the 18th till May 3d, on May 8th Mr Asquith carried a motion to devote only four more parliamentary days to the Bill and on the 15th the third reading was carried by a majority of 362 to 241, and the Bill was sent up to the House of Lords. A few trivial changes had been accepted in its wording, but all the substantial amendments proposed by the Opposition had been negatived, and the one attempt from within the Coalition to modify the Bill—a Labour party amendment

<sup>1</sup> *E B* xxvii 143

*Ibid* xx 846 847

they may understand that in the event of the policy of the Government being approved by an adequate majority in the new House of Commons His Majesty will be ready to exercise his constitutional powers which may involve the prerogative of creating peer if needed to secure that effect shall be given to the decision of the country. His Majesty's ministers are fully alive to the importance of keeping the name of the King out of the sphere of party and electoral controversy. They take upon themselves as is their duty the entire and exclusive responsibility for the policy which they will place before the electorate. His Majesty will doubtless agree that it would be inadvisable in the interests of the State that any communication of the intentions of the Crown should be made public unless and until the actual occasion should arise.

The King had felt that he had no alternative except to assent though he did so as Lord Crewe now stated (as was understood) on his behalf, 'with natural and legitimate reluctance. The Government, according to their own view had hoped that as the result of the general election, the Parliament Bill would be allowed to pass without amendments which would be fatal to its purpose and therefore without a disclosure of the confidential understanding which all the time existed as to the use of the Prerogative but this was no longer possible and the only question now was whether the threat was to be sufficient by itself, or whether by continued resistance the Government should be forced to carry it into effect.

On this point a serious division of opinion at once was shown in the Unionist party. It was clear that in the House of Commons the Lords' amendments would be summarily rejected by the Coalition majority and any further development of the political crisis depended on what would happen in the House of Lords when the Bill was sent back to it. A hurried meeting of Unionist Peers was held immediately (July 21st) at Lansdowne House at which Lord Lansdowne informed them that the Government had told the Opposition leaders that their intention was not to send the Bill up from the House of Commons unless an assurance was given that it would be passed, the assumption being that failing this assurance peers would at once be created in sufficient numbers for the purpose and it was freely stated in the Liberal Press that the Government Whips had a list ready of persons who were prepared to accept peerages on condition that they voted for the Liberal programme. A state of extreme exasperation prevailed but a considerable majority of Unionist peers agreed with Lord Lansdowne's view that if this creation of peers was proceeded with, not only would the Parliament Bill be passed but even such opportunities as it left open for subsequent resistance to Home Rule and similar measures would be nullified, the only prudent course in the interest either of the Unionist party or of the peerage was to sink further opposition now that they were no longer 'free agents'. On the other hand a minority whose view was strongly expressed by Lord Halsbury the veteran ex Lord Chancellor bitterly opposed such a surrender in their view they did not cease to be 'free agents' until they were actually outvoted, and it was in this sense that they had understood Lord Lansdowne's use of the phrase on the third reading and only on that condition that they had not rejected the Bill then they still regarded the Government threat as a piece of bluff which could not be carried into action but even if it was not bluff and a large number of new Liberal peers were actually created such a violent course would bring ridicule and disaster on the Liberal party and would make the country realise as nothing else apparently could the revolution that was contemplated. Moreover from experience in the past, it was well within what might be expected that when the 500 eligible magnates who were willing to take Liberal peerages had voted for the Parliament Bill they would take a more independent view of their position so far as Home Rule and other measures were concerned. When the Government had finally shot their bolt and by creating the new peers had reconstituted the existing House of Lords in such a way as to destroy the Liberal contention that it was simply a Tory preserve it would formally at all events, be actually strengthened as part of the constitutional machinery. It was impossible to suppose that even in so wholesale a creation, the class of men whom Mr Asquith was prepared to nominate for the purpose would be different from those who in recent years had been added quite acceptably to the House of Lords by Liberal initiation in considerable numbers, and who had in many cases come round there to a different

way of thinking<sup>1</sup> A further argument was that if a creation of peers was avoided now it would not prevent exactly the same situation arising if and when the House of Lords subsequently rejected a *Home Rule Bill*, the best thing therefore was to get the whole business over at once, and exhaust the credit which had been opened by the Ministry, matters had already gone too far for the House of Lords any longer to act as safeguard against single-chamber government

Between these opposing views of the situation a cleavage in the Unionist ranks was at once manifest, among the peers, the party in the House of Commons the rank and file in the country and in the Press Mr Balfour decided to 'stand or fall' with Lord Lansdowne's advice, and they were followed by much the larger numbers, but public interest centred in the outcome of what was known as the 'Die Hard' movement, which was actively organised under Lord Halsbury's leadership and initiated at a largely attended and enthusiastic dinner in his honour at the Hotel Cecil on July 26th at which Lord Selborne presided supported by Lord Salisbury, Lord Milner, the Dukes of Northumberland Marlborough, Bedford and Somerset, Mr Austen Chamberlain, Mr George Wyndham Sir Edward Carson, Lord Hugh Cecil Mr F E Smith Lord Wiloughby de Broke and other prominent men How many peers would follow the lead given by Lord Halsbury and vote against the unamended Bill when it was again sent up was still uncertain but as Lord Lansdowne and the bulk of those who accepted his advice were only prepared to desist from further opposition and would not assist the Government affirmatively by voting for a measure they detested just as much as the "Die Hards" it was impossible for him to give Mr Asquith the assurance he had demanded A period of extreme tension and uncertainty followed On July 24th when Mr Asquith was to move in the House of Commons that the Lords' amendments be disagreed with, he was howled down from the Unionist benches, amid a scene of great disorder in which Lord Hugh Cecil and Mr F E Smith were specially prominent and the Speaker was eventually obliged to adjourn the House further disorder took place next day when Lord Hugh Cecil was howled down by the Ministerialists and it was not till August 8th that with Mr Winston Churchill leading the House in the absence of Mr Asquith who was suffering from laryngitis the motion for disagreeing with the Lords' amendments was carried by 321 to 215, after the Government had agreed to introduce a few minor changes Meanwhile Mr Balfour had endeavoured to placate the whole of the Unionist party by moving a vote of censure (Aug 7th), which was rejected by 365 to 246 and in the House of Lords a similar vote of censure moved by Lord Curzon (Aug 8th), was carried by 282 to 68 but the "Die Hard" movement had gone on unfalteringly and an active canvass had been in progress both on the Unionist and the Liberal sides with a view of ascertaining how the division might go if the Bill came again before the House of Lords under existing conditions

The uncertainty whether the 'Die Hards' would outnumber the Liberal peers if Lord Lansdowne's supporters simply abstained, as he advised them to do made the situation very difficult both for the Government and also for those Unionist peers who thought that a wholesale creation of new Liberal peerages would be worse even than the passing of the Bill without it On the one hand a considerable section of Radical opinion was in favour of settling the whole question, including the future of the Radical programme, by immediately making enough peers to ensure a Liberal majority on the other a section of Unionist peers led by Lord Cromer and Lord St Aldwyn were considering whether to avoid this they should vote for the Bill bad as it was while others passionately resenting this suggestion, declared that if it were acted on they would desert Lord Lansdowne and join the 'Die Hards' Amid the confusion on both sides and the increasing bitterness of feeling among the Unionists, it was believed that Lord Knollys the King's private secretary who was in constant communication with Down

<sup>1</sup> It is worth noting in this connection that between 1868 (when modern Liberalism and Conservatism practically started as organised parties) and October 1912 the new peerages created by Liberal Governments numbered 164 and those created by Conservative Governments 149 Mr Asquith alone had created 52 new peers up to October 1912 since he became Premier in 1908 See also *E B* xxii 112

so as directly to reverse the Osborne Judgment, was impossible, though the Government was prepared with a Bill—unsatisfactory to the Labour party and not proceeded with a second edition being introduced in 1912—for enabling Trade Unions to make special provision for voluntary political funds, separately from the general funds to which every member of the Union had to contribute but it was hoped that payment of all M P s out of public money would do away with the particular grievance of the Labour members. This was not however in fact the result, and the demand for a complete legislative reversal of the Osborne Judgment persisted. In the country generally a good deal of disgust was felt at the calm way in which M P 's had voted themselves £400 a year and a number of individual members, who were far too well off to want the subsidy, did their best to refuse it. But the deed was done, provision was made in the Budget and a new temptation was held out for the multiplication of parliamentary candidates among persons to whom £400 a year would be useful.

Meanwhile the National Insurance Bill introduced by Mr Lloyd George on May 4, 1911, had introduced new issues into the political conflict even when the constitutional crisis was at its height. This elaborate measure in 8, Clauses covered *The Insurance Act.* two distinct subjects, one being National Health insurance under newly constituted Insurance Commissioners for England, Wales, Scotland and Ireland (with a joint Committee, formed from among them, for adjusting common affairs) assisted in each case by an Advisory Committee with County and County borough Committees for local administration and the other Unemployment Insurance directly under the Board of Trade. As the latter excited comparatively little criticism it may be dealt with first.

(1) Unemployment Insurance administered largely through the Labour Exchanges was limited to begin with to certain trades—building construction of works (railroads dock etc.) shipbuilding mechanical engineering ironfounding construction of vehicles and saw milling—but with power for the Board of Trade to extend the scheme to others. Workmen in these trades (others than foremen clerks indentured apprentices and persons under sixteen) would be entitled under various restrictions to unemployment benefit (up to a standard of 7 s. a week for not more than fifteen weeks a year starting at the second week of unemployment) out of an Unemployment Fund formed by each workman compulsorily contributing 2½d. a week (paid by employer and deducted from wages) employers 2½d. a week per man and the State adding an amount equal to a third of their total contribution.

(2) For National Health purposes compulsory insurance was imposed on all persons (between 16 and 70) under contracts of service with certain exceptions (including those employed otherwise than in manual labour and paid over £160 a year or possessing £26 a year from property), provision being also made for certain classes of employed persons not compulsorily insured to come into the scheme as voluntary contributors. Under the compulsory insurance (except for certain lower rates) male contributors were to pay 4d. a week female 3d. (employers making the payments and deducting them from wages), and employers 3d. for each male or female employed (special stamps for each amount having to be affixed to cards for this purpose) the State adding to the National Health Insurance Fund so constituted an amount (two ninths in the case of men and a quarter in the case of women) of the cost of benefits and administration) which was reckoned to work out at 2d. a week per head. The benefits primarily secured were (1) free medical treatment at home (2) sanatorium treatment for tuberculosis and other diseases specified by the Local Government Board for which special arrangements were made the Government allocating £1 500 000 for the building of sanatoria (3) payment during sickness of 10s. a week for men and 7s. 6d. for women up to 26 weeks (4) subsequent payment during disablement of 5s. a week and (5) maternity bonus of 30s. to women (including wives of insured persons) on confinement. Provisions being made for granting these benefits (medical attendance sickness, and maternity benefits not till six months disablement not till two years after payments started) or modifying and extending them as funds permitted. The agencies for

administering the benefits were made (1) 'approved societies' i.e. the Friendly Societies, trade unions and such similar bodies as the Insurance Commissioners approved the intention of the Government being to have as many as possible of the insured included as members of "approved societies" (2) the Post Offices which would deal with those who would not join societies or whom societies would not admit, and who thus became "deposit contributors". The Local Health Committees among their other duties (including the administration of sanatorium benefit) were left to arrange for the service of medical practitioners for insured persons, preparing lists of doctors from among whom the patients were to have their own choice payment to the doctors from the general fund being estimated for at the rate of 6s (including cost of drugs) per head per annum. This feature of the Bill as explained by Mr Lloyd George quickly aroused the opposition of the doctors who were organised under the British Medical Association to refuse their services unless a larger payment was made and as a body the doctors stood out for better terms month after month going by without any settlement being arrived at even after the Act came into operation. As medical benefits under the Act became due on January 15 1913 it became a question for the Government whether if no terms could be arranged a regular State Medical Service would not have to be started but this would take time to organise and mean while it would be poor consolation to the prospective beneficiaries under the Act for the Government merely to hand them over the money proposed for the doctors and to leave them to make the best of it. On October 23 1912 Mr Lloyd George announced the Government's final offer to increase the capitation fee to 9s (including drugs and extras) representing a further increase in the remuneration of doctors by £1 650 000 but on November 17th the offer was rejected by an overwhelming majority of the profession at a representative meeting of the British Medical Association and negotiations began again. (See below *ad fin*)

The second reading of the Insurance Bill debate on which began on May 24 1911 was carried without a division on May 30th and the Committee stage went on intermittently from July 3th to August 4th when with the discussion on the 17th clause finished Mr Lloyd George was still able to regard the Opposition as favourably disposed towards the Bill and co-operating by useful criticism in giving shape to what was necessarily a very complicated measure. Its remaining stages were then left over for the Autumn Session, which began on October 4th. But in the interval opposition had been growing and the political situation in other respects was such that genuine co-operation with anything proposed by the Government was hardly possible if party capital could be made for the Unionists by what was unpopular in its programme. Not only were the doctors in full revolt against the terms the Bill proposed for their remuneration but the working classes themselves were found to dislike exceedingly being taxed in such a direct way for benefits they were not able to appreciate. Mr Lloyd George ever an ardent electioneer however sincere he might be as a social reformer exasperated the Unionist party sore enough already at his success with the Budget of 1909 and the electioneering use made of the grant of Old Age Pensions by his description of the Bill as giving the working classes ninepence for fourpence but there was no doubt about the fourpence being a first charge on wages and the man who paid it was perhaps only providing ninepence for somebody else—this being the essence of any insurance scheme,—and was not so much impressed by the prospect of benefits as by the compulsory character of the contributions. Among domestic servants the scheme was cordially disliked. Though the Bill was planned so as to involve financial co-operation between the State and the Friendly Societies there was considerable uncertainty as to how far a great many of the latter especially the smaller local societies, would reap advantage rather than loss. The whole scheme in spite of the excellence of its intentions, was seen to raise a number of new social and economic problems the solution of which nobody could foresee, either before it became law or afterwards and public discussion concentrated on the difficulties and objections. It was inevitable therefore that, so far as the political

*Progress in  
Parliament.*

aspects of the Bill were concerned the attitude of the Opposition should be affected by the discovery of its wide unpopularity. They had originally welcomed it in principle but they represented for organised political purposes, a growing body of hostile criticism as to details and criticism which in the circumstances was becoming more and more incompatible with parliamentary support.

The result was decidedly unfortunate for a scheme which aimed at accomplishing so important a work of social reform. The Government had its programme for 1912 full subject to the way being cleared by the Parliament Act by the political necessity of proceeding with Home Rule and Welsh Disestablishment and Mr Lloyd George whose influence on the parliamentary tactics of the Coalition was now supreme, determined to force the Insurance Bill through before 1911 ended. When the House of Commons resumed on October 24th Mr Asquith carried a time-table resolution for closing the remainder of its stages, and by this drastic method the Bill passed through Committee on November 21st and was read a third time on December 6th. Under such conditions the opportunity for effective Opposition criticism and amendment was so limited that very little was possible in spite of the activity of Mr Worthington Evans and other Unionist members and towards the end it became a question whether the Unionist leaders would actually divide against the third reading, a course to which they were openly challenged by Mr Lloyd George. Instead of this an Opposition front bench amendment was moved by Mr H W Forster proposing that the Bill should be postponed for further discussion and this was defeated by 320 to 223 the third reading then being carried in a division in which the Opposition as a whole took no part, 21 members recording their votes against it. On December 11th the Bill was read a second time in the House of Lords and after various Government amendments had been inserted in Committee on December 14th it was passed and received the Royal assent next day when Parliament was prorogued.

During all this time both inside and outside Parliament opinion as to the scheme and its prospects had become more clearly crystallised. While Mr Lloyd George and his supporters proclaimed it to be the most beneficial reform ever conceived in the interest of the working classes and taunted the Opposition with attempting to destroy it the Unionists dwelt on the injury done by forcing through a measure which ought to have been more carefully considered before it became law, and threw the responsibility on the Liberal party for everything that was objectionable and unworkable in it. The by elections showed that its unpopularity was continually growing and under the arrangement made in the Act that the Insurance commissioners should during 1912 make regulations as to details nobody knew what procedure would be adopted to overcome countless points of difficulty which under the Act itself remained quite unsettled. The medical profession without whose co-operation so far as could be seen the Act would not work at all continued to refuse it unless they were given better terms, to which Mr Lloyd George was still unable to agree. 'passive resistance' was being organised on their behalf by the British Medical Association and threatened in various other directions. As time went on the muddle only grew worse and when the Act came into effect in the autumn of 1912 most of its problems were still unsolved.

As a measure of social reform indeed the Insurance Act was undoubtedly one which ought to be of great value when in full operation and as usual in Great Britain in spite of general discontent most people combined to carry the Act out. Speaking on October 12 1912 Mr Lloyd George was able to boast that, whereas the original actuarial calculations led to the expectation that 12 million stamps on the average would be fixed to cards every week, this number had been regularly and continuously exceeded, and had that week reached over 15 million. In spite of all objections and much talk about resistance among employers and employed, though the benefits were not yet forthcoming and complete uncertainty existed as to the action of the medical profession payment was being made for insuring between 13 and 14 millions of people against sickness and 2½ millions against unemployment. As a piece of Liberal electioneering,

on the other hand despite desperate oratorical efforts on Mr Lloyd George's part and assiduous lecturing by his emissaries throughout the country on its advantages to the working classes it was for the present a complete failure, and its unpopularity became the most prominent feature in the political life of the country, with the result of a marked improvement in the Unionist position. During the debate on the address early in 1912 the leader (Mr Bonar Law) of the Unionist party being asked in debate by Mr Asquith whether he would repeal it if he came into office hastily replied 'Certainly'—afterwards explaining that he meant withdraw for amendment. It was considered at first by the Liberal Press (and even by many Unionists at the time) that he had made a *faux pas* but as a matter of fact the unpopularity of the Act was such that the Liberals found it impossible to make any lasting capital out of the indiscretion.

Another piece of social legislation which caused considerable local irritation was the Shop Act quickly passed in the autumn session which many shopkeepers found to work very inconveniently. It limited the hours of shop assistants to 60 (with one half holiday) a week regulated the overtime permissible and while providing for Sunday closing gave power to local authorities with the approval of two thirds of the shops affected to decide the closing hours on other days.

It was however not only the stimulus given by the antagonism of the country to the Insurance Act that was causing a revival of Unionist confidence after the defeat over the Parliament Act. During the autumn session the Unionist party had started afresh under a new leader in the House of Commons. The

*Mr Balfour's  
resignation*

'Die Hard' revolt had been a fresh illustration of the dissatisfaction within the party at the way it had been led by Mr Balfour for some time past. If the Parliament Bill had actually been defeated in the House of Lords by the Die Hards it was an open secret that both Lord Lansdowne and Mr Balfour had intended to retire from their positions at the head of the party and it was largely the dislike of acting disloyally by them that confined the open revolt to a comparatively small section. Exasperation at the result however was general and though when the crisis was over Unionist concentration was obviously dictated by all the circumstances Mr Balfour's authority had been seriously shaken. He himself did his best to smooth matters over declaring in a public speech (Haddington Oct. 7th) that the question of the Peers' tactics was now a dead issue of no more practical importance than the controversy as to the identity of Junius and the Die Hards though they started a Halsbury Club and kept their organisation in being protested at the same time that the differences within the party were ended with the cause of them and that they only meant to work for the common good. But after some weeks of reflection when the hubbub was all over Mr Balfour made up his mind that the right moment had arrived for him to retire from the leadership though not from Parliament in view of the arduous political struggles still impending and the unlikelihood of his being strong enough in health should the Unionists again return to power to conduct a Ministry. Since 1891 he had led his party in the House of Commons and at sixty three it was time for him to make way for others. It would be better he thought to get a new leader into harness at once so that he might be ready for the responsibility of office. His announcement to this effect was made on November 8th at a hastily convened meeting in the City of London and he made it clear that the step was irrevocable. For a few days the question of who would succeed him was uncertain. Mr Austen Chamberlain, not only as principal leader of the Tariff Reformers and one whose very name would, on his father's account be most representative of the Imperialist movement, but as ex-Chancellor of the Exchequer and officially Mr Balfour's deputy on the Opposition Front Bench had apparently the strongest claim but as a Liberal Unionist his selection was opposed by many Conservatives who considered Mr Walter Long a better choice, and Mr Long's great popularity among all sections was much in his favour. It became clear to the partisans of both that if either were proposed and votes were taken it would only emphasise the division of opinion and create friction between their supporters whereas unanimity was the first consideration.

It was found that Mr Austen Chamberlain and Mr Long were both prepared to stand aside in favour of Mr Bonar Law,<sup>1</sup> nominally a Conservative and at the same time a strong Tariff Reformer, and on their joint proposal he was quickly adopted as leader in the House of Commons (Lord Lansdowne continuing to be leader in the House of Lords) at a party meeting on November 13th. Their sacrifice of personal ambition to the party interest and their loyal pledges of co-operation with the new leader, who himself enjoyed the admiration of all sections set an example which did much to promote fresh confidence within the party and Mr Bonar Law had no sooner become leader than there were signs of improved Unionist prospects in the constituencies. In intellectual range subtlety of exposition and criticism and political experience, Mr Balfour had admittedly no rival on either side but he still remained in the fighting rank ready to devote himself to the Unionist cause as much as anybody. His retirement from the formal responsibilities of leadership gave freer play to the respect and admiration felt for him personally as a public man while relieving the party of the accumulation of doubt as to his policy and tactics which rightly or wrongly had led to undercurrents of dissension. To the plain man his detached and philosophical outlook on public affairs had been rather too lofty to be 'had' or tricked as the party was openly taunted by its opponents over the Budget of 1909 or the Parliament Bill of 1911 simply meant that its leader had failed in astuteness, ardent Tariff Reformers enthusiastic for Mr Chamberlain's policy and pining for Mr Chamberlain's aggressive tactics felt that Mr Balfour's balancing support of their proposals was unpractical and was confined to economic generalities. He was perhaps too much of a gentleman as well as too little of a business man for the situation. Mr Bonar Law on the other hand was more of the Chamberlain type — a successful man of business the clearest and most convincing platform exponent of Tariff Reform a speaker who was accustomed to calling a spade a spade. Though he had never sat in a Cabinet he had for several years been regarded by his party as one of their principal leaders. If Mr Balfour for his own reasons had not decided to retire it is certain that however vocal the malcontents were — and the *National Review* and *Morning Post* had for some time been in open mutiny — the party as a whole and all his colleagues would have remained loyal to his leadership but as things were it is equally certain that the change was regarded on all sides as marking an epoch in the fortunes of the Unionist party. With the selection of Mr Bonar Law to lead them in the House of Commons came a new spirit of hope and zeal. He made an excellent start with his first public speeches after becoming leader notably with a general attack on the Government at the Albert Hall on January 6 1912.

At the same time the result of the Canadian elections at the end of September and the defeat of Sir Wilfrid Laurier's American Reciprocity proposals had delighted the Unionists and given them fresh confidence for the future of Imperialism. Canada had shown that she meant to keep her place in the Empire, and that antagonism to the prospect of becoming simply an annexe to the United States was more powerful than the temptation to secure immediate commercial advantages from Reciprocity. Up to the last the result of the Canadian elections had been very uncertain and the Tariff Reformers in England who had been thoroughly depressed and disheartened by the idea that if reciprocity between Canada and the United States were established, their hopes for Imperial commercial union would be frustrated had in Mr Borden's success a legitimate triumph for their own views of Imperial policy. Imperial patriotism in Canada had averted the greatest danger yet

<sup>1</sup> The Rt. Hon. Andrew Bonar Law was born in New Brunswick, Canada, on September 16 1858, his father being a Presbyterian minister and his mother a native of Glasgow. He was sent to school in Glasgow and went into the business of his mother's family there, William Kidston & Sons, iron merchants, from which he retired with a fortune. He entered Parliament for the Blackfriars division of Glasgow in 1900 but did not contest the seat in 1906 being then returned for Dulwich where he sat till December 1910 when he stood unsuccessfully in Manchester. In March 1911 he was returned for Bootle. From 1902 to 1906 he was Under Secretary for Trade.

threatened in spite of the support given by the Liberal government at home and the British Ambassador at Washington. Every platform rang with Unionist rejoicings, and the Canadian victory put new heart into the Tariff Reform propaganda.

On yet another question of Imperial moment a rebuff was given to the Ministerial policy. Throughout 1911 the decision of the Government to ratify the Declaration of

*The Naval Prize Bill* London had led to a prolonged agitation. Most of the Unionist party together with a strong body of naval opinion were actively opposed to it, their argument being that under its provisions the advantages of British supremacy at sea in war time would be seriously diminished. The Government succeeded however (June 1 1911) in obtaining the support of the Imperial Conference, considerable weight attaching to Sir E. Grey's view that adhesion to the Declaration would be advantageous in Great Britain's foreign relations and to the cause of peace. As Parliament had no direct control over the action of the Government in the matter of ratification, political opposition centered on the Naval Prize Bill which was introduced to carry out the provisions of the Declaration of London, the second reading being taken on July 3d. So much headway was made in arousing antagonism to the Declaration itself that when the third reading of the Naval Prize Bill came on in the House of Commons on December 7th the Government only managed to get a majority of 41, and the House of Lords promptly rejected the Bill.

The Government were meanwhile being perpetually worn and worried by the militant agitation for Women's Suffrage and by the difficulty of dealing with any legisla-

*The Franchise question* tion on the subject when the Cabinet was divided. The Prime Minister himself was avowedly opposed to Women's Suffrage altogether, and among other Ministers Lord Loreburn and Mr. Lewis Harcourt shared his views. On the other hand Mr. Lloyd George, while professing himself a strong supporter of the cause which was also advocated by Sir E. Grey and Lord Haldane, objected to any Bill which was not thoroughly democratic, and because the militants regarded his attitude as obstructing the particular measure which they had in view and held him responsible for a Government Bill not being introduced as they desired, he was pestered as much as if he had actually been an open opponent like Mr. Asquith. The so-called Conciliation Bill introduced by Sir G. Kemp, which assimilated the parliamentary to the municipal franchise for women and would give votes to about 4 million, had been read a second time in the House of Commons on May 5 1911. Mr. Asquith himself plying against it while Mr. Lloyd George and other Ministers supported it, and as there was no time for proceeding with the Bill in 1911 the Government promised to give it facilities in the following year. But while the various sections of supporters of Women's Suffrage disputed about its prospects and the militants raged together, Mr. Asquith suddenly gave a new turn on November 7th by announcing the intention of the Government to add to its programme a Franchise Reform Bill on the lines of Manhood Suffrage. In answer to a deputation of Woman Suffragists on November 17th he declared that while he was personally opposed to Women's Suffrage altogether, this Bill would be so drawn as to admit of amendment to include women on certain terms, and if an amendment which the Government as such would not oppose, were carried the Government would then adopt it. They would also, as had been promised, give facilities for the Conciliation Bill.

It had been generally supposed that the Government would take advantage of the passing of the Parliament Act to reintroduce the Bill against Plural Voting which the Lords had rejected in 1906, but this larger measure was totally unexpected and the announcement was widely construed simply as a device for 'dishing' Women's Suffrage. It was at once denounced for that reason by the militants, who began to make more trouble than ever. Their proceedings are chronicled elsewhere. So far as Parliament is concerned it is sufficient here to note that from this moment the internal divisions within the Cabinet on the subject of Women's Suffrage and the necessity of taking administrative action against militant violence remained a source of constant difficulty. When eventually on March 28 1912 the Conciliation Bill was rejected

by 222 to 208, owing to disgust at "militant" tactics the prospect of legislative action rested entirely with the question of an amendment of the Government Franchise Bill, which was read a first time on June 17 1912 by 274 to 50 and a second time on July 22<sup>nd</sup> by 290 to 218. In other respects this Bill, which abolished plural voting and University representation made six months' residence by adult males the only qualification for votes and did away with existing restrictions as to registration handing it over for automatic action by the Municipal Authorities, excited comparatively little public interest. There did not seem likely to be time even if there were inclination to pass it into law before the session ended. The Unionists while objecting to details opposed it mainly on the old ground that Redistribution should accompany Reform while the Liberal rank and file who for their own electioneering purposes were principally anxious to destroy the plural vote, felt that a simpler measure with that object would have sufficed. A Bill, to abolish plural voting introduced by a private member, Mr Baker was read a second time on March 1 1912 and it was thought that the Government might well adopt this if their own Bill had to be dropped.

Mr Asquith's introduction of the Franchise Bill was however not the only parliamentary result of the continued blocking of the movement for Women's Suffrage. A *The White Slave Traf-  
fic Bill* neglected in the House of Commons gave useful support to Mr A. H. Lee's Bill aimed at the so-called White Slave Traffic which in June 1912 was adopted as a Government measure. Its object was to give power to any constable to arrest "procurers" summarily on good cause of suspicion without having to delay to get a warrant to strengthen the law dealing with brothel keepers and make landlords of such houses liable for their illegal use to make the law as to solicitation apply to men as well as women and to penalise more effectually men who lived on the earnings of immorality. The Bill was read a second time and then referred to a Standing Committee, where it met with a good deal of criticism resulting in some of its provisions being weakened the power of summary arrest in particular being altered so that it could only be exercised by special officers not below the rank of sergeant. The movement however, outside Parliament was too powerful to be denied and in October the Home Secretary promised a deputation of the Bill's supporters to use the Government influence to pass it with the original and more drastic provisions restored. The whole subject had aroused much public attention during 1912 in England as well as in America and it was widely felt that everything ought to be done at any risk to deny facilities in England for carrying on what had become an international traffic in women for purposes of prostitution accompanied by systematic fraud and outrage which the existing law was powerless to stop. In accordance with the Home Secretary's advice the House of Commons agreed on the Report stage to restore the Bill to its original more stringent form. By a considerable majority flogging was made the penalty under Clause 2 for a second offence on the part of male procurers and by a narrow division was extended also to a first offence against the advice of the Government, under Clause 6 flogging was made a penalty for the second offence but the proposal to extend it to a first offence was defeated. On November 12<sup>th</sup> the bill was read a third time without discussion. On December 9 it passed the Lords with minor amendments in its most drastic shape, and on December 11 it became law, coming into operation at once.

The main problem however before the Government when Parliament met on February 14 1912 was Irish Home Rule with Welsh Disestablishment and Disendowment in a secondary place. The latter measure keenly as it was opposed in the interests of the Church of England may be dismissed in a comparatively short statement. The general scheme of the Bill which was introduced by Mr McKenna on April 23<sup>d</sup> had been already explained by him in a speech at the Queen's Hall London, on January 28<sup>th</sup>. Its main interest lay naturally in the financial provisions, and their effect may be shown as follows. The income of the Welsh dioceses in 1906 was £556,000 (£296,000 representing voluntary contributions

which would be unaffected) and of the £260,000 derived from endowments the Bill would take away £1,2500 representing (according to the Liberal view) national property but this reduction would only be gradually effected in about forty years by the Welsh Commissioners appointed to manage the transfer—existing interests being maintained and existing incumbents being paid their present stipends,—so that in that time the Church would have the chance of making good the loss of income by increased voluntary contributions. The disestablished Church was given power to set up a representative body which might be incorporated by charter, and to this body the Welsh Commissioners would hand over the cathedrals, episcopal palaces, churches and parsonages and also the modern endowments—and such part of the glebe as was not considered to be part of the ancient endowments—to which the Church as such was strictly entitled. As a dividing line the date of 1662 was taken as that after which property of uncertain origin now owned by the Church might be regarded as her own. The funds which by degrees would be taken from the Church were to be applied partly to charitable and public purposes by being handed over to the County Councils and partly to the colleges of the University of Wales (library, etc.)

The rather moderate extent of the disendowment thus proposed was somewhat of a surprise. Extreme Liberationists had to console themselves with the prospect of a success for the principle of disestablishment rather than any considerable acquisition of Church property for secular purposes. On the other hand from a Church point of view the smallness of the operation on its financial side made the whole transaction seem one of peculiar meanness for a paltry result the work of the Church—admittedly now well done as had been proved before the Welsh Church Commission, whatever its shortcomings in the past—was to be crippled and hampered. Defenders of the Church notably the Bishops of St David's and St Asaph's and Lord Hugh Cecil could point with cogent force to the fact that the Church was the largest single religious body in Wales and the only one which was represented in every parish by a regular organisation. Their argument for its being better entitled than any other denomination to be the national Welsh Church and administer as such the 'national' property it had so long possessed represented one side of the case against the Bill. The ecclesiastical indivisibility of Wales and England was a more fundamental objection the Welsh dioceses being from the Church point of view an integral part of the Church of England. The case for the Government granted the principle of disestablishment at all was however fairly simple. Their precedent was the case of the Irish Church in 1869 it was equally a part of the Church of England and disestablishment and disendowment had done it good rather than harm. The answer to those who contended that the Church really was the national Church of Wales was that the Welsh people thought otherwise at election after election almost unanimously so far as political representation showed they demanded the change as an act of justice. On the first reading of the Bill (April 25) which was carried by means of the closure by 331 to 253 Mr Lloyd George emphasised this point in a somewhat rhetorical plea for the right of his own nationality to have the religion it chose and not to be nationally misrepresented by a Church which however well it worked was English and not Welsh. On May 13th the second reading opened with a slashing criticism from Mr F E Smith but on the 16th it was carried by the closure by 348 to 267 and the Bill was then hung up till the late autumn. Its introduction satisfied the Welsh party but otherwise it excited no real parliamentary enthusiasm. In recent years disestablishment had ceased to interest any large section of Liberal politicians and the Bill while alienating many Liberal Churchmen and rallying to defence of the Church numbers of voters who are normally indifferent to ordinary political issues was not of a nature to help Liberal or Labour electioneering outside Wales itself.

In making an Irish Home Rule Bill their chief measure in 1912 the Government were more fortunate in one respect than Mr Gladstone had been in 1886 and 1893 when the whole Irish question was still associated in Great Britain with the prejudice and hostility aroused by the agrarian war, with all its incidents of cattle-maiming

and boycotting the plan of campaign' the Phoenix Park murders and dynamiting outrages, the downfall of Parnell and the split in the Nationalist ranks. A new generation had grown up to whom all this was ancient history with no special application to the existing conditions. Ireland for years had been peaceful and growing in prosperity, the Unionist Government had given her both local government and the Land Purchase Act and the idea of Home Rule (as apart from the forgotten Home Rule Bills) was now familiar simply as one of the standing issues of party politics. Lord Rosebery's defection had not prevented Sir Henry Campbell Bannerman from inscribing it again in 1905 on the banner of the Liberal Party and though the Liberals then came into power, independently of the Nationalist vote under a pledge not to introduce a Home Rule Bill during the 1905-1910 Parliament Mr Asquith had been quite explicit in saying, when the elections of January 1910 were taken that if he got a majority this self-denying ordinance would be at an end. On the Unionist side the attitude of the Liberal party in this respect was indeed severely criticised and it was true that at the elections of December 1910 neither Mr Asquith nor his colleagues in the Cabinet made Home Rule a direct issue either in their election addresses or in their speeches. On the contrary, when the Unionists warned the electorate that in voting for the Parliament Bill they were voting also for Home Rule, they were constantly told that this was only a "hoge". But the fact remained that in spite of Unionist efforts and in conformity with what, from a Liberal point of view was quite sufficient intimation that Home Rule was an integral part of the Liberal programme a majority for the Parliament Bill had been returned and within the coalition majority the Irish Nationalists held the balance of power. The Unionists taunted Mr Asquith with being in office simply by the will of Mr Redmond and continued throughout the controversy to deny any Liberal mandate for Home Rule at all, but the parliamentary majority was the solid fact of the situation. Mr Redmond for his part had been perfectly frank about the conditions of his support on September 27 1910 for example (to give only one instance out of many) at a moment when it was still uncertain to what lengths the Liberal Cabinet would go in framing a Home Rule Bill he was reported as saying in a speech at Buffalo U.S.A. 'I believe the leaders of the Liberals are sincerely friendly to Home Rule, but sincere or not we have the power and will make them toe the line. Undoubtedly the Nationalists could have turned the Government out if it did not toe the line' but this would have done their cause no good. The strength of their position for making a good bargain over the terms of the Bill was really based on the willingness of the Liberal and Labour parties to concede in all essentials the Nationalist demand representing as it did not only a solid vote from three quarters of Ireland but also an important body of Irish opinion in America and the British Colonies. Apart altogether from the older arguments for Home Rule the Liberals justified their policy by the success attending their grant of self government to the Transvaal and by the congestion of business in the Imperial Parliament, which in any case made it desirable to move in the direction of devolution. An Irish Parliament and executive of the colonial type for purely Irish affairs subordinate to the Imperial Parliament would not only satisfy the Irish claim but might be the beginning of a federal scheme for the whole of the United Kingdom. Arguing on these lines—and Mr Redmond carefully put the Irish case no higher in his speeches before British audiences—it was much easier in 1910 and 1911 for supporters of the Government than it was in 1886 and 1893 to scout Unionist objections to the principle of Home Rule they could even appeal to Unionist arguments in favour of an Imperial federal constitution. Whether the Bill to be introduced for Irish government had still to be seen but meanwhile its consideration was approached this time under conditions more favourable than formerly. English Liberal Nonconformists were not now so much agitated about Home Rule meaning Rome Rule and public opinion in Great Britain generally had become rather apathetic about Ireland altogether being to a large extent out of touch with its problems. It was only in Ulster that the passionate resistance of a generation before was as yet reawakened.

Mr Asquith introduced the Government of Ireland Bill in the House of Commons on April 11, 1912. He laid particular stress on its being intended to be the first step towards Parliamentary devolution and a system of federalised parliaments within the British Isles and on its maintaining the supremacy of the Imperial Parliament at Westminster over the new Irish Parliament equally with any that might later be set up in other divisions of the Kingdom. The essence of the Bill was that in Ireland an Irish Parliament and Irish Executive should be responsible for exclusively Irish affairs. Instead of saying precisely what these affairs were the Bill specified what were the Imperial affairs which the Irish Government could not deal with, including certain Irish matters (Clause 2) reserved to the Imperial Government. There would be two Houses,—an elected House of Representatives of 164 members (of whom, on the existing basis, 30 would probably be Unionists), and a nominated Senate of 40 members, on which Mr Redmond's view was that there would thus be the opportunity to secure the inclusion of Irish public men of eminence without reference to their party colour. In case of a conflict between the two Houses they would sit and vote together. For Imperial purposes Ireland would still be represented at Westminster but only by 40 members subject to a special provision (Clause 26) for increasing this number in case the question of altering the financial relations should arise at some future time and purely for that purpose. The acts of the Irish Parliament would be subject to veto or postponement by the Imperial Executive or Parliament disputes as to their validity being adjudicated on first by the Irish Court of Appeal and secondly by the Privy Council. It might not enact privilege or disability endowment or deprivation for any form of religion or make any religious belief or ceremony necessary to the validity of marriage. Irish taxes would be settled by the Irish Parliament but would continue to be collected (together with such Imperial taxes as remained) by the Imperial Government and an annual sum corresponding to the cost of Irish services at the time of the passing of the Act would be transferred to the Irish Exchequer under the administration of a Joint Exchequer Committee together with a grant beginning at £500,000 to be reduced as circumstances permitted practically this meant an annual subsidy of £1,000,000 from the Imperial Exchequer. The 'transferred sum' would provide a security on which the Irish Government could raise loans. The financing of Old Age Pensions National Insurance the Post Office Savings Bank and the Royal Irish Constabulary was reserved temporarily to the Imperial Exchequer but the Irish Post Office (with the patronage attaching to it) was made a separate service under Irish administration. The powers given to the Irish Parliament to deal with Customs and Excise as well as other taxation contemplated the setting up of Irish custom houses independently of Great Britain and (within certain limits) the possibility of varying duties as between goods imported into Ireland or into Great Britain and as the collection was to be made by the Imperial Government and allowances for the Irish levy to be made to the Irish by the Imperial Exchequer the procedure was necessarily rather complicated. The finance of the Bill was indeed admittedly and necessarily provisional complete data being unavailable in spite of the Government's having had the advice of a Committee of financial experts whose report however was not disclosed. For 1912-13 it was estimated that the revenue derived from, and the expenditure incurred in, Ireland would be as follows showing a deficit of £1,515,000.

Revenue		Expenditure	
	£		£
Customs	3 230 000	Not separately specified	5 462 000
Excise	3 320 000	Post Office	1 600 000
Income Tax	1 512 000	Old Age Pensions	2 664 000
Estate Duties	939 000	Charges for Land Purchase	761 000
Stamps	347 000	Nat. Insurance and Labour Exchanges	191 500
Miscellaneous	137 000	Royal Irish Constabulary	1 377 500
Post Office	1 354 000	Collection of Revenue	298 000
Total	10 839 000	Total	12,354,000

## ENGLISH POLITICAL HISTORY

In the next ten or fifteen years it was contemplated the charges for Land Purchase might well increase by £450 000, and for National Insurance by £300 000, while the cost of Old Age Pensions within twenty years might decrease by £200 000, thus a normal increase might be expected in the deficit bringing it up to over £2 000 000. In arranging for Ireland to manage her own finances, England was bound to give her a fair start and not to expect to score by the change and the subsidy now proposed was estimated accordingly. As against this, it was claimed on the Nationalist side that since 1817 Ireland had altogether contributed about £330 000 000 to what was strictly Imperial expenditure, so that she was justified now in getting even a larger subsidy back towards internal expenditure the scale of which had been imposed according to English and not Irish ideas. According to the new system proposed under the Bill it was calculated that under Home Rule the first year's finances would work out as follows in the Irish and (on Irish account) the Imperial Budgets —

<i>Irish Revenue</i>		<i>Irish Expenditure</i>	
Transferred Sum	£ 6 127 000	Not separately specified	£ 5 462 000
Post Office	1 354 000	Post Office	1 600 000
Fee Stamps	31 000		
		Surplus	7 062 000
			500,000
<b>Total</b>	<b>£7 56- 000</b>	<b>Total</b>	<b>£7 562 000</b>
<i>Imperial Revenue</i>		<i>Imperial Expenditure</i>	
Irish Revenue (excluding Post Office and Fee Stamps)	£ 9 404 000	Transferred Sum	£ 6 127 000
Deficit	2 015 000	Old Age Pensions	2 664 000
		Nat Insurance & Labour Exchange	191 500
		Land Purchase Charges	761 000
		Constabulary	1 377 500
		Collection	298 000
<b>Total</b>	<b>£11 419 000</b>	<b>Total</b>	<b>£11 419 000</b>

For convenience a summary of the Bill is here given clause by clause omitting details as to the financial adjustment between the Irish and Imperial Exchequers

*Precis of Government of Ireland Bill 1912*

(1) Sets up Irish Parliament with two Houses a Senate and a House of Commons. Supreme power of Imperial Parliament however to remain undiminished over all persons matters and things within H. M. s dominions.

(2) Irish Parliament shall have power to make laws for the peace order and good government of Ireland but only in respect of matters exclusively relating to Ireland or some part thereof. It cannot legislate concerning the Crown peace or war army or navy treaties or foreign relations dignities and titles treason naturalization foreign trade (except for taxation) quarantine navigation, lighthouses etc coinage weights and measures trade marks copyright and patents nor on any reserved matters including the subject matter of the Land Purchase Act Old Age Pensions Act and National Insurance Act the collection of taxes the Royal Irish Constabulary the Post Office Savings Banks and Trustee Savings Banks Friendly Societies or Irish Public Loans up to date of the Act. Any laws in contravention of these limitations to be void. [In Committee the question of Trinity College Dublin was added to the reserved matters.]

(3) Irish Parliament shall not make any law so as either directly or indirectly to establish or endow any religion or prohibit its free exercise or give a preference or advantage disability or disadvantage to any religious belief or status or make any religious belief or ceremony a condition of the validity of marriage. Any law in contravention of this limitation to be void.

(4) Executive power in Ireland to continue vested in the King. As regards Irish services the Lord Lieutenant or other chief executive officers approved in his place shall exercise any prerogative or executive power which may be delegated by the King. This power being exercised through such Irish departments as the Irish Parliament by its own Act may establish and officers (i.e. ministers) to administer these departments being appointed by the Lord Lieutenant and holding office during his pleasure. Ministers must be members of the Irish Privy Council and of the Irish Parliament (if in office longer than six months).

(5) After six years a transfer of the management of the Royal Irish Constabulary shall be made to the Irish Government. Also if the Irish Parliament so resolves the public

services connected with Old Age Pensions National Insurance, Labour Exchanges and (after ten years) Post Office Savings Banks Trustee Savings Banks and Friendly Societies

(6) Irish Parliament must meet once a year at least

(7) Lord Lieutenant shall give or withhold Royal assent to Bills passed by both Irish Houses of Parliament but (1) shall comply with any instructions given by His Majesty (i.e. the Imperial Government) in respect of such Bill and (2) if so directed shall postpone assent during the King's pleasure

(8) The Irish Senate shall consist of 40 members, the first 40 being nominated by the Lord Lieutenant on the advice of the Imperial Government and subsequent members being nominated by him on the advice of the Irish Executive They shall sit for eight years one fourth (selected by lot as provided in Clause 42) retiring every second year [This was altered in Committee see below]

(9) The Irish House of Commons shall consist of 164 members returned (as to the Imperial House of Commons) by the following constituencies (1st Schedule) *Boroughs* Dublin 11 Belfast 14 Londonderry 2 Cork 4 Limerick 2 Waterford 1 *University* Dublin 2 *Counties* Ulster 43 Leinster 30 Munster 30 Connaught 25 It is limited to a duration of five years After three years from the passing of this Act the Irish Parliament may alter the qualification of electors mode of election constituencies and distribution of members among them but not the number

(10) Money Bills shall only originate in House of Commons after recommendation by Lord Lieutenant (i.e. proposal by an Irish minister) Senate may neither reject nor amend a Money Bill and may not amend any bill so as to increase taxation

(11) If Senate rejects or fails to pass a Bill sent up by House of Commons or amends it in a way the latter will not agree to and the House of Commons next session repeats the Bill and the Senate repeats its action the Lord Lieutenant may convene a joint sitting of both Houses they shall vote together and a majority shall prevail

(12) Peers (Irish or otherwise) are qualified to become members of either House Ministers who are members of one House may also sit and speak but not vote in the other Irish Parliamentary powers privileges and immunities to be as defined by Irish Act but otherwise the same as at Westminster and no greater

(13) Instead of the existing Irish representatives in the Imperial Parliament 42 Irish members shall be returned to Westminster for the following constituencies under the election laws and qualifications of the United Kingdom unalterable by Irish Parliament — *Boroughs* Dublin 3 Belfast 4 Cork 1 *Counties* Ulster 11 Leinster 8 Munster 9 Connaught 6

(14) There shall be an Irish Exchequer and Irish Consolidated Fund separate from those of the United Kingdom but the proceeds of all Irish taxes shall be paid into the Imperial Exchequer and out of the Imperial Consolidated Fund a transferred sum is annually to be paid to the Irish Exchequer This transferred sum is composed of (a) an amount to be determined by a Joint Exchequer Board (see Clause 16 *et seq.*) representing the net cost of Irish services to the Imperial Exchequer at the time of the passing of this Act (b) a sum of £500 000 to be reduced eventually to £200 000 by annual diminutions of £50 000 beginning after the third year (c) a sum equal to the proceeds as determined by the Joint Exchequer Board of any new Irish taxes imposed by the Irish Parliament The Irish Parliament shall provide for the cost of Irish services within its own sphere of action existing charges on the Imperial Consolidated Fund ceasing together with advances from the Public Works Loan Commissioners or Local Loan Fund

(15) The Irish Parliament may vary (add to [reduce]<sup>1</sup> or discontinue) any Imperial tax (except certain stamp duties) as regards the Irish levy and may impose in Ireland any independent tax substantially different (in the opinion of the Joint Exchequer Board) from Imperial ones but subject to certain limitations It may not impose a customs duty (export or import) unless there is also an Imperial customs duty on that article it may not levy a customs duty exceeding a corresponding excise duty and (Clause 17 § 3) no Imperial customs duty (except on beer and spirits) nor income tax nor death duties may be increased by more than ten per cent

(16-25) In these financial clauses detailed provision is made for adjusting Irish and Imperial customs duties and other financial relations under the control of a Joint Exchequer Board consisting of a Chairman appointed by the Imperial Government two nominees of the Imperial Treasury and two of the Irish Treasury

(26) It in any three successive years the Joint Exchequer Board reports that the proceeds of Irish taxation and of any revenue to which Ireland is entitled exceed the transferred sum a revision of the whole financial arrangement is to be taken up by the Imperial Parliament For this purpose alone the Irish representation at Westminster as provided for in Clause 13 is then to be modified there shall be summoned such number of members of the Irish House of Commons as will make the representatives of Ireland in the Commons House of Parliament of the United Kingdom equivalent to the representatives of Great Britain on the basis of population

<sup>1</sup> This was afterwards eliminated see below

- (27) Irish judges shall in future be appointed by the Lord Lieutenant  
 (28) For appeals to the House of Lords appeals shall be substituted to the Judicial Committee of the Privy Council  
 (29-30) Questions raised by the Lord Lieutenant or a Secretary of State as to Irish Acts being *ultra vires* shall be determined by the Judicial Committee of the Privy Council to whom also shall be appeals on such points raised by decisions of the Irish Court of Appeal and similar appeals shall lie to the latter from the Irish Courts  
 (31) The Lord Lieutenant may be any British subject irrespective of religious belief His term of office shall be six years and he shall be paid by the Imperial Exchequer a deduction for this purpose of £5 000 per annum being made from the transferred sum  
 (32-36) Provision is made in these Clauses for safeguarding the interests of existing Irish judges and administrative officials under the direction of a Civil Service Committee consisting of a chairman nominated by the Lord Chief Justice of England a nominee of the Imperial Treasury and a nominee of the Irish Ministry  
 (37) Provision is also made for maintaining the existing interests of the Dublin Metropolitan Police and Royal Irish Constabulary  
 (38-41) General provisions including that the Irish Parliament cannot repeal or alter this act or any other that the Imperial Parliament extends hereafter to Ireland  
 (42-46) For the purpose of effecting the transition to a Home Rule system in Ireland provision is made for details to be settled by Orders in Council  
 (47) Definitions

Even before the introduction of the Bill it had been seen that the greatest practical difficulty in the way of Home Rule, irrespective of controversy over particular details in the scheme, would be the attitude of Unionist Ulster. Under Sir Edward Carson's leadership opposition was already being organised in 1911 on behalf of the North of Ireland Protestants and Orangemen which, it was openly avowed, would if necessary go to extreme lengths, even to a refusal to recognise a Parliament in Dublin<sup>1</sup> and to the setting up of a separate provisional government. The anxiety of the Government to counter this movement as far as possible had been shown early in the session by the announcement that Mr Winston Churchill was going over to Belfast to speak on February 8th in the Ulster Hall, and violent opposition to the proceeding was at once taken in hand there. It was considered on the Unionist side that for the son of Lord Randolph Churchill who had said that 'Ulster would fight and Ulster would be right,' to preach Home Rule in a place associated with the campaign against it was an outrage, and the leaders of the Ulster Unionist Council took steps to make the delivery of his speech in the Ulster Hall impossible. Eventually its engagement for the purpose was cancelled, and it seemed for the moment that the prospects of noting and bloodshed if Mr Churchill appeared in Belfast at all were so serious that the Government would be obliged to keep him away. Mr Churchill however was not to be daunted. Arrangements were made for the speech to be delivered in a pavilion in a field outside the city, and for troops to be drafted there in large numbers for the maintenance of order. The apparent denial of free speech at all on the Ulster Unionist side was severely commented upon elsewhere, and justified with some misgivings by English sympathisers, but when the leaders had been successful in defeating the plan for holding a Home Rule meeting in the Ulster Hall they went no further. Mr Churchill duly arrived and made his speech with characteristic courage dwelling particularly on the safeguards which the Home Rule Bill would contain against anything to which Ulster could object but the city was in a ferment of dangerous antagonism and he had to be smuggled away afterwards to avoid the hostility of the crowd. Actual noting was avoided, and peace was kept between Nationalists and Loyalists at the cost of £2 730 for the expense of the troops engaged, the Ulster leaders having eventually devoted themselves to keeping their supporters well in hand, but the whole incident was an unpleasant revelation of the rebellious spirit that was being aroused. A little later (April 9th) Mr Bonar Law was present at a great anti Home Rule demonstration at Belfast, the special note of which was a solemn pledge of Loyalist resistance.

The Liberal Press in England made light of these warnings, but the organisation of

<sup>1</sup> The anniversary of 'Craigavon Day' September 23 1911 when Sir E Carson was acclaimed the Ulster leader and the Declaration of Ulster was published to the above effect was publicly celebrated in 1912

opposition in Ulster went steadily on. As controlled by the Irish Unionist leaders for a single purpose—to meet the situation arising if the Home Rule Bill became law—it was formally independent of actual parliamentary tactics and therefore

**Unionist  
attitude**

of the action of the Unionist party under Mr. Bonar Law's guidance but Unionist opposition in Parliament and in the constituencies was inevitably concerned with what might take place in Ulster. Mr. Bonar Law at a Unionist meeting at Blenheim on July 27th gave emphatic expression to the view he took of its meaning which he was severely reprovved by Mr. Asquith for repeating in the House of Commons on August 3th while Mr. Churchill on August 10th again took him to task in a published letter to which Mr. Law made a spirited reply (Aug. 1th). He and his party were bound to side with the Unionists of Ulster. As Mr. Bonar Law put the case if the Ulstermen were forced into open defiance of a measure passed under the Parliament Act without further appeal to the electorate and by the dictation of a Nationalist vote which had in their view always been disloyal to the Empire any attempt to coerce Ulster could only mean civil war and this could not be confined to Ireland. It was incredible that the Government should contemplate the coercion of Ulster by British bayonets but if they went to that length the situation would be intolerable—ministers would be lynched in London. Here was indeed the root of the Home Rule difficulty. Many Liberals hoped to find relief by proposing to leave Ulster out of the Home Rule Bill at least temporarily altogether, but Mr. Agar Robert's amendment to this effect in Committee (July 18) after some ambiguous enquiries from the Government whether Ulster would be satisfied if it were adopted was rejected by 320 to 52, the Nationalists could not do without the richest part of Ireland.

Criticism in Parliament meanwhile had gone on for the present along more or less stereotyped lines. On April 23rd an Irish National Convention in Dublin with Mr.

**Progress of  
the Bill**

Redmond presiding accepted the Bill and the doubts as to whether Irish Nationalists might disagree over it and it might be snuffed out like the Irish Councils Bill in 1907 were dissipated. On July 10th Mr. Asquith addressed an enthusiastic meeting in Dublin and was received with fervour as the first English Prime Minister who had had a welcome there in Nationalist circles. The first reading of the Bill was carried in the House of Commons on April 16th by 360 votes to 266 and the second reading (April 30th) was carried on May 4th by 371 to 271. The Committee stage began on June 11th and on July 3rd the first clause had gone through discussion but then suspended till the autumn. On the Unionist side the objections to any scheme for a separate Irish Parliament and Executive were fortified by criticisms of special features in the new Bill itself—the finance, the proposal for Irish representatives to remain at Westminster, the separation of Post Offices and Custom houses but these subjects had still to be further discussed when Parliament adjourned in August. On the Liberal side a good many members disliked the provision for the nomination of an Irish Senate and this question arose in Committee on Clause 1 but Mr. Dickinson's amendment to exclude it was rejected (June 19th) by 288 to 190.

The real opposition meanwhile went on in Ulster, not in Parliament. Serious rioting between Protestants and Catholics in the Belfast ship-yards during July showed the

**The Solemn  
Covenant**

tension there and on September 14th a free fight between partisans of both sides in the course of a football match at Belfast at which 10,000 people were present resulted in injuries to about 100, revolvers and knives being used. Active preparations were on foot for a series of Unionist demonstrations in Ulster beginning at Enniskillen on September 18th and leading up to the signing on September 28th of a Solemn Covenant pledging resistance to Home Rule. The perplexity on the Liberal side in face of Ulster's determination was shown by a speech of Mr. Churchill's at Dundee on September 12th in which he suggested, purely on his own account, that to secure a federal system of government for the United Kingdom—to which Home Rule for Ireland however was an essential preliminary—it might be desirable to grant separate legislatures to large homogeneous areas in England like Lancashire, Yorkshire, the Midlands and London; he would not shrink from the

creation of ten or twelve such English bodies all subordinate to the Imperial Parliament. The obvious comment on this suggestion was that Unionist and Protestant Ulster was as much entitled to stand alone in Ireland as Lancashire in England. Mr Churchill's speculation was effectively criticised by Mr Balfour at Haddington on October 9th, the scheme being described as 'the application of decimal fractions to the United Kingdom'. What Unionist Ulster demanded was to remain under the Imperial Parliament and not be at the mercy of a National Executive and Parliament in Dublin.

The text of the Solemn Covenant, promulgated by the Ulster Unionist Council, was as follows —

Being convinced in our consciences that Home Rule would be disastrous to the material well being of Ulster as well as of the whole of Ireland subversive of our civil and religious freedom destructive of our citizenship and perilous to the unity of the Empire we whose names are underwritten men of Ulster loyal subjects of His Gracious Majesty King George V humbly relying on the God Whom our fathers in days of stress and trial confidently trusted hereby pledge ourselves in Solemn Covenant throughout this our time of threatened calamity to stand by one another in defending for ourselves and our children our cherished position of equal citizenship in the United Kingdom and in using all means which may be found necessary to defeat the present conspiracy to set up a Home Rule Parliament in Ireland and in the event of such a Parliament being forced upon us we further solemnly and mutually pledge ourselves to refuse to recognise its authority In sure confidence that God will defend the right we hereto subscribe our names and further we individually declare that we have not already signed this Covenant

Sir Edward Carson signed first, on September 28th at the head of a great gathering in Belfast And when, just afterwards, he crossed with Mr F E Smith to Liverpool he had a remarkable ovation violent speeches being made by sympathisers with the cause of Ulster, in favour of supporting her resistance by force of arms It was announced later that the total signatures to the Covenant were — *Ulster*, men 218 206 women 228 991 *Outside Ulster* men 19 162 women 5,055

Parliament met again for the autumn session on October 7th, and the political conflict was once more transferred to the House of Commons The effect of the Ulster

*The autumn session.*

demonstrations on the Government up to this point was not specially terrifying, and Mr Asquith speaking at Ladybank on October 5th dealt somewhat scornfully with Sir Edward Carson's movement and the Unionist attitude towards it The Government he intimated were ready to consider any proposals for safeguarding Ulster but Ulster had nothing to suggest—she simply would not allow Ireland to have what the other four fifths of Ireland demanded. It was impossible for the Government to give way to intimidation prompted by the spirit of Orange ascendancy, they meant to go on with their Bill On October 10th he introduced in the House of Commons a series of resolutions for completing the various stages of discussion on it by Christmas under the closure Including the time already occupied fifty days (to which two were added a few days later) were on this scheme to be devoted to debate An Opposition amendment proposed by Mr Bonar Law, was defeated by 323 to 232 The operation of the guillotine combined with the "Kangaroo" system by which the Chairman of Committees was left to choose which among the various amendments proposed should be discussed in the time available made the resumption of the Committee stage simply a question of whether the Government could maintain their majorities any effective debate was obviously impossible and Mr Bonar Law bluntly declared that the Government might just as well have moved that the Bill should be passed without further delay On the other hand it was equally true that without

<sup>1</sup> It must be remembered of course that "Ulster" as an Irish political unit does not mean the whole province but only the N E portion comprising the five counties of Antrim, Armagh, Down, Londonderry and Tyrone with the cities of Belfast and London-derry As a geographical unit Ulster has a population (1911) of 1,581 696 but the N E portion by itself has 1 188 695 Out of the latter total those of 16 years old and over were 387 241 males and 438 774 females As the census classification showed that 33 1 per cent of the population in this N E area was Roman Catholic the number of adult male Protestants in Ulster who might be expected to sign the Covenant was not much in excess of those who actually did so

such a time limit the Opposition would have protracted the debates till Doomsday, the Government had no option in the matter if they were to send the Bill up to the House of Lords during that session as they must in order to obtain the benefit of the terms of the Parliament Act. Even if the Home Rule Bill were to be passed through the House of Commons by January the Government programme was overloaded for they had announced their intention also to pass the Welsh Disestablishment Bill, the Franchise Bill and other measures before the session ended.

Meanwhile with Mr Lloyd George's active encouragement yet another political issue had been made prominent during the autumn throughout the constituencies in

**The land agitation**

the shape of an organised agitation for land tenure reform and increased taxation of land-owners promoted more particularly by a section of the Radical party who had long been advocates of the single tax theory on Henry George's lines (see *E B* xi 747). The Budget of 1909, with its provisions for effecting a complete valuation of the land paved the way for such a movement and the land reformers saw their opportunity now for pushing their views and preparing for legislation. The unpopularity of the Insurance Act made it opportune moreover for Mr Lloyd George's section of the party to try to divert electioneering attention on the Radical side to something more attractive and at the summer and autumn by elections the new land campaign was made a leading feature by Radical candidates notably by Mr Outhwaite at Hanley. Intense exasperation was created on the Conservative side representing as it did to so large an extent the landed interests of the country by the organisation of an unofficial Committee of Inquiry under Mr Lloyd George's auspices, with the authority of the Cabinet in order to obtain evidence of various sorts of agrarian grievances in furtherance of a Radical policy. It was objected that any such enquiry for Government purposes should be by an impartial Royal Commission which would act publicly and responsibly and not by an unofficial body acting surreptitiously and in the interest of a partisan movement. Mr Asquith on behalf of the Government, repudiated entirely any sympathy with the single tax theory and insisted that any new land policy adopted by the Cabinet would be announced by them when the proper time came. But it was clear that so far as Mr Lloyd George was concerned the next move forward in the direction of Radical social reform would be for 'forcing the land' and that active preparations were being made by him with this object.

An important change in the Home Rule Bill was made when on October 30th the discussion in Committee reached clause 8 concerning the composition of the Irish

**The proposed Irish Senate**

Senate. It was suddenly announced by Mr Asquith that while the proposed nomination of the first Senators by the Imperial Government would be adhered to the Government had decided to abandon the idea of their successors being nominated by the Irish Government. Instead of this the method would be substituted of election by the voters in the four Irish provinces taken as units on a plan of proportional representation each elector having a 'transferable' vote.<sup>1</sup> The term of office for Senators would be five years and all would retire together at the end of the fifth year so that the elections might then be taken casual vacancies being filled by substitutes sitting only for the unexpired term, to be nominated if the vacancy is that of a nominated Senator and elected if of an elected. The next day (October 31st) the revised clause was introduced and carried. Mr Asquith insisted that it would be an additional safeguard for the Unionist and Protestant minority in Ireland but Mr Bonar Law regarded it as worthless for any such purpose and Mr Healy frankly declared that in his opinion the Irish Unionists would have been better off with the method of nomination. Mr Redmond while accepting the Government's decision expressed much the same view. The fact was that the whole idea of a nominated Senate was distasteful to most of the Liberal party and it seemed a favourable opportunity for putting the experiment of proportional representation which had recently made many converts into practice. The Government refused however to adopt proportional representation for the Irish House of

<sup>1</sup> See *E B* xxiii 115c

**Commons** They also resisted the proposal made in an amendment moved on November 5th by Mr Snowden to make the local government register and not the parliamentary the basis of elections to the Irish Parliament and thus include women voters. The defeat of this amendment by 314 to 141, through Government and Nationalist pressure caused considerable irritation among the more active supporters of women's suffrage but the case against it was strong if this was purely an Irish question it was one which it was contended, the Irish Parliament itself should decide while if a decision was to be taken on the general question of women's suffrage for the whole kingdom, the proper occasion would arise when the Government's Franchise Bill came on.

On Friday November 8th a further step was taken to expedite the work of the session by the introduction of a guillotine time table for the Welsh Church Bill.

**Government defeat and its result.** Mr Asquith moved a resolution allocating 14 days to the Committee stage, 2 to Report and one to third reading. So short a shrift excited much bitterness on the Opposition benches and it was hotly debated the discussion that day being adjourned and on the following Monday (Nov. 11th)

the whole situation in the House of Commons was changed by an unforeseen event. The Resolution required as a preliminary to discussion of the financial clauses of the Home Rule Bill was in its Report stage having been carried in Committee by a majority of 10 and Sir F. Banbury now moved an amendment without notice providing that the total payment from the Imperial to the Irish exchequer in any one year should not exceed £2,500,000. It was early in the afternoon and the Government Whips had not realised that the Unionists were in unaccustomed force and had temporarily a majority in the House but on a division the Government was defeated the amendment being carried by 208 to 206. Mr Asquith immediately moved the adjournment of the House in order to consider what action should be taken but the idea of resignation was scouted at once and next day it was announced that the Cabinet had decided to move a resolution rescinding the vote notwithstanding anything in any Standing Order and providing (so as to regularise further proceedings under the time table which was entirely upset by the incident) that the next day on which business was taken on the Home Rule Bill should count as the 16th allotted day though as previously fixed the 16th day was November 11th when this had been done they proposed to reintroduce their financial resolution and proceed as though nothing had happened. On Wednesday the 13th Mr Asquith accordingly moved to this effect arguing that all the circumstances showed that the defeat of the Government had not been a genuine one and that they were not called upon to pay any attention to it. This proposal to rescind the vote and set up the resolution afresh was however as the Speaker agreed in reply to Unionist objections absolutely unprecedented in Parliamentary procedure. It had always been held and was laid down by Erskine May that no question or Bill could be brought up in the House that was substantially the same as one on which judgment had already been expressed in the current session and when the Speaker nevertheless ruled that Mr Asquith's motion though unprecedented was in order Opposition exasperation became intensified to a point beyond control. After Mr Bonar Law had argued the case at length and had moved the adjournment of the debate, which Mr Asquith curtly declined to accept a state of organised disorder prevented any further proceedings. With the approval of their leaders the Opposition showed their resentment by keeping up a chorus of cries of "Adjourn" and refusing to allow any continuance of business. The Speaker at last took the only course open to him and adjourned the House. There seemed likely to be renewal of the same scene next day since the Opposition were determined not to allow what in their view was a defiance of the "common law" of Parliament. Before the House met however on the 14th calmer counsels prevailed owing to the exercise of the Speaker's influence. At the opening of the sitting he suggested that if more time were given for reflection a less objectionable way might be found for regularising the proceedings. Mr Asquith promptly accepted this suggestion and moved that the House should adjourn for the purpose till Monday the 18th. As Mr Bonar Law concurred this course was accordingly adopted and the

anticipated storm was avoided. The air had previously been cleared to some extent by amends being made by Mr Ronald McNeill for the most violent incident in the disorder of the previous evening. In the heat of the moment he had thrown a book at Mr Winston Churchill which struck him a severe blow on the face, but he now offered a handsome apology which was equally handsomely accepted.

The Liberal Press was inclined to treat the opposition to Mr Asquith's motion as purely factious and the organised disorder as a further mark of deterioration in parliamentary manners. But the historian of Parliament cannot well take this

*The point  
at issue*

simple view. The defeat of the Government was certainly an accident but it was the sort of accident that happens when a number of nominal supporters are not personally enthusiastic for the particular cause involved or are being tired out by excessive demands on their attendance. The opinion of a high independent Liberal authority on procedure Mr James Caldwell ex M.P. and formerly Chairman of Committees was moreover that Mr Asquith's proposal for meeting the new situation was 'clearly out of order' (*Times* Nov. 16th) although not so ruled by the Speaker. Owing to the critical state of foreign affairs consequent on the situation in the Balkan war a change of government as Mr Bonar Law frankly admitted was not at this moment desirable and if the Government chose to ignore what was formally a parliamentary defeat their normal majority was still available. But the Opposition were naturally not prepared to forgo what according to the practice and precedent of Parliament was a legitimate opportunity for impeding the execution of the Government's programme of legislation for the session and they gained their point. On Monday the 18th Mr Asquith made an amended proposal which was agreed to without further discussion that the financial resolution should simply be negatived that day and the Committee stage on the financial clauses of the Home Rule Bill set up afresh on the 19th by the introduction of an amended resolution, the report stage of which would be taken on the 20th so that the next allotted day (the 17th day under the time table) would be on Thursday November 21st. This course was accordingly pursued.

The loss of a full week led to some questioning as to either the Welsh Church Bill or the Franchise Bill being dropped but any such intention was firmly denied by Ministers. The only immediate victim to the necessity for lightening the ship was the Mental Deficiency Bill an important social reform which a section of Radical members in the supposed interests of individual liberty were hotly opposing in Standing Committee. The Home Secretary on the 19th announced that the hope of carrying this measure through must now be abandoned though it would be reintroduced next session with the improvements suggested by the examination it had already received. Mr Asquith speaking at Nottingham at the annual meeting of the National Liberal Federation on November 22d declared that the Government intended to pass Home Rule, Welsh Disestablishment and Franchise Reform before the prorogation. He vigorously denied that there was any justification for the Opposition contention that a majority obtained at the last general election for the Parliament Bill should not be used to carry these Liberal measures to the introduction of which the destruction of the Lords' veto was well known to be a preliminary. The meeting was memorable for the appearance of Mr Redmond side by side with Mr Asquith this being the first time that a Nationalist leader had been on a National Liberal Federation platform, and he made a speech insisting on the solidarity between the Irish and Liberal parties and the cordial agreement of the Nationalists with the Government programme.

After the scare in the Government ranks caused by the misadventure of November 17th and its immediate consequences the resumption of proceedings on the financial

Finance*

clauses of the Home Rule Bill saw their normal majority well kept up and the guillotine fell with merciless regularity. Faced with a hostile and unreformed House of Lords whose certain antagonism could only be defeated by sending the Bill up in time to obtain the benefit of the Parliament Act the Coalition were compelled to restrict discussion in the House of Commons and it might well be thought on their side that at this stage, since in any case the Parliament

Act involved nearly two years' delay it was futile to attempt to examine every detail in a scheme which was approved in principle but which still had a long fight before it. On the other hand it was incontestable that, for a measure of such profound importance, supposing it to be one that might come into operation as it left the House of Commons the discussion of the various difficult and obscure aspects of the new financial relations proposed between Ireland and Great Britain was entirely inadequate. The Insurance Act had been an unfortunate example of the results of insufficiently considered legislation but here too clause after clause was carried undiscussed under the closure, full of complicated provisions the working of which very few of the rank and file in Parliament even pretended to understand. The present scheme was totally different from anything proposed in Mr Gladstone's Bills of 1886 and 1893, yet the one thing certain in 1912 was that if those Bills had become law their financial arrangements would have hopelessly broken down. And now the new proposals fraught with revolutionary consequences alike to the finance of Ireland and of Great Britain were being forced through with even less consideration. It was only natural that the Opposition should remain restive under conditions which made serious criticism impossible, if only because there was no time for ministers to reply in more than a perfunctory way. Mr Herbert Samuel, Sir Rufus Isaacs and Sir John Simon for the Government defended the finance of the Bill with marked ability so far as time served but the fact remained that on a single evening (Nov. 26th) after the guillotine had cut short a discussion on clause 15 which left it quite uncertain to what extent it enabled a protectionist system to be set up in Ireland, clauses 16, 17, 18, 19, 20 and 21 were then passed with various amendments introduced by the Government itself altogether undiscussed, most of the time available being consumed simply by taking division after division. Sir Edward Carson hotly denounced the whole proceedings as the gravest public scandal in the whole history of Parliament. On behalf of the Government it was contended that it was absurd to suppose that any Irish administration would be so foolish as to adopt the means which Mr Amery and other Unionist speakers suggested that the Bill opened to them for introducing a protectionist policy. One variation only from the original draft of the Bill was proposed by the Government in deference to remonstrances from their own supporters: under clause 15 the power to reduce an Imperial tax was omitted. But the Opposition amendments proposing to reserve all power over Customs and Excise to the Imperial Government and to prohibit the giving of direct or indirect bounties were stoutly resisted. Mr Bonar Law summed up the Opposition view by declaring that the Bill undoubtedly enabled the Irish administration to set up the worst form of Protection, namely bounties, and that the Government were really giving in to the demands of their Nationalist allies while professing to be the champions of Free Trade principles. Mr Samuel on his side taunted the Opposition with being advocates of Protection yet dwelling on the objection to a protectionist system in Ireland. Thus each party retorted on the other. But the clauses passed under the closure with only the slightest consideration by Parliament of the effects of its own legislation. For any judicial examination in debate reflecting the careful conclusions of the House of Commons was substituted the opinion of the ministers in charge of the Bill, alike as to the powers it gave and the way those powers were likely to be used. Just as the Insurance Act had left all sorts of obscure questions to be settled by the Commissioners, so the Home Rule Bill left some of the thorniest problems of the financial relations with Ireland to be solved by the proposed Joint Exchequer Board, an entirely new official body whose real status was highly questionable, and clause 22 providing for this with the remaining financial clauses 23, 24 and 25 were duly guillotined on November 27th. During 18 allotted days since the beginning of the Committee stage 78 lines of the 25 clauses passed had been discussed and 534 lines undiscussed, while 48 amendments had been discussed and 771 ignored, on the financial clauses alone (14 to 25) 30½ lines had been discussed, and 260½ lines passed without discussion, the amendments discussed numbering 12 and undiscussed 210. Eventually under the guillotine the Bill passed its third reading on January 1, 1913.

When Parliament adjourned for Christmas from December 10th till December 30th the two chief Government Bills, for Irish Home Rule and Welsh Church Disestablishment were well on their way through the House of Commons. The Committee stage of the Home Rule Bill had ended on December 12th clauses 26-48 and the final schedules having been carried since December 2nd by the operation of the guillotine without any concession to Unionist criticisms.

*Situation  
at end of  
1912*

The Committee stage had lasted altogether 36 days, including the 25 provided under the time table. Two clauses (1 and 31) had been fully discussed and 22 partly discussed while 24 had received no discussion at all (6 10 12 16 18 19 20 21 23 25 28 30 32 34 35 36 39 40 41 44 45 46 47, 48). Seven days' discussion was reserved for the Report stage. For the Welsh Church Bill the time table resolution had been carried on November 28th at the end of an all night sitting after a 'reasoned amendment,' proposed by Mr Lyttleton on behalf of the Opposition had been defeated by 295 to 221 but the government agreed to give 16 days instead of the 14 originally proposed, to the Committee stage which began on December 5th. The discussions were marked throughout by much bitterness of feeling on the part of the defenders of the Church among whom Lord Robert Cecil was specially prominent but they were notable also for some important expressions of the desire of Liberal Churchmen to make the disendowment proposals less harsh than what the Welsh Nonconformists considered to be in accordance with their rightful demands. On December 5th clause 1 was carried by 208 votes to 179 and clause 2 by 279 to 183, while clause 3 was carried on December 6th by 59 to 145 but on December 13th clause 4 was only carried by 269 to 202 after an amendment moved by Mr France and seconded by Mr Gladstone (both Liberals) for leaving the Church all its endowments except tithe rent charge (thus proposing to reduce its funds by £1 6 000 a year instead of £173 000) had been rejected by 265 to 215 the majority of 50 including 68 Irish Nationalists. And after clauses 5, 6 and 7 had been carried on December 16th and 17th by normal Coalition majorities a concession was made on clause 8 the government accepting (Dec 18th) amendments proposed by Sir Ryland Adkins and Mr Atherley Jones (both Liberals) by which much to the disgust of the Welsh members the Church would retain possession of the Queen Anne's Bounty funds and property (see *E. B.* xxii 7 9 730). On another amendment proposed by Mr Ormsby Gore (Conservative) for keeping all the glebe as Church property the government majority fell (Dec 19th) to 53 the figures being 277 to 222 and clause 8 was only carried by 84 to 21. The fact that the majorities in both these cases were smaller than the number of Irish Nationalists voting with the Government showed that there was a good deal of sympathy with the Opposition among some sections of Liberals.

The actual proceedings in the House of Commons were being followed however with marked apathy in the country. Everybody felt that the real struggle had to come in

1913. During the whole of December the critical state of European affairs monopolised public interest and the party conflict took a secondary place when larger issues were at stake. Mr Asquith and Sir Edward Grey by common consent were making British influence a powerful factor for peace

*Revival of  
Liberal  
confidence*

in the settlement of the Balkan crisis. The Administration was strengthened for the moment simply by the fact that it represented the whole nation in the councils of Europe. Meanwhile trade was booming and in some other respects also the position of the Government was more favourable than it had seemed likely to be a few months earlier. Since the Bolton by-election on November 23rd when the Liberal candidate had surprised his own party by retaining the seat with only a slightly diminished majority the Liberal Press had taken a much more confident tone about the Coalition prospects. Moreover in the middle of December a flurry started in the Unionist ranks over a contentious question of electioneering tactics which did much to assist a revival of Liberal confidence. Since Mr Bonar Law had become the Unionist leader there had been to all appearance a concentration among all his followers on *Fiscal Reform and Imperial Preference* as the corner stone of their constructive policy and little had been heard of any wavering as to the principle of including low taxes on foreign wheat and other food

stuffs so as to give a preference to colonial imports. But the question of going to another election at all on a programme including food taxes was now raised again on what started purely as a side issue. It was thought by the leaders of the party that the time had come when an explicit declaration should be made that Mr Balfour's proposal, before the general election of December 1910, to submit the first Tariff Reform Budget after the Unionists returned to office to a Referendum was no longer the party policy, and Lord Lansdowne accordingly made a statement to that effect at the Albert Hall on November 14th. No sooner had it been made than an agitation arose in certain Unionist quarters especially in Lancashire where it was contended that harm would be done to their electoral prospects by dropping the proposal and the cry was taken up in circles where the food taxes had always been disliked, with the result that pressure was put on Mr Bonar Law to make a definite pronouncement on the whole scheme of Imperial Preference. This he did at Ashton-under-Lyne on December 16th but without the effect that was presumably intended.

A large part of Mr Bonar Law's speech was devoted to combating the claims of the Radical party that they were the peculiar friends of the working classes on the contrary he insisted that the party now in power were occupied mainly in work of destruction and that the real social needs of the community could only be met by a Unionist government. After criticising Mr Lloyd George for offering what were only quack remedies and declaring that the most important question of the day so far as the industrial class was concerned was to raise the level of wages throughout the country which Tariff Reform would help to do, he proceeded to explain at length the main lines of the Tariff Reform programme and particularly its relation to the policy of Imperial Preference. He repudiated the allegation that Tariff Reform was simply old fashioned Protectionism. It was not proposed to bolster up industries which were not naturally suited to the country or to enable manufacturers to secure an artificial monopoly. Tariff Reform involved the imposition of duties smaller than in any other country and its object was to give British workmen a preference in the home market over their foreign competitors. Similarly the object of Imperial Preference was to unite the Empire on lines of trade and to secure for the United Kingdom the largest possible advantage in the British overseas markets. It was in connection simply with Colonial Preference that food duties were included in the Unionist programme and he adhered to that policy in spite of all the misrepresentations to which it lent itself. 'For nine years we have kept the flag flying and if there is any sincerity in political life at all this is not the time and I am not the man to haul down that flag. But he wanted to make clear exactly what this meant and here Mr Law announced a new departure which to some extent appeared inconsistent with his previous utterance.

If our countrymen entrust us with power we do not intend to impose food duties. What we intend to do is to call a conference of the Colonies to consider the whole question of preferential trade and the question whether or not food duties will be imposed will not arise until those negotiations are completed. We do not wish to impose them. They are not proposed by us for the sake of Protection and there is no Protection in them. They are proposed solely for the sake of Preference and if when the conference takes place the Colonies do not want them—I will put it far stronger than that unless the Colonies regard them as essential for Preference—then also the food duties will not be imposed. All that we ask is that our countrymen should give us authority to enter into that negotiation with power to impose certain low duties on foodstuffs and within strict limits which will never be increased. I hope it will be possible and I think it may be possible that if any readjustment is necessary it will only be a duty on wheat. I hope so but I do not think it would be reasonable to ask the Colonies to meet us if our power of negotiation were limited. If the Colonies do not think those duties necessary for Preference they will never be imposed if they do think them necessary then I for one do not believe that the people of this country would not be ready to make that readjustment which is necessary to effect the purpose.

As regards the Referendum, Mr Law repeated Lord Lansdowne's declaration and justified it on the ground that a pledge to submit the result of the negotiations with the colonies to a Referendum in the United Kingdom would not be fair to the colonies.

Next morning this speech had a mixed reception both in the Unionist Press and

Mr Law's  
Ashton  
speech

in the party. The *Daily Mail* took it quite plainly as meaning that no food taxes would be proposed at all and approved of their being dropped. The *Times*, admiring the spirit but not the letter, objected to making the taxation of the United Kingdom appear in any shape to depend on the decision of the colonies. The responsibility must be with the electors of the United Kingdom. In Lancashire and Yorkshire and also in Ireland and Scotland some important

*Unionist  
Internal  
dissensions*

Unionist papers openly mutinied against the abandonment of the Referendum. Uncertainty as to what Mr Law really meant—an unusual thing in his case—led to a revival in the clubs and in the House of Commons as well as in the Press of the same sort of expression of hostile sectional views that had made Mr Balfour's leadership so difficult between 1903 and 1906. There were alarms and excursions for several days. Mr Garvin in the *Pall Mall Gazette* and *Observer* violently accused the *Times* and *Daily Mail* of leading a movement for repudiating the idea of food duties altogether and fulminated against all and sundry who would split the party and betray the cause of Imperial Preference. Nothing that those papers had actually said really warranted any such invective, though the *Times*, both through its parliamentary correspondent and in its second leading article on the subject (Dec 19th) encouraged the view that the majority of Unionists were averse from food taxes and would prefer to see Mr Balfour's Referendum policy maintained and that the section in favour of food taxes though in control of the party machine was really a small minority. By giving currency to the report that the larger section was composed of followers of Mr Walter Long and the smaller of those of Mr Austen Chamberlain—an analysis of the situation which was much too simple and very far from correct—the *Times* moreover gave some ground for suspicion and irritation on the part of those who had always advocated the

whole policy. But while criticizing Mr Bonar Law's suggestion that it would rest with colonial opinion to decide whether food taxes should be imposed the *Times* had been quite firm in supporting Imperial Preference including the possibility of new food duties its real objection was to laying down any scheme of taxation in advance of precise knowledge of the conditions which might exist when a Unionist government should return to power. Nor was there theoretically any weakening in the *Daily Mail* so far as the general policy of Tariff Reform was concerned on the contrary on December 24th it announced that the *Daily Mail* is frankly Protectionist and is a firm believer in Imperial Preference but it was not over enamoured of food taxes and hopeful that the Dominions do not wish Great Britain to tax corn. As consideration became cooler it was recognised that nobody wanted to do anything that was not in the interest of a united party. Mr F. E. Smith speaking at Dudley on December 20th declared that the whole Unionist front bench in the House of Commons adopted the views expressed by Mr Law and that he had never meant that the decision as to food duties would be left to the colonies all that he meant was that the decision must depend on what the colonies wanted. A duty on wheat which seemed a vital matter in 1903 might be much less so now, and while Mr Law had taken the straightforward course of saying that the electors must leave the matter open for negotiation the indications were that the colonies themselves would not ask for any measure which could be represented even untruthfully, as likely to raise the cost of living to the working classes in Great Britain. Mr Austen Chamberlain also wrote a letter to a correspondent on December 23rd expressing a general agreement with Mr Bonar Law.<sup>1</sup>

While this lively interlude was providing sport for the Free Trade party the penultimate act of another drama of more direct import to Liberalism, was also drawing to its close. On December 19th the result of the poll was published which had been taken among the medical profession as to whether they would accept Mr Lloyd George's latest terms for ordinary medical service under the Insurance Act, outside the special

<sup>1</sup> Eventually as the result of a memorial from the bulk of the Unionist M.P.s Mr Bonar Law on January 14 stated in a letter that he and Lord Lansdowne while remaining leaders of the party were willing to agree that food duties should not be imposed without the approval of the electorate at a subsequent general election.

terms made for the treatment of tuberculosis which had already been accepted. Out of a total vote of 13 751 only 2 422 were in favour of accepting 11 309 being for rejection an adverse majority of considerably more than 4 to 1. On December 20th the representative meeting of the British Medical Association was held to consider what action its members should take in view of the voting and by 187 votes to 21 a resolution was passed rejecting the Government proposal and advising the profession to decline service under the Act. In the previous February practically the whole profession—at all events 27 400 doctors—had signed an undertaking to stand together by the policy to be decided upon by the British Medical Association and if they held to their pledge this meant a complete breakdown in the provisions of the National Insurance Act for medical benefit which were to become operative on January 15 1913. On the other hand a scheme for an alternative policy was coupled with this flat refusal of Mr Lloyd George's own proposals. It was recommended that the profession should express its willingness to treat insured persons under arrangements to be made between local committees of doctors and the insured or their representatives (*i.e.* the approved societies) for a minimum capitation rate of 8s 6d inclusive of drugs or a minimum fee of 2s 6d a visit on condition that each insured person should have free choice of doctor and that the doctor should consent to act. Under this plan the doctors would not be dictated to by the lay insurance committees but the financial terms would be practically the same that Mr Lloyd George had last offered. It was promptly announced that the Government could not fall in with this proposal which would involve handing over public money without public control and the question now was whether there would be sufficient breaking away from the pledges given to the British Medical Association for the insurance committees to be able to secure their panels of doctors in accordance with the regulations under the Act. Only about half of the 27 000 doctors who had ranged themselves with the Association in February had actually taken the trouble to go to the poll in December, and though this was generally believed not to indicate in itself any corresponding failure in the solidarity of the profession there were now signs of a good deal of independent action in certain localities and notably in Scotland. Already in November a few doctors who thought it a public duty to fall in with the Government scheme had started a new organisation in opposition to the British Medical Association called the National Insurance Practitioners Association and its influence backed by Government support was being exerted in the same direction. On Jan 2 1913 Mr Lloyd George addressing the Advisory Committee took a sanguine view of this situation and declared that some 8 000 doctors were available. Nevertheless the strike now proclaimed against the Insurance Act by the recognised leaders of the medical profession was a very awkward fact for the Liberal party to reckon with. The year thus ended with the promise of a full crop of domestic political difficulties to be harvested in 1913.

(HUGH CHISHOLM)

#### II *The Labour "Unrest"*

Allusion has already been made to the complications attending the political situation during 1911 and 1912 on account of the industrial unrest which had taken a peculiarly acute and dangerous form. Though trade generally was busy and unemployment<sup>1</sup> which had been a serious problem only a little while previously steadily diminished the demand of the wage-earning classes for a proportionately larger share of the good things of life—better pay and less work for it—had become more articulate and more organised than had been known before. Socialist—and particularly "Syndicalist"—theories had for some time been getting a strong hold of the younger generation of trade unionists and a growing sense of the impotence of the Labour members in Parliament added to increasing suspicion that Liberals and Tories alike were in league with the "money power," encouraged the idea that 'direct action' by means of strikes was

<sup>1</sup> The only official figures for 'unemployed' issued by the Board of Trade are for the trade unions. In these the percentage of unemployment which was 9 in 1908 and 1909 fell to 5 in 1910 and 3 in 1911. For the first eleven months of 1912 it was as follows: January 2.7 February 2.6 March 11.3 (coal strike) April 3.6 May 2.7 June 2.5 July 2.6 August 2.2 September 2.1 October 2.0 November 1.8

the only way of successfully asserting the claims of the operatives to a larger share of the profits of industry. The fact that wages, under existing agreements practically remained stationary while the cost of living owing to higher prices, was going up gave a solid basis for discontent. The result was seen not only in numerous local conflicts between Capital and Labour, of which it is unnecessary to give a detailed account, but in three more extended general strikes which aimed at holding up whole industries throughout the country and compelling parliamentary intervention. These were the Railway Men's Strike of 1911 and the Coal miners' and Transport Workers' Strikes of 1912. A narrative of each of these is given below in which allusion is made to the political incidents concerned with them. One outcome of the Railway Strike, and of the general unrest of which it was a symptom, was an addition made by the Government to the official machinery applicable at the Board of Trade to the working of the Conciliation Act of 1906. In October 1911 an Industrial Council representative of employers and workmen was instituted as a permanent body for considering and inquiring into matters referred to them concerning trade disputes and for taking suitable action (but without any compulsory powers) on the same lines as the Conciliation Boards already adopted in particular industries. As Chairman of this Industrial Council and Chief Industrial Commissioner the Government chose Sir George Askwith (b. 1861) head of the Labour department of the Board of Trade who had just been knighted in recognition of the valuable work he had done in effecting peace in recent industrial conflicts. But during 1912 at all events the deliberations of the new Industrial Council were not specially productive.

From a public point of view the worst feature of the industrial conflicts during 1911 and 1912 was the spirit of lawlessness so repeatedly shown in acts of violence and intimidation and the apparent inadequacy of the law (partly owing to the Trade Disputes Act) to vindicate the right to work on the part of willing labourers outside the ranks of the unions. With a view to supplementing the protection available in the shape of the police and the military—limited as this might be by the unwillingness of the executive government to do more than appeared absolutely necessary in taking a side against strikers who were also voters and even actually political supporters—various arrangements were made in 1911 for enrolling volunteer in private organisations for the purpose but so far this movement has not had any important practical result. In spite of constant criticism on points of temporary difficulty both from employers and in Parliament and in the Unionist Press the measures taken by the Government in calling out troops and supporting the local authorities were substantially effective. The complete failure of the Transport Workers' strike of May-August 1912 following on the disappointing results of both the railway strike and coal strike showed that when society as a whole was threatened it could and would protect itself and that the security of existing social order was the first consideration for the executive Government however much it wished to be neutral in disputes between employers and employed. The necessity of using troops however as well as police in such circumstances has led to great bitterness on the part of the strikers and their sympathisers in Parliament, and in certain socialist quarters attempts have been made to put pressure upon soldiers themselves not to assist Capital against Labour and thus fight against their own class. In March 1912 the Government prosecuted a journalist named Bowman, together with the two printers of a paper called *The Syndicalist*, for the publication of an article inciting soldiers to mutiny by telling them not to shoot at strikers if ordered to do so: they were found guilty at the Old Bailey and sentences of nine and six months' hard labour was passed (March 22nd). On March 19th too for making a speech to the same effect Mr Tom Mann, the well known Labour agitator, was arrested on a warrant issued by the Salford magistrates and he was found guilty at the Manchester assizes on May 9th and sentenced to six months' imprisonment (reduced to two months by the Home Secretary).

The year 1912 also saw the fruition of an enterprise long discussed at Trade Union Congresses, namely the starting in England of a daily paper directly representing Labour. On October 8th the first number of the *Daily Citizen* was published under the

control of a board of directors appointed on behalf of the trade unions the parliamentary Labour party and the Independent Labour party. Heretofore the principal organ of the movement—and particularly its socialistic side—had been the weekly *Labour Leader* but the direct financing and control of a regular daily combining the supply of general news with the attempt to forward Labour interests in particular, in competition with existing dailies was a much more ambitious experiment the results of which remained to be seen.

**The Railway Strike of 1911**—For the first time in the history of English labour troubles a national strike was precipitated in 1911 and private war was made on the whole community by the members of the railway unions. In 1907 there had been a violent agitation among members of the Amalgamated Society of Railway Servants for better wages and shorter hours and towards this end for 'recognition' of their Trade Union by the railway companies which had been steadily refused by all except the North Eastern Company (after an arbitration in 1897). This struggle had gone on for many months the companies insisting that their finances would not permit of any concessions till in October 1907 a ballot of the Union was taken and preparations were made for a general railway strike. This was only averted on November 6th as the result of negotiations carried on by Mr Lloyd George as President of the Board of Trade by an agreement between both sides to accept a scheme of conciliation and arbitration proposed by him. Under this scheme<sup>1</sup> sectional boards were set up for each company, composed of representatives of employers and employed to deal with disputes about hours and wages a Central Conciliation Board also representing both sides was set up to adjudicate on points on which the sectional boards did not agree and a final appeal was provided to a single arbitrator to be appointed by the Speaker and Master of the Rolls or one of them. The agreement to abide by this scheme was to remain in force for six years and then be terminable by either side on a year's notice.

Mr Lloyd George was thought to have been highly successful in bringing it about and it was hoped that a permanent remedy had been found for the unrest in the railway world. The companies had gone a very long way to meet the demands of the Union owing to the pressure put on them by the Government to accept the scheme. The actual working of the Conciliation Boards however proved as time went on very disappointing to the railway men and the movement for shorter hours and better wages persistently pressed by the forward party in the Union and associated with the socialist propaganda throughout the Labour world came to a head again in 1911. Strikes had been going on in Liverpool Manchester London and elsewhere among various other classes of transport workers—seamen, dockers and carters. In London a violent dock strike was only terminated early in August by an award of Sir Albert Rolit increasing wages and a carmen's strike which had been accompanied by serious disorder and had driven the Government to order troops from Aldershot was brought to an end with considerable difficulty at the same time by the intervention of the Board of Trade the men securing concessions both as to hours and wages. At Liverpool a protracted dock strike had driven the shipowners on August 3rd to agree to recognise the Dockers Union and make other concessions but a number of strikers refused to go back to work, and the shipowners then announced a general lock out to begin on August 14th. The answer of the Dockers Strike Committee led by Mr Tom Mann was to call on all transport workers to assist them by striking in sympathy and wild scenes of rioting resulted requiring the assistance of troops to assist the Liverpool police. The general unrest now spread in an active form to the railway men too.

For some time past the discontent at the working of the Conciliation scheme had led to talk of a general railway strike the Trade Union agitators were spoiling for a fight and the companies were preparing for emergencies. At Liverpool the goods porters at the Lancashire and Yorkshire stations struck on August 5th because of the delay in dealing with their grievances and at other stations the men came out in sympathy. On August 15th the joint executives of the four railwaymen's Unions—Amalgamated So-

<sup>1</sup> See generally E. B. II. 331 *et seq*

ciety of Railway Servants Associated Society of Locomotive Engineers and Firemen General Railway Workers Union and Signalmen's and Pointsmen's Union—decided to order a general strike unless in twenty four hours the companies agreed to meet them and discuss terms. The Companies at once refused to do so or to admit that the Conciliation scheme of 1907 could be thrown over in this way. The leaders of the men on the other hand contended that the spirit if not the letter of the agreement of 1907 had never been carried out and that they must have direct recognition of their unions. Matters were now at a deadlock. However conciliatory the Government might be to Labour its attitude was necessarily dictated in the first place by the duty in the event of a strike of securing the transport of food and mails, the safety of property and other public interests threatened and secondly by its own responsibility for the agreement of 1907 which the railway men were openly intending to break. The machinery of the Board of Trade was set to work to try to bring both sides together and to delay the rupture but meanwhile the companies who engaged to provide for a restricted service by means of their non union employees were guaranteed military protection and preparations were made for placing soldiers along the lines at the stations and elsewhere for this purpose.

On August 17th Mr Asquith had an interview with the men's representatives and offered a Royal Commission to inquire into the working of the Conciliation Scheme but at the same time he warned them gravely and firmly that the Government could not allow the railway service of the country to be paralysed. Resenting the tone of his speech and suspicious of a Royal Commission as simply a means of shelving the whole matter—though it was explained too late that Mr Asquith really meant a Commission of three to sit and report at once—they refused this offer and ordered the strike which began next day in spite of continued efforts by Mr Lloyd George (Mr Asquith having left further action to him) to overcome what seemed to be a misunderstanding. As the result of his explanations to the men's leaders negotiations still went on a vote of censure on the Government which the Labour Party at first decided to move in the House of Commons was not proceeded with and instead of Parliament being adjourned on August 18th until the autumn session as had been arranged it was decided to meet again on August 22nd in order to deal with the situation. Meanwhile the strike was in actual operation for practically two whole days and did not terminate till August 20th. On Saturday (19th) however a settlement was effected late at night as the result of a conference at the Board of Trade between representatives of the companies and the men Mr Ramsay MacDonald Mr Lloyd George Mr Sydney Buxton Sir H Llewellyn Smith and Mr G R Askwith. It was agreed that a Special Commission should at once investigate the working of the Conciliation Scheme and report quickly what changes were desirable and that the trade union leaders should persuade the men to return to work the strikers being reinstated. There was some difficulty in certain districts in getting the men to go back at once but the crisis was now substantially at an end victory being claimed for the strikers at a mass-meeting in Hyde Park on Sunday. When Parliament met on the 22nd Mr Asquith explained what had been done and gave the names of the Special Commissioners—Sir David Harrel (Chairman) Sir Thomas Ratcliffe Ellis Mr C G Beale Mr A Henderson M P and Mr John Burnett, and though Mr Keir Hardie and a few supporters insisted on a division against adjourning for the parliamentary holiday and attacked the Government for taking sides against the strikers—a charge warmly resented by Mr Lloyd George—the general feeling was that a bad business was over as well as was possible.

The Special Commission started work on August 23rd and took evidence from both sides up to October 3rd, its report being issued on October 20th. It was unanimously recommended that the Conciliation Scheme should be amended in various ways the central board being abolished and any differences within the sectional boards being settled by an independent chairman chosen from a panel drawn up by the Board of Trade. Trade Union 'recognition' by the companies was not directly conceded—the Commissioners pointed out that the companies could not permit intervention on the subject

of discipline and management—but some satisfaction was given in this direction by a recommendation that the men should have anybody they wanted (e.g. a Trade Union official and not actually an employee) on the sectional boards as their secretary and advocate. Meanwhile however though the men were back at work, there was still much unrest and the Labour party and Trade Union leaders were by no means satisfied with the result of the Commission. When they accepted its appointment there was a general impression, shared in by the Government, that both sides had agreed to accept its findings, but on the men's side this was now denied, and threats of a renewal of the strike were made unless the companies agreed to specific demands for shorter hours and higher wages on a minimum scale. The union leaders decided to take a ballot in December on the question whether the findings of the Commission should be accepted or another strike for "recognition" started, and when the report of the Commission came up for discussion in the House of Commons on November 22nd the situation was still a very difficult one. A resolution was moved by Mr Lloyd George asking the Government to bring about a further meeting between the representatives to the agreement of August 19th but this was only carried after a contentious debate displaying obstinacy on both sides. Mr Ramsay MacDonald insisting that the men had not agreed to accept the Report and that "recognition" was indispensable while the view of the companies was that the Government ought to hold the Report as binding on both parties. It was not till December 11th that, after a good deal of diplomacy on the part of the Board of Trade officials, a compromise was arrived at as the result of further conferences. A few days before the ballot of the members of the unions had been taken but the result was not made public and now both parties agreed to accept the Report of the Commission as a basis for modifying the future working of the Conciliation Scheme the "recognition" of the unions being accepted to the extent of allowing the men to have their Trade-Union Secretary as adviser. Matters were gradually arranged for continuing the conciliation boards on this amended scheme and various concessions as to wages and hours were also made by the companies which helped to keep the peace with the unions during 1912, though discontent with their conditions of labour still continued among various classes of workers.

As regards the strike itself while in actual operation the state of the railways during those two or three days was unprecedented. Some 220,000 men altogether about a third of the workers were out and traffic was much restricted the worst dislocation being in the North of England, round Liverpool and Manchester. Troops were employed freely to guard the lines and give protection against violence and in consequence there were only certain particularly disturbed districts where serious mischief occurred. On August 19th an attack was made by rioters on a train at Llanelli and the soldiers had to shoot two men being killed while an explosion due to the mob setting fire to some trucks containing gunpowder resulted in five more deaths and at Liverpool on the 15th two men were shot in a riot. The employment of the military was furiously denounced by the Labour agitators but the intimidation practised against non-unionists and the danger of extended sabotage were such that on the whole the comparative peaceableness of the stoppage which occurred in a summer of unexampled heat was rather remarkable. To a great extent, and particularly on the lines nearer London this was due to the fact that a large proportion of the union men who went out (a certain number remaining loyal to the Companies) only did so because they dared not disobey the union orders.

Simply on the issue as to more generous treatment of the railway workers there was a fairly widespread sympathy on the part of the public with the men, and it was against the method employed by their leaders for asserting their claims that public indignation was aroused. It is too early to estimate whether any substantial success was gained by the strike in improving the position of the men. One definite advantage was however secured for the railway unions as such their membership before the strike had been steadily declining and during the subsequent months they were joined by large numbers of men who had previously remained outside.

*The Knox Case 1912*—In December 1912 a serious strike took place on the North Eastern railway over the case of Driver Knox leading temporarily to a complete local dislocation of traffic and much injury to industry. Knox who was a main line driver had been arrested at Newcastle on October 6 for being drunk and disorderly and assaulting the police and when brought before the magistrates was fined five shillings for being drunk though the charge of assault was dismissed. He was off duty at the time but the company naturally took a serious view of such a conviction in the case of a man who was liable to be responsible for the safety of a passenger train and he was reduced in rank to that of driver of a pilot engine only. He had apparently thought that no notice would be taken by the company and had paid the fine and not appealed against the conviction, but when he was reduced in rank he protested that he had been wrongly convicted and his case was taken up by the local branches of the men's union at Newcastle Gateshead and elsewhere their claim being that the company had no right to take cognisance of a man's action when off duty. Their demand that Knox should be reinstated was refused on public grounds by the company and on December 6 the men decided to strike. The situation was altogether anomalous, since the strike was carried out without the sanction of the officials of the union without legal notice and contrary to the agreement made with the company for referring all disputes to a conciliation board but by December 8 thousands of railwaymen at Newcastle Gateshead South Shields and other neighbouring centres had gone out and the whole service was disorganised. It quickly became apparent that a settlement depended on whether Knox's conviction for drunkenness represented a serious offence or not. As matters stood the company were bound to treat it as one but if he could show that an error had been committed they were prepared to reinstate him. For this purpose an appeal was made by Knox to the Home Office and on the 10th of December the Home Secretary sent Mr Chester Jones one of the London police magistrates to Newcastle to hold an official enquiry. He began to take evidence on the 11th and issued his report on the 14th. It was shown that Knox was not quite sober on the occasion in question and had been refused admission to a tramcar with the result that an altercation took place in which he had been roughly handled by the police but the evidence was by no means satisfactory and Mr Chester Jones in the circumstances came to the conclusion on the main point at issue that Knox was not really either 'drunk or disorderly' or 'drunk and incapable' or even 'drunk at all' in the police court sense. This being so the Home Secretary announced that Knox would be granted a free pardon and as this result wiped all the proceedings out the company immediately reinstated him. It was agreed that the strikers should resume their old places which they had forfeited by their breach of agreement on paying a week's wages as a fine while the company paid compensation to the new men they had taken on during the strike and on these terms the whole affair came to an end on December 16 with a minimum of further dissatisfaction.

*The National Coal Strike of 1912*—In December 1912 a strike began at the Cambrian Combine Collieries (of which Mr D. A. Thomas was managing director) owing to the failure of the two referees (representing owners and men) appointed by the South Wales Conciliation Board to agree upon a tonnage price for the working of a seam at the Ely Pit which had till then been worked on day work. The rates offered by the owners were denounced by the strike committee as a 'starvation' wage but the strike was really a forward move on the part of the younger extremists among the men who had obtained the upper hand and were influenced by socialistic doctrines. A general lock out of the men working in other seams in the Ely Pit was the masters' reply. The Welsh socialists then sent delegates to enlist sympathy among the English and Scottish miners elsewhere and to try to bring about a general strike but the leaders of the Miners' Federation of Great Britain were not prepared to support the action of the Ely Pit strike committee and financial support was withdrawn so that the strike collapsed. But the propaganda which started in connection with it had an influence on what followed.

## ENGLISH COAL STRIKE

For some little while the Miners' Federation had been putting a claim before the owners in the Federated area for the fixing of definite rates of payment in the case of "abnormal places" where the men were unable to earn an average day's wage for no fault of their own. The reasonableness of some such step could not be altogether denied but the difficulty was to agree on satisfactory terms and no conclusion had been arrived at. At the Southport Conference of Miners' Delegates in October 1911 the demand that in abnormal places, a miner's remuneration should be made up to the district rate was given a different form, a claim now being made for an all round minimum. The following resolution, proposed by the executive, was unanimously passed —

That the Federation take immediate steps to secure an individual minimum wage for all men and boys working in mines in the area of the Federation without any reference to the working places being abnormal. In the event of the employers refusing to agree to this the 21st rule to be put into operation to demand assent.

The delegates were instructed to report the result of their negotiations with the employers at a second Conference on November 14th. At this conference, at which they reported their failure to obtain the minimum wage, an adjournment was resolved on (by 336 000 votes to 238 000) for future negotiations, and on December 21st the situation remaining the same it was resolved that a ballot should be taken on January 10th-11th 1912 on the question: Are you in favour of giving notice to establish the principle of a minimum wage for every man and boy working in the mines of Great Britain? A resolution was also passed "that each district send to Mr Ashton [General Secretary of the Miners' Federation] a tabulated statement of what it desires to be its minimum wage and that the Executive Committee of the Federation meet to consider the statements and report to a National Conference in Birmingham on January 18, 1912."

The result of the ballot, as declared at the Birmingham Conference, showed 445 801 votes for giving notice, 115 721 against — majority 330 080. South Wales alone giving a majority of 85 107 for stopping work. And on February 2, 1912, after considerable discussion of the minimum rates asked for, the following schedule was approved —

	District Demand		Rate Approved			District Demand		Rate Approved	
	s.	d.	s.	d.		s.	d.	s.	d.
Yorkshire	8		7	6	Bristol	6		4	11
Lancashire	7		7		Cumberland	6	6	6	6
Midlands	5, 6	-7 1/2	6	-7	Scotland	6		6	
Derbyshire	8		7	1 1/2 - 7 1/6	South Wales	8		7	1 1/2 - 7 1/6
Nottinghamshire	8		7	6	Northumberland	6	-6 9	6	-7 1/2
North Wales	7		6		Durham	6	1 1/2	6	1 1/2
Leicestershire	7 1/2		7	1/2	Forest of Dean	6		5	10
South Derbyshire	6	-7 6	6	6	Cleveland	6		5	10
Somersetshire	6		4	11					

The coal owners met on February 7th and the Welsh owners then refused to discuss the minimum wage and retired from the conference. This made a strike inevitable since the miners were not prepared to settle with any but the whole Federated area, and notices were given accordingly, the public being faced with a prospect of a complete cessation of coal supplies. The Prime Minister on February 20th invited both sides to meet him to discuss means of averting a national stoppage, and their representatives met him on February 22nd but to no purpose, and on February 26th the first miners went on strike at Alfreton, the rest soon following in spite of the announcement that the principle of a minimum wage was now adopted by the Government and that they would take steps to give it Parliamentary sanction unless an agreement were arrived at. On this point a split occurred between the coal owners: those of Durham and the Federated districts being prepared to fall in with the proposal of the Government and the others refusing. On March 1st over a million coal miners were out (Yorks and N. Midlands, 235 000, S. Wales 220 000, Scotland 130 000, Northumberland 110 000, Durham 110 000, Midlands and South, 105 000, N. Wales 70 000, N. and E. Lancs 45 000) and during the whole month the country was convulsed by the calamity.

At last after the Government had made a further unsuccessful attempt, by a conference, to bring owners and miners to agreement on March 19th Mr Asquith introduced in the House of Commons a Minimum Wage Bill as their last resort. It provided that in the coal industry every contract for employment should involve the payment of a minimum rate to be settled for each district by a joint board set up under the auspices of the Board of Trade. The Bill was read a second time on March 21st after a motion for its rejection by Mr Balfour, on behalf of the Opposition, had been defeated by 348 votes to 25 and it had passed both Houses on March 28th. Having made their protest against a piece of revolutionary legislation which introduced so novel and far-reaching a principle into industrial economics the Unionists left the responsibility to the Government and the only Parliamentary difficulty was caused by the Labour party, who fought for the inclusion of a precise definition of the minimum in the shape of 5s a day for adults and 2s for boys, as the Government refused this and insisted on the rates being fixed by the district boards. The Labour party opposed the third reading which however was carried by 13 to 48. There was acute dissatisfaction among the miners at the failure of the Labour party to get their own minimum schedule of rates adopted and for a time the result was doubtful but it was decided to take a ballot (April 1st) on the question of returning to work and though a majority still voted for staying out (44,011 to 201,013) it was not large enough (two thirds being required by the rules) and the abstentions were significant.

The fact was the funds were exhausted and the men had had enough of the struggle. The conclusion of Sir A. Markham, the Liberal M.P. and coalowner writing in the *Quarterly Review* for April 1911 is probably the verdict of history; he considered that the ground of attack was ill chosen, the men should have stood to their original demand the payment on account of abnormal prices or losses due to bad management. If in addition they had asked for an increase of wages equivalent to 10% on the basis rates to meet the increased cost of living they would have occupied strong ground. The great mass of men came out to obtain higher wages and for no other reason and when they voted for the formula 'minimum wage nine tenths' did not know what they were voting for. The result as the year went on and the minimum rates were settled not without friction was a profound disgust among the coal miners generally with the operation of the new Act which was found to do very little to increase the amount paid in wages but it had done its work for the moment the crisis being over. In October moreover an agreement was arrived at between representatives of miners and coal owners of the English Federated area by which about 400,000 workers would at once receive an advance of a shilling a week in wages. This was the outcome of discussions before a Conciliation Board which had been in existence for some years and was now renewed for a further period and this addition of about £1,000,000 a year to the wage fund was worth more than all the haggling about minimum rates.

**The Transport-workers Strike of 1912**—In connection with the opening phases of the railway strike of 1911 allusion has already been made to the sporadic strikes of other sections of transport workers' earlier in that year and the general dock strike which began in London on May 20 1911 was really the concluding phase of the unrest which had only been partially quieted during the previous August. First the lightermen came out and then a 'sympathetic' strike involved all the other unions of transport workers connected with the Port of London. The nominal reason for the lightermen ceasing work was their objection to one man employed as a watchman having no 'Federation ticket' he belonged to the Foremen's Society, a union not affiliated to the Transport workers' Federation but refused to join the Lightermen's Society which was so affiliated and when the lightermen demanded his dismissal on the ground that they would work only with men who belonged to the Federation his employers naturally refused. This was however in reality only the culmination of a number of grievances put forward by the men who complained of being victimised under the terms of the existing agreements. Unsuccessful negotiations had for some time been going on between their secretary Mr Gosling (himself actually a member of the Port of London Authority)

and the Board of Trade, with a view to pressure being put on the employers and the declaration of a strike on May 20th for the reason given was prompted by the hope that the hands of the Government would be forced. In taking this step the lightermen relied on their privileged position in the Port of London. Their Society held an old licence from the Watermen's Company whose functions were transferred in 1908 to the new Port of London Authority, and the law was that unlicensed men should not be employed so long as licensed men were available, so that apart from the difficulty of obtaining substitutes in an emergency, the employers, as they knew, would have to reinstate them when the strike was over. (One result of the strike was that the Port of London Authority took steps to get this law altered.)

The Federation of Transport Workers now took up the Lightermen's cause and in doing so put forward a further grievance on behalf of the Carters' Union by whom an agreement had been made with the Master Carters' Association when the strike of the previous August was settled. The complaint was that one firm which had joined the Association had dismissed their union men contrary to the terms accepted and had resigned from the Association when it called them to account so that the agreement was useless. The Union demanded accordingly that all employers in the Port should be obliged to belong to a Masters' Federation which would have power to guarantee the carrying out of agreements. As no concession on this point was forthcoming notice of a general strike of all members of the Transport Workers' Federation was given.

The Government at once took action by appointing Sir Edward Clarke, K. C. to hold an enquiry on May 4th in order that the issues, which at the moment were decidedly confused, might be somewhat better defined and in the hope of checking the development of the conflict. He sat to hear evidence from both sides at Fishmongers Hall and made his report on May 28th to the effect that while the lightermen were wrong in supposing that the award of the previous August meant that none but members of their Federation should be employed and they themselves had broken their agreement by striking without recourse to arbitration still there were several points on which the Transport Workers had legitimate grievances, owing to the employers not having carried out certain terms of their agreements also. The Government on May 29th suggested a conference between the two sides which was however declined by the shipowners who insisted that the only point really at issue was the lightermen's breach of agreement in suspending work and thus dislocating the whole business of the Port. Meanwhile a general strike of transport workers was in progress at the docks some 80,000 men being affected and the whole food supply of London was threatened but the shipowners actively engaged free labourers in spite of trade union picketing and intimidation, and day by day managed more efficiently to get their ships unloaded. Public discussion influenced by Sir Edward Clarke's report and its criticism of both sides, centred round the apparent necessity of providing alike for masters and men some guarantee against breaches of agreements and Mr Lloyd George who in Mr Asquith's temporary absence in the Mediterranean dominated the Government policy made proposals which he explained in the House of Commons on June 5th for a Joint Conciliation Board, combined with pecuniary guarantees on both sides. Mr Goshing on behalf of the Transport Workers gave a general assent to this suggestion but the employers and the Port of London Authority (with Lord Devonport—formerly Mr Hudson Kearley, a well known Liberal M.P.—as chairman), after careful consideration rejected it on June 10th. It was pointed out by them that there was no proper basis under the conditions prevailing at the docks for such a Board the trades concerned being very different and the employers (some of whom were foreign firms) themselves being competitors, the Port of London Authority moreover was a statutory body with distinct obligations and responsibilities and could not well enter into such an arrangement any more than a Government Department could—the Post Office, for instance—with the men in its employment. This was not a case of a strike against some individual firm which had given legitimate cause of offence but a general strike against the whole Port, on the part of a heterogeneous body of workmen, most of whom had no actual quarrel

with their employers and who had stopped work in defiance of existing agreements. Negotiations now broke down altogether and the leaders of the Transport Workers Federation declared a national strike and tried to call out all its allied members at other ports as well as London. But though some 30 000 men responded altogether at Manchester, Southampton, Bristol, Plymouth and Swansea, this appeal for a "national strike" was a thorough failure: the railway unions had had enough fighting the year before and the seamen and firemen as a body were not prepared to come out. Scenes of violence were of daily occurrence between unionists and free labourers at the London docks and in the East End, where the cessation of employment was causing great distress. It became necessary to cancel the King's intended visit to open the Royal Albert dock on June 17th, but by June 18th it was clear that the Port of London Authority and the employers, aided by police protection (which Mr McKenna, the Home Secretary, provided however somewhat grudgingly), had the strikers well beaten, having obtained a sufficient supply of labour for the handling of cargo. From this point the strike degenerated into sheer anarchism under the leadership of Mr Ben Tillett, the Secretary of the Dockers' Union, whose revolutionary and inflammatory speeches—and especially a passionate prayer uttered by him for Lord Devonport's death—disgusted not only the public but also the Labour party in Parliament and embarrassed their attempts to get the Government to intervene. Serious conflicts occurred in which revolvers were used in self defence by the free labourers, notably on July 24th and on July 31st, but by degrees the Strike Committee realised that their efforts were in vain. They recommended a return to work on July 27th, but a mass meeting in Hyde Park next day refused to comply with this advice, and it was not for a week later that all pretence at continuing the strike was abandoned. On July 31st the lightermen decided to give in, and the riot among the dockers that day was mainly due to their finding that their old places had been filled up and that it no longer rested with them to say whether they were wanted any more or not. On behalf of the employers however and of Lord Devonport, a general assurance had been given that if the strike were abandoned unconditionally, any outstanding grievances under the old agreements would be inquired into and reinstatement effected as soon as possible for men who had formerly been in regular employment, and as the Strike Committee and the leaders of the Transport Workers Federation could hold out no longer, further resistance came to an end.

The real object of the strike, in so far as it aimed at being a "national" one, was to compel Parliament to legislate as it had done for the coal miners. In this case however the Labour politicians and their sympathisers were impotent. The discussions in the House of Commons turned mainly on Unionist criticism of the Home Secretary for the apparent disinclination he showed for using force to preserve order and protect the free labourers. On June 12th Mr Austen Chamberlain moved a vote of censure on Mr McKenna, which was rejected however by 331 to 60. On July 1st Mr O Grady (Labour M.P. for East Leeds) moved a resolution that it was expedient that the representatives of the Employers and Working Men's organisations involved in the dispute should meet with a view of arriving at a settlement, and Mr Asquith (who had now returned to England) left the matter to the House, saying that he himself would not vote on it, as he did not think Government intervention would be justifiable or expedient. Mr Bonar Law, for the Unionists, having expressed his surprise that in those circumstances Mr Asquith did not oppose the resolution, moved as an amendment "that this House regrets the continuance of the strike and the consequent suffering, and approves of the declaration of the Prime Minister that the constitutional and normal attitude of the Government should be one of complete detachment and neutrality, and is of opinion that the intervention of this House in this instance can serve no useful purpose. The amendment was rejected by 60 to 15, and the resolution was carried by 254 to 188. This was the end however of any Parliamentary action. The strike was already collapsing, and its only political result was to focus public opinion on the desirability of compulsory arbitration or at any rate some improved machinery of making agreements once entered into, binding on both sides. (HUGH CHISHOLM)

*V United Kingdom Finance 1905-1913*<sup>1</sup>

The history of English public finance for the period from 1905 to 1912-13 offers many aspects of interest and importance. The Salisbury Balfour administrations of 1895-1905, have been followed by those of Sir Henry Campbell Bannerman (1905-8), and of Mr Asquith (1908- ), and the transfer of political power is reflected in prominent features of the public finance of these periods.

When Sir Henry Campbell Bannerman became Prime Minister on December 9 1905 the financial position was still affected seriously by the events and work of the period just closed. Public expenditure had been growing rapidly, and had reached a total which was substantially higher than the level of 1895 nor did there seem a prospect of any serious reduction. In 1895-6 the total expenditure was £97.7 millions with grants to local taxation of £7.4 millions—a total of £105.1 millions. In 1905-6 the expenditure was £140.5 plus £9.88 millions to local taxation, or a total of £150.4 millions. The figures just given do not include sums spent on account of capital expenditure though annuities to meet that expenditure were included in the various estimates. In 1895 there were only three items in this account, *viz* those for the Imperial Defence and the Barracks Acts of 1888 and 1890 respectively, and for the Telegraph Acts. The total was only £810,000 of which £670,000 was under the Barracks Act. In 1905-6 the sum thus spent was £6.1 millions, but it had been higher for some years, and on these accounts there were pending among the liabilities of the State about £45 millions. (In March 1912 the sum owing under this head had reached £50 millions but the only item added to those of 1905 was £3 millions, in part payment for the purchase of the National Telephone Company.)

The growth of expenditure from £105 to £150 millions (with extras) in the decade had however been more serious than these figures themselves suggest. The South African War broke out in October 1899, and has left its mark on the finances permanently besides keeping expenditure at a higher level. Large sums were paid toward the war from current revenue the rest being borrowed in various ways. The borrowings to the end of 1902-3 (March) amounted to about £160 millions but the direct cost of that War must have exceeded £230,000,000. Internationally moreover, relations were strained in Europe leaving a legacy in higher expenditure on the services in time of peace and British trade was checked in a career which had promised very favourably. The surpluses of 1895 to 1899 gave place to the deficits of the war time for five years (but reappeared before Mr Balfour left office), and meantime new taxation had been imposed up to 1902-3 to about £75½ millions which included additions to the tea tobacco beer, and spirit duties the imposition of taxes on sugar coal (export) corn and flour and the raising of the poundage of the Income Tax first by 4d then by 2d, and then by a penny more (7d in the £ altogether) to 1s 3d. The South African War, in short disorganised finances and necessarily caused difficulties at home and abroad nor can its effects cease for some years. On the other hand it is a surprise to many how remarkably strong the recovery has been since peace was signed at Vereeniging in 1902. To this period also 1901 and 1902, belongs the Boxer outbreak in China, which involved an expense to the United Kingdom of over £6 millions.

But the South African War does not account for the whole of the growth in expenditure up to 1905-6. The debt service at £28 millions was £3 millions higher and was a war charge. The cost of the Army in 1895-6 was £18.4 and in 1905-6 £28.9 millions, that of the Navy £10.7 and £33.3 millions. All the civil services exhibited a growing cost and especially the revenue departments which had heavier work in collection, but special mention of the education services is required which went up from £11 to £16 millions and of a sum of £6.5 millions in 1901-2 with another of £8 millions in 1902-3 (or £14.5 millions in all), granted to the Transvaal and Orange River Colony to aid reorganisation. This last was virtually a part of the war's expense. It may be added that the revenue during this period was strong,

<sup>1</sup> See *E. R.* ix 458 *et seq*

though overwhelmed by war from 1899 to 1902-3 and moved from £109.4 millions in 1895-6 to £153.8 millions in 1905-6. The Corn Duty had been withdrawn and the Income Tax at 1s 3d in war time reduced to 11d but raised again to 1s. Only the resources of a wealthy country could have borne the strain implied in these facts, and it seems as though the rapidly expanding expenditure which marks the period had been sealed and made permanent by the establishments set up during the War. It was acknowledged at the same time that the Army was in pressing need of reorganisation.

Mr Asquith succeeded Mr A. Chamberlain in December 1905 as Chancellor of the Exchequer, and held the office until he became Prime Minister on the resignation of Sir

Henry Campbell Bannerman in April 1908, being succeeded in turn by Mr Lloyd George. The leading feature of the period from 1905-6 to 1912-13 is that for the latter year the total expenditure for revenue was placed at

£186.9 millions to which £900,000 more had to be added for Naval purposes. To this should also be added £2,085,000 on account of capital expenditure, but it is only fair to add that during the whole period such extra expenditure was discouraged and in the case of military and naval outlay the year's expenditure was placed wholly on the estimates. For such a purpose as the undertaking of the National Telephone Company, which was taken over by the Post Office in January 1912, resort was had to borrowed capital, £3 millions being taken in 1911-12, £1.7 millions more in 1912-13, while a much larger sum was due for the undertaking, the total amount being still in dispute at the end of 1912 and subject to decision by an arbitration court.

It will be convenient to deal separately with Mr Asquith's and Mr Lloyd George's management of the national finances, though they seem to embody a continuous policy. It will be necessary to draw attention to the way in which £38 millions more were added to the annual expenditure of the United Kingdom between 1905 and 1913, and to emphasise the fact that new state services have been undertaken.

Mr Asquith was responsible for three budgets, 1906-7, 1907-8 and 1908-9, representing a period of consolidation. Retrenchment had been advocated by him in opposition

and the expenditure was watched and checked carefully, as was essential after the costly war. The measures taken to this end may be judged by the following facts. From £150.4 in 1905-6 the budget expenditure rose to

£152.3 millions in 1908-9, though it had been below the 1905-6 level meantime. In the interval the Post Office charges rose from £15.9 to £18.1 millions, but were more than covered throughout by revenue. The Army estimates were reduced, though Mr Haldane was reorganising the whole service, and the cost fell from £28.8 to £26.8 millions. The cost of the Navy too was reduced—declining from £33.3 to £32.2 millions in this period, and extras on capital expenditure were discouraged, nothing being added to former commitments. There was a growth indeed in the cost of the Civil Services from £28.4 to £32.3 millions. The principal causes of this, apart from a normal tendency upward in the expense of administration, were the Education estimates, which showed a growth of about £1 million, and the initiation of the Old Age Pension system at the opening of 1909, toward which £2.1 millions were found necessary ultimately to meet the expense of the quarter from January to March. By this time the expenditure under capital during the year had fallen to £2.6 millions, but the outstanding total under this head was still £51.4 millions.

The revenue fell from £153.8 in 1905-6 to £151.5 millions in 1908-9, but had been as high as £156.5 millions the year before, and when the circumstances are considered it

was surprising to find that surpluses aggregating £15 millions had been realised from 1904-5 to 1907-8. The result of 1908-9 proved eventually

to have been a deficit of £14,000, as receipts were much lower than the estimate. This deficit may be accounted for in part by the changes made during this period in taxation, and on the other hand by the foundation of Old Age Pensions, for which only temporary provision had been made. Mr Asquith's operations in taxation were important. In 1905-6 Mr A. Chamberlain had reduced the Tea Duty from 8d to 6d per lb, and also some warehousing charges, at a total cost of nearly £2 millions. In

1906-7 Mr Asquith fixed the Tea Duty at 5d readjusted the rebate on stripped tobacco and repealed the export duty on coal at a cost of about £3 8 millions. This was followed in 1907-8 by changes of much interest. Income Tax was at a shilling in the £ at which it had been left by Mr Chamberlain in 1904-5. Mr Asquith now fixed the duty on earned incomes which do not exceed £2 000 at 9d, provided the taxpayer claims the reduction by September 30th a concession which was computed to cost £1½ millions. That was balanced however by reframing the scale of ascending charges for Estate Duty more severely (£1 per cent up to £500, 10 up to £1 million and 10 for £1 million and 15 per cent on sums above that when the total exceeds £3 millions) to bring in £1 2 millions to revenue. Several minor concessions were also made on income tax. The most important budget reform however was the power taken to pay the sums hitherto transferred directly to the Local Taxation Account into the Treasury whence in future there should be paid to local authorities a fixed sum equal to their share in this year (1907-8), by this method an automatic growth of these grants was checked and the taxation by which the money had been raised accounted for without any interception in the Consolidated Fund. In 1908-9 again reductions of taxation were made. The Sugar Duty of 1901 was reduced to 1s 10d a cwt from 4s 2d at a cost of £3 6 millions; the Establishment Licences transferred for collection to County and Borough Councils (which had received them before by transfer from the Treasury) and marine insurance stamps reduced from 3d to 1d per cent. The Licences represented a loss of £1 650 000, and when the duty on glucose and on saccharine had been adjusted to the reduced sugar duty the total concession for the year was computed at £5 450 000. During the three years therefore remissions of taxation (including the licences transferred) amounted to £10 500 000 the additions £1 2 millions or a total reduction of £9 3 millions but it should be observed that this involved a shifting of a weightier portion to death duties while duties on tea, coal and sugar were either reduced or repealed. It may be added that provision was made for an excise duty on tobacco grown in Ireland and for the transfer of the care of excise duties from the Inland Revenue to the Commissioners of 'Customs and Excise'.

Mr Asquith's tenure of the Exchequer was distinguished also for his operations on the National Debt. During the South African War the Sinking Fund had been suspended for two years but interest on War Loans had been paid for two other years the sum devoted to the service of the debt had been reduced from £5 to £73 millions. From 1903-4 interest on the War Loans had been included among the permanent burdens on this charge which was raised first to £27 millions in that year and to £28 millions in 1905-6. Mr Asquith pursuing the rein-statement of credit for the period 1906-9 kept this charge at £8 5 £9 and £28 millions respectively thus devoting the largest amount recorded to swell the 'New' Sinking Fund. The result of this policy may be gathered by the figures of the triennial period 1905-6 to 1907-8 (inclusive). These were years of large surpluses, allocated to the 'Old Sinking Fund' and amounting to nearly £14 millions for the period and these payments together with large sums applied from the charge for the debt coupled with the purely financial operations of the Debt Commissioners reduced the 'dead weight' debt from £7.5 millions at which it had been left in 1905 to £7.11 4 in 1908 (March) or a reduction of £43½ millions. On the other hand the liabilities on capital expenditure had matured and grown from £41 6 to £50 8 millions, but as the policy by which they were incurred had been reversed by this time, the reduction on the 'dead weight' debt was so much gained.

When Mr Asquith handed over the work of the Exchequer to his successor in April 1908, the financial position had undoubtedly improved very considerably since 1905.

*Position in 1908.*

At the outset affairs were still in the shadow of the war and though trade was growing and even buoyant amid the shocks which it had to endure, public credit was low and public expenditure at a high figure. Consols, which had been at 113½ in May 1897 were 89½ in December 1905 (but in 1903 had been reduced from a 2½% to a 2½% security). In that situation a policy of caution and re-

trenchment was justified. As the revenue was elastic and the wastage of the war had been great it was wise to fortify the position by reducing debt and thus to aid, if only to aid recovery. It is probable that the still expanding imports and exports owed something to this though they dropped again in 1908 as compared with the bounteous year, 1907. Still amid undoubtedly great commercial prosperity Consols were only at 83 $\frac{1}{4}$  in December 1908 and they had been as low as 82 $\frac{3}{4}$  in prosperous 1907. During the war years however the progress of social reform was checked and while Mr Asquith was strengthening the finances the demand for amelioration in the condition of the working classes became insistent. Hence the institution of the Old Age Pension system by Mr Asquith in 1908 followed by the provision of Labour Exchanges in 1909 and later measures. Mr Asquith had left £1 200 000 to meet the cost of the Old Age Pensions during the first quarter of 1909 but it was found that £2 1 millions were required.

The Old Age Pensions scheme was designed to supplement the Poor Law by giving pensions to qualified persons of 70 years of age and upwards. As originally passed it did not extend to persons who had been in receipt of poor relief but after 1910 by an amending Act they were included. The chief qualification is that a pensioner shall not possess means above £31 10s a year (or 12s 1d per week) when a shilling a week will be payable and a further shilling for every shilling per week by which the means are shown to be less up to 5s each person when the means do not exceed £1 a year (or 8s 1d per week). A weekly 5s is the highest pension per person. Up to March 1917 there were about 942 160 who had been awarded a pension, but from the first the number awarded in Ireland was relatively much higher than in other parts of the Kingdom. The total cost has been much higher than the original estimates and apart altogether from the extension of the Act. The first quarter cost about £2 000 000 the year 1900-10 £8 7 millions 1910-11 £9 8 millions 1911-12 £11 7 millions and 1912-13 about £12 2 millions. It is reckoned that the services rendered by other State departments to the Pension service cost £450 000 in addition. On the other hand the reduction in the number of paupers receiving poor relief should be set off against this total—say 200 000 at £17=£3 400 000. This scheme of Old Age Pensions was the first of the Liberal attempts to realise a constructive social reform programme the effect of which upon the finances will be noticed later.

In April 1908 Mr Lloyd George went to the Exchequer (though the budget that year was Mr Asquith's) and the Social Reform programme was further developed under him. The season of careful retrenchment was over and the Pensions Act was the harbinger of a still more important reform involving increased expenditure. Under the Unemployed Workmen's Act 1905 the Local Government Board had been entrusted with a sum of money annually to be used in relieving distress by assisting to open relief works. For some years that sum was £200 000 but for 1912 it was only £100 000 as unemployment had decreased substantially. This was partly due to the Labour Exchanges Act 1909. But apart from the great reform Mr Lloyd George had in contemplation which took shape in the National Insurance Act 1911 it was his task from the first to finance a Liberal social programme and this policy left its mark deeply on the revenue and expenditure from 1908-9 to 1912-13. Mr Asquith had provided only for the first quarter of 1909 for the cost of the Old Age Pensions and the new Chancellor of the Exchequer had at the outset to find means to defray an expenditure which was a novelty upon the estimates.

The total gross expenditure for 1908-9 was £152 3 millions that for 1911-12 was £178 5 and the estimates for 1912-13 £186 9 millions which with a further £900 000 for the Navy and other supplementary demands brought the total to £188 millions. Nearly £36 millions of the £38 millions of increase since December 1905 fall therefore to be accounted for under the second Chancellorship of the Liberal Administration. Just as £2 millions were for postal purposes in Mr Asquith's period so may £5 8 millions be accounted for as the Post Office required £23 8 millions in 1912-13 a sum including the administration of the newly acquired telephones. This comparison requires correction on the other hand for though Mr

chequer*

*Growing  
expenditure  
1908-13*

Asquith left the Debt service at £28 millions in 1912-13 only £24·5 millions were applied to that object. There is also the necessity to replace the £1 650 000 which the transfer of the Establishment Licences involved which sum was now omitted from the gross expenditure. This would leave about £35½ millions of increased expenditure to be provided for in 1912-13 as compared with 1908-9. For the reduction of the Sinking Fund it was pleaded that Mr. Asquith had provided so largely during the previous three years but obviously the new expenditure which was decided upon called for a larger free income. As usual such a transfer as that of the Licences and the suspension of the Sinking Fund disguised and understated the increase of expenditure.

As the Debt, the Consolidated Fund services grants to local taxation, and such fixed services show a decreased total, the increased total expenditure must be sought in the supply services for each year. Expenditure under Capital does not call for further notice for with the exception of operations for telegraphs and telephones, that expenditure had not been allowed to continue. Turning to the supply services the Army took £28·8 in 1905-6, £26·8 in 1908-9 and £27·8 millions in 1912-13. We may look back usefully to 1895 and find that the Army then cost £17·8 millions. The Navy too which took £17·5 in 1895 required £33·3 in 1905-6, £32·2 in 1908-9, and £45 millions in 1912-13. The Revenue departments which cost £3·1 in 1905-6 took £3·3 in 1908-9, and £4·2 millions in 1912-13. The general Civil Services which took £28·4 in 1905-6 needed £32·3 in 1908-9 and nearly £50 millions in 1912-13. These facts enable us to trace the increased expenditure, and the swift channels in which it ran. Army expenditure is still below that of 1905-6, though £1 million above 1908-9 but since 1895 the cost had increased by over 56%. Naval expenditure is now nearly £12 millions more than 1905-6 and £13 millions higher than in 1908-9 comparing with 1895, it has increased by £2½ millions or 15% in a little over 17 years. As for the Civil Services and the Revenue departments together which cost £31½ millions in 1905-6 and in 1912-13 about £54 millions we find that as the cost was only £35·6 in 1908-9 some £18½ millions of the increase had been registered since then and £3 millions or so (about 71 per cent) since 1905-6. If to the £3½ millions taken from the Sinking Fund and £1·6 millions less for licences placed in the total we add the increases on Army, Navy and Civil Services the additions made from 1908-9 to 1912-13 amount to about £3½ millions.

A further analysis of the £18½ millions added to the cost of the Civil Services as shown in 1912-13 is required. About £1 million was on account of the Revenue departments a large portion of which £530 000 means the Valuation department of the Inland Revenue. Old Age Pensions £12½ millions is however the largest item. National Insurance and Labour Exchanges appear for £2·8 millions (and the cost of medical benefits seemed likely at the end of 1912 to be £1½ millions more) while Education takes £1½ millions. The rest of the £18½ millions of increased expenditure about £1·3 millions may be traced to the various official bureaux.

This analysis of the trend of expenditure during 1908-9 to 1912-13 will serve to exhibit the position as conceived at the opening of this period. The House of Commons had been committed to a large and somewhat indefinite expenditure on Old Age Pensions for which no permanent provision had been made. A further extension of the social programme was in contemplation. There was uneasiness in the international situation, and a prospect of the growth of armaments administration was becoming more expensive. What steps were taken to adjust the national finance to the national needs?

Expenditure depends largely on policy and the taxation to meet it is intimately related to that policy. The measures taken to raise revenue in the budget of 1909 afterwards found in the Finance Act of 1910 together with the Constitutional crisis which resulted will always be famous in English history.

Before giving a summary of the changes made in the revenue laws it may be well, however to give a brief account of the revenue to the end of this period.

The revenue in 1908-9 was left at £151·5 it was £131·6 in 1909-10 and £203·8 in 1910-11 (both abnormal figures as explained below), and in 1911-12 £185 millions.

*The Trend  
of Expendi-  
ture*

*Revenue  
1908-13*

The estimate for 1912-13 amounted to £187 1 millions the borrowing for capital expenditure being about £2 9 millions principally for telegraphs and telephones. On 1908-9 there was a budget deficit of £714 000 but on the combined years 1909-10-11 there was a surplus of £5 6 millions, and on 1911-12 a surplus of £6 3 millions. The figures already given show that the relation between revenue and expenditure in 1912-13 was tighter, but trade was favourable the revenue returns showed much elasticity in certain directions and yet expenditure as has been shown, had not ceased to grow. These figures show plainly that this was a critical time when the due working of the Treasury was much disturbed. An account of Mr Lloyd George's budget of 1909-10 and its changes in taxation will go far to account for that disturbance, especially as the Budgets of succeeding years made no changes of importance in the revenue laws.

The Finance Bill of 1909 was introduced on May 26th (after the discussions on the Budget statement of April 30th), and was read a third time on November 4th only to be rejected on the 30th by the Lords, who wished to have it submitted to the country. The budget statement anticipated a total revenue of £162 5 millions as against £151 5 realised for 1908-9. The actual revenue proved to be £131 6 in 1909 consequent upon the rejection of the Bill by the Lords for the custom of collecting the Income Tax and tea duty which are annual taxes on the authority of a resolution of the House only had to be suspended—a custom judicially declared since (Nov. 1912) not to have any legal warrant. Some £30 millions of the huge revenue of 1910-11 was therefore arrears of the revenue of 1909-10. After the general election of January 1910 which maintained the government in office the Finance Bill (1909-10) was reintroduced on April 20th and the Lords agreed to it without amendment on April 29th. There was a second Finance Act of 1910, the ordinary one for the year but it made no change in revenue laws.

According to Mr Asquith (May 5th) the budget of 1909 contained proposals adequate for the year and for the prospective necessities of years to follow without deviating from the principles and practices of free trade and without imposing additional burdens upon the necessities of the people. The Chancellor of the Exchequer too on the third reading (Nov. 4th) said that the taxes had been arranged to meet the requirements not only of the year but also of the future. A summary of the provisions for new taxation may now be given by which it was proposed to increase the revenue while at the same time £3½ millions were saved by reducing the Sinking Fund by that amount.

*Beer* duty was increased from 8s to 8s 3d per barrel. *Spirits* home from 11s to 14s 9d per proof gallon and imported from 11s 4d to 13s 1d. *Tobacco* 8d per lb added to 3s with adjustments in Ireland and Scotland and on cigars &c. *Motor Spirit* 3d per gallon with certain rebates. *Liquor Licences* were increased and the whole code reframed. *Motor Car Licences* were also increased and graduated according to horse power. *Estate and other inheritance duties* were revised again more severely especially the scale on Estates exceeding £5 000 in value. Settlement Estate Duty was increased from 1 to 2 per cent and powers of disposition were amended the rates of Legacy and Succession duties were made higher. In *Stamps* the duties were doubled on Conveyances and Leases and on Bearer securities while those on Contract notes were increased and graduated from 6d to £1 according to the amount in question. The *Income Tax* was raised from 1s to 1s 2d in the £ and abatements on the income of those resident out of the United Kingdom abolished. A *Super Tax* of 6d was imposed on incomes over £5 000 assessable on so much as exceeds £3 000. On the other hand the concession of a rate of 1s in the £ on earned incomes which exceed £2 000 but not £3 000 extended this innovation regarding earned incomes (this in 1910-11 was a concession which involved £87 500) there was an allowance of £10 on the assessment for every child under 16 on incomes between £160 and £500 and additional relief was granted under Schedule A on account of the cost of maintenance repairs insurance &c. The chief novelty of the Budget was the *Land Value Duties* the provisions respecting which are somewhat complicated with regard to assessment which also involved a scheme for securing a valua-

*Provisions  
of Finance  
Bill 1909 10*

tion of all land in the United Kingdom. The principle to be applied was easily stated, but in application is found very complex, while the terms of the Act in these sections are confessedly difficult not to say obscure. The duties imposed were four, viz the *Increment Duty* of 20% on the increase in value of the land site, the *Undeveloped Land Duty* of  $\frac{1}{2}$ d in the £ on capital value, the *Reversion Duty* of 10 per cent on benefits accruing at the termination of a Lease and *Mineral Rights Duty* of 1s in the £ on mineral rents, way, leaves &c. These land value duties are not payable on agricultural land.

There were some general provisions touching this revenue which deserve notice, such as the instruction that premiums on the grant of new on liquor licences shall be paid into the Exchequer, that 5% shall be paid to county councils in Ireland on the amount of the duty levied on motor cars, and that the proceeds of the duties on motor spirits and on motor car licences shall be paid to a fund as a grant (under the Development and Road Improvement Funds Act 1900) for road improvement. It may be added that when the House of Commons passed the Bill a second time provisions were added to confirm the collection of taxes while the Bill was passing the legislature.

Whatever might be the political objections to the Budget of 1909, it has already been shown that its operation resulted in raising the gross revenue from £151.5 in 1908-9

to £187.1 millions estimated in 1911-13, thus showing a growth of £35.6 millions in the interval. A certain amount of the increase arose, however, from non-tax revenue, £7 millions from Postal Services alone. The tax revenue in 1908-9 was £125.5, in 1911-12 (a normal year) it was £155 millions in 1912-13 about £153.8 millions. The only change of substance in 1911-12 was the withdrawal of the 2d per lb customs duty on ground cocoa which involved about £60,000 only, but the tax revenue for 1912-13 showed an expectation of £28.3 millions above 1908-9. A revised estimate in 1909-10 of the anticipated effect of the new taxes gave a total of £1  $\frac{1}{2}$  millions for that year and £17.7 millions ultimately, but this last was exclusive of spirits, liquor licences and the land value duties. A comparison of the differences between the revenue derived from various chief heads in 1908-9 and in 1912-13 will be instructive. Customs yielded more by £4.7, Excise by £4.1, Estate Duties by £1.1, Stamps by £1.7 and Income Tax (including Super Tax which yielded £3 millions in 1911-12) by £10.2 millions. The House Duty also continues to show a growing yield. These are remarkable figures, no doubt, and speak much of the resources of the country. Each of these items, too, when compared with the expectation of 1909, shows a fulfilment of hopes, with the doubtful exception of the Excise, while the changes in Income Tax estimated to produce an extra £6  $\frac{1}{2}$  millions actually produced £10  $\frac{1}{4}$  millions. The Land Value Duties, on the other hand, which were originally estimated to produce £600,000 in the first year (and much more ultimately) proved disappointing, the results being (1910-11) £50,000 (1911-12) £481,000 (1912-13 estimated) £545,000. Much revenue from this source could not be expected, indeed, until the land valuation of the whole kingdom affording a datum for the duties had been completed, which could not be earlier than 1915. Meanwhile the larger part of the revenue from those land value duties is derived from the Mineral Rights Duty, the yield of the others being small.

Both direct and indirect sources were appealed to for the additions to revenue. The new indirect taxes (tobacco, alcoholic drinks and liquor licences) contributed £8 out of the £28.3 millions by which the revenue of 1911-13 exceeded that of 1908-9. On the direct side there are additions to taxes on property like the Estate duties and largely the Stamps, and the half million from Land Value duties, and finally the high rate of 1s 2d in the £ on income tax (coupled with a super tax) which in 1912-13 yielded over £44 millions. The concrete results of the Budget of 1909-10, which for 1912-13 drew additional revenue of £8.8 millions from indirect and £19.5 millions from direct taxation, were naturally pointed to in 1912 by Mr. Lloyd George as justifying his policy.

Not unconnected with the incidence of the new taxation were some applications of the revenue to be raised, such as the provision of a *Development Fund* and of a *Road Improvement Fund*. In 1909 an Act to form Boards, &c. to manage these Funds was

passed which directed that a sum of £500,000 should be placed to the credit of the Development Fund annually for four years beginning with 1910-11 and the Finance

**The Development and Road Improvement Funds** Act of 1909-10 transferred a sum equal to the "net proceeds of the duties on motor spirit and 7 licences for motor cars to the Road Improvement Fund. According to the Act of 1909 £400,000, in addition to the £500,000 granted by that Act was voted to the Development Fund and the Board in 1910 was made to consist of 8 members instead of five. The half million was paid into that fund again in 1911-12, but by the Finance Act of 1911, £1½ millions were set aside from surplus revenue to be paid to this fund during the years ending in March 1913, 1914 and 1915. To the Road Improvement Fund was paid in 1910-11 over £860,000 and in 1911-12 £1,209,800. In 1912-13 this fund was estimated to reach £1,225,000. The functions and duties of the Road Board are indicated by its title. As for the Development Fund that is used for the promotion, by government departments, colleges, institutions or persons *not trading for profit* by means of a grant or a loan of agriculture, forestry, drainage, harbours, fisheries, transport stock, and so forth in many cases by way of experiment. By means of these two Funds about £1½ millions a year are now used so as to benefit property and that aspect may have to be reconsidered in any reform of local taxation.

The National Insurance Act of 1911 though a measure of great social and financial interest does not enter into the finances of this period beyond the appropriation of £8 millions in 1911-13.

**The National Debt** which was left at £711.4 in 1908-9 had been further reduced to £614.1 millions in March 1912 the total dead weight Debt being lower by £36.7 millions. Together with the £43½ millions paid off under Mr Asquith (in

**National Debt 1908-13** cluding £11.8 millions for 1905-6 as provided in Mr A. Chamberlain's Budget) this makes a reduction of over £80 millions during seven years.

The disposal of the surpluses of the second period is worth notice. The small deficit left by Mr Asquith in 1908-9 was followed by the confusion of the finances in 1909-10 at the rejection of the Finance Bill by the Lords but the conjoint years 1909-10-11 yielded a surplus of £5.6 and 1911-12 yielded £6.5 millions which strictly should have gone to the Old Sinking Fund. From the first of these two as already stated £1½ millions were placed to the credit of the Development Fund. Another £1½ millions were used to provide Sanatoria for the treatment of tuberculosis and £50,000 as a loan to the East African Protectorate. In June 1911 the Chancellor of the Exchequer announced that from the 1911-12 surplus of £6.5 millions nearly £1 million would be required for Naval purposes and £500,000 would be advanced to Uganda and East Africa as a loan. In this connection also it should be recollected that not only was the action of the 'New' Sinking Fund suspended in part in 1909-10 owing to the confusion of that year but that the Debt Service Charge was reduced from £28 to £24.5 millions.

The political controversies which have centred round Lloyd George's finance are still too acute for final criticism. To it are attributed by its opponents the largely increased export of British capital and the fall in the value of Consols and other 'gilt edged' securities. Whether the incontestable growth of British investments abroad is a good thing or a bad thing for the nation is however itself a matter of controversy. The price of Consols, whatever may have been the influence of politics, has undoubtedly been affected by a number of other causes such as the extension of trustee stocks and particularly the opportunities offered by a bounding commerce for more remunerative investments. The drop from 113½ in 1897 when the interest was 2½ or even from 89½ in December 1905 when the interest was ½ per cent, to 72½ in October 1912 is in itself a serious one. But it points rather to the importance of maintaining the Sinking Fund than to any actual decline in British credit. In so far as the price of Consols is a test of British credit they compare favourably with any national securities elsewhere. On November 15, 1912 Consols at ½% were 75½ (equivalent to over 90 at 3%) and German 3% were 16-78.

(W. M. J. WILLIAMS)

A few additions may be made here to the record of British obituary already contained in the *E B* in respect of the period (1909-10) when the 11th edition was passing through the press

The deaths of Bishop **Alfred Barry**, formerly primate of Australia (b 1826 d at Windsor April 1 1910 see *E B* iii 444) General Sir **William Butler** the Irish soldier and writer (b 1839 d in Tipperary June 7 1910 see *E B* iv 888) Prof **J E B Mayor**, the classical scholar (b 1825 d at Cambridge December 1 1910 see *E B* xvii 937) and Sir **Walter Palmer** 1st Bart of Huntley & Palmers (b 1858 d in Berkshire April 16 1910 see *E B* xx 645) may be noted in connection with the biographical articles referring to them.

In the case of other people referred to in the *E B* as then living the deaths occurred in 1910 of Lieut **Boyd Alexander**, the African explorer (b 1873 killed by natives at Nyeri in Wadai April 2 see *E B* i 353) Col **Claude Regnier Conder**, R.E. LL.D. the Palestinian geographer and archaeologist (b 1848 d February 16 see *E B* xi p vi) **Reginald Frank Doherty**, the lawn tennis player (b 1874 d in London December 29 see *E B* xvi 303) Sir **Thomas Drew**, the Irish architect president of the Royal Hibernian Academy (b 1838 d in Dublin March 13 see *E B* ii 441) Rev **Hereford Brooke George**, the New College (Oxford) tutor military historian geographer and Alpine climber (b 1838 d December 15 see *E B* xv 556 Jungfrau) **Robert Walker Macbeth**, the Scottish painter (b 1848 d in London November 1 see *E B* xx 500) **Frank Podmore**, the associate of Gurney and Myers in psychical research (b 1856 d near Malvern August 14 see *E B* xxii 15) Admiral Sir **Harry Rawson**, governor of New South Wales 1902-09 (b 1843 d in London November 3 see *E B* iii 733) and Dean **Edward C Wickham** of Lincoln ex headmaster of Wellington (b 1834 d in Switzerland August 18 see *E B* xii 72).

Archbishop **William Dalrymple MacLagan**, who had resigned the archbishopric of York in 1908 died in London on the 19th of September 1910. Born in Edinburgh in 1826 he had begun life in the army retiring as lieutenant in 1852 in order to enter the church and after studying at Cambridge he became a London rector first at Newington and then at St Mary Abbott's Kensington where his success led to his selection as bishop of Lichfield in 1878. In 1891 he was made archbishop of York. Both as bishop and archbishop MacLagan did much to stimulate Church work both among the clergy and the laity. In 1899 he sat as assessor with Archbishop Temple of Canterbury when the decision was given against the use of incense and other ritualistic practices (see *E B* xiv 357) and though personally a strong High Churchman he loyally upheld the Primacy's opinion in his diocese.

Mention must be made here too of the death in London on December 12 1909 of the eccentric art collector **George Salting** (b Australia 1836) whose name will endure because of his bequest to the nation of his unique treasures porcelains etc. now housed in several rooms of the Victoria and Albert Museum.

The premature death in London on December 29 1910 of **Samuel Henry Butcher**, the classical scholar and M.P. for Cambridge calls for a fuller notice. He was the eldest son of Samuel Butcher classical tutor and lecturer at Trinity College Dublin and subsequently Bishop of Meath. Born in Dublin on the 16th of April 1850 he went to Marlborough in 1864 and won an open scholarship for classics at Trinity College Cambridge in 1869. In 1870 he won the Bell scholarship at Cambridge. In 1871 the Waddington scholarship and in 1871 and 1872 the Powis medal. In 1873 he graduated as senior classic and won a Chancellor's medal. He took an assistant mastership at Eton for a year but returned to Trinity Cambridge as fellow and lecturer in classics. On his marriage in 1876 to Rose daughter of Archbishop Trench of Dublin (see *E B* xxvii 242d) he had to resign his Trinity fellowship and was then elected tutor and married fellow at University College Oxford. In 1882 he succeeded Prof Blackie as professor of Greek in the University of Edinburgh. During his tenure of this chair he became widely known not only as a scholar but as a judicious administrator and educational reformer. He was a member of the royal commission which was appointed after the passing of the Scottish Universities Bill in 1889 to reform the whole academical system in Scotland and which reported in April 1900. In 1902 Mrs Butcher died and two years later he resigned his professorship and went to reside in London. He had been a member of the Royal Commission of 1901 on University Education in Ireland which produced an abortive report with 8 reservations in 1903 and he was also included on the Royal Commission of 1906. In the latter year on the death of Sir Richard Jebb he was chosen as a Unionist to represent the University of Cambridge in Parliament where his brother J. G. Butcher (b 1853) a well known barrister had sat for many years as Unionist member for York. He made an effective maiden speech on the Irish University Bill and frequently took a valuable part in debate. His grave and thoughtful style and gift of natural eloquence were combined with a charm and sincerity which won him universal respect and affection no less in public than in private life. He was however above all a fine Greek scholar full of the true spirit of classical learning with a remarkable

power of literary expression shown especially in such publications as his *Aspects of the Greek Genius* (1891) *Aristotle's Theory of Poetry and Fine Art* (1895) *Greek Idealism in the Common Things of Life* (1901) *Harvard Lectures on Greek Subjects* (1904) and his prose translation (with Andrew Lang) of the *Odyssey* (1879). In 1907 he was president of the English Classical Association of which he had been one of the principal founders in 1903. He was also the first president of the Irish Classical Association and an original member of the British Academy becoming its president in 1909. In 1908 he was appointed a trustee of the British Museum. Two years later his health began to fail and he made his last public appearance and delivered his last speech on the 21st of October 1910 at the dinner given to celebrate the publication of the 11th edition of the *Encyclopædia Britannica* by the Cambridge University Press.

## 1911

The following persons of whom separate biographical notices are given in the *E B*, died in 1911

**Edwin Austin Abbey** (b 1851 see *E B* i 11) the Anglo American painter on August 1 in London. Besides bequests to the Corcoran Art Gallery Washington the Boston Art Museum and the British National Gallery Mr Abbey left his house in Chelsea London after the death of his widow to the Royal Academy for the use of the president.

**William Alexander** (b 1824 see *E B* i 565) Protestant Archbishop of Armagh and Primate of Ireland at Torquay on September 12. He had resigned his see on January 30 and had been created a G.C.V.O.

The 9th Earl of Carlisle (b 1844 see *E B* v 341) in London on April 16th.

**Edward Dicey** (b 1835 see *E B* viii 178) the publicist in London on July 7th.

**Sir Charles Dilke** (b 1841 see *E B* viii 271) the Liberal statesman and author in London on January 26th.

**Sir Francis Galton** (b 1823 see *E B* vi 427) the anthropologist and founder of eugenics at Haslemere on January 17th.

**Sir William Gilbert** (b 1836 see *E B* xii 10) author of the *Bab Ballads* and collaborator with Sir Arthur Sullivan in the Savoy operas on May 29th being drowned in trying to rescue a lady from a pond in his grounds at Harrow Weald.

**Sir Eldon Gorst** (b 1861 see *E B* xii 261) Lord Cromer's successor as British Agent and Consul general in Egypt on July 12th at Castle Combe Wiltshire. He had resigned his position in Egypt shortly before he died being succeeded by Lord Kitchener.

**Sir Robert Hart** (b 1835 see *E B* xiii 30) long the head of the Chinese Customs at Great Marlow on September 20th.

**Sir Joseph Hooker** (b 1817 see *E B* xiii 671) the eminent botanist at Sunnydale on December 10th.

**Baron James of Hereford** (b 1829 see *E B* xiv 144) the Liberal Unionist statesman and lawyer at Epsom on August 18th.

**Thomas Rupert Jones** (b 1819 see *E B* xv 500) the geologist and palaeontologist at Chesham Bucks on April 13th.

**Alphonse Legros** (b 1837 see *E B* xvi 380 ix 806) the artist on December 8.

**Sir Alfred Lyall** (b 1835 see *E B* xvii 148) the Anglo Indian administrator and man of letters in the Isle of Wight on April 11th.

**John Brown Paton** (b 1830 see *E B* xix 930) the Congregationalist divine on January 26th.

The 1st Baron Northcote (b 1846 see *E B* xiv 280) Governor general of Australia 1903-08 at Ashford on December 29th.

The 4th Earl of Onslow (b 1858 see *E B* xx 113) formerly a Conservative Cabinet Minister and governor of New Zealand on October 23.

**William Clark Russell** (b 1844 see *E B* xxiii 865) the writer of sea stories on November 8th.

**Edward Whymper** (b 1840 see *E B* xxviii 617) the artist and Alpine climber at Chamounix on September 16.

"John Strange Winter" (Mrs Arthur Stannard b 1856 see *E B* xxviii 734) authoress of *Bootles Baby* in London on December 13.

The 1st Viscount Wolverhampton (b 1831 see *E B* xxviii 781) the Liberal statesman on February 25. He had retired from the Asquith Cabinet early in 1910.

References are also made in the *E B* to the following who died in this year.

**Hermann Adler** (b 1849 d July 18) the Chief Rabbi of the United Synagogue London (see *E B* xxvi 292a).

**James Aumonier** (b 1832 d October 4) the landscape painter (see *E B* xx 501c). His *Sheep Washing* and *Black Mountains* are in the Chantrey Bequest collection at the Tate Gallery.

**Charles Frederick Moberly Bell** (b 1847 d April 5th) the managing director of the *Times* (see *E B* xiv 558a). Born in Alexandria the son of an Egyptian merchant he was educated in England but in 1865 went back to Egypt and engaged in business. He

soon began sending occasional correspondence to the London *Times* and from 1875 onwards devoted himself mainly to journalism. By 1880 when he founded the *Egyptian Gazette* he had become the regular correspondent for the *Times* in Egypt. He also published *Khedives & Pashas* (1884), *Egyptian Finance* (1887) and *From Pharaoh to Fellah* (1888). In 1890 he was summoned to London to take the post of manager (nominally assistant manager) of the paper at a time when it had suffered heavy financial losses over the proceedings connected with the Farnell Commissions (*E B* xx 858). From that date he devoted all his masterful energies to the journal he served and up to his death his was the personality most prominently associated with it in the public eye. When the Times Publishing Company was formed in 1908 and mainly through his personal exertions the financial control passed from the Walter family to Lord Northcliffe he became managing director.

**Sir Rubert William Boyce** (b 1863 d June 16) the bacteriologist and pathologist (see *E B* xx 779). Born in London he was educated privately in Rugby and at Paris and afterwards at University College London where he took his M B in 1889 and was in 1892 appointed constant professor of pathology. In 1894 he became professor of pathology in University College Liverpool and in 1898 bacteriologist to the Liverpool Corporation. He did much to promote the foundation of Liverpool University in 1902 and the endowment of the four chairs of bio-chemistry, tropical medicine, comparative pathology and medical entomology. He had in 1898 worked with Sir Alfred Jones to establish the Liverpool School of Tropical Medicine and in 1901 organised a series of expeditions to the tropics to investigate disease. In 1905 he went himself to New Orleans and British Honduras and in 1910 to West Africa to examine epidemics of yellow fever. He published *Mosquito or Man* (1909), *Heat & Progress and Administration in the West Indies* (1910), *Yellow Fever and its Prevention* (1911) and many papers for scientific societies. He was knighted in 1906.

**Sir Percy William Bunting** (b 1836 d July 22) editor of the *Contemporary Review* (see *E B* ix 802 b).

**Sir Caspar Purdon Clarke** (b 1846 d March 29) the art expert. Educated privately at Hydenham and Boulogne in 1862 he entered the art schools at South Kensington and was trained as an architect. In 1865 he entered H. M. Office of Works and in 1867 was attached to the works department of the South Kensington Museum. He travelled extensively for the museum purchasing objects of art and at the same time carried on his profession as an architect. In 1883 he became keeper of the India Museum at South Kensington in 1892 keeper of the art collections at South Kensington in 1893 assistant director and in 1896 director. This post he held until 1905 when he became director of the Metropolitan Museum New York (*E B* xix 614) resigning in 1910. He was knighted in 1902.

**Ernest Crofts, R.A.** (b 1847 d March 19) the historical painter (see *E B* xx 500d). He had been keeper of the Royal Academy since 1898.

**John Passmore Edwards** (b 1823 d April 22) newspaper proprietor and philanthropist. The son of a Cornish carpenter and mainly self educated in 1844 he became London representative in Manchester of the *Sentinel* an Anti Corn Law weekly newspaper. A year later he went to London and began lecturing together with the practice of journalism starting several small periodicals which in succession failed until in 1862 he bought the *Building News* which by 1866 had made a handsome profit. In 1876 he bought the London halfpenny evening newspaper the *Echo* and controlled it for 20 years. He was an ardent peace advocate and supported a number of humanitarian and philanthropic objects endowing various libraries and other institutions which bore his name notably the Settlement in Tavistock Place Bloomsbury. He also founded a Passmore Edwards scholarship at Oxford for the conjoint study of English and classical literature. He published privately an autobiography *A Few Footprints* (2nd edition 1906).

**Edward Mills Grace** (b 1841 d May 20) the cricketer. A brother of Dr W. G. Grace (see *E B* xii 308d) he was a player of first-class cricket for 35 years (see *E B* vii 441). He had been Coroner for West Gloucestershire since 1875.

**Lady Halle** (Madame Norman Neruda) the famous violinist (b 1839 d April 15) (see *E B* xii 853b).

**John Lockwood Kipling** (b 1837 d January 30) the Anglo Indian artist, curator of the Lahore Museum 1875-93 and father of Mr Rudyard Kipling (see *E B* xi 825).

**Sir Charles Bennett Lawes-Wittewronge**, 2nd Bart (b 1843 d October 6) the sculptor (see *E B* xxiv 503b and 506). The only son of Sir John Lawes of Rothamsted (see *E B* xvi 300b) he was educated at Eton and Cambridge where he was a notable athlete. Subsequently he devoted himself to sculpture, while doing much also to further the scientific side of the Lawes Agricultural Trust founded by his father of which he was chairman. In 1882 he was defendant in a famous libel action brought by another sculptor Mr Belt for a criticism published in *Vanity Fair* imputing dishonesty to Mr Belt in taking credit for work done by another man. The question of how much a sculptor may be aided by others in work to which he attaches his name was inconclusively debated through a long and costly trial and the verdict of the jury awarding £5,000 damages to the plaintiff was much discussed at the time.

**General Sir Robert Cunliffe Low, G.C.B.** (b 1838 d August 4) a famous soldier. Entering the Indian army in 1854, he served through the Mutiny. As Director of Transport

he organised the mobilisation of troops for the campaign of 1880-81 including the march from Cabul to Kandahar. After some years of service as Lieutenant he commanded the Chitral Relief Expedition of 1895 (see *E B* vi 252). Retiring in 1905 he was appointed Keeper of the Crown Jewels in 1909.

**George Robert Milne Murray, F.R.S.** (b 1858 d December 16) the well known botanist younger brother of A. S. Murray (see *E B* xix 38). As keeper of the Department of Botany at the British Museum his researches were principally devoted to algae and cryptogams in the pursuit of which he made several voyages notably in 1901 as scientific director to Capt. R. F. Scott's Antarctic Expedition.

**Frederick William Pavy** (b 1829 d September 19) the well known physician. He was for years the chief authority in Europe on diabetes (*E B* xviii 62) and wrote various works upon digestion and the metabolism of the carbo-hydrates.

**Sir Herbert Hope Risley** (b 1851 d September 30) the Anglo-Indian Civil Servant and anthropologist. His principal work was done in connection with Indian ethnography, the discussion of the caste system etc. and he published under Government auspices some important volumes of anthropometric data. He had charge of the Indian Census operations of 1901. He was appointed Secretary of the Judicial Department of the India Office in 1910.

**General Sir Frederick Charles Arthur Stephenson, G.C.B.** (b 1821 d March 10) Constable of the Tower of London since 1898. He fought in the Crimea and served in China from 1857 to 1861. From 1883 to 1888 he commanded the army of occupation in Egypt (see *E B* ix 123, 126).

**Meredith White Townsend** (b 1831 d October 21) the well known journalist. Born in Suffolk and educated at Ipswich grammar school in 1848 he went out to India and four years later became editor of the *Friend of India* acting also for some years as *Times* correspondent. In 1860 he returned to England and purchased the weekly *Spectator* (*E B* xix 562). With R. H. Hutton (*E B* xiv 16d) he was joint editor until 1898 and he was largely instrumental in making it an established success.

**Bishop John Wordsworth** of Salisbury (b 1843 d August 16) the classical scholar and divine son of Dr. Christopher Wordsworth (afterwards Bishop of Lincoln) and grand nephew of the poet (see *E B* xxviii 825c).

The obituary for 1911 also included the following names of people of public interest concerning whom brief biographical data are appended.

**Sir John Aird, 1st Bart.** the famous engineer and contractor d January 6th. Born in London on the 3rd of December 1833 the only child of John Aird Contractor for gas and water plant he joined his father's business at eighteen. He was entrusted with the removal of the Crystal Palace buildings for the Great Exhibition of 1851 from Hyde Park and their re-erection at Sydenham and took part in many large enterprises at home and abroad such as the Hampton and Staines reservoirs the water works of Amsterdam Copenhagen Moscow Bahia Para Calcutta Simla and Berlin and later (in the joint firm of Lucas & Aird afterwards John Aird & Co.) the St. John's Wood Railway the Hull & Barnley Railway and Docks the West Highland Railway and the great Assuan Dam across the Nile (see *E B* xiv 850a). He represented North Paddington in Parliament as a Unionist from 1887 to 1905 and was its first mayor in 1900. In 1901 he was created a baronet.

**William George Aston** a well known authority on Japanese literature b 1841 d Nov. 22nd. He entered the British consular service in Japan in 1864. His Japanese grammars and translations were the first good English books on the subject.

**Harold Kyrie Bellew**, the actor d at Salt Lake City Utah November 2. B. in 1855 in Lancashire he first appeared on the stage in Australia in 1874 and after several London engagements he joined Henry Irving for two years at the Lyceum in 1878. He had the reputation of being the handsomest man on the stage. In 1888 with Mrs. Brown Potter's company he toured round the world. For the last ten years of his life he had been playing in the United States in romantic and modern plays.

**Sir Nathan Bodington**, vice-chancellor of Leeds University b 1848 d May 12th. A graduate of Wadham Oxford he became a fellow of Oriel and in 1882 professor of Greek and principal of Yorkshire College Leeds. It was owing to his efforts that the college was endowed and chartered in 1903 as a university.

**Colonel Sir Edward Ridley Colborne Bradford** 1st Bart. the Anglo-Indian soldier and London Police Commissioner d May 13th. Born in Buckinghamshire on the 27th of July 1836 and educated at Marlborough in 1853 he went to India as a cadet in the East India Company's service and joined the 2nd Madras light cavalry. He served with distinction through the Indian Mutiny and till 1863 when he lost an arm in tiger shooting he then accepted political office serving as political agent chief of native police and after 1878 chief commissioner of Ajmere and in control of all relations with the Rajput chiefs. In 1887 he was recalled to the India Office in London and from 1890 to 1903 he was commissioner of the London Metropolitan Police. He was created a baronet in 1902.

**Henry Broadhurst**, the English Labour Leader and Liberal politician d at Cromer October 11th. Born at Littlemore near Oxford on the 13th of April 1840 the son of a stonemason he was educated at the village school and at the age of 13 was apprenticed to

his father's trade. He worked at it for nearly twenty years going to London finally in 1865 where he was employed in the building of the House of Commons. In 1872 he was elected chairman of the mason's committee during a strike and from that time was prominent as a trade union official. In 1875 he was elected secretary of the parliamentary committee of the trade union congress. He entered parliament in 1880 as Liberal member for Stoke-on-Trent. In 1885 he was elected for the Bordesley division of Birmingham and in February 1886 was appointed under-secretary to the Home Office going out with the Gladstone government later in the year. He belonged to the older school of trade unionism and was opposed to such demands as an 8 hours day fixed by law. His moderate policy was defeated at the trade union congress of 1890 and he then resigned his secretaryship. Both in 1892 and 1893 he was unsuccessful in his parliamentary candidatures. In 1892 he was appointed a member of the Royal Commission on Labour and in 1894 he was elected Liberal member for Leicester which seat he held until 1906 when he retired from ill health. He published the story of his life in 1901 and a book on *Leasehold Emfranchisement* in conjunction with Lord Loreburn in 1885.

**Lady Cohn Campbell** (*nee* Gertrude Elizabeth Blood) d. in London Nov. 11th. In 1886 she obtained a separation from her husband a son of the duke of Argyll after a long and painful suit and subsequently she became well known as an art critic and journalist.

The 3rd Earl of **Cawdor** (Frederick Archibald Vaughan Campbell) a prominent Unionist politician d. at Stackpole Court Pembrokeshire February 8th. Born at Windsor on the 13th of February 1847 he was educated at Eton and Christ Church Oxford. From 1874 to 1885 he was Conservative member for Carnarvonshire and succeeded to the peerage in 1898. In 1890 he became a director of the Great Western Railway and chairman in 1895 and in this capacity earned a high reputation for business ability. On the 6th of March 1905 he became First Lord of the Admiralty in Mr. Balfour's cabinet and held that post till the fall of the government in December. Under him the Dreadnought and invincible the first ships of a new class were laid down and before leaving office he issued a programme for building four large armoured ships annually. His death deprived the Unionist party of a trusted statesman of whom much was expected. In 1907 he had moved for a select committee to consider the reform of the House of Lords and he took a strong part in advising that House to reject the Budget in 1909. He was a member of the Conference of party leaders in 1910 which tried in vain to arrange a compromise on the constitutional question.

**Prof. George Chrystal**, the eminent mathematician d. at Edinburgh November 3rd. Born near Aberdeen in 1851 he was second wrangler at Cambridge in 1875 and was appointed successively professor of mathematics at St. Andrews in 1877 and at Edinburgh in 1879 holding the latter post till his death. He was the author of many publications on physical and mathematical subjects and his researches into the surface oscillations of Scottish lakes won him a royal medal from the Royal Society.

**Baron Collins of Kensington** (Richard Henn Collins) the jurist and Lord of Appeal d. at Hove January 3rd. Born in Dublin in 1842 and educated at Trinity College Dublin and Downing College Cambridge he was called to the English bar in 1867 and joined the northern circuit. He edited the 7th 8th and 9th editions of Smith's Leading Cases. was made a Q.C. in 1883 and a judge in 1891. In 1897 he became a judge of appeal in 1901 Master of the Rolls and in 1907 a lord of appeal (resigning in 1910). In 1899 he represented Great Britain on the tribunal appointed to arbitrate in the boundary dispute between British Guiana and Venezuela and in 1904 he was chairman of the commission which investigated the case of Adolf Beck (*E.B.* xiv 287) and resulted in his conviction being annulled.

**Canon Robinson Duckworth**, the well known divine d. at Hawkhurst September 25th. Born at Liverpool in 1834 he took a first class degree at Oxford in 1857 and became a fellow of Trinity College where after being a master at Marlborough he was tutor from 1860 to 1866. He was then appointed Instructor and Governor to the Duke of Albany (1866-70) and subsequently Chaplain to Queen Victoria (1870). He was admitted into the most domestic Court circles and accompanied the Prince of Wales (afterwards King Edward VII) on his tour through India. He became a Canon of Westminster in 1875 (succeeding Charles Kingsley) and Sub Dean in 1895.

**Sir Charles Alfred Elliott**, the Anglo Indian administrator d. at Wimbledon May 28th. Born at Brighton in 1835 and educated at Harrow he proceeded to Trinity College Cambridge but in 1856 when the Indian civil service was first thrown open to public competition abandoned his Cambridge career and went out as one of the first fifteen members. During the mutiny he was assistant magistrate of Mursapur. He served at Cawnpore and Oonao where he published *Chronicles of Oonao* a collection of folk lore. he accomplished the settlement of the Hoshangabad district and the Farukhabad district drawing up a model report of these operations. He administered famine relief at Mysore in 1878 and in 1881 became chief commissioner of Assam. In 1886 he presided over a committee appointed by Lord Dufferin to inquire into Indian public expenditure. From 1890 to 1895 he was lieutenant-governor of Bengal. After his retirement he did valuable work as a member of the education committee of the London County Council.

**Sir Hugh Gulzean-Reid**, journalist and newspaper proprietor d. at Hendon November

5th Born in Aberdeenshire in 1835 he became a journalist and founded several provincial papers notably the first existing halfpenny daily, the *North Eastern Daily Gazette*. He was the first president of the Institute of Journalists 1888-90 and the first Liberal member of parliament for Aston Manor 1885-86. He was knighted in 1893.

Sir William Grantham, the well known judge d in London November 30th. Born in 1835 he came of an old Sussex family and inherited property in the county. After a successful career at the bar and in parliament where he represented East Surrey in the Conservative interest from 1874-85, he was appointed in 1885 judge of the Queen's Bench division of the High Court. He was never at pains to conceal his own views on politics and after 1906 when he was on the rota of judges for election petitions his decisions were sharply criticized as biased against the Liberal party notably in the Great Yarmouth case which led to a motion of censure in the House of Commons in July 1906. But in certain criminal cases he gained considerable credit and in the Adolf Beck trial he was one of the first to suspect the mistake as to the prisoner's identity (see *E. B.* xiv 281). He was chairman of the East Sussex Quarter Sessions and as a landlord took a practical interest in the housing of the rural labourers. In Parliament he was a strong supporter of the establishment of the Criminal Court of Appeal.

The Very Rev. Robert Gregory Dean of St Paul's d August 2nd. Born at Nottingham in 1819, he was at first intended for business but subsequently went to C.C.C. Oxford and was ordained in 1843. In 1851 after holding various country curacies he became Curate of Lambeth Parish Church and from 1853-73 was rector of St Mary's Lambeth becoming a Canon of St Paul's in 1868. In 1890 he became Dean of St Paul's and to the end of his long life devoted himself to the service of the metropolitan cathedral. He was a High Churchman a champion of Church Schools and of religious education and was a member of the first London School Board.

Sir Henry Harben, a pioneer of industrial life insurance b 1825 d Dec 2nd. From 1848 he had been connected with the Prudential Assurance Company and saw it increase from small beginnings till its income was over 14 millions sterling.

**Lord Peel**, ex speaker of the House of Commons b 1829 d at Sand Beds on the 24th of October (See *E B* xxi 39d).

**W. S. Penley**, the actor b 1852 d November 11th (See *E B* xxi 99)

**R. Norman Shaw**, the architect b 1831 d at Hampstead November 17th (See *E B* xxiv 843)

**Walter William Skeat**, the philologist b 1835 d. at Cambridge on the 6th of October (See *E B* xxiv 168)

**William Thomas Stead**, the journalist b 1850 perished in the sinking of the *Titanic* on the 15th of April (See *E B* xxv 817c)

**Edward O'Connor Terry**, the actor b 1845 d in London on the 3rd of April (See *E B* xxvi 660)

**Sir George Stuart White**, the field-marshal b 1836 d in London on the 24th of June (See *E B* xxviii 599b and for his Natal Campaign xxvii 204a and 205d)

Biographical notes may be added concerning others who died during the year —

By the death of **Henry Du Pre Labouchere**, the Radical politician and proprietor of *Truth* in Florence on the 15th of January a famous figure passed away. Born in London in 1831 the son of John Labouchere of Broome Hall and nephew of Lord Taunton (*E B* xxvi 453a) he was educated at Eton and after spending a short time at Cambridge entered the diplomatic service in 1854 becoming in 1863 second secretary to the British Embassy at Constantinople. In 1864 he abandoned diplomacy for politics and in 1865 was elected Liberal member for Windsor but was unseated on petition. In 1866 he won a by-election for Middlesex but failed to be re-elected in 1868. In 1880 he again entered the House of Commons as Radical member for Northampton with Mr Bradlaugh as his colleague and this seat he retained until his retirement in 1905. He began his journalistic career with the *Daily News* of which he became part proprietor just before the Franco-German war and he was himself the author of the *Letters of a Besieged Resident* sent to it from Paris by balloon post during the siege, addressed to his wife in London. In 1874 he became associated with Edmund Yates on *The World* (see *E B* xxviii 905b) but two years later he started *Truth* as a rival society paper destined as he himself said to be another and a better *World*. It had a remarkable record in the exposure of shams and organised impostures especially frauds on the charitable. Many libel actions were brought against it but in 25 between 1897 and 1907 only 3 verdicts were given definitely against the paper. For many years Mr Labouchere himself contributed many articles and notes and he was to the end popularly identified with *Truth* though in fact he left the direction in later years first to Mr Horace Viles and then to Mr Bennett and took no active part either in writing or editing. He was a thorough Bohemian and after his death the whole story of his life in connection with *Truth* was very candidly told in a series of admirable articles in its columns. As a politician Labby was the chartered jester of the House of Commons but his pungent and somewhat cynical speeches were the expression of highly independent democratic convictions deeply opposed to all forms of social privilege or Jingo Imperialism. He was a strenuous advocate of the abolition of the House of Lords (see *E B* xx 845d 846b) at the time of the Parnell Commission (*E B* xx 858d) he had much to do with the unmasking of Pigott and he was a member of the Inquiry into the Jameson Raid his hostility to Mr Chamberlain being as pronounced as against Lord Rosebery when the latter became leader of the Liberal party. He considered himself entitled to office when his party was in power and was decidedly mortified at not getting it from Mr Gladstone. In 1868 he had married Miss Henrietta Hodson a popular actress. After 1903 he lived mainly in Italy at a villa near Florence where he died. He left a fortune of some two million sterling to his daughter who had married a son of the Marquis di Rudini.

Among other people of political prominence the following may be noted —

The 10th Earl of **Carlisle**, who had succeeded to the title only in 1911 b 1867 d January 20th. As Lord Morpeth (*E B* v 341b) he served on the London School Board from 1894 to 1902 and was Unionist member for South Birmingham 1904-11.

**Enoch Edwards**, the Labour leader and M.P. for Hanley (since 1906) d at Southport on June 28th. Born at Talk-o the Hill Staffordshire in 1852 he was the son of a pitman and worked as a boy in a coal mine. He became first treasurer then secretary of the North Staffordshire Miners' Association and in 1884 went to Burslem where he held various municipal posts and finally became mayor. He was also president of the Midland Miners' Association and latterly president of the Miners' Federation of Great Britain.

**George Harwood**, cotton manufacturer and member of parliament d in London on November 7th. Born at Bolton in 1845 he entered his father's cotton spinning business while still a student of Owens College where he worked at classics and political economy until he could take the London M.A. degree. Later he read theology and in conjunction with Dean Stanley and others founded the Church Reform Union. Under the influence of Bishop Fraser of Manchester he was ordained deacon in 1886 and frequently preached in the north of England though living outwardly the life of a layman. In 1895 he was elected Liberal member for Bolton and held the seat till his death. He published *The Coming Democracy Essays for the Times*, *Christianity & Common Sense* and other works.

The 1st Baron **Holden** (see *E B* xii 582d) Liberal M.P. for Bradford 1885 and the Buckrose division of Yorkshire 1892-1900 b 1833 d at Bolton Percy on March 25th.

**Sir Richmond Thackeray Ritchie** (see *E B* xvi 716d) b 1854 d October 12th Entering the India Office in 1877 he rose to be Permanent Under Secretary of State in 1910

**Lt Col Henry Strachey** b 1816 brother of Sir Richard Strachey (*E B* xxv 976) d February 9th Entering the Indian service in 1835 he made a notable journey in 1846 into Tibet (*E B* xxvi 923d) and in 1847 he was a member of the Cashmere Boundary Commission

**George Strachey** brother of last named b 1829 d February 25th Minister at Dresden 1890-97

**Admiral Sir Richard Vesey Hamilton** b 1829 d September 18th Entering the navy at the age of fourteen he served in Captain Ommanney's Arctic expedition of 1850-51 afterwards joining Captain Kellett (*E B* xvi 946a) and remaining in the Arctic regions for three winters In 1856 he was promoted to command the gunboat *Haughty* and went to China He was promoted captain 1862 rear admiral 1877 vice admiral 1884 and admiral 1887 From 1885-87 he was commander in chief on the China station In 1889 he was appointed Second Sea Lord of the Admiralty becoming shortly First Sea Lord In 1891 he became president of the Royal Naval College at Greenwich and retired in 1894 He published *Naval Administration* (1896) and edited the *Letters and Papers of Admirals of the Fleet Sir Thomas Byam Martin* (3 vols)

**Admiral of the Fleet Sir Nowell Salmon** b 1835 d February 14th Entering the Navy in 1847 he served with the Shannon brigade in the Indian Mutiny and received the V C for bravery at the second relief of Lucknow (1858) He became Commander in Chief at the Cape 1882-85 and Commander in Chief at Portsmouth 1894-97

**Admiral of the Fleet Sir Frederick William Richards**, b 1833 d September 28th Entering the navy in 1848 he served at first on the Australian station In 1855 he was promoted lieutenant in 1860 commander and in 1866 captain From 1870-73 he commanded the Indian troopship *Jumna* and from 1873-77 the *Devastation* the first sea going turret ship In 1878 being appointed Commodore and Senior Officer on the West Coast of Africa he arrived at the Cape of Good Hope only to hear of the disaster at Isandhlwana He promptly proceeded east and landed with a force of 250 men who shared in the battle of Ginginhlovo and the relief of Eshowe In 1881 he was at the battle of Laing's Nek He became rear admiral in 1882 and from 1882-85 served as Junior Lord of the Admiralty From 1885-88 he was Commander in Chief of the East Indies Station In 1888 he was promoted vice admiral In 1890 he became Commander in Chief on the China station and in 1892 was appointed second Naval Lord of the Admiralty being Senior Lord from 1893-99 He was promoted Admiral in 1893 and Admiral of the Fleet in 1898

**Major General Sir John Frederick Maurice**, b 1841 d January 12th The eldest son of Frederick Denison Maurice (see *E B* xvii 190), he entered the Royal Artillery in 1861 Seven years later he was appointed Instructor at Sandhurst and in 1873 went to the Gold

Coast as private secretary to Sir Carnet (Lord) Wolseley. After seeing service in South Africa and in the Egyptian campaign of 1882 he held the post of professor of Military History at the Staff College and was gazetted a major general in 1895. It was however less on active service than as a student of war and national problems and as a thinker and writer that most of his work was achieved between 1871 when he was awarded the Wellington prize for his essay on field manoeuvres and 1906-08 when he brought out the official history of the South African War. His published works include a *Life of his father* (1884) *Hostilities without Declaration of War* (1883) *The Balance of Military Power in Europe* (1888) *National Defence* (1897) *War* (1891) an expansion of his article in the *E B* (9th ed.) and the *Diary of Sir John Moore* with notes. In 1907 he was awarded the Chesney Cold Medal of the Royal United Service Institution for his writings. One of his sons Hugh Alexander was killed at Delhi in a railway accident on the 22nd of January 1912 ten days after the death of his father.

General Sir Charles John Stanley Gough, b. 1832 grand nephew of Viscount Cough (*E B* xii 281) d. September 6th. He went to India at the age of sixteen where he joined the 8th Bengal Cavalry and served through the Punjab campaign of 1848-49. During the Mutiny he and his brother (afterwards General Sir Hugh Gough keeper of the Crown Jewels) joined the Guide Corps and took part in many actions including the relief of Lucknow. He won the Victoria Cross. He served in the Bhutan expedition of 1864 and commanded a cavalry brigade in the Peshawar Valley Field Force during the Afghan War of 1878. He commanded the Hyderabad contingent from 1881-85 and a division of the Bengal Army from 1886-90. He published *The Sikhs and the Sikh Wars* in 1897.

Major-General Sir Frederick Walter Kitchener, b. 1855 brother of Lord Kitchener (*F B* xv 838) d. March 6th. He was with Lord Roberts in the Afghan War of 1878-80. From 1891-96 he was Deputy Assistant Adjutant General for Instruction in India. He accompanied the Dongola expedition of 1896 as director of Transport and in 1899 filled the same post in Lord Kitchener's march to Khartum (see *E B* ix 130a). He served under Sir Redvers Buller in South Africa taking part in the relief of Ladysmith. In 1908 he was appointed Governor of Bermuda where he died.

Religion was represented by the following notable names —

John Sheepshanks, formerly Bishop of Norwich, b. 1834 d. June 3rd. Educated at the Grammar School Coventry and Christ's College Cambridge he was ordained in 1857 to a curacy under Dr. Hook vicar of Leeds but in 1859 he went out to British Columbia to be chaplain to its bishop and rector of New Westminster. His eight years work amongst settlers miners and lumbermen taught him an unconventionality of outlook and methods which remained with him throughout his clerical career. He published his experiences under the title of *A Bishop in the Rough*. In 1868 he returned to England and after five years in the Yorkshire parish of Bilton near Harrogate he was presented to St. Margaret Anfield Liverpool where he came under the notice of Mr. Gladstone who in 1893 offered him the bishopric of Norwich. He held the see till 1910 when he resigned owing to ill health. Among his other publications were *My Life in Mongolia and Siberia* (1903) *The Pastor in his Parish* (1908) and volumes of sermons and addresses.

Charles William Stubbs, Bishop of Truro, b. 1843 d. May 4th. His father and grand father were York hire agriculturists and throughout his life he took a strong interest in the welfare of the agricultural labourer. He published three volumes on the subject *Village Politics* (1878) *The Land and the Labourers* (1890) and *Christ and Democracy* (1883). He was a strong Liberal with somewhat socialistic views and was preferred by Mr. Gladstone to the living of Stokenham and Chivelstone in Devon in 1884. In 1887 he was transferred to Liverpool becoming rector of Wavertree. In 1893 Mr. Gladstone made him dean of Ely. There he remained till 1905 when Sir Henry Campbell Bannerman made him Bishop of Truro. He was Hulsean Lecturer at Cambridge in 1904 and published his lectures under the title *The Christ in English Poetry* (1905). His other published works include *A Creed for Christian Socialists* (1896) and *A Handbook to Ely Cathedral* (1898).

George William Kitchen, Dean of Durham, b. 1827 d. October 13th. Educated at the Ipswich Grammar School King's College London and Christ Church Oxford he graduated in 1850 the only double first-class man of his year and was ordained in 1852. He became a schoolmaster but returned to Oxford as tutor at Christ Church in 1863. He undertook the organisation and control of the non-collegiate students admitted by the University after 1868 becoming their first Censor and holding the office till 1883 when he became Dean of Winchester. In 1894 he was appointed Dean of Durham becoming also first Warden and then Chancellor of Durham University. He published a *History of France* (1873-77) *Life of Pope Pius II* (1881) and various books on Winchester and Durham.

George Evan Moule, Anglican missionary Bishop in China, b. 1828 d. March 3rd. Having graduated from C.C.C. Cambridge and taken orders in 1851 he was sent out in 1857 to China by the Church Missionary Society. In 1861 he was joined by his brother the Rev. Arthur E. Moule and with him worked for over 50 years, at first at Ningpo but principally at Hangchow. In 1880 he was consecrated first Bishop of Mid China and his work steadily developed till his resignation in 1908. Bishop Moule was a Chinese scholar and translated the Prayer book into classical Chinese.

**Father John Gerard**, the Jesuit b 1840 d December 13th He was educated at Stonyhurst after becoming a Jesuit spent a great part of his life as a master at his old school In 1879 he was appointed its Rector of Studies but relinquished the post in 1893 to become editor of *The Month* From 1897 to 1900 he was Provincial of the English Jesuits He published a refutation of Haeckel in *The Old Riddle and the Newest Answer* and various other works notably *The Gunpowder Plot* (see *E B* xi 729a)

**John Griffith** the Welsh Congregationalist missionary in China b 1831 d July 25th He showed his religious bent very early He was brought up a Congregationalist and at the age of eight was admitted to full membership of his chapel and when only 14 he delivered his first sermon at a prayer meeting At sixteen he became a regular preacher and was subsequently trained at the Brecon Congregational College for the ministry In 1853 he offered his services to the London Missionary Society and after two years training sailed for Shanghai in 1855 His work in China covered a period of 55 years In 1861 he went from Shanghai through the provinces of Central China which he was the first Christian missionary to penetrate and he claimed that with his colleagues he had established over 100 mission stations in Hu peh and Hu nan (see *E B* xvii 596) He acquired an intimate knowledge of the Chinese language and literature and translated the New Testament and a great part of the old into more than one Chinese dialect In the Yangtze valley he founded a theological college for native preachers which bears his name At the end of 1911 his health finally gave way and he returned to England

**Arthur Wollaston Hutton**, Anglican clergyman and author b 1849 d March 25 A scholar of Exeter Oxford he took orders in the Church of England in 1872 but under Newman's influence became a Roman Catholic and from 1876-83 was a member of the Edgbaston Oratorian Community He changed his views however renounced Romanism and became known as an agnostic and free thinker and for some years he was librarian at the National Liberal Club in London In 1898 he again made a remarkable change being readmitted to Anglican orders and from 1903 to his death he was rector of Bow Church London His absolute sincerity strength of conviction and great intellectual ability and honesty were recognised by all who knew him He was the author of a *Life of Manning* (189-) and of several articles in the *E B*

**Charles Voysey**, the Theistic preacher b 1828 d July 20th Educated at Stockwell Grammar School and St Edmund Hall Oxford he was ordained in the Anglican Church and held various curacies up to 1860 when he became curate of St Mark's Whitechapel Thence he was ejected for heterodox doctrine and he went to St Mark's Victoria Docks and later to Healaugh near Tadcaster where he was first curate and then vicar But in 1869 he was summoned before the Chancery Court of the Diocese of York for heterodox teaching and deprived of his living He appealed to the Privy Council but the decision was upheld He then established a Theistic Church in London where he continued to preach and teach up to the time of his death

In the medical world the following were of most interest—

**Sir William Henry Allchin**, physician and author b 1846 d February 8th He was educated at University College London where he afterwards became Lecturer on Anatomy and Physiology then he was principally associated with Westminster Hospital of which he became Senior Physician He edited a *Manual of Medicine* (1905) to which he contributed articles on his special subject of abdominal diseases He was Harveian Orator (1903) Bradshaw Lecturer (1901) and Lumsden Lecturer (1905) and was knighted in 1907

**Sir Henry Trentham Butlin Bart** the surgeon and pathologist b 1845 d January 24th He received his medical training at St Bartholomew's Hospital London to which he returned after holding posts at the Children's Hospital Great Ormond Street and at the West London Hospital and was successively demonstrator assistant surgeon (1881) and surgeon from 1892-1902 In 1909 he was elected president of the Royal College of Surgeons His investigations of cancer led him to the theory that the disease is a parasitic growth formed within and from the tissues of its host which he announced at a Bradshaw lecture of the Royal College of Surgeons in 1905

**Clinton Thomas Denton**, a well known surgeon and Alpine climber b 1850 d August 26th Educated at Eton and Trinity College Cambridge he was vice-president of the Royal College of Surgeons senior surgeon to St George's Hospital and since 1904 chief surgeon to the Metropolitan Police He made the first ascent of the Aiguille du Dru after 18 unsuccessful attempts and the first ascent of the Rothhorn from the Zermatt side He also did much exploration in the Caucasus Besides many works on surgery he published *Above the Snow Line* (1885)

**Washington Epps**, the homoeopathic physician b 1848 d October 14th The son of George Napoleon Epps (see *E B* ix 708c) he was for 38 years on the staff of the London Homoeopathic Hospital and was president of the British Homoeopathic Society

**William Ogle**, physician and author b 1828 d April 12th He took his medical degree at Oxford and became a Fellow of Corpus In medical circles he was well known as chief secretary to the Royal Medical and Chirurgical Society Lecturer on Physiology at St George's Hospital Medical School but his permanent fame rests on his remarkable edition of Aristotle's *De Partibus Animalium* a work of great scholarship and learning

The following were prominent in the legal profession —

**Sir Gainsford Bruce**, Judge of the High Court b 1834 d January 23rd. He graduated at Glasgow University and was called to the bar in 1859. He joined the Northern and afterwards the North Eastern circuit and from 1869-82 reported Admiralty and Ecclesiastical cases for the *Lau Reports*. His strength lay in Admiralty law and he made several contributions to its literature notably *Williams and Bruce's Admiralty Practice* and the 4th edition of *Maude and Pollock on Shipping*. He was Recorder of Bradford from 1877-9 and successively solicitor general (1879) and attorney general (1886) to the County Palatine of Durham. A Conservative in politics he represented Holborn in Parliament from 1888 till he was raised to the bench in 1892.

**Sir John Compton Lawrance**, Judge of the High Court b 1832 d December 5th. Called to the bar in 1859 he became Q.C. in 1877 and Recorder of Derby in 1879. In 1880 he was returned to Parliament as Conservative member for South Lincolnshire and in 1885 was elected member for the Stamford division. He was made a Judge in 1890 and sat on the Bench for 22 years retiring March 1912.

**Sir Alfred Wills**, Judge of the High Court b 1828 d August 10th. He was educated at University College London and was called to the bar in 1851. After some years on the Midland and North Eastern Circuits he was appointed to a judgeship in the Queen's Bench Division in 1884 and four years later acted as the first *ex officio* commissioner under the Railway Canal Traffic Act. Very few of his decisions or opinions were reversed upon appeal. His ability for dealing with complicated cases was notably shown in *Cockerton v London School Board* the point at issue being the power of the School Board to pay for higher technical education out of the rates. His judgment adverse to the Board was affirmed by the Court of Appeal and in the case of *Sharp v Wakefield* when with Mr Justice Field he asserted the unrestricted discretion of licensing justices to refuse under certain circumstances to renew a licence the House of Lords upheld the decision. Sir Alfred Wills was a pioneer of mountaineering (see *E.B.* xviii 938c and 1 748d) one of the founders of the Alpine Club in 1858 third president in 1863 and author of several books about climbing and other Swiss experiences. His father's treatise *Wills on Circumstantial Evidence* was enlarged and edited by him in book form and went through several editions.

**Lord Stormonth Darling**, Judge of the Court of Session in Scotland b 1845 d June 2nd. Educated at Kelso Grammar School and Edinburgh University he was called to the Scottish bar in 1867. In 1888 he entered the House of Commons as member for the Universities of Edinburgh and St Andrews and in the same year became solicitor general for Scotland. In 1890 he was appointed a Lord of Session.

**Thomas Hutchinson Tristram**, a well known ecclesiastical lawyer b 18.5 d March 8th. He took his D.C.L. degree in 1854 and became an advocate of Doctors Commons (see *E.B.* viii 367). When that body was dissolved in 1857 he continued to practise as counsel being eventually its last survivor. He was principally known in connection with ritual cases several times representing Mr Mackonochie and other clergymen charged with illegal practices (see *E.B.* xiv 352d and xvi 678a) and he appeared for the promoters in the ecclesiastical suit ended by the Lincoln Judgment (*E.B.* xvi 712c). He was Chancellor of the diocese of London and also of the dioceses of Hereford, Ripon, Wakefield and Chichester and Commissary General of the Diocese and City of Canterbury. He published *Contentious Probate Practice* (1881).

**John Troutbeck** the coroner for Westminster b 1861 d February 29th. The eldest son of the Rev. Dr Troutbeck Canon and Precentor of Westminster Abbey, he was educated at Westminster School and Queen's College Oxford, was admitted a solicitor in 1884 and became coroner for Westminster in 1888. His policy of employing an independent pathologist for *post mortems* instead of the doctor in attendance brought him on several occasions into conflict with the medical profession and was objected to by the British Medical Association. But he was master in his own court and successfully defied opposition.

**Sir Raymond West**, the Anglo Indian jurist b 1832 d September 8th. Educated at Queen's College Galway he entered the Indian Civil Service in 1856 and during the Mutiny served under the resident magistrate of Belgaum. In 1871 he became a Judge of the High Court of Bombay and in 1877 a member of the Bombay government. In 1879 he was appointed to the Indian Law Commission. In 1884 he accepted for a time the office of Procureur-General in Egypt and drew up a report on the French system of criminal procedure as applied to an oriental people. He then returned to India where he remained till his retirement in 1892. He became reader in Indian Law to the University of Cambridge holding that post till 1906. He published *The Bombay Code* (3 vols.) and *Hindu Law* a work which passed through many editions.

One of the magnates of finance passed away in **Sir Julius Charles Wernher**, Bart the South African millionaire d May 21st. He was born at Darmstadt in 1850 entered a banking house in Frankfurt and early in 1870 came to London as a clerk. On the outbreak of the Franco-German War he returned to Germany to take his place in the army and was present at the fall of Paris. At the end of 1871 he was sent by Mr Jules Porges diamond merchant of London and Paris on a mission to Kimberley. There he remained till 1880 when he was transferred to London as English representative of the firm of Porges and

Wernher interested not only in diamonds but in the gold mines of South Africa. In 1888 when the Kimberley diamond mines were amalgamated by Cecil Rhodes and Alfred Beit he became a life governor of the De Beers Corporation. Beit was now a member of his firm and in 1889 when Porges retired the name of the firm was changed to Wernher, Beit & Co (see *E B* iii 659a). Out of his enormous fortune Sir J. Wernher, who was created a baronet in 1905, spent large sums on public objects including education; he gave £10,000 to the National Physical Laboratory and together with Beit endowed the South African University with £500,000.

A captain of industry died in **Baron Furness** (formerly Sir Christopher Furness) on November 10th. He was born on the 23rd of April 1852, the son of a provision merchant, and entered the family business in 1870. By making a corner in food stuffs whilst the French fleet was blockading the mouth of the Elbe he made a profit of over £50,000 for his firm out of the provisioning of ships. In 1877 he left the business and inaugurated the Furness line of steamships and in 1891 he amalgamated with Withy & Co. iron and steel shipbuilders founding the great shipbuilding firm of Furness Withy & Co. In 1898 with others he acquired extensive iron and steel works and founded the S. Durham Steel & Iron Co. He had an interest in many other concerns and was chief proprietor of a Liberal paper the *North Mail*. In 1908 he established a profit sharing scheme for his workmen but in 1910 its continuance was put to the vote and rejected by a majority. In 1891 he was elected Liberal member for the Hartlepool but in 1895 he lost the seat winning it again in 1900. In 1906 he was returned unopposed and in January 1910 he was elected but unseated on petition. A month later he was raised to the peerage; he had been knighted in 1895.

No fewer than four ex Lord Mayors of London died during the year three of whom had sat as Conservatives in the House of Commons —

**Sir Joseph Dimsdale, Bart.** (b. 1849 d. August 10th) who came of a Quaker family of bankers, was sheriff of London in 1894 and from 1900-06 was M.P. for the City. In 1901-02 King Edward's coronation year he was Lord Mayor and from 1902 till he died he was City Chamberlain.

**Sir John Whitaker Ellis, Bart.** (b. 1829 d. September 20th) entered as a lad the office of an auctioneer and surveyor and rose to be a partner and finally head of the firm; he was Lord Mayor in 1881-8 and M.P. for a division of Surrey 1884-92.

**Sir Horatio David Davies** (b. 1842 d. September 18th) was a London merchant who in 1889 was elected an Alderman and in 1897-98 was Lord Mayor. From 1895-1906 he was M.P. for Chatham.

**Sir James Thomson Ritchie, Bart.** (b. 1835 d. September 18th) was the son of a Dundee jute merchant and carried on the same business in London. His younger brother was Lord Ritchie, the Conservative politician (see *E B* xiii 376b). He was elected an Alderman in 1891 and became Lord Mayor in 1903-04.

Mechanical science lost the following important representatives —

**Prof. Osborne Reynolds**, b. 1842 d. February 21st. He was educated at Cambridge and in 1868 became professor of Engineering at Owens College, Manchester holding that post for nearly forty years. He was elected F.R.S. in 1877. He was the author of over 70 papers on mechanics and physics published in the transactions of learned societies notably *Sub-Mechanics of the Universe* issued by the Royal Society. (For references to his work see *E B* iii 581c v 61a viii 783i xiv 61c xxii 806c xxv 444c xxviii 428d.)

**Prof. Henry Taylor Bovey**, b. 1852 d. November 2nd. He was educated at Queens College, Cambridge of which he was afterwards a Fellow. Joining the staff of the Mersey Docks and Harbour Board he became assistant engineer but in 1887 was appointed Professor of Civil Engineering and Applied Mechanics at McGill University, Montreal. In 1909 he was appointed to be the first Rector of the Imperial College of Science and Technology in London but ill health obliged him to resign the post after a few months.

Valuable work in a special branch of science had also been done by the Rev. **Francis Bashforth** (b. 1819 d. February 12th). Second Wrangler in 1841 he became a Fellow of St. John's College, Cambridge and having taken orders he was rector of Minting (Lincolnshire) from 1857-1908. His interest in ballistics led him to make a series of experiments between 1864-80 upon which our present knowledge of air resistance is founded (see *E B* iii 281a). The Bashforth Chronograph for recording the velocity of shot (see *E B* vi 303a) was his invention and he received a pension from the government and a grant of £1,000 for his work. For some time he was professor of Applied Mathematics to the advanced class of Artillery officers at Woolwich.

**Samuel Arthur Saunderson**, b. 1852 d. December 8th was one of the leading authorities on Selenography (see *E B* xvi 525a).

A well known naturalist passed away in **William Bernhard Tegetmeier**, b. 1816 d. November 19th. His special subject was poultry breeding on which he wrote in the 9th ed. of the *E B* and for forty years he was the poultry-editor of *The Field*.

**Rowland Ward**, b. 1848 d. December 28th author of *Record of Big Game* was famous all over the world as a taxidermist.

An eminent Scottish ichthyologist and palaeontologist died in **Ramsay Heatley Traquair**, b. 1840 d. November 24th (see *E B* xiv 248b 249c).

The death also occurred on December 8th of **Henry Dudding**, famous all over the world as a scientific breeder of long wool sheep and shorthorn cattle (see *E B* xxiv 819d).

In **Dr Shadworth Holloway Hodgson** (b 1832 d June 13th) there passed away an accomplished scholar and metaphysician. Educated at Rugby and Corpus Christi College Oxford he devoted himself from 1858 onwards entirely to the study of philosophy and acquired a remarkable knowledge of the whole field of philosophical literature ancient and modern. He helped to found the Aristotelian Society of London in 1880 and was its first president. His published works include *Time and Space* (1870), *The Philosophy of Reflection* (1878) and a complete exposition of his philosophy (see *E B* xviii 251d) in *The Metaphysic of Experience* (1898).

English classical scholarship was notably poorer by the death of **Arthur Woolgar Verrall** (b 1851 d June 18th). Educated at Wellington and at Trinity College Cambridge he graduated as second classic in 1873 and became a fellow and tutor of his college. He published editions of many classical plays especially the *Medea*, *Agamemnon* and *Choephores*. In 1895 appeared *Euripides the Rationalist* followed in 1905 and 1910 by editions of most of Euripides plays. He was an original critic with views of his own often expounded in the *Classical Review* and other journals. In February 1911 he was appointed to fill the new King Edward VII professorship of Literature at Cambridge which had been endowed by Sir Harold Harmsworth.

Cambridge University lost also two heads of colleges the Master of Caius **Dr Ernest Stewart Roberts** (b 1847 d June 16th) and the Master of Jesus **Henry Arthur Morgan** (b 1830 d September 3rd).

Oxford University lost an able philologist in **Dr Henry Sweet** (b 1845 d April 30th). He was a recognised authority on the subject of phonetics (see *E B* xvi 460-61 ix 597c) a Readership in Phonetics having been specially created for him in 1901 by the University. His other published works include an *Anglo Saxon Reader* a *Student's Dictionary of Anglo-Saxon* an *English Grammar* *The History of Language* and many editions of Old and Middle English Texts.

A widely known anthropologist passed away in **Augustus Henry Keane** (b 1835 d February 3rd). A native of Cork he was educated at Dublin and in Rome for the Roman Catholic priesthood but he declined to enter the church and devoted himself to geographical and ethnological research (see *E B* i 442c ix 900b xxii 678c). He registered and classified almost every known language and from these data worked out a system of ethnology. He edited Stanford's *Compendium of Geography* and besides many papers in the journals of learned societies and in encyclopaedias published *Man Past and Present* (1899) *Ethnology* (1896 and later editions) *The Gold of Ophir* (1901) etc. He was professor of Hindustani at University College London till 1885.

The literary world has lost also the following —

**James Beresford Atlay**, barrister and journalist author of *Lives of the Victorian Chancellors* and other works b 1860 d November 22nd.

**Robert Barr**, the novelist b 1850 d October 21st. A native of Glasgow he was taken to Canada when four years old and educated at the Normal School Toronto. He was headmaster of the public school of Windsor Ont. until 1876 when he joined the editorial staff of the *Detroit Free Press*. He had an adventurous career as a journalist for five years and in 1881 came to England. In 1892 he started the *Idler* together with Mr Jerome K. Jerome. He published a number of novels and short stories the best known being *The Mutable Many* (1897) and *Countess Tekla* (1899).

**Capt. Frank Brinkley**, the well known authority on Japan b 1841 d at Tokyo October 28th. Having entered the British army he went to Japan in 1867 in command of a battery of artillery. In 1871 he became Principal Instructor at the Marine College Tokyo under the Japanese government and henceforth devoted himself to things Japanese. He left the army married a Japanese lady and in 1881 founded the *Japan Mail* of which he was proprietor and editor till his death. He was also correspondent for the *London Times* in Japan. He published *Japan* (1901) *Japan and China* (1903) as well as a Japanese English Dictionary and was the author of the article *Japan* in the *E B*. He held a unique position among foreign residents in Japan alike as a profound student of its history and art and as a powerful factor in international politics.

The Rev **Alfred John Church**, a prolific author b 1829 d April 27th. Educated at Lincoln College Oxford he took holy orders and was assistant master at Merchant Taylors School for many years. He was professor of Latin at University College London from 1880-88. In partnership with the late W. J. Brodrick he translated Tacitus and edited Pliny's Letters but he is best known by his English re-telling of classical tales and legends for young people (*Stories from Virgil* *Stories from Homer* etc.). He wrote much Latin and English verse and in 1908 published his *Memories of Men and Books*.

**George Knottesford Fortescue**, Keeper of the Printed Books at the British Museum b 1847 d October 26th. Appointed an assistant in the British Museum Library in 1870 he became Superintendent of the Reading Room in 1884, and in 1886 began a valuable series of subject indexes to the modern works in the library the last of which appeared in 1911.

**Thomas Kirkup**, the sociologist and economist b 1844 d May 23rd Starting as a pupil teacher in the village school at Kirk Yetholm he proceeded thence to Edinburgh University and studied later at Göttingen Berlin Tübingen Geneva and Paris Besides many articles on economic subjects for reviews and encyclopaedias (including Socialism in the 9th edition of the *E. B.*) he wrote *An Inquiry into Socialism* (1887) *History of Socialism* (1892) *South Africa, Old and New* (1903) *Progress and the Fiscal Problem* (1905) and *Primer of Socialism* (1908)

**Thomas Mackay**, economist b 1849 d February 23rd He was called to the bar but never practised devoting himself to the study of economics and the English Poor Law which was the subject of most of his writings

**Sir Frank Thomas Marzials**, C.B. civil servant and man of letters b 1840 d February 14th He entered the War Office in the fifties and became Accountant-General in 1898 retiring in 1904 As one of the editors of the Great Writers series, he contributed to it several volumes and made an English version of the *Chronicle of Villehardouin* (1908)

**William Flavelle Monypenny**, the biographer of Lord Beaconsfield b 1866 d November 23rd Of Ulster birth and educated at Trinity College Dublin and Balliol Oxford in 1893 he joined the editorial staff of the *Times* and early in 1899 became editor of the *Johannesburg Star* in the Transvaal He played an important part as a publicist on the side of the Reform party there and when war came he joined the Imperial Light Horse and was one of the defenders of Ladysmith Returning afterward to his position on the *Star* he did much to promote Lord Milner's work of reconstruction but resigned in 1903 owing to his hostility to the introduction of Chinese labour in the mines He was then entrusted by the *Times* with the task of writing the official biography of Disraeli and also did other work for that paper becoming in 1908 a director of the company Owing to ill health the first volume of the *Life of Beaconsfield* (intended to be in four or five) only appeared in 1910 and the second shortly before his death

**Edward Williams Byron Nicholson**, Bodley's librarian at Oxford b 1849 d March 17th Educated at Tonbridge and Trinity College Oxford in 1873 he became librarian of the London Institution and in 1877 he founded the International Conference of Librarians and the Library Association In 1882 he succeeded H. O. Cox as Bodley's librarian and did much to bring the library up to date He published commentaries on the Gospel according to the Hebrews (1879) and St. Matthew (1881) *Celtic Researches* (1904) papers on comparative philology etc and wrote the article on Mandeville in the *E. B.*

**Dr Frederic Seebohm**, the historian b 1833 d February 6th He was a native of Bradford and came of a Quaker family His interest in problems of modern life social and religious led him to study the conditions of English rural life in the past and the religious movements of the Reformation In his *English Village Community* (1853) he dwelt on the survival of Roman influences in agricultural life and in his *Tribal Systems in Wales* (1895) he reconstituted a Celtic society from 14th century evidence

**Bram Stoker**, the novelist for many years secretary to Sir Henry Irving b 1847 d April 20th He was a native of Dublin and was educated there at Trinity College Beside *Dracula* and other novels he wrote *Personal Reminiscences of Sir Henry Irving* a valuable record of the theatrical history of the last quarter of the nineteenth century

The Rev **Duncan Crookes Tovey** biographer and critic b 1842 d September 29th Educated at Trinity College Cambridge in 1868 he became assistant master at Haileybury in 1871 chaplain to Trinity College in 1874 assistant master at Eton and in 1886 rector of Worplesden He was Clark lecturer in English literature at Cambridge in 1897-98 and published *Gray and His Friends* (1890) an edition of Gray's poems *The Letters of Thomas Gray* (1900-12) an edition of Thomson's poems and *Reviews and Essays* (1897) He wrote the articles on Thomson and Gray in the *E. B.*

English music suffered a premature loss by the death of **Samuel Coleridge Taylor**, b 1875 d September 1st Of Anglo-African parentage his father being a native of Sierra Leone and his mother an Englishwoman he was educated at the Royal College of Music entering as a violinist in 1891 In 1893 he won an open scholarship for composition and studied for four years under Sir Charles Stanford In 1898 his cantata *Hwa-wa-ha's Wedding Feast* was produced in London with marked success and was followed by two other cantatas *The Death of Minnehaha* and *The Departure of Hwa-wa-ha* (see *E. B.* xix 85a) This trilogy was first given complete at the Albert Hall London in 1900 *The Blind Girl of Castel Cuille* was given in Leeds in 1901 *Meg Blane* at Sheffield in 1902 and an oratorio *The Atonement* at Hereford in 1903 He also produced *Endymion's Dream* and the *Bon Bon suite* (1908-09) and *A Tale of Old Japan* (1911)

In the art world the following may be mentioned —

**Robert Wiedemann Barrett Browning** (b 1849 d at Asolo in Italy July 8th) the only son of Robert and Elizabeth Barrett Browning (see *E. B.* iv 668a *et seq.*) He became a painter studying under M. Heyermans at Antwerp and in 1875 had his first picture *The Armourer* exhibited at the Royal Academy He had other pictures hung in the Paris Salon and at Paris he also studied sculpture under Rodin He bought and restored the Palazzo Rezzonico in Venice, where his father died making it a museum to his parents' memory

but it was subsequently sold and he lived at Asolo and Florence. His portrait of his father hangs in Balliol College Oxford

**Eduardo de Martino**, the marine painter (b 1838 d May 21st) He was a native of Italy and was educated at the Naval College in Naples After serving as an officer in the Italian navy until 1867 he went to Brazil married a Brazilian lady became a member of the Rio de Janeiro Academy of Fine Arts and was attached to the Court of Dom Pedro II Emperor of Brazil for whom he painted several pictures besides making a number of sketches during the Paraguayan War In 1875 he came to England and became marine painter to Queen Victoria

**John Leighton** the designer and illustrator (b 1822 d September 15th) The son of a London book-binder at an early age he began designs for book-covers in later life he was a prolific designer of book plates (see *E B* iv 233a) and wrote and illustrated the *Book Plate Annual* from 1894-99 He did much work as a book illustrator in the sixties and seventies one of his best productions being *The Life of Man Symbolised by the Months of the Year* (1866)

**Charles Brinsley Marlay**, a well known art collector (b 1831 d June 18th) He inherited extensive Irish estates from the last Earl of Belvedere and his sister married the 7th Duke of Rutland He was a connoisseur of Italian art and a frequent exhibitor of pictures porcelains etc at the Burlington Fine Arts Club and elsewhere He bequeathed his collection of all kinds to Cambridge University together with £80 000 for the Fitzwilliam Museum

**Sir John Edward Arthur Murray Scott, Bart** a trustee of the National Gallery (b 1847 d January 17th) The son of an English doctor at Boulogne he became secretary to Sir Richard Wallace (see *E B* xxvii 277a) heir of the 4th Marquess of Hertford He helped Sir Richard to organise relief for the sufferers of the siege of Paris in 1870 and after the siege to transport the treasures of the Hertford Art Collection from Paris to Bethnal Green Museum It was largely through his influence that Sir Richard Wallace's widow left the collection *en bloc* to the British nation together with Hertford House (see *E B* xix 62b) and he acted as chairman of the trustees' committee until his death

English sport lost well known representatives in **John Moyer Heathcote** (b 1834 d July 12th) formerly amateur champion at tennis (see *E B* xxvi 630a b) and **William Storer** (b 1868 d February 28th) the Derbyshire professional wicket keeper and batsman who played cricket for England against Australia in 1893 and 1899

A magnate of the music hall world died in **Sir Edward Moss** (b 1852 d November 25th) who had been the principal pioneer in the changes by which the modern variety entertainment has been so successfully established His first Empire Theatre was opened at Edinburgh in 1877 and gradually others were built elsewhere till Moss's Empires (which became a company under that name) numbered in 1912 over twenty houses and the business represented a capital of over £2 000 000 He was knighted in 1905

The deaths of several well known women must also be recorded —

**Louisa Twining**, the social reformer b 1820 d September 25th In early life she was an artist and published *Symbols and Emblems of Mediaeval Christian Art* (1852) and *Types and Figures of the Bible* (1854) In 1853 however she became interested in movements for social reform (see *E B* iv 811a) and began the work in connection with the Poor Law to which she devoted the rest of her life In March 1861 she helped to establish a home for workhouse girls sent out to service and in 1864 a Workhouse Visiting Society In 1867 an act was passed separating infirmaries from workhouses and after twelve more years of work Miss Twining in 1879 established the Workhouse Infirmary Nursing Association She was a Poor Law Guardian for Kensington from 1884-90 and for Tonbridge Union from 1893-96 She promoted the opening of Lincoln's Inn Fields to the public helped to start the Metropolitan and National Association for nursing the poor in their homes did much to secure the appointment of police matrons and was president of the Women's Local Government Society She published *Recollections of Life and Work* (1894) *Workhouse and Pauperism* (1898) and many papers on poor law subjects

**Dr Sophia Jex-Blake**, the pioneer lady doctor b 1840 died at Mark Cross Sussex on the 7th of January From 1858-61 she was mathematical tutor at Queen's College London She subsequently set out on a tour of inspection of girls' education institutions and in America became a pupil of Dr Elizabeth Blackwell (*E B* xxv 957d) In 1866 Miss Jex-Blake began a course of study in Boston under Dr Lucy Sewall In 1868 she returned to England and applied to the University of London for admission to their medical examinations Being refused she returned to the University of Edinburgh and was told that they could not admit one lady only She got others to join her and finally in 1869 they were admitted to classes in 1870 to the hospitals though here they encountered much riotous hostility from a section of the male students The university however still refused to allow graduation and after some legal proceedings and much expense Miss Jex-Blake in 1874 went to London where she took a leading part in establishing the London School of Medicine for women In 1877 this was associated with the Royal Free Hospital and in the same year Miss Jex-Blake obtained the M.D. degree of Bern She was also admitted a

licentiate of the College of Physicians Dublin and member in 1880. She began practice in Edinburgh in 1878 and opened a dispensary there for women and children. In 1886 she founded the Edinburgh School of Medicine for Women. She retired in 1899. Besides various medical works she published *American Schools and Colleges* (1886) and *Medical Women* (1872).

**Victoria, Lady Welby**, b 1837 died at Harrow on the 29th of March. She was the daughter of the Hon. Charles Stuart Wortley, brother of the first Lord Wharncliffe; her mother being Lady Emmeline Manners, sister of the 6th and 7th Dukes of Rutland. She was in the household of the Duchess of Kent from 1858-61 and from 1861-63 was maid of honour to Queen Victoria. In 1863 she married Sir William Welby Gregory Bart. who died in 1898. She published in 1881 *Links and Clues* a collection of religious papers. In later life she worked on the subject of *significs* or the study of the correct philosophic and scientific use of language. She corresponded with a large circle of scientific men and philosophers and she published *What is Meaning? Significs and Language* (1911) and was the author of the article *Significs* in the *E. B.*

**Rosa Morison**, the educational pioneer b 1841 d February 8th. She was one of the founders of College Hall Byng Place as a residence for women students in London and was vice principal (her friend Miss Grove being principal) from 1882-1900. In 1883 she was appointed as the first Lady Superintendent of Women Students at University College a post which she held till her death.

**Catherine Marsh**, b 1818 d December 12th. Author of *Memorials of Captain Hedley Viscars English Hearts and English Hands* and well known for her philanthropic work among British navies.

**Marian Rebecca Hughes**, Mother Superior of St. Thomas's Sisterhood Holy Trinity Convent Oxford b 1817 d at Oxford on the 7th of May. She became the first Anglican nun on the 6th of June 1841 (see *E. B.* xxv 160c). At first she was directed by John Henry Newman afterwards for fifty years by Edward Bouverie Pusey who took an active part in establishing Anglican sisterhoods and finally by Edward King Bishop of Lincoln. Under her rule the sisterhood prospered, schools were established for girls of all classes, a printing press was set up and a *Convent Magazine* issued. Much work was also done amongst the poor of Oxford and memorable service was rendered by the Mother during the cholera epidemic of 1866.

**Lady Lindsay**, the verse writer and painter died in London in August. The daughter of the Rt. Hon. Henry Fitzroy who married Miss Hannah Mayer de Rothschild and grand daughter of the 2nd Lord Southampton she married Sir Coutts Lindsay in 1864 and for 30 years before her death had lived in London or Venice gathering a circle of friends about her which included C. F. Watts, Alma Tadema and Browning. She collected a number of fine pictures some of which she left in the National Gallery. She wrote several volumes of verse which hardly won the attention they deserved among them *From a Venetian Balcony* and *Poems of Love and Death*.

**Margaret Hunt**, the novelist b 1831 widow of the painter A. W. Hunt (*E. B.* xiii 934) d in London on November 1st. Her best known book was *Thornicroft's Model*.

**Mrs. De Courcy Laffan**, the novelist d in London on the 5th of September. She married first Surgeon General Leith Adams and secondly the Rev. R. S. de Courcy Laffan for some years headmaster of Cheltenham. As Mrs. Leith Adams she published a number of novels, beginning with *Winstone* (1877) and including *My Land of Beulah* (1880), *Louis Draycott* (1891) and *The Peyton Romance* (1894). She also published two plays in 1906 and a volume of poems in 1907.

**Mrs Stanhope Forbes**, the painter b 1859 d at Newlyn Cornwall on the 16th of March. A native of Canada but educated in New York as Miss Elizabeth Armstrong she became known as an etcher and a painter of the Newlyn School (see *E. B.* xx 499c). In 1889 she married Mr. Stanhope Forbes R.A. Many of her pictures were exhibited at the Royal Academy and the Paris Salon and she was an associate of the Royal Society of Painters in Water Colours.

**Emily Soldene**, the singer and actress b 1840 d in London on the 8th of April. She appeared in *Genevieve de Brabant* her special rôle in 1871 and in *La Fille de Madame Angot* in 1872. Her greatest successes were made in opera bouffe. She retired from the stage for some thirty years before her death.

**Florence St. John**, the actress b 1854 d in London on the 30th of January. She went on the stage as a vocalist at the age of fourteen. Her chief early successes were made in light comic opera notably as Germaine in *Les Cloches de Corneville* and in *Madame Favart* and for many years she played leading rôles in musical comedy and burlesque.

**Beryl Faber**, the actress d in London on the 1st of May. She married Mr. Cosmo Hamilton formerly editor of the *World* and began her stage career as an amateur. She was the original Clarence in *The Masqueraders* by H. A. Jones (1894) and Ellean in *The Second Mrs. Tanqueray* and appeared in several of Sir Arthur Pinero's other plays.

**Mrs. Lewis Waller** (Florence West) the actress b 1862 d November 14th (see *E. B.* xxviii 283b).

Mention must also be made of the deaths of two well known personages in Society — The Duchess of Buccleuch, d at Dalkeith N.B. on the 17th of March. She was the daughter of the 1st Duke of Abercorn and one of the seven sisters depicted by Disraeli in *Lothair*. In 1859 Lady Louisa Jane Hamilton married Lord Dalkeith afterwards 5th Duke of Buccleugh (see *E.B.* iv 712c). A great lady of the old school she was an intimate friend of the Royal family particularly of Queen Victoria to whom she was mistress of the robes in 1885-92 and 1895-1901 and was continued in office by Queen Alexandra.

The Countess of Cork and Orrery, b 1828 d in London on the 10th of October. She was the daughter of the first Marquis of Clanricarde her mother being a daughter of George Canning. She was married in 1853 to Lord Dungarvan afterwards 9th Earl of Cork and Orrery and was the mother of three sons and five daughters. Possessed of great beauty and a brilliant talker she gathered round her a wide circle of men of letters and politicians especially among the Whigs to which party her husband belonged. She was the writer of occasional papers and of a little volume of verse *Memories and Thought* (1886).

## ENGLAND AND WALES<sup>1</sup>

### *Including General Statistics for the United Kingdom*

**Population**—The census of the United Kingdom in 1911 of which tabular details are given below revealed a greater aggregate increase in England itself during the decade 1901-11 than during that of 1891-1901, but the increase per cent of the population declined. A tendency is suggested towards a state of equilibrium as between urban and rural districts as was also indicated in the earlier decade. Thirteen administrative counties returned decreased populations in 1901 but these with the exception of West Suffolk and Westmorland showed an increase in 1911. In addition to these Cumberland, Carnarvon and Radnor returned a decrease in 1911 though not in 1901 and among Welsh counties Cardigan, Montgomeryshire and Merionethshire showed a decrease at both censuses. These counties indicate the existence of three main areas of decreasing or unstable population a north western an East Anglian and a Welsh area. But the census report points out that in the agricultural counties the returns of increase for 1901-11 compare favourably in nearly all cases with those recorded in the earlier period and the fact is particularly noteworthy in Bedfordshire, Lincolnshire and Rutland, Buckinghamshire and Oxfordshire and Dorset. On considering the chief mining and industrial counties the argument is found to hold good, excepting in South Wales. A greatly enhanced rate of increase in the industrial area of South Wales causes the rate for the whole of Wales to grow from 13.3 per cent increase in 1901 to 18.1 per cent in 1911. Otherwise in Nottinghamshire the rate is fairly steady moving slightly up in Northumberland and Durham, Lancashire, Staffordshire and the West Riding of Yorkshire it is markedly down (*Geog Jour* xxxviii, 399). The average rate of increase in the population of 98 towns with populations exceeding 50,000 has declined from 15.3 per cent in 1891-01 to 8.7 per cent in 1901-11 and has fallen in all the 15 towns whose population exceeded 200,000 except Portsmouth. The greatest increase of all is at Southend-on-Sea (pop. 62,723 increase 117.4 per cent). Ilford, Ealing and Acton, Coventry, Wallasey and King's Norton follow. Three of these towns are on the outer ring of London. Southend is practically so, and Wallasey and King's Norton are also ring towns. The radiation outward from London and other great urban centres is going on at the same time it is surging over some of the ring towns which were at the height of their growth about 1901. Thus the rate of increase has fallen in Ilford from 277.6 per cent to 89.6 per cent in East Ham from 193.6 per cent to 39.1 per cent in Walthamstow from 105.3 per cent to 31 per cent. As to the gross decrease in the County of London the report puts the matter geographically—The process of decentralization which at first affected the inner districts of London only has gradually affected a much wider area until in 1901-11 only nine of the twenty-eight Metropolitan boroughs showed an increase of population. These boroughs, which are mainly those furthest removed from the centre, are Hampstead, Hackney, Fulham, Hammersmith, Wandsworth, Camberwell, Greenwich, Lewisham and Woolwich' (*Geog Jour* xxxviii, 400).

<sup>1</sup> For earlier information on England see *E.B.* ix 408 *et seq.* for Wales xxviii 258 *et seq.* for general statistics for the United Kingdom xxvii 598 *et seq.* See also *E.B.* articles on the counties and towns and sections in articles on special subjects.

# UNITED KINGDOM STATISTICS

357

The 1911 census figures for the United Kingdom showing a combined area of 11 1391 square miles and a total population of 45 360 822 (22 010 004 males 23 350 818 females) with an increase of 9.1 per cent in population since 1901 are analysed in Table I

Table I

*Agriculture* —According to returns of 1911 out of a total area of 3, 143, 933 acres for England and Wales the average under all crops and grass was 7 169 46 a decrease of 0.3 per cent on the returns for the preceding year. The general Table VIII for the United Kingdom is given for purposes of comparison (increase or decrease per cent on the preceding year following the total acreage in brackets)

Table VIII

	England and Wales	Scotland	Ireland
Corn Crops	5 924 617(+1 7)	1 230 125(+0 9)	1 65 597(+0 9)

Total Sales	£127 650 000	£23 150 000	£150 800 000

<sup>1</sup> Hay area

<sup>2</sup> Pasture and mountain grazing

<sup>3</sup> This census was provided for by the Census of Production Act 1906. It is under the direction of the Board of Trade and the first census was taken in 1908. The results so far as applying to agriculture were issued by the Board of Agriculture.

<sup>4</sup> The total value of farm crops grown in 1908 is calculated at £125 000 000 but the portion actually sold realised (as shown in Table IX) £46 600 000 the remainder of the produce being used to feed the stock and maintain the fertility of the land.

## ENGLAND AND WALES

A further return of the Census of Production analysed the labour employed on the farms of Great Britain (Table X)

Table X

	Males	Females	Total
Members of Family	313 000	189 000	502 000
Other Persons	576 000	95 000	671 000
Total permanently employed	889 000	284 000	1 173 000
Temporary Labourers	127 000	40 000	167 000
Occupiers			500 000
Grand Total			1 840 000

The gross output amounted to £90 per head if occupiers are included and temporary labourers excluded. Engines employed in agricultural pursuits numbered 34 450 with a total H P. of 213 525.

The number of agricultural holdings in the United Kingdom as returned by the Census of Production is shown in Table XI.

Table XI—Agricultural Holdings 1908

	1-5 Acres	5-50 Acres	50-300 Acres	Above 300 Acres
England	79 837	165 265	109 830	14 651
Wales	10 121	31 953	18 034	390
Scotland	18 136	34 601	25 138	2 673
Ireland	61 730	364 549	90 617	

The census of production has rendered available a mass of statistics which have not previously been compiled. Thus it is now possible to view the estimated production of crops in order of their gross value for Great Britain in 1908, the principal being shown in Table XII.

Table XII—Crops 1908

	Quantity	Value in Thou sands		Quantity	Value in Thou sands
Turnips and Swedes	Tons 23 768 000	£23 768	Potatoes	Tons 3 918 000	£9 892
Meadow Hay	6 213 000	19 106	Barley	Qrs 6 840 000	9 177
Oats	Qrs 15 453 000	13 264	Mangold	Tons 8 995 000	7 196
Clover and Seed			Beans	Qrs 1 161 000	1 735
Hay	Tons 3 507 000	12 712	Apples	Tons 224 300	1 490
Straw	7 000 000	12 660	Peas	Qrs 765 000	1 130
Wheat	Qrs 6 567 000	10 370	Hops	Tons 23 540	1 059
			Strawberries	41 450	1 036

Below the tabulated category follow cabbage £760 000 vetches or tares £439 000 nuts and mixed orchard fruits £406 000 plums £357 000 a group of vegetables including artichokes cucumbers marrows, etc. £352 000 raspberries £309 000 lucerne £276 000 mixed small fruits £252 000 rye £220 000 and gooseberries £208 000. Between £200 000 and £100 000 follow cherries rape rhubarb carrots crops under glass crops for seed flowers and shrubs mustard and onions between £100 000 and £50 000 pears kohlrabi black currants broccoli and cauliflower celery red currants and Brussels sprouts and below the last figure asparagus parsnips lettuce sea-kale kale beetroot (but the subsequent extension of beet cultivation should be borne in mind) buckwheat maize and flax.

It is found that the number of cattle slaughtered for meat in Great Britain was 1 489 000 calves 639 000 sheep 7 638 000 lambs 1 915 000 and pigs 4 418 000. The total British supply of meat amounted to 1 051 000 tons representing an average supply per head of the population of Great Britain of 26.3 lb of beef and veal 14.5 lb of mutton and lamb and 17.5 lb of pig meat (total 58.3 lb) the average of imports in the same year (1908) being 20.44 lb of beef and veal 11.23 of mutton and lamb 18.69 of pig meat (total 50.36 lb).

A farm-yard-census has also been taken which so far as concerns birds is summarized in Table XIII the interesting comparison for Ireland being added. Table XIV gives particulars of dairy produce and Table XV those of timber.

**Development Commission**—The Development Commission was instituted in May 1910 under the provision of the Development and Road Improvement Fund Acts of that and the previous year. It consists of eight commissioners appointed for ten years one (who is eligible for re-appointment) retiring every two years. In the order in which they were to retire, the commissioners were as follows: Mr H J Davies, Sir S Eardley Wilmot, Mr M A Ennis, Mr W S Haldane, Mr A D Hall, FRS, Mr Sidney Webb, Lord Richard Frederick Cavendish (chairman) and Sir Francis Hopwood (vice chairman). Mr Vaughan Nash, who had been private secretary to the Prime Minister, Mr Asquith succeeded to the vice chairmanship in 1912. The function of the Commission is to consider the development of agriculture and other economic resources of the kingdom and to advise the Treasury as to the disposal of grants and loans for purposes connected with agriculture, forestry, reclamation of land, rural transport other than roads, canals, harbours and fisheries. The sums available are partly voted by parliament partly charged on the consolidated fund and partly received by way of interest on and repayment of loans and of profits received (if so provided) on works started by a grant or loan from the Commission.

**Agricultural Progress**<sup>1</sup>—In Norfolk the inception of sugar beet growing on a considerable

<sup>1</sup> See also Agriculture in Part I of the YEAR BOOK

able scale is the outstanding agricultural development. A large sugar beet factory at Cantley on the banks of the Yare some ten miles from Norwich, was opened in 1912. Despite the torrential rains in August of that year samples of Norfolk grown beet yielded as much as the average yield of roots grown in Holland. Farmers who have at first looked askance at the new venture, have since offered land freely. Beet sugar experiments have also been made in Kent and Sussex. The Maidstone Farmers Club reported in 1912 that satisfactory crops could be grown and in Sussex it was proposed to form a company to develop the industry on condition that 2000 acres should be placed under the crop for five years. A factory has been established at Hayle in Cornwall.

Recently tobacco growing has been inaugurated at Methwold in south west Norfolk on a soil previously thought valueless except for game preservation. Some experts are of the opinion that this may turn out to be one of the most promising experiments in East Anglian agriculture. In the protracted drought of 1911 the Methwold tobacco prospered well but in the wet summer of 1912 it succeeded even better the sandy porous soil absorbing rain very quickly.

Heavy losses were sustained by Hampshire agriculturists and market gardeners owing to the dry summer of 1911 and the long continued rains of 1912 but the cultivation of straw berries did well. The fruit is grown at Swanwick and at Sarisbury and is sent to market a week or more before the Kent crop. In some cases the plantations yielded a profit of £50 an acre the culture not being confined to small holdings but carried on extensively on large farms where strawberries have displaced some of the usual crops. The Hampshire County Council purchased 264 acres at Sparsholt near Winchester for use as a farm school and have established a system of agricultural scholarships.

Considerable disturbance in the agricultural industries of Cheshire and Shropshire is reported owing to the change in ownership of thousands of acres of agricultural land through owners of great estates putting them on the market.

A wide scheme for the reclamation of waste lands in the north of the Isle of Man the creation of small holdings and the development of an export trade in the produce to English markets has been under consideration.

In the direction of agricultural education mention may be made of the extension of facilities by the university of Bristol in adjacent counties. A large technical school with an agricultural department has been established by the Essex Education Committee. The new buildings of the Cheshire Agricultural College and Norris Midworth Museum were opened on July 22 1912.

Dr Clement Stephenson F.R.C.V.S. in February 1912 gave £5000 towards buildings for a new agricultural department at Armstrong College Newcastle upon Tyne.

*Mining and Manufactures*—Table XVI shows the total number of persons employed at mines in the four divisions of the United Kingdom in 1911.

Coal was exported from the United Kingdom to the amount of 62 000 000 tons in 1910 and 64 600 000 in 1911 while in addition 19 500 000 tons in 1910 and 19 264 000 in 1911 were shipped on steamers engaged in foreign trade Table XX shows the chief receiving countries

Table XX—Countries Receiving British Coal

A national strike of miners lasted from March 1 to April 6 1912 (see under *History* above) The following report from the northern coal fields may be taken as an illustration of some of its effects The Northumberland Miners Association disbursed in strike pay £156 000 its total funds including investments from which it had been deriving £4000 annually in interest The funds of the Durham Miners Association amounting to over £400 000, were also seriously depleted The loss to colliery owners and to trades dependent on coal supplies was enormous This strike occurred during a period of prosperity Northumberland miners wages in August 1912 were 36 per cent above the 1899 basis—the highest recorded for many years previously

In the week ending July 13 1912 the King and Queen travelled in the West Riding of Yorkshire to inspect the social and industrial life of the people including Halifax Huddersfield Rotherham, and many colliery centres, among them Cadeby Colliery Conisborough which they visited on hearing of a series of explosions which occurred on July 9 1912 resulting in the loss of 86 lives Among those killed were Mr W H Pickering, chief inspector of mines for Yorkshire Mr H R Hewitt government inspector for Sheffield and Mr J Y Fickle government inspector of Doncaster

A remarkable colliery development has taken place in the Doncaster district in the last two years. Numerous pits have been sunk and coal has been reached in several of them. Former villages have grown into populous places and Doncaster is becoming the centre of a large population. Again the developments which have taken place in the neighbouring north Nottingham coalfield have largely altered the industrial character of that part of the country. Within a radius of five miles of Mansfield eleven collieries have been sunk and twenty others in the ten mile limit. The Mansfield colliery itself was responsible for the output of 1 183 876 tons in 1911 an increase of 40 756 tons over the previous year. The beautiful Dukeries have been invaded and in 1912 negotiations were completed for a pit between Warsop and the forest village of Budby to be known as the Welbeck Colliery. To cope with this advance the Mansfield tramways have been extended and a new railway touching that town and Sutton is in course of construction.

Progress has been made in the Kent coalfield and four new seams were reported as proved within the boundary of the Kent Coal Concessions Ltd in August 1911.

The outlook in the South Wales coal was better towards the close of 1912 than it had been for some time. In 1911 the trade suffered on account of a succession of strikes which probably affected this district more than any other. Thus while there was an increase of shipments of coal from the United Kingdom there was a decline from South Wales. The details of foreign shipments were as follows—Cardiff 16 127 777 tons (dec 829 979) Newport 4 324 917 tons (inc 550 555) Swansea 2 929 982 tons (inc 218 788) Port Talbot 1 650 538 tons (inc 65 858). The coastwise trade was as follows—Cardiff 2 644 520 tons (dec 222 912) Newport 689 960 tons (dec 48 781) Swansea 272 331 tons (dec 39 516) Port Talbot 164 791 tons (dec 18 350). These decreases are unusual and due entirely to the unrest in the labour world. Their significance may be realized from the fact that the output of one coalfield despite the strike amounted to 50 000 000 tons as compared with 48 699 982 tons in 1910 and that the number of persons employed in one coalfield has risen from 150 394 in 1901 to 213 252 in 1910. The North Wales coal mines have been holding their own whereas metalliferous mines and slate quarries have been doing badly.

*Other Minerals*—Metals were obtained from British ores as in Table XXI

Table XXI—British Metals 1910

	Iron	Tin	Lead	Zinc	Copper	Silver	Gold
Quantity	Tons 4 975 735	Tons 4 797	Tons 21 522	Tons 4 168	Tons 449	Oz 136 665	Oz 2 427
Value	£ 17 008 812	£ 738 025	£ 283 194	£ 99 823	£ 27 570	£ 14 058	£ 8 088

*Iron*—The production of iron ore in the chief producing counties of England in 1910 is shown in Table XXII. Wales produced 41 455 tons (percentage of total U.K. 0.3).

Table XXII—Counties Producing Iron ore

	Tons	Percentage of Total U.K.		Tons	Percentage of Total U.K.
England	14 471 108	95.0	Northampton	2 649 539	17.4
Cumberland	1 334 751	8.8	Oxford and		
Lancashire	408 090	2.7	Rutland	242 291	1.6
Leicestershire	560 410	3.7	Stafford	913 006	6.0
Lincolnshire	2 128 161	14.0	Yorkshire	6 198 411	40.7

*Salt*—Affecting the Cheshire salt industry a parliamentary bill was promoted in 1912 by the Cheshire County Council and other bodies to restrict the conveyance of brine by pipe from the salt manufacturing areas of Northwich and Winsford to Weston Point which offers advantages of cheaper transport by Manchester Ship Canal and the combined manufacture of salt and electricity. (At Weston it was stated the Salt Union was receiving £15 000 a year from the sale of electricity made by steam going on its way to boil the brine). By the House of Lords' Committee the Bill was rejected. Incidentally there was mentioned a discovery of brine and large deposits of rock salt at Lymm.

*Tin*—The steady rise in the already high price of tin has maintained the prosperity of the Cornish mines of established position while the most noteworthy new progress has been the development of alluvial workings following on the success of this method of operations on the Goss Moors. A large electric power station at Hayle is now supply

ing current through west Cornwall from Camborne on the east to St. Just with a branch to Penzance on the west. The wires are carried across country on overhead standards. At present the chief users are the mines. The whole of the mining schools of Cornwall have been combined in one school of metalliferous mining at Camborne and the local schools at Redruth, Truro and Penzance are now closed for mining education.

Important developments are anticipated from the recent discovery of radium in the famous hot springs at Bath. A discovery of gold was reported in Jersey in 1911.

*Manufacturing Industries.* *The Midlands.*—In all branches of trade in the Birmingham district there has been an improvement during the past two years. The South Staffordshire iron trade has experienced a remarkable revival. The former preference of steel over iron has in many cases disappeared whereas the open hearth process for steel has also regained favour to the advantage of this district. In bars, billets and all other classes of semi raw and finished material there have been repeated advances of selling prices and during 1911 the price of pig iron moved slowly but steadily upwards. The insufficient supply and high price of coke has seriously handicapped the iron trade during the past year. Ironworkers have received several advances in wages. Foreign competition in bar iron, steel billets, etc., has diminished considerably during 1911.

In the copper, brass and metal trades there has been constantly increasing activity. By the formation of associations and manufacturers combinations selling prices have been improved. Repeated advances in selling prices were declared in 1911, though without a corresponding increase in profits owing to the high prices of fuel and raw materials.

The selling prices of metal bedsteads have been increased through the formation of an alliance embracing all the principal factories.

The cycle and motor trade have increased in prosperity. The trade in bicycles fell off a little in 1911 but revived in 1912, while the popularity of the motor cycle has greatly augmented business. Many motor car manufacturers have turned their attention to vehicle for heavy traffic, others again are making special efforts to produce cheap cars in order to meet American competition. The amalgamation of the Daimler Company (Coventry) with the Birmingham Small Arms Company has proved successful.

The Birmingham gun trade has fully recovered its former prosperity. Both the home and the export demand for good sporting guns and rifles have steadily improved. A difficulty is found however in obtaining killed men. Belgian and other foreign competition has been largely met by the designing of cheap machine made guns with standardised parts. The Gun Trade Technical School has been placed under the Birmingham Education Committee though it still receives financial support from the guardians of the Proof House.

The jewellery trade of Birmingham has experienced some fluctuations, but the average volume of business tends to increase. Several new factories have been erected.

In the button trade, which has suffered from changes in fashion, employment at the end of 1912 was exceedingly good. All the fancy and miscellaneous trades have been busy.

In all the metal trades wages have been advanced the advances ranging from 5 to 20 per cent. Strikes have been comparatively few and unimportant. The most notable was that of the Birmingham Small Arms Company employees in October 1911 which affected over 3,000 persons and lasted four weeks. It was ended by important concessions.

Electrical engineering and trades accessory to it have grown enormously in the Midlands during the past two years and export business has been unprecedented.

In the saddlery and harness and general leather goods trades of *Walsall* which was recently in a depressed state there has been a return to prosperity especially in connexion with the export trade. Prices have advanced considerably not only on account of demand but also through the very large increase in the cost of leather and other materials. The engineering and hardware trades of the town and neighbourhood have also prospered.

At *Coventry* the watch trade has been exceedingly busy owing to the growing preference for English made watches. The artificial silk trade is increasing and the general engineering trades have done well. A large electrical industry appears likely to grow up.

The trade of *Leicester* shows progress boot and shoe exports being heavier than previously and hosiery and elastic webbing employing many hands. Large works for general electrical engineering constitute an important new industry in *Northampton*. The growing industries of *Peterborough* include a large shop fitting factory. In *Nottingham* the tendency of lace making firms to erect factories in outlying districts has acted as a stimulus to new industries. Blouse and robe-making have become of great importance engineering and wood working occupy much labour and in 1912 there was introduced a new machine for the making of embroidery. It was announced in October 1912 that a large lace manufacturing business would be removed from Beeston (Notts) to Raab in Hungary as a result of the effect of hostile tariffs and that facilities and remission from taxation had been granted by the Hungarian government. Through the activity of the *Derby Borough Development*

Committee new industries have been introduced there one of great importance being the manufacture of filament electric lamps. The ironworks industry at Hawarden Bridge, *Flintshire* has continued to develop and connected with it a garden city at Sealand has been partly built and occupied. Another ironworks industry is flourishing at Ellesmere Port, *Cheshire* where water-transit facilities have also developed corn milling. The population has increased in ten years by 6091.

*Lancashire and Yorkshire*—New cotton mills are building in such centres as Turton, Leigh, Nelson, Hastenley and Livesey (Blackburn), Haslingden, &c., while steel works at Partington and salt works at Runcorn are to be included among other industrial developments. The Lancashire cotton trade enjoyed in 1911 its most prosperous year since 1907 and this prosperity was reflected in the iron founding and engineering industries which are more or less closely allied to the staple industry of the county. At the end of 1911 however a dispute occurred in the cotton trade which was only brought to a close on January 19, 1912 after a lock-out of the operatives lasting nearly a month.

All the *Sheffield* industries have shown remarkable activity the volume of trade in the last three years being larger than at almost any previous period. To protect themselves against infringers of trade marks a special fund of £15,000 has been raised by manufacturers and several prosecutions have been successfully initiated. A new society called the Sheffield Electro Metallurgical Society was formed in 1910. Many new mills have been erected at Huddersfield where the cloth and other trades have been active.

*Northern Counties*—Ship building on the north-east coast from Blyth to the Tees has reached a very high point, 349 vessels of 1,011,443 tons being launched in 1911 compared with 226 vessels of 654,789 tons in 1910. After an interval of five years the

blue riband for the largest amount of construction by one firm in the United Kingdom came to the Tyne in 1911 this distinction being obtained by Messrs Swan, Hunter and Wigham Richardson whose production aggregated 125,050 tons. New methods of marine propulsion during the period under review include the geared turbine of Sir Charles Parsons, the Diesel oil engine as exemplified in the Wallsend built ship *Toiler* and the gas engine vessel *Holzappel I* built at South Shields. At the close of 1912 Messrs Swan, Hunter and Wigham Richardson were building for a Scotch firm a vessel for the Canadian lakes on the new principle of a Diesel engine supplying electrical power.

Naturally with ship building so active in 1911 the sister industry of marine engineering was correspondingly brisk. One firm on the Tyne Messrs R. J. W. Hawthorn, Leslie and Co. held the record over the Kingdom for the year their turn out of engines amounting to 150,200 shaft horse power. Since 1910 the various sections of labour engaged in ship building have had their wages increased three times representing 38 per week per man. Shipyard workers' discharge notes were discontinued at the request of the men in the early part of 1912 and their demand along with the engineering trades is for an eight hours day.

*East Anglia, etc.*—Among recent industrial developments in this part of England are the establishment of blast furnaces and rolling mills at Scunthorpe, Lincolnshire and of electric steel furnaces at Braintree, Essex. Among industries recently established at Chelmsford are works of the Marconi Wireless Telegraph Co. and other electrical works, the National Steam Car works, etc. At Rochester large works for the manufacture of cement making machinery were established by an Anglo-German firm in 1911.

*South Wales*—The revival of prosperity in the tin plate trade which began in 1898 continues unchecked. The annual amount paid in wages to South Wales tin plate workers is now about £2,300,000. Of the 569 mills engaged on the manufacture of tin plates in England and Wales 96 per cent are situated in Glamorgan, Carmarthen and Monmouth. In 1911 the Welsh tin plate trade broke all records.

*Labour Exchanges*—The system of labour exchanges was inaugurated on February 1, 1910. By the end of 1911 there were 161 exchanges at work and during that year the number of vacancies notified by employers was 757,109, and the number filled by the exchanges was 589,770. The demand for workers exceeded the supply in the cotton, woollen and worsted trades as well as, during certain seasons of the year, in the coach building and engineering trades and the Clyde ship building industry while female workers were also found scarce in the clothing and laundry industries.

*Fisheries*—The great herring industry at Yarmouth has now a fleet of 1000 boats principally steam drifters. A Yarmouth boat broke all records in September 1912 with a haul of 320,000 herrings, a catch that realised £520. Not less than 10,000 fishermen are engaged in the Yarmouth fishery. In the season of 1911 the catch at Yarmouth

totalled just upon 550 000 000 herrings but the catch in 1912 exceeded that and all previous records. Protests have lately been made against the practice of trawling for herrings and the consequent destruction of immature fish the matter was the subject of a deputation to the president of the Board of Agriculture and Fisheries (Mr Runciman) in October 1912 and the difficult questions involved may result in legislation and international action. A movement has been started to organize steam trawling on colonial fishing grounds in connection with Grimsby. A new trawling industry was initiated at the port of Blyth at the beginning of 1912. A considerable number of Cornish fishing boats have been fitted with motors including some of the larger craft engaged on mackerel fishing in the Mount's Bay ports and new boats for the pulchard and inshore fisheries are being built with these engines along the south coast of Cornwall especially in the eastern ports, and in Devonshire.

For the English and Welsh fisheries the total weight of wet fish landed in 1911 was 14 418 904 cwt. and the total value £8 051 456 representing an increase in comparison with the previous year of practically 10 per cent in weight but only 1 per cent in value. The principal fish were—cod 2 562 182 cwt (£1 291 095) haddock 2 114 287 cwt (£1 269 432) herring 4 995 976 cwt (£1 174 065) plaice 986 165 cwt (£985 098) hake 732 365 cwt (£564 769) sole 61 817 cwt (£403 637). The total value of shell fish was £273 012 making a grand total value for all fish of £8 324 498 (an increase of 3.7 per cent on the average for 1906-10). The principal shell fish were 4 785 984 crabs (£54 034) 570 144 lobsters (£27 435) 26 353 115 oysters (£79 773). The imports of fish into the United Kingdom decreased by 10 per cent in value in 1911 to £3 906 020 whereas the exports of fresh fish increased by 66 per cent to £1 508 235 and those of cured or salt fish by 15 per cent to £5 118,825.

Commerce.—British trade has had three record years in 1910 1911 and 1912 each surpassing all others before it in the figures for imports and exports. Those for 1911 are analysed below but the totals for 1912 as disclosed by the final monthly Board of Trade returns issued on January 7 1913 may first be given. The imports were valued at £1 443 806 114 (nearly 6½ million pounds more than 1911) the British exports at £1 431 434 09 (over 3½ millions more) and re-exports at £1 111 837 905 (over 9 millions more) the total exports being £5 590 219 01 (over 4 millions more). It may be useful to show by comparison with previous years the enormous expansion that has taken place as shown by the import and export figures (in million pound) in British trade—

	1912	1911	1910	1909	1902	1897
Imports	744	680	678	645	528	451
Total Exports	599	556	534	517	349	294
British Exports	487	454	430	426	283	234

It will be seen that in fifteen years the exports of purely British products have more than doubled.

During 1912 the principal increases in imports were recorded in the following groups—grain and flour +£1 746 268 non dutiable food and drink (other than meat grain and flour) +£3 678 390 tobacco +£1 088 933 wood and timber +£2 489 144 raw cotton +£9 085 446 textile materials other than cotton and wool +£3 967 054 oil seed etc +£2 397 031 hides and undressed skins +£2 613 386 iron and steel and their manufactures +£3 618 654 cutlery and hardware +£1 717 532 machinery +£1 052 082 chemicals dyes etc +£1 150 501 leather excluding boots and shoes +£2 115 826 railway cars motor vehicles etc +£1 331 322. The total increase of £64 738 987 for the year is divided broadly under Raw materials etc £27 554 672 Articles wholly or mainly manufactured £19 943 700 Food Drink and Tobacco £16 805 989 and miscellaneous £434 616.

In British exports the chief increases were in the following groups food and drink (other than grain flour and meat) +£2 465 512 coal coke and fuel +£4 137 420 wool +£916 474 iron and steel and their manufactures +£4 898 626 other metals and their manufactures +£1 276 613 electrical goods +£1 550 503 machinery +£2 201 094 new ships +£1 368 784 cotton yarns +£1 164 560 yarns other than cotton wool and silk +£1 376 487 apparel +£1 892 758 chemicals +£1 019 621 railway cars motor vehicles etc +£1 641 546. The total increase of £33 314 704 is divided broadly under Articles wholly or mainly manufactured £22 996 368 Raw materials and articles mainly unmanufactured £5 702 023 Food Drink and Tobacco £3 652 405 Miscellaneous £963 908.

The increase in trade was reflected also in shipping activity. Ships entered with cargoes exceeded those in 1911 by 4 401 543 tons and those cleared with cargoes by 7 746 369 tons.

## BRITISH TRADE

The appointment was announced in April 1911 of a royal commission to inquire into the natural resources and improvement of the trade of the Empire, following upon a resolution passed at the Imperial Conference in May 1911. The following were appointed for the United Kingdom Lord Inchcape (Chairman) Sir Edgar Vincent Sir Charles John Owens Sir H. Rider Haggard Mr. Tom Garnett (of Manchester) and Mr. William Lorimer (of Glasgow) for Canada Mr. George Eulas Foster minister of trade and customs for Australia Mr. Donald Campbell formerly a member of the legislature of South Australia for New Zealand Sir Joseph George Ward recently prime minister of the Dominion for South Africa Sir David de Villiers Graaf minister of posts and telegraphs for Newfoundland Mr. Edgar Bowring M.L.C.

*Import and Export Trade (United Kingdom 1911)*—The total imports into the United Kingdom in 1911 were valued at £680 157 527 an increase of £1 900 503 (+0.27 per cent) on 1910. Of this total British possessions contributed £171 453 597 (an increase of £815 971 or +0.47 per cent) and foreign countries £508 703 940 (an increase of £1 084 532 or +0.2 per cent). The total exports in 1911 were valued at £556 878 432 an increase of £22 732 615 (+4.082 per cent) on 1910. Of this total British possessions took £169 745 187 (an increase of £12 289 933 or +7.2 per cent) and foreign countries £387 133 245 (an increase of £10 442 682 or +2.69 per cent). The proportion per head of population of the value of imports into the United Kingdom in 1910 was £15.21 and in 1911 £15.04 that of exports of native produce only (£430 384 772 in 1910 and £454 119 298 in 1911) was £9.11.8 in 1910 and £10.0.7 in 1911 and that of net imports (i.e. less re-exports) was £12.15.10 in 1910 and £12.15.0 in 1911. Bullion and specie are excluded. Table XXIII shows the trade with British possessions and Table XXIV with foreign countries.

Table XXIII—Imports from and Exports to British Possessions 1911

From and To	Imports	Inc. or Dec. on 1910	Exports	Inc. or Dec. on 1910

The imports of gold and silver bullion and specie into the United Kingdom were as follows in 1911 the increase or decrease per cent on 1910 being given in brackets. *Gold*—from British possessions £42 815 915 (+4 7) including Cape of Good Hope and Natal £37 218 665 (+9 1) India £2 245 761 (+1 14) and Australia £1 534 965 (-33 8) from foreign countries £5 877 838 (-64 3) making a total from foreign countries and British possession of £48 693 753 (-15 1). *Silver*—from British possessions £1 441 957 (-35 1) from foreign countries £12 845 790 (+8 2) including United States of America £11 898 503 (+4 02) making a total of £14 293 447 (+1 37).

*Textile Industries*—The imports of raw cotton in 1911 (with increase or decrease on the preceding year) were as follows—total imports 2 207 088 100 lbs (+11 88) re-exported 291 180 600 lbs (+13 6) retained 1 915 907 500 lbs (+11 6). The United States supplied 1 662 000 000 lbs (+14 4) Egypt 364 000 000 lbs (+10 6) and British India 79 000 000 lbs (-6 9).

Wool (sheep lamb alpaca and llama) was imported in 1911 to a total of 799 890 221 lb (-0 5) 304 525 910 lbs were re-exported (-9 2) 495 370 311 lbs were retained (+5 8). Table XXVII shows the country of origin.

Table XXVII—Countries of Origin for Wool Imports to U.K. 1911

	1911 Million lbs	In (+) or D (-) Per Cent on 1910		1911 Million lbs	In (+) or D (-) Per Cent on 1910

*Shipping*—In 1911 the total net tonnage of vessels entered and cleared with cargoes and in ballast at ports of the United Kingdom was as follows showing increase or decrease per cent on 1910. *Steam*, entered 67 253 999 tons (+1 9) cleared 67 844 960 (+3 7). *Sailing* entered 1 910,516 (-2 2), cleared 1,899 866 (-2 5). *Total* entered 69 164 515 (+3 7) cleared 69 744 826 (+3 3). Of these the British vessels alone represented entered 40 777 476 tons (+2 8), cleared 41,107,978 (+2 3).

The total net tonnage of British vessels with cargoes entered and cleared in ports of foreign countries in 1911 was as follows entered 21 534 126 tons cleared 29 237 582. In British ports abroad entered 7 920,081, cleared 7 856,500.

The principal ports of the U.K. with the tonnage of vessels cleared and entered in 1911 are shown as follows with the increase or decrease per cent on 1910—London entered 11 973, 249 (-1 5) cleared 9 004 974 (+0 05) Liverpool and Birkenhead entered 7 887 719 (+3 9) cleared

*Recent Developments at English Ports*—*London*—In 1909 the value of the imports into the port of London represented 37.0 per cent and the exports 18.5 per cent of the total for the U.K. The Port of London (Registration of Craft) Order Confirmation Act 1910 authorised the Port of London Authority to impose fees in respect of the registration or licensing of craft on the river Thames. In 1911 the Port Authority decided to construct a new dock estimated to cost £1,400,000 and the King undertook to perform the ceremony of cutting the first sod on July 17 1911 but this was prevented by the Transport Workers strike. On February 1 1911 H.M.S. *Thunderer* the first super Dreadnought vessel constructed on the Thames was launched from the yard of the Thames Ironworks Shipbuilding and Engineering Co.

*Mersey*—Important developments of the north end of the Liverpool Dock Estate include the Gladstone Dock at Seorth begun in September 1910. It was decided early in 1911 to construct a deep water approach taking vessels 100 feet long. The Gladstone Dock is to be convertible into a graving dock, two branch docks and a half tide dock together with a lock 645 feet long communicating with the Hornby Dock. are included in the scheme the estimated cost of which is £5,000,000. New works have also been undertaken at Brocklebank Branch Dock including the extension of quayside railways and sheds. The proposal to construct a bridge between Liverpool and Birkenhead was revived in 1912 but the scheme for the erection of a custom house at the pier head has been abandoned owing to failure of the negotiations for the site. Facilities at the Port of Manchester have been extended at Trafford Park and elsewhere on the canal and seed crushing works have been undertaken at Partington and elsewhere. Cornbrook wharf was extended in 1911. The Manchester Cotton Association is actively fostering the import trade in raw cotton.

*Dee*—An improved waterway for shipping in the Dee estuary has long been contemplated and in 1912 a conference of representatives of Flint and Denbigh County Councils, Chester Town Council, Dee Conservancy Board and other bodies gave general approval to a scheme for a navigable channel near the Flintshire shore and agreed to press the Development Commissioners to grant £30,000 towards the estimated cost of £75,000.

*Southampton*—Increased size of the Atlantic liners calling at Southampton necessitated the construction of a dock of 16 acres which was used for the "Titanic." Considerable loss has been sustained by strikes of dockers.

At *Dover*, trials were made in 1910 for the running of trains serving passenger vessels on the Admiralty Pier extension. It was decided in September 1912 to close the western entrance to Dover harbour with a view to improving the shelter in rough weather and to extend or duplicate the eastern entrance.

*Bristol* continues to direct its chief effort to the development of the dock estate owned by the municipality. New traffic has been attracted. The Canadian Steamship Ltd. (Royal Line), established in 1910 has been very successful particularly in the emigration branch and large numbers of agriculturists from the west of England have been

## BRITISH RAILWAYS

settled in Canada. There has also been considerable increase of the imports of frozen meat. The port dues grew from £146,565 in 1911 to £155,284 in 1912. The latter figures are the highest on record and the trade has doubled since 1882. Grain and provisions continue to be among the chief imports and petroleum and fruit have been imported in increasing quantities of late. There is still a heavy call on the rates to meet the deficiency in dock revenue the amount of aid in 1912 being £140,000 compared with £154,000 in 1911. The city's indebtedness considerably exceeds £8,000,000 over £5,50,000 being for docks after allowing for accumulations in the Sinking Fund.

*Humber and Lincolnshire Coast*—At Hull an important addition to the facilities for the coal export trade was made in 1910 by the installation of coaling beds at the Victoria Docks. This method of shipping coal the appliance for which has a capacity of 600 tons per hour, had not previously been employed in England. The extension of the joint dock was completed in 1912.

The greatest undertaking on the east coast has been the construction by the Great Central Railway of the Immingham Dock opened by the King on July 22, 1912. Six miles from Grimsby and nine miles nearer the North Sea than Hull Immingham possesses many advantages providing free ingress and egress at any state of the tide. The area of the dock property which is two and a half miles in length and one mile in breadth is just over 1,000 acres and the railway sidings and lines extend to 170 miles being sufficient to take 11,600 waggons carrying upwards of 10,000 tons. The water area is 45 acres. There are eight hydraulic steam hoists capable of shipping 5,600 tons per hour. From Grimsby itself the coal shipments to foreign ports in 1911 exceeded 1,500,000 tons. At Boston dock extension has been taken in hand.

*Wrecks*—The number of vessels belonging to the United Kingdom totally lost at sea in 1910 was 319 of 150,142 tons (sailing 195 of 32,547 tons steam 124 of 117,595 tons).

*Communications—Railways*—Table XXVIII gives particulars for the railways of the United Kingdom in 1911 the figures being also analysed under the three divisions of the kingdom for purposes of comparison.

Table XXVIII—Railway Statistics 1911

	United Kingdom	England and Wales	Scotland	Ireland
Mileage at the end of year	23,417	16,200	3,815	3,402
Capital paid up (million £)	£1,324	£1,093.2	£185.7	£44.98
Number of passengers (millions) <sup>1</sup>	1,326.3	1,188.2	107.3	30.8
Increase per cent on 1910	1.4	1.4	2.8	0.29
Tonnage (millions) of minerals and goods	523.57	448.29	68.67	6.62
Increase per cent on 1910	1.78	1.7	2.0	1.4
Total receipts	£127,199,000	£109,189,000	£13,489,000	£4,511,000
From passengers	£53,955,000	£46,308,000	£5,362,000	£1,284,000
Per mile of line open	£2,304	£2,859	£1,405	£671
From goods	£63,285,000	£53,921,000	£7,281,000	£2,082,000
Per mile of line open	£2,703	£3,328	£1,909	£612
Total increase per cent	2.6	2.6	3.0	0.8
Working expenses	£78,617,000	£68,252,000	£7,551,000	£2,814,000

The percentage of working expenditure to total receipts was 62 for the whole kingdom 63 for England and Wales 56 for Scotland and 62 for Ireland.

The Great Western Railway company having shortened its route between Birmingham and London by making a new line *via* Aynho, has spent upwards of £2,000,000 in the Birmingham district in widening and improving the line north and south of the city, rebuilding Snow Hill Station and constructing a new passenger station and a large goods station at Moor Street near the public markets. The London and North-Western Railway company are preparing an important scheme for the improvement of New Street Station, Birmingham and the extension of the adjoining Queen's Hotel. A new line is projected from Coventry to Arley in conjunction with the Whitacre and Nuneaton branch of the London and North-Western for the purpose of developing the coalfield in the neighbourhood of Coventry. In connection with recent labour disputes it may be mentioned that the North-Western company

<sup>1</sup> Excluding season ticket holders.

appointed a grievance hearer (Feb. 1912) to inquire into minor complaints. The extension of a branch line of the Great Northern Railway north of Enfield to Cuffley and beyond is opening up a new residential district for London. Other railway enterprises include the reopening (April 13, 1911) of the Shropshire and Montgomeryshire Light Railway from Shrewsbury to Llanymynech after lying derelict for thirty years and the opening of a line (July 1, 1912, 1½ mile long) connecting Holywell Flintshire with Holywell Junction station on the L. & N.W. line from Chester to Holyhead. An extension of the electrification of part of the Lancashire and Yorkshire railway system was opened in March 1911 between Maghull and Town Green and a scheme for the electrification of the Manchester South Junction and Altrincham line is in hand. A bill was promoted in 1912 by local landowners for a railway between Richmond and Reeth in the valley of the Swale, Yorkshire.

*Canals etc.*—The final report of the Royal Commission on Canals and Inland Navigation has received much attention in the midlands and a Midland Waterways Association representative of all the towns and interests concerned, has been formed to press forward the scheme of the Commission for improved water communication with Hull, Liverpool, London and the Severn ports. A committee has also been formed to promote the restoration of the Warwickshire Avon as a commercial waterway.

*London Traffic.*—In 1910 the mileage of tramways in London was 130.48. Motor omnibuses have practically superseded the horse omnibus; in 1890 there were five motor omnibuses, licensed by the Metropolitan Police, while in 1910 this number swelled to 1,700 and the number has greatly increased since. The streets of London extend to 1,151 miles. In some of these the congestion of traffic is exceedingly severe. The number of accidents and consequent agitation in parliament and elsewhere in the autumn of 1912 drew the serious attention of the Home Office and other authorities to the matter and it was considered whether statutory powers should be created for the limitation of the number of public vehicles in certain thoroughfares. The recommendation of the Royal Commission on London traffic in favour of a Traffic Board for London was strongly revived but did not receive the support of the government.

Practically all the drivers of motor cabs in London struck in October/November 1911 and the dispute was settled by an arrangement the principal points of which were that the drivers should retain extras which are chargeable by statute upon passengers and that observers whose duty it was to report to the cab companies any defalcation on the part of the drivers should be abolished. A further dispute arose in March 1912 with the drivers and two of the companies and a settlement was only effected on April 15th and at the end of the year another strike took place.

The Piccadilly, the Baker Street and Waterloo and the Hampstead "tube" railways were amalgamated as the London Electric Railway Company in 1910 under the control of the Underground Electric Railways Company, the fusion of the latter company with the London General Omnibus Company (which has absorbed a number of competing omnibus companies since the introduction of motor traction) was subsequently arranged and in November 1912 it was announced that it was intended to amalgamate the Central London and the City and South London tubes with the underground system and the London United Tramways with the Metropolitan Electric Tramways. The chairman of the Underground company is Sir Edgar Speyer.

*Road Board.*—Under the Development and Road Improvement Act (1909) the Road Board was created for the improvement of roads and the administration of a grant for that purpose consisting of the proceeds of duties on motor spirit and of part of the duties in respect of carriage licences. The Commissioners appointed in May 1910 were Sir George S. Gibb (chairman), Lord Pirrie, Lord Kingsburgh (Sir J. W. Macdonald), Lord St. Davids and Sir Charles D. Rose Bart. The Board has power to act on its own initiative or through existing highway authorities and has already carried out much important work, not only in the direction of improving roads but in such other directions as inquiry into the best forms of road crusts.

One proposal which has attracted wide attention and was the subject of a conference in February 1912 under the chairman of the Board and including representatives of the Board of Trade and local authorities interested is that of a new approach to London from the west extending from Hounslow to the West Cromwell Road and avoiding among other crowded points the narrow High Street of Brentford. The cost was estimated approximately at

## BRITISH POST OFFICE

£1 750 000 but alternative schemes are in the field. Mention may also be made of the adaptation of disused portions of the Roman Foss Way in Lincolnshire for modern traffic.

The system of propulsion of electric vehicles without rails by means of overhead trolleys has received much attention and has an example in Leeds where a public service on this principle was inaugurated in June 1911.

*Tramways of the United Kingdom*—The total length of tramways open at the end of 1911 was 2597 the paid up capital £74 725 440 the gross receipts £13 777 001 (an increase of 5.3 per cent on the preceding year). Working expenses amounted to £8 500 941 (increase 4.5 per cent) net receipts to £5 276 060 (increase 6.6 per cent). The number of passengers carried during the year was 2 907 177 120 an increase of 9.2 per cent.

*Post Office*—With the close of the year 1911 the telephone system of the National Telephone Company passed under the control of the Postmaster General whose department under this arrangement entered into possession of some 1 500 exchanges and undertook the service of 400 000 subscribers in addition to about 80 000 who were previously served by existing post office exchanges. With very few exceptions the company's staff was transferred to the government service the total *personnel* amounting to about 18 000. The rates were not immediately affected by the change but public opinion was freely expressed that the efficiency of the service had deteriorated.

The following statistics relate to the year ending March 31 1912. The total number of letters delivered in the United Kingdom was 3186.8 millions (in England and Wales 2729.8 Scotland 273.8 and Ireland 183.2 millions) an average per head of the population of 75 in England and Wales 58 in Scotland and 42 in Ireland or 70 for the whole kingdom. There were also delivered in the Kingdom 1265.5 million newspapers and half penny packets 905 500 000 postcards and 124 254 092 parcels with an average postal rate of 4.84d providing a revenue of £2 505 068 of which £1 122 605 was paid to railway companies. The length of telegraph lines in 1910-11 was 52 413 miles overhead 5569 underground and 3314 submarine but these figures represent lengths of wire of 440 315 miles overhead 787 553 underground and 10 727 submarine. Telegraph business was transacted at 13 959 postal and other offices and telegrams numbered 76 029 000 inland (a decrease of 596 000) and 15 585 000 foreign (an increase of 478 000 on the preceding year). Receipts on telegrams and telephones amounted to £5 121 341 including £2 297 953 from inland telegrams and £1 952 537 from telephones (including royalties) expenditure on this department amounted to £6 352 281.

Money orders were issued in 1911-12 to the amount of £35 260 390 in England and Wales £4 467 975 in Scotland and £2 367 366 in Ireland (total £42 095 731) and postal orders to the amounts of £41 337 000 £4 432 000 and £2 261 000 respectively (total £48 030 000).

The demolition of the old General Post Office in St. Martin's Lane London was undertaken in July 1912. It was hoped to preserve the façade which is of some architectural interest (*E B* xvi 945b) by its re-erection elsewhere.

*Finance* (see under *History* above *ad fin*). For 1911-12 the total revenue for the United Kingdom was £185 090 286, and the expenditure £178,545 100.

The following were the details of revenue—*Customs* £33 640 000 *Excise* £38 380 000 *Estate Duties* £25 392 000 *Stamps* £9 454 000 *Land Tax* £750 000 *House Duty* £2 130 000 *Income Tax* £44 804 000 *Land Value Duties* £481 000 *Post Office* £19 650 000 *Telegraphs* £3 105 000 *Telephones* £2 945 000 *Crown Lands* £530 000 *Receipts for Suez Canal shares etc.* £1 281 497 *Miscellaneous* £2 538 789.

The following were the details of heads of expenditure—*National Debt* £24 500 000 *Development Fund* £1 709 859 *To local taxation account* £9 636 399 *Civil list* £470 000 *Annuities and Pensions* £317 745 *Salaries and Allowances* £56 572 *Courts of Justice* £823 000 *Miscellaneous* £325 525 *Army* £27 649 000 *Navy* £42 858 000 *Miscellaneous Civil Services* £46 001 000 *Customs and Excise* £2 297 000 *Inland Revenue* £1 654 000 *Post Office* (Telegraphs etc.) £20 547 000.

The income brought under review for the assessment of income tax was stated as follows for the year ending April 5 1911—Schedule A (ownership of lands houses etc.) England £233 906 688 Scotland £26 944 348 Ireland £14 971 877 Sch B (occupation of lands) England £12 282 010 Scotland £1 925 858 Ireland £3 231 092 Sch C (interest on securities etc.) United Kingdom £49 562 418 Sch D (profits from business professions etc.) England £509 578 244 Scotland £57 036 283 Ireland £16 697 542 Sch E (salaries etc.) United Kingdom £119 697 415.

The National Debt on March 21 1912 consisted of—*Funded Debt* £602 200 092 *Termable Annuities* £33 044 389 *Unfunded Debt* £39 500 000 *Other capital liabilities* £50 061 947 *Total gross liabilities* £724 806 428.

*Parliamentary Electors*—In 1912 the registered number of parliamentary electors

was 7 984 600, or an average of 11,917 per member of parliament (670 seats). They were distributed as follows: (A) England and Wales *counties* (253 seats) 504 81 owners 3 106 370 occupiers, 130 302 lodgers total 3 800,953 *boroughs* (237), 22 986 freemen freeholders etc. 445 387 occupiers, 185,601 lodgers, total 2,653 974 *universities* (5) 20 816 Total 6 475 743 (B) Scotland *counties* (39) 63 884 owners 37- 913 occupiers 34,116 lodgers total 4,0 013 *boroughs* (31) 30 265 freemen etc. 255 420 occupiers 32 044 lodgers total 317 738 *universities* ( ) 23 801 Total 812 452 (C) Ireland *counties* (85) 8 918 owners 556 535 occupiers 49 6 lodgers total 570 379, *boroughs* (16) 2 535 freemen etc., 113 803 occupiers, 4,691 lodgers, total 121 029 *universities* (2) 4 997 Total 696 403.

*Defence*—The cost of imperial defence in relation to national wealth and income, is summarized in Table XXIX<sup>1</sup>.

Table XXIX

	National wealth	Per head	National Income	Per head	Expenditure on defence (est. 1912-13)	Per head
	Million £	£	Million £	£	1 000 £	£ s d
England and Wales	13 716	380	1 740	48	65 700	
Scotland	1 451	305	173	36	7 500	
Ireland	714	163	103	23	Nil	
United Kingdom	15 882	351	2 016	44	73 000	1 12 3
Canada	2 072	288	259	36	2 285	6 5
Australia	1 312	287	164	36	4 775	1 0 0

India	3 600	10	608	2	20 249	1 3
Crown Colonies etc.	1 200		170		1 000	
Total	24 986		3 332		102 440	

*Navies* (see also *Navies* in Part I sect. 1 of the YEAR BOOK).—The creation of a Naval War Staff was announced in January 1912. Its advisory functions were outlined in an important memorandum by the First Lord of the Admiralty Mr Winston Churchill in which he foreshadowed a scheme of collaboration between the Naval War Staff and the General Staff of the army. Some staff officers were to be appointed immediately and appointments were to be made subsequently after a special course of training at the War College. At the same time the appointment was announced of Sir Francis Hopwood as additional Civil Lord of the Admiralty to deal with the business and commercial transactions of the Board, the appointment being permanent and non political. Rear Admiral E. C. T. Troubridge was appointed Chief of the War Staff, Captain G. Ballard Director of the Operations Division and Captain E. C. Jackson Director of the Intelligence Division.

Admiral of the Fleet Sir A. K. Wilson, formerly First Sea Lord, retired from the active list on March 4, 1912 on attaining the age of seventy. He was succeeded as First Sea Lord on November 20, 1911 by Admiral Sir Francis Bridgman, whose resignation on the ground of ill health<sup>2</sup> was announced on December 6, 1912. He was succeeded

<sup>1</sup> After Mr Edgar Crammond in the *Nineteenth Century and After* (Aug. 1912).

<sup>2</sup> The resignation of Sir F. Bridgman on Dec. 4th was the subject of several questions to Mr Winston Churchill in the House of Commons and led to an animated debate on Dec. 20th. Mr Churchill had originally stated that Sir F. Bridgman resigned for reasons of health but under pressure admitted that he had himself taken the initiative in asking for the First Sea Lord's resignation and he was sharply attacked by Lord Charles Beresford who suggested that Sir F. Bridgman had been improperly treated and that he had been removed because he disagreed with Mr Churchill on questions of naval policy. The full disclosure of the facts on Dec. 20th showed that these charges were untenable. Mr Churchill had reluctantly been forced to the conclusion that the Admiral's health was not equal to the grave responsibility attaching to his office at a time of severe strain and he was bound

by Admiral Prince Louis of Battenberg, who was followed in the office of Second Sea Lord by Vice admiral Sir J. R. Jellicoe. Among other recent appointments Admiral the Hon. Sir H. Meux succeeded Admiral Sir A. Moore as Commander in Chief of Portsmouth and Admiral Sir A. Berkeley Milne succeeded Admiral Sir E. Poe as Commander in Chief in the Mediterranean (announced in April 1912).

The *personnel* of the Royal Navy for 1912-13 is shown as follows: (1) *Sea Service* (a) Fleet—flag officers 28, commissioned officers 4727, subordinate officers 740, warrant officers 2070, petty officers and seamen 97811, boys (service) 2601, total 107977. (b) Coast guard—commissioned officers 99, chief officers and second mates 205, petty officers and seamen 2796, total 3100. (c) Royal Marines—commissioned officers 420, warrant officers 67, staff sergeants and sergeants 1300, band ranks, buglers and musicians 1708, rank and file 13296, band boys 272, total 17063, total for sea service 128140. (2) Other services 7860. (3) Addition under supplementary estimate 1500. Total *personnel* 137500.

*Air Service*—In February 1912 a joint Army and Navy School of Aviation was established for the instruction of officers in both services. A British aeronautical service was instituted and designated the Royal Flying Corps with naval and military sections and a central flying school on Salisbury Plain administered by the War Office. The Army Aircraft Factory was renamed the Royal Aircraft Factory.

General Sir C. W. H. Douglas succeeded General Sir J. French as Inspector General of the Home Forces on March 5, 1912.

The following figures show the *personnel* of the Army on October 1, 1911, the numbers wanting to complete the strength being given in brackets where necessary:—(a) Regular Army—British establishment 176539 (4271), Indian establishment 77770 and 1886 supernumerary staff and departments etc. 2474 (106), army reserve 138531, special reserve 60931 (30288). (b) Territorial Force—officers N.C.O.s and men 264911 (49445).<sup>1</sup> permanent staff 2786 (15), reserve 656. The above figures give a total of 724598. There are also to be added—militia 1655, reserve 205, militia (Channel Isles, Malta and Bermuda)—permanent staff 178 (1) and militia 5243 (319), volunteers (Bermuda)—permanent staff 4 (1) and volunteer officers and volunteers 225 (80). Grand total 732108.

*Local Affairs and Finance, United Kingdom, 1900-10*—For England and Wales the revenue of local bodies amounted to £168 15/ 505<sup>2</sup> and expenditure to £166 104 559, for Scotland to £18 854 650 and £18 918 681 respectively, and for Ireland to £8 52 408 and £8 508 435 respectively. Outstanding local loans in England and Wales amounted to £536 002 520, including £49 529 722 in respect of loans taken over or raised by the Metropolitan Water Board for Scotland the figure was £65 827 182, including capitalised values of annuities, and for Ireland £2 066 834. Total £623 896 545.

*London Government*—The assessable value in the county of London in 1911 amounted to £44 669 417. The net outstanding debt of central and local bodies on March 31, 1910, was £111,043 088. The central rates for the administrative county (excluding the City of London) for the year ending March 31, 1911, amounted to 55 3 005d in the pound, leaving to be raised locally differential rates in each borough. The amounts of the localised rates varied from 15 0 005d in Westminster (St. James) to 68 0 005d in Poplar; the amount of the total rates varied from 68 4d in Westminster (St. James) to 118 4d in Poplar. A return published by the London County Council in November 1912 compared the cost of the municipal services in London and six other large cities. The total net cost per head of the population was found to be highest in London £3 5 9 7d, against £2 16s 11 9d for Manchester, £2 8s 9 7d for Leeds, £2 5s 5 5d for Liverpool, £2 3s 6 1d for Bristol, £2 3s 9 9d for Birmingham and £1 18s 8 4d for Sheffield).

those circumstances to act as he did after consulting with the Prime Minister and informing the King, whose sanction had been obtained. After conveying his view to Sir F. Bridge, man in so kind and diplomatic a letter that the gallant Admiral at first failed to realise the situation, he had then put it so bluntly—as Mr. Bonar Law considered brutally—that no misunderstanding was possible. But after the full explanation given by Mr. Churchill it was clear that if his method was open to criticism, his action was not, and that the attacks on him in other respects were unsupported by any material evidence.

<sup>1</sup> Includes both permanent staff and territorial officers for O.T.C. The Territorial force was stated to include 9236 officers and 252 152 N.C.O.s and men on October 1, 1912, giving a total of 261 388 and a decrease of 3523 on the total of the previous year.

<sup>2</sup> Including £22 570 459 of loans and £2 679 183 of other receipts accounted for by the Port of London Authority.

but the cost per £ of assessable value is lowest in London (6s 5 d. ranging up to 10s 4d in Leeds). Education is found to cost 6s 7 6d per head more and police 3s 10 d more in London than the average for the other cities. Higher prices salaries, wages, and cost of lands and building are adduced as explanations of the higher total cost per head in London.

Alderman Sir David Burnett (an auctioneer and surveyor by profession, was elected Lord Mayor of London on September 28 1912 in succession to Sir Thomas Boor Crosby. The London Borough Council elections took place on November 1, 1912 and as the result the Municipal Reform party retained the general ascendancy which it had previously held. To a total number of 1362 seats in the 28 borough councils there were returned 1002 Municipal Reformers 252 Progressives 33 labour representatives, 15 socialists 23 independents and 37 non party members (the borough of Stoke Newington electing a non party council of 30). The Progressives outnumber Municipal Reformers in the councils of Bethnal Green, Southwark and Battersea the result in the borough last named constituting a Progressive gain on the other hand that party lost its previous majority over the Municipal Reformers in Hackney.

*Municipal Boundary Alterations* England and Wales.—Among recent changes adopted or proposed in the boundaries or constitution of boroughs the following may be noticed.

The area of the city of *Bath* was increased at the expense of the county of Somerset by 1767 acres in 1911 a population of 18 454 and a rateable value of £81 043 were thus added.

The *Greater Birmingham* scheme came into operation on November 9 1911. The effect of the scheme was to include in the city the borough of Aston Manor and the urban district of Erdington (Warwickshire) the urban district of Handsworth with Perry Barr (Staffordshire) the rural district formed by the parish of Yardley and the greater part of the urban district of Kings Norton and Northfield (Worcestershire). Quinton (Worcester) had been absorbed in 1909. The whole of these districts thus became part of the geographical county of Warwick. Birmingham by this extension was made the second largest city in the empire but it only maintained that position until November 1912 when the extension of the boundaries of Glasgow (q.v.) raised the Scottish above the midland city. The area of Birmingham was increased from 13 478 acres to 43 601 acres. The population in 1911 was 840 202. Without the added areas it would have been 525 833. The population at the end of 1912 was estimated at about 854 000. The corporation now consists of a Lord Mayor thirty aldermen and ninety councillors and the city is divided into 30 wards. The water gas and electric lighting and tramway undertakings belong to the corporation. The whole of the city with the exception of Handsworth (which remains in the West Bromwich Union) forms one parish for poor law purposes.

Application has been made for a charter of incorporation for *Buxton*. At *Chesterfield* or which the Duke of Devonshire was mayor in 1910-11 the borough boundaries have been considerably extended the area being increased from 1212 to 2611 acres and the population by some 10 000 to 37 429. A scheme for the extension of the borough of *Dudley* is under consideration. The borough of *Eastbourne* was extended in April 1911 to include part of the parish of Willington. A scheme is being promoted for the extension of the borough of *Kidderminster*. By a provisional order granted in May 1912 Roundhay, Seacroft, Shadwell and part of Crossgates have been incorporated in *Leeds* extending the area of the city by 4670 acres and adding 7020 to the population while the rateable value is increased by £56 640. *Northampton* was redivided in 1912 into 12 wards instead of 9 and the number of town councillors was increased from 36 to 48. In 1911 besides being the scene of the coronation review and providing hospitality for ships of foreign navies *Ports-mouth* entertained the British Association British Pharmaceutical Society Institute of Auctioneers National Free Church Council Co-operative Congress Incorporated Municipal Electrical Association South Eastern and Metropolitan Poor Law Conference and smaller bodies. It was considered opportune that Portsmouth should be raised to the rank of a city but the petition was refused. In 1912 *Reading* enlarged its boundaries by including Caversham and part of Tilehurst in spite of some opposition. Its acreage has been increased from 5876 to 9107 acres and its population from 75 214 to more than 88 000. The union of *Rochester*, *Chatham* and *Gillingham* as a county borough has been considered. In the census of 1911 *Sheffield* was found to be the largest city in Yorkshire with a population of 454 603 as compared with 445 568 in Leeds which had previously held the first position. On April 1 1912 Tinsley was added to Sheffield giving an additional area of 685 acres a population of 5270 and a rateable value of £42 659. A movement is on foot for the incorporation of Stourbridge. In Cheshire the urban district of *Wallasey* virtually a residential suburb of Liverpool which since 1901 has increased its population by 24 935 (pop. in 1911 78 514) was constituted by charter dated July 27 1910 a municipal borough and will become a county borough on April 1 1913. The borough of *Walsend* was increased in October 1910

by the addition of the former urban district of Willington Quay and part of the rural district of Tynemouth

*Channel Islands*—The Guernsey States (the legislative body) approved a resolution for the adoption of English weights and measures in 1910 to the exclusion of the old local standards but a petition for the adoption of British coinage as the only legal currency was rejected in 1911. Major E. O. F. Hamilton C.B. succeeded the late Major General R. Auld C.B. in April 1911 as lieutenant governor and commander of the troops in Guernsey and Alderney.

*Isle of Man*—In April 1911 the Home Secretary appointed a committee to report upon a petition from the House of Keys for reforms in the Manx Government. It was proposed to limit the lieutenant-governorship to a term of years (seven or eight) to extend the powers of the Tynwald and to constitute the legislative council of four members elected by the keys together with the Attorney General the Bishop and two judges. The Tynwald with the approval of the Board of Trade passed in April 1912 a resolution imposing a duty on passengers entering or leaving the ports of Douglas Ramsey Peel Laxey and Port St Mary and devoting the proceeds to the improvements of the ports.

*Water Supply*—In London the Metropolitan Water Board (New Works) Act 1911 authorised the Board to construct new storage reservoirs at Staines Laleham and Shepperton new service reservoirs on Horsendon Hill Greenford and on Barn Hill Wembley and to construct numerous conduits and aqueducts. The Island Barn reservoir near West Molesley constructed by the Board was opened on November 4 1911.

The corporations of *Derby* *Leicester* *Nottingham* and *Sheffield* are jointly responsible for the Derwent Valley Water scheme of which the cost is estimated at £6 000 000 and which began the impounding of water on January 1 1912. The first two reservoirs are the Howden and the Derwent the former having a capacity of 1 886 million gallons and being 14 miles in length and the latter a capacity of 2 000 millions with a length of 1½ miles. The proportion of water allotted to Leicester is 35.72 per cent providing for a daily yield of 9 800 000 gallons to Derby 25 per cent to Nottingham 14.28 per cent and to Sheffield 26 per cent. Derbyshire water has also been laid under contribution for the supply of *Stockport* a new source at Kinder Hayfield being opened on July 11 1912.

Improvements undertaken in the *Liverpool* water supply system include the construction of a reservoir on Lake Vyrnwy aqueduct near Malpas and a water tower (1911) and high level tank at Woolton Hill. Similarly at *Manchester* for which water is drawn from Thirlmere in the Lake District it has been necessary to undertake extension of the works by laying a third conduit from the lake to the city. Works are in progress for a water supply from the river Alwen in North Wales for *Birkenhead*.

On October 4 1911 the new *Lincoln* water supply was inaugurated being obtained from the red sandstone near the village of Elkesley Nottinghamshire 22 miles from the city at a cost of about £250 000.

*Housing and Town planning*—In London improved communications and the working class dwellings provided in the outskirts (as at Norbury Totterdown and White Hart Lane) by the London County Council have facilitated the efflux of population from the centre to the border of the county. The tenements in dwellings belonging to the London County Council on December 31 1910 numbered 9 217 the total number of rooms was 25 022½ the average rent per week per room was 2s 10½d. A scheme for the establishment of a garden city on land belonging to King's College Cambridge at Ruishp Northwood was authorised by the Local Government Board in March 1911 and a plan was adopted after competition. It was proposed to devote two-thirds of the estate of 1 300 acres to building and one third to open spaces. The extension of the Garden City movement in the neighbourhood of London is also illustrated by the plan adopted in April 1912 for a garden village covering about 1 000 acres at Knebworth while at Letchworth the first garden city 28 factories have been established.

At *Birmingham* town planning schemes have been adopted for Qumton Harborne Edgbaston and East Birmingham. In 1911 the town council of *Coventry* adopted a scheme for artisans dwellings estimated to cost £30 000. *Portsmouth* *Manchester* and *Bournemouth* have adopted town planning schemes and at Portsmouth it was found feasible to clear a large slum area and erect model dwellings without adopting the Housing Act. A garden village has been founded in the Far Cotton district of *Northampton* at Hunsbury Hill on the Bouvere estate. In *Liverpool* mention may be made of the laying of the foundation of a housing scheme the largest of six undertaken by the Liverpool City Council by the Rt Hon John Burns in November 1910. Housing is provided for 1372 persons. The development of a garden city at Wavertree is in progress and a number of streets have been

widened in connection with this. The Town Planning Act is in operation at *Sheffield* and various districts are scheduled but not yet developed. A new road along the *Rivelin Valley* some three miles long has been made by the Water Committee of the corporation and the surplus land on each side is to be developed in accordance with modern town planning methods. The recent census returns confirm the trade statistics in their evidence of the prosperity of *South Wales* and *Monmouthshire*. The counties of *Monmouth* and *Glamorgan* show a higher percentage of increases of population than any other typically commercial and industrial county in England and Wales. Between 1901 and 1911 the increase per cent in *Monmouthshire* was no less than 32.8 or nearly double that in any English county. *Glamorgan* makes a good second with 30.3 per cent. It is largely due to the rapid growth of the chief centres of population that the housing conditions are so notoriously bad. The local authorities are now trying to meet the need with municipal housing schemes but despite improvement in some towns the general conditions remain the worst in Britain. One result is that according to the most recent statistics the infantile mortality rate in *Cardiganshire* 136 per 1000 births is the highest county rate in England and Wales despite the fact that the chief industry there is agriculture.

*Open Spaces*—In 1912 the London County Council and the City Corporation decided to co-operate with the King Edward VII Memorial Committee with a view to the conversion of the site of the *Shadwell Fish Market* into an open space for the purpose of a memorial in the East End of London to King Edward VII. On February 19, 1910 twelve additional acres of land adjoining *Ruskin Park*, *Denmark Hill* were thrown open for the use of the public. In the same year the London County Council decided to acquire and preserve the *Sir Robert Geoffrey's Almshouses* in *Kingsland Road* and certain property in *Maria Street*. The open space has been laid out and is known as *Geoffrey's Garden*. The Council have also decided to acquire the *Grange estate*, *Kilburn*. The estate extends to 8½ acres 7 of which are laid out as a park.

The break up of large estates in the neighbourhood of *Bournemouth*, *Lymington*, *Portsmouth*, *Gosport* and other Hampshire towns has enabled the public bodies to acquire numerous open spaces though it is to be regretted that around *Bournemouth* and in the *New Forest* the picturesque features have suffered. Near the first named town and on the Crown lands woods have disappeared. A movement was started to make the *New Forest* a sanctuary like *Epping Forest* but was not supported by the *Hants County Council*.

*Loxley Chase* (74 acres) has been presented to *Sheffield* as a public park.

*Public Buildings and Other Undertakings*—*London*<sup>1</sup>. In October 1912, it was announced that the front of *Buckingham Palace* was shortly to be refaced in stone from designs by *Sir Aston Webb*. The *Queen Victoria Memorial* in front of the palace was completed and unveiled by the King on May 16, 1911.

The King laid the foundation stone of a new County Hall at the south end of *Westminster Bridge* (*Belvedere Road*, *Lambeth*) on March 9, 1912. In the course of excavations on the County Hall site the remains of a Roman boat were discovered together with various Roman objects. The boat and objects are preserved at the *London Museum*, *Kensington Palace*, opened by the King on March 21, 1912. A stone bearing the inscription 'Lambeth Boundary of *Pedlar's Acre* 1771' was also unearthed.

Among other new London buildings may be mentioned the premises of the *Royal Society of Medicine* (*Wimpole Street*) opened by the King on May 21, 1912; the lecture hall and museum at the *Horniman Museum*, *Forest Hill* (Jan. 27, 1912) and the *London Opera House* in *Kingsway* (1911). *Mr Oscar Hammerstein* of *New York* for whom this opera house was built decided to close it after his season in 1912. *Cinematograph theatres* are now subject to licence (*Cinematograph Act*, 1909) and about 250 halls have been licensed in London. The *Young Men's Christian Association* has opened a new building in *Tottenham Court Road*, and with the object of disposing of the

<sup>1</sup> Among recent works on London see—*Sir Walter Besant* *London, North of the Thames* (1911); *London, South of the Thames* (1912); *Sir Laurence Gomme* *The Making of London* (1912); *E. Beresford Chancellor* *Annals of Fleet Street* (1912); *Calendar of Letter Books preserved among the archives of the Corporation of the City of London as the Guildhall* (A.K.) (circa 1275-1464); The London County Council—Various annual publications: *The Survey of London* (Vol. III, the Parish of *St Giles in the Fields*) (1912); *Indications of Houses of Historical Interest* (parts 1 to xxxvi).

debt upon it at the outset an attempt was made in January 1912 to raise a fund of £100 000 in 12 days by means of an organised campaign which was not however fully successful. The Port of London Authority adopted in July 1911 a design by Mr Edwin Cooper for chief offices to be erected in Trinity Square E.C. In January 1912 the London County Council sold the site at the eastern junction of the Strand and Aldwych to the Commonwealth of Australia for £379,756 for the erection of offices.

The Corporation of London (Bridges) Act 1911 authorised the Corporation to construct a new bridge over the Thames between Southwark and Blackfriars bridges to widen St Paul's Churchyard and to carry out other improvements in the city of London. The new bridge will be probably known as St Paul's bridge. On June 1 1911 the subways constructed to relieve the traffic at the Elephant and Castle were opened for pedestrian traffic and on October 26 1912 a tunnel beneath the Thames at Woolwich was opened for foot passengers.

Other public buildings and municipal enterprises have been reported as under—

**Birmingham**—In July 1912 was opened an extension of the Birmingham Council House upon land on the opposite side of Edmund Street. The scheme still in progress at the end of the year has cost upwards of £200 000 out of which £50 000 was provided out of a bequest by the late John Feenev (proprietor of the *Birmingham Daily Post*) for an extension of the Art Gallery. Provision has been made for a museum of Natural History.

**Blackpool**—The new promenade known as Princess Parade was opened in 1912 extending from the north pier to Cocker Street the cost was £25 000.

**Cardiff**—The visit of the King and Queen to South Wales in 1911 was an occasion of gratification to Welsh nationalist pride. The King laid the foundation stone in Cardiff of the National Museum which with the University College and the National Library are the outward signs of a great Welsh renaissance. In two other important respects the right of Wales to be treated as a distinct autonomous unit has been recognised. For the purposes of the Insurance Act Cardiff has been selected as a centre for the principality with its own commissioners and staff and the Welsh National Memorial Association which has a fund of more than £200 000 publicly subscribed for a campaign against tuberculosis has received a royal charter and the full status of a national institution.

**Chester**—Municipal progress includes a hydro-electricity scheme (1911) for utilizing by means of turbines the water power at the Dee Mills for an auxiliary supply of electricity.

**Dudley**—The corporation received in 1912 a bequest of £30 000 from the late Mr Brooke Robinson (formerly M.P. for the borough) for an art gallery or museum.

**Hereford**—The city library has been extended by the addition of an art gallery provided by the late Sir Joseph Pulley and Mr C. T. Pulley High Sheriff (1912). The Roman site of Dinodur Camp near the city has been purchased for a public pleasure ground.

**Hertford**—In May 1911 Lord Salisbury offered the castle and ground at Hertford to the corporation for public use at a nominal rent and the transfer of the building in which the municipal offices are established took place in the following year.

**Hull**—An art gallery was opened in 1910 by Mr T. R. Ferens M.P. who has largely contributed to its erection and upkeep and also presented to the town in 1911 twelve almshouses as a memorial to King Edward VII and a playing field near the East Park. A new museum has been designed to illustrate the shipping and fishing industries.

**Leicester**—A great fire in October 1911 destroyed St George's Church and an important hosiery factory. A scheme has been put forward for a public hall near Victoria Park.

**Liverpool**—The cathedral has been enriched by the gift of a reredos by Mr Mark Wood from designs of Mr Gilbert Scott. It was decided in the autumn of 1912 by the cathedral committee to proceed with the building of the first transept. A representative exhibition of the works of Albrecht Dürer was held in the Walker Art Gallery in April 1910. Mr Andrew Carnegie in August 1911 opened at Sefton Park a library worked by a staff of women.

**Manchester**—Mr Carnegie also in the same year presented £15 000 to Manchester towards the establishment of three branch libraries. A church house with a hall seating 2 000 persons was opened in October 1911 by the Archbishop of York.

**Middlesbrough**—A transporter bridge across the Tees erected by the Corporation was opened by Prince Arthur of Connaught in October 1911.

**Northampton**—Among important new buildings are a Carnegie library costing £15 000 in Abington Street a theatre and new buildings for the grammar school (1911).

**Norwich**—Serious damage was caused and much suffering occasioned by a great rain storm and floods on August 26 1912. At Brundall near the city 8 06 in. of rain fell and more than 7 in. over an oval area including Norwich and the district of the Broads. The damage to communications was enormous. Large relief funds were raised.

**Nottingham**—A number of improvements have been carried out in Nottingham among the most noteworthy being the widening of Carrington Street and Great Friar Gate at a cost of £60 000. A still larger scheme is that in the Carter Street area estimated to cost £139 000.

*Penzance*—By a legacy under the will of the late Prebendary Hedgeland the Penzance library received in 1911 an addition of 7 000 books

*Plymouth*—In October 1910 a free library art gallery and museum were opened they had cost about £25 000 towards which Mr Andrew Carnegie gave £15 000

*Reading*—The Berkshire County Council has built new offices at Reading a fine building in the Queen Anne style near the medieval gateway of the abbey

*Shrewsbury*—A weir has been constructed on the Severn to improve boating and the Town Council resolved on June 24 1912 to apply for sanction for a loan of £12 000 to widen the English bridge over that river

*Stoke on Trent*—In 1911 the Duke of Sutherland offered Trentham Hall and a large portion of its grounds to the corporation but the offer was declined The hall was therefore demolished and its chimney pieces and other carvings and fittings were sold

*Wakefield*—The County Hall has been extended at a cost of £32 000

*Worcester*—Important street improvements have been effected principally in the widening of The Foregate High Street The Corporation has acquired Pitchcroft (including the racecourse) for a public pleasure ground and has purchased land for a recreation ground

*Ancient Sites and Buildings—London*—In the course of work on the fine Norman western porch of the Temple Church it was found that the carving had been coated over and it has now been revealed in almost its original state by the removal of the coating

*Rochester*—The restored north aisle of Rochester Cathedral was dedicated on March 10, 1911

*Salisbury*—Old Sarum the former city of Salisbury lies buried a mile and a half from the present town and interesting excavations were made in 1912 The area is in the care of archaeologists, under Col William Hawley F.S.A. and the history of the site is gradually coming to light The most recent excavations reveal a good outline of the south wing of the transept of the great church and many graves have been met with most of them very near the surface Their depths vary considerably but none seems to be more than three feet while stone coffins must have been actually on the surface For the present all the coffins have been covered up to receive attention later but it is doubtful whether anything definite will be ascertained of the occupants as the covering tones have in all instances been taken away and doubtless the contents have been interfered with Other things unearthed include some very fine gargoyles found in the transept cutting The intention of the excavators in 1911 was to get a general outline of the close and the cathedral and to open out the entire basement of the building when work was resumed in 1913 It was hoped that the work would be completed by 1915

Luke House near Salisbury a fine example of Elizabethan stone architecture in the occupation of Mr P. W. Illingworth M.P. was destroyed by fire on March 29, 1912

After much public interest had been aroused *Tattershall Castle* with its famous carved stone fireplaces was purchased in 1912 by Earl Curzon of Kedleston The fireplaces were brought back in June and Lord Curzon intimated that he intended to restore the mansion to its original condition and make it accessible to the public

*Winchester*—In July 1912 a service was held in Winchester Cathedral at which the King and Queen were present to celebrate the completion of the restoration of the cathedral The eastern arm of the cathedral was practically built over a peat bog upon a raft which after eight centuries subsided and in 1905 the whole building threatened to collapse Over £113 000 was raised to meet the cost of restoration New buttresses were erected and a diver working in darkness for six hours a day for six years and much hampered by subterranean springs laid a solid bed of concrete under the piers and walls

*Education*—For the year ending July 31 1911 the total number of pupils in schools comprised under the national system of public elementary and higher elementary education in England and Wales was 6 067 075 of these 350 621 were aged 3 to under 5, 1 301,267 aged 5 to under 7, 3 511 756 aged 7 to under 12 1 066 474 aged 12 to under 15 and 6 957 aged 15 and over There were 8 046 Council elementary schools with accommodation for 3 980 046 pupils 12,734 voluntary elementary schools (maintained by local education authorities) with accommodation for 2 808 795 and 66 voluntary elementary schools (not so maintained) with accommodation for 17 790 Also 46 Council higher elementary and 285 other schools with accommodation for 12 207 and 19 391 respectively and 1 voluntary higher elementary and 116 other schools with accommodation for 140 and 1 742 respectively Of the 1 734 voluntary elementary schools 10,941 (with accommodation for 2 245 143 pupils) were

Church of England 225 (for 60 322 pupils) Wesleyan 1 075 (for 375 535) Roman Catholic 12 (for 9 863) Jewish The parliamentary grant for elementary education was £11,445 055 the additional amount provided by rates and borough funds being £11,635 725 for higher elementary the receipts were £1,129 699 from parliamentary grants, and £1 85/ 95<sup>3</sup> from rates and borough funds

It was announced on November 28 1911 that Sir R. Morant who had been secretary and chief permanent official of the Board of Education since 1903 had been appointed Chairman of the new Board of Commissioners under the National Insurance Act He was succeeded at the Board of Education in 1912 by Mr W. A. Selby Bigge

On July 2-5 1912 a congress of the universities of the empire was held in London under the chairmanship of Lord Rosebery Lord Curzon Lord Rayleigh and Lord Strathcona Fifty-two universities were represented It was resolved to establish in London a bureau of information concerning the universities of the empire

In local educational circles some of the principal events of 1910-12 may be noted

*Oxford University*—The question of the continuance of the study of Greek by mathematical and science students has been much discussed and at a large meeting of Convocation it was decided in the affirmative by a great majority The preamble of a statute making Greek optional in Responsions was rejected however by 188 votes to 152 at a Congregation on November 1 1910 The new buildings of Oriel College provided by the munificence of Cecil Rhodes were opened on September 23 1911 and form a new feature of High Street opposite St. Mary's Church The Union Society new buildings were opened by Lord Curzon the Chancellor on June 1, 1911 He also inaugurated some new buildings at Lady Margaret Hall on October 22 1910 A new electrical laboratory presented by the Drapers' Company of London was handed over to the University on June 22 1910 The front of Christ Church has been restored The Principal of Brasenose Dr C. B. Heberden D.C.L. was elected Vice-Chancellor in 1912 in place of the President of Magdalen, Dr T. H. Warren D.C.L. A new financial board for the University has been formed Mr Falconer Madan senior sub-librarian was recommended in June 1912 by the curators of the Bodleian Library to the office of Bodley's librarian vacated by the death of Mr E. B. Nicholson The Prince of Wales entered Magdalen College as an undergraduate in October 1912

The millenary of the city of Oxford was celebrated at the beginning of July 1912 when a historical exhibition was collected the city entertained members of the university and others and degrees *honoris causa* were conferred upon the mayor and the town clerk

*Cambridge University*—During 1911 Mrs Butler widow of A. J. Butler Fellow of Trinity College presented to the library a valuable collection of the early editions of the works of Dante Mr E. W. Hunnybun presented his unique collection of drawings of the flowering plants of the British Isles Mr J. Willis Clark late Registrar of the University bequeathed to the library his valuable collections relating to the town county colleges and university of Cambridge including his manuscript collections Sir Harold Harmsworth's offer to found a professorship in English literature took shape during the Michaelmas term of 1911 in February 1912 Dr A. W. Verrall was appointed and on his death Sir A. Quiller Couch the novelist ('Q') was chosen professor in October Following a promised anonymous donation of £125 for ten years towards the stipend of a Reader in Modern History the readership has been established A new lecture rooms building was completed and brought into use in the year 1911-12 A munificent offer of the Drapers' Company to provide a physiological laboratory was accepted by the Senate and the erection of the building was begun with this is connected a laboratory of experimental psychology

*Other Universities*—In the new buildings of *Birmingham University* at Bournbrook a statue of King Edward VII (the gift of the pro-vice-chancellor Alderman F. C. Clayton) has been erected to commemorate the opening of the buildings by his Majesty and Queen Alexandra on July 7, 1909 These buildings include departments of mining and metallurgy mechanical engineering chemistry and physics together with foundries and other plant for experimental purposes on an unusually complete scale and an experimental mine There is also a large hall and library and the buildings (from the designs of Sir Aston Webb and

Mr Ingress Bell) are surmounted by a lofty clock tower Alderman C G Beale Vice-Chancellor of the University died on September 1 1912

The late Mr H O Wills has been succeeded by Lord Haldane as Chancellor of *Bristol University*

In December 1911 intimation was given of the decision of *Durham University* to admit all students professing the Christian faith to Divinity degrees hitherto limited to the Church of England

A large extension of the textile department of *Leeds University* has been made through the generosity of the Clothworkers Company Sir Nathan Bodington Vice Chancellor of the university died May 12 1911 at the age of 63 He was succeeded by Professor M E Sadler C B the well known educationalist (b 1861) Lord Airedale formerly Mr Jas Kitson one of the governing body of the university and head of the Airedale Foundry Leeds died in March 1911 Sir William Hepton Lord Mayor of Leeds who was knighted at the opening of the university extension met with a fatal accident while fishing in France on May 23 1911 A new training college for teachers has been established at a cost of nearly a quarter of a million

At *Liverpool University* the foundation stone of a new engineering laboratory was laid on October 22 1910 The Liverpool School of Tropical Medicine in 1910 offered to the university the endowment of a chair in tropical entomology and in the following year Professor R Newstead was appointed from the school to the new Dutton Memorial Chair of Entomology A new lectureship in education preparatory for teaching in secondary schools was filled by Mr Kenneth Forbes (St John's College Oxford) in July 1911 In the same year the cost of building a central hall for the Undergraduates Union and of furnishing the Union was undertaken by Captain Gilmour Sir William Hartley presented a wireless telegraphic installation for the purpose of experiment and research in 1912 A plant for tests in connection with the erosion of metals has been established in the metallurgical department a certificate in architectural design and a diploma in ophthalmic surgery have been instituted

*London*—Under the King's College London (Transfer) Act 1908 this college apart from the faculty of theology was incorporated in the University of London on January 1 1910 King's College hospital and medical school were separated from the college in the previous year King's College for Women became a separate institution and a site is under consideration for new buildings to include laboratories for a home science department in connection with Queen Mary's hostel for practical training in domestic arts for which it was announced in February 1911 that £100 000 had been privately subscribed A further change in the arrangements of King's College took place in June 1911 when King's College School at Wimbledon became a separate corporation

Proposals have been put forward for the acquisition of a site for London University to the north of the British Museum in Bloomsbury and Lord Haldane as chairman of the Royal Commission on university education in London stated in May 1912 that large sums had been offered by private donors for this purpose but alternative sites have been considered and the whole question has given rise to some dispute the reconstitution of the university being *sub judice* pending the report of the commission

A building fund of £100 000 was completed in February 1912 for Bedford College for Women one of the schools of London University

At *Manchester University* a new botanical laboratory was opened in 1911 and a physical laboratory in 1912 The engineering buildings have also been extended An extension of the Manchester museum was opened on October 30 1912 providing accommodation for geological anthropological and Egyptian antiquarian collections

Sir Charles Eliot first vice-chancellor of *Sheffield University* accepted in March 1912 the position of principal of the Hong Kong University and in November Mr H A L Fisher of New College Oxford was selected to succeed him in the office Sir Frederick T Mappin Bart one of the first pro-chancellors died in March 1909 He was a generous donor to the university and the Mappin Art Gallery The University Library erected at a cost of £30 000 by Mr William Edgar Allen was opened in 1909 He has also given a medicomechanical institute the first established in England to work in connection with the hospitals New buildings to be used chiefly for the study of mining and non-ferrous metallurgy were opened in 1912 in connection with the applied science department The Company of Drapers contributed £15 000 to the cost and the corporation make an annual grant of £1 000 for ten years A training college for teachers has been completed and equipped

*University Colleges*—Earl Grey who returned to Northumberland at the end of October 1911 after several years governor generalship of Canada was shortly afterwards appointed president of *Armstrong College* Newcastle upon Tyne

At *Brighton* a movement was set on foot in 1911 to establish a university college and in January 1912 it was proposed to make it a college of the University of London with courses in the arts sciences education and pedagogy at first and subsequently in medicine and law

*Hartley University College* at Southampton threatened with the withdrawal of the Treasury grants owing to the lack of the usual support was able to collect £32 000 partly by

grants from the County Council and Southampton Town Council for the erection of a college and school of art on Southampton Common.

Educational needs have been met in *Nottingham* by several new schools and the university college is extending its utility by a mining department and a Byron Chair of Literature in connection with which the American ambassador (Mr Whitelaw Reid) paid a visit to the institution in November 1910.

The expansion of the work of University College *Reading* is a remarkable feature of the educational work of *Berkshire*. It has adopted the hostel system the chief institution being Wantage Hall, built and permanently endowed by the generosity of Lady Wantage of Lockinge. The Rt Hon G W Palmer and other members of his family have enriched the college with buildings and lands. The college has undertaken the important work of improving agriculture. It has a well-equipped experimental farm at Shinfield and in 1910 in connection with the Berkshire County Council sent a deputation to visit selected centres of agricultural and horticultural education in the United States and Canada. The college has over 1 000 students. The Berkshire Education Committee has made provision for the instruction of those engaged in agricultural and horticultural work and provided an expert to teach employees on farms. A travelling farriery school has also proved useful.

The opening of the new buildings of the University College of *North Wales* Bangor by the King took place on July 14 1911.

Among other recent educational developments may be mentioned the addition of a new textile department to the Bradford Technical College opened by Lord Rotherham on October 25 1911 a residential school for the blind has been established by the education committee in the same city. The Cheshire County Council's training college for teachers was opened on July 5 1912. At Shrewsbury School a new speech hall was opened on May 5 1911 and science buildings on October 20 of the same year. Evesham grammar school one of the oldest in Worcestershire opened new buildings in 1911. An anonymous donation has been made (in July 1912) of £10 000 to the Chancellor of the Exchequer for educational purposes in Wales.

In September 1911 a strike of school boys took place in Newcastle upon Tyne and other places in the neighbourhood.

*Crime*—The criminal statistics for 1911 show the following figures. *England and Wales* committed for trial 13 644 (males 12 301, females 1 343) convicted 11 538. *Scotland* committed for trial 1 401 (males 1 215 females 186) convicted 1 112. *Ireland* committed for trial 1 114 (males 1 804 females 310) convicted 1 406.

Police numbered in 1911—in *England and Wales* 51 203 in *Scotland* 5 654 and in *Ireland* 11 865.

*Paupers*—The number of paupers (exclusive of casual paupers) in receipt of relief in the United Kingdom at comparable periods was as follows. *England and Wales* (July 1, 1911) 749 777 *Scotland* (Sept 15 1911) 105 478 *Ireland* (first week of July 1911) 75 317. *England and Wales* (Jan 1 1912) 797 140 *Scotland* (Jan 15 1912) 100 069 *Ireland* (close of first week of Jan 1912) 78 652. The proportion of paupers per 10,000 of the population of the United Kingdom in the summer period of 1911 was 205 and in January 1912, 216.

In *England and Wales* for the year ending March 31, 1911 the total expenditure on relief of the poor by the Guardians and Poor Law authorities amounted to £15 380 420 (London £3 888,684). Of this sum in maintenance represented £3 600 327 (London £1,103,433) out-relief £3 300,319 (London, £28, 42 ), and lunatic asylums £ 545 189 (London £505 265) the balance being for salaries buildings loan charges etc.

*Old Age Pensions*—The Old Age Pensions Act 1908 was modified by a further act of 1911. The pauper disqualification was removed as from January 1 1911 and poor law authorities in *England and Wales* were thereby relieved of the charge of 122 415 paupers in that month. Qualifications for an old age pension include the age of 70 years the status of a British subject for 20 years previously to the receipt of the pension and residence in the United Kingdom (subject to certain exceptions) for 12 years out of that period. The pensions are arranged on a sliding scale from 5s a week for those who possess incomes not exceeding £21 a year down to 1s a week on incomes over £28 17s 6d and up to £31 10s 0d. The numbers of pensions payable on March 31 1912 were—in *England* 602 441 in *Wales* 40 083 in *Scotland* 94 319 in *Ireland* 205 317 and the proportion of pensioners per thousand of the census population of 1911 in that year was 17.81 in *England and Wales* 19.82 in *Scotland* and 46.86 in *Ireland*. According to the appropriation amounts for the year ending March 31 1911 the grant for pensions was £9 820 000 for expenses of pension committees £100 000 while the actual expenditure was—for pensions £9 682 526 for expenses £74 155 for sums irrecoverable £798 and for extra statutory payments £117—total £9 757 596. The civil

service estimates for pensions for 1911-12 were £12 350 000 and for 1912-13 £12 135 000 (decrease £215 000) the pension committees in addition costing £65 000

*Hospitals etc*—Memorials to King Edward VII have given an impetus to the building or extension of hospitals and among other schemes the following have been reported. A new infirmary at Bristol erected at a cost of £70 000 was opened by the King and Queen on June 28 1912. The citizens of Birmingham have raised a fund out of which will be provided a new building in Ladywood Road for the Children's Hospital in addition to a statue of King Edward by Albert Toft R.A. a native of Birmingham. As a Warwickshire memorial a sanatorium on Binton Hill near Stratford on Avon was decided on. The Worcestershire memorial takes the form of an enlargement of the sanatorium for consumptives at Knightwick. The North Wales counties joined the scheme of national sanatoria for the treatment of tuberculosis. The Shropshire memorial took the form of a sanatorium. Cheshire's memorial fund was apportioned to existing hospitals and Chester and Stockport embarked on infirmary extensions costing respectively £40 000 and £10 000. A subscription was promoted at Leeds to raise £150 000 for the reconstruction and extension of the General Infirmary and two-thirds of this sum having been received the work was started in 1912. This also involves an extensive street improvement undertaken by the City Council in the neighbourhood of the Town Hall clearing away a considerable amount of slum property.

Among other institutions the erection of a home for consumptives on a site between the Lickey and the Clent Hills was started in 1912 at a cost of £14 000 by the Birmingham Hospital Saturday Committee as a memorial of the late Alderman Sir William Cook who was chairman of the Committee (also of the Health Committee of the Corporation) for many years. To perpetuate the memory of Edwin James Oates his sisters have presented £10 000 to Halifax towards an open air school and a convalescent home. There was opened at Crewe (Dec. 18 1911) a railway orphanage built and endowed out of the residue of the estate of the late Mr F. W. Webb chief mechanical engineer L. & N. W. Railway. The Berkshire Hospital has considerably enlarged its building and now provides 200 beds and is one of the best equipped in the country. The Radcliffe Infirmary at Oxford has also begun some new buildings at a cost of £20 000.

Portsmouth was the first municipality in the United Kingdom to start a tuberculin dispensary (1911) with treatment for out patients an open air hospital and a stock of shelters disinfecting appliances etc. lent to patients visited at their own homes the inclusive cost being £1000 a year.

[For the above sections on England and Wales the collaboration of the following local correspondents is acknowledged—R. W. Brown (Northampton) J. B. Cornish (Penzance) T. A. Davies (Cardiff) Rev. P. Parker (Chester) F. P. Pointon (Nottingham) A. E. Reynolds (Salisbury) C. Wells (Bristol). The general statistics have been compiled from official sources by Harold Macfarlane.] (O. J. R. HOWARTH)

#### SCOTLAND<sup>1</sup>

*Population*—The most significant feature in the recent economic development of Scotland is the progress of the country in industrial enterprise and its gradual decline in agricultural activity. The townward trend of the rural population which has been in progress for many years is emphasised by the latest census returns. The population of the country in 1911 (details of which are furnished in Tables A and B) was 4 759 445 and of this total (of whom 2 302 865 are males and 2 446 808 females) about 77 per cent live in towns and 21 per cent in the country. Scotland like other parts of the United Kingdom, has felt the effect of a slackening birth rate and in the last census year the number of births registered was smaller than in any year since 1873, the year 1890 excepted, and the birth rate was the lowest recorded since 1885. The total increased population was less than at any census since 1861. The falling birth rate has of course a vital bearing on the comparatively moderate increase of the population generally, but the dwindling of rural communities cannot be wholly attributed either to it, or to the call of the towns. Scotland has suffered seriously within recent years from emigration. In 1911 alone 57 417 passengers of Scottish nationality left Scottish ports in itself a disquieting enough fact. But in order to appreciate the effect on the country of the drain of emigration, it is necessary to take a more distant view. Going back a period of ten years it is found that 354 056 Scottish people left their native shores for permanent residence abroad and against that there was an immigration of 66 921. In other words within the period mentioned Scotland was depleted by 287 135 persons. The cities,

of course have made contributions to the multitude of emigrants but the effect of emigration has been chiefly felt in the purely agricultural counties. Thus compared with the census returns of 1901 at which period modern emigration enterprise had scarcely begun decreases are to be noted (Table A) in the following counties—Shetland Orkney Caithness Sutherland Inverness Elgin or Moray Forfar Clackmannan Argyll Bute Berwick Roxburgh Kirkcudbright Wigtown. In those counties the staple occupations of the people are agriculture or fishing. A more cheerful state of things is revealed in the counties which contain the chief cities and towns and where the people are engaged in industrial pursuits. Thus Lanarkshire shows an increase of 107 786 Fifeshire 48,894, Dumbartonshire 25 966, and Renfrewshire 45 594. Perhaps the most remarkable increase is in Fifeshire. The Kingdom is unique among counties half of it being almost entirely rural and the other half chiefly industrial. In East Fifeshire farming and fishing are the principal occupations and its picturesque parishes and townships have suffered by the exodus of the sturdiest part of the population to other lands, a fact borne out by the decrease in the fishing communities, and the growing difficulty of procuring agricultural labour. The increase of population in Fifeshire is entirely in the West the seat of coal mining and the great linoleum manufactures.

The deaths in the eight principal towns of children under one year numbered 5907. The births registered were 44 206 and the aggregate infantile mortality for the year was 134 per thousand. It ranged from 156 in Edinburgh 139 in Glasgow and Aberdeen to 112 in Greenock and 111 in Paisley.

**Agriculture**—The land system in Scotland is in some respects peculiar, and the huge estates and large farms on which it is based have proved a severe handicap to the enterprise of an uncommonly capable peasantry. The land agitation, a chequered history of economic struggle, which, particularly in the north, assumed a virulent and often violent form, has not however within recent years shown much vitality. The

problem of the Highland crofter is at least in process of settlement, and the operations of the Congested Districts Board have certainly had beneficial effect. The number of new holdings formed since the establishment of the Board (1898) is 611 while 1068 crofters have obtained enlargement of holdings. The last notable intervention of the Board followed on the dispute between Lady Cathcart and her tenants at Castlebay, part of her Hebridean possessions, which resulted in what was known as the Vatersay Raid (1908). Thus the latest crofter rising in the Islands was at the time somewhat exaggerated although events proved that the tenants had reason for their action. The inhabitants of Castlebay eke out a slender livelihood partly by their labour on a peculiarly stullen soil and partly by fishing. The land is barren and scarcely adequate to maintain one family on each holding. The difficulty arose from squatters' members of the crofter families who set up huts on the family crofts. The inevitable congestion followed. Opposite Castlebay is the Island of Vatersay, then occupied by grazing farms. Some of the bolder spirits among the "squatters" the pioneers being three lobster fishermen descended on Vatersay erected huts and proceeded to agricultural activity. There were some exciting encounters between the forces of law and the Vatersay 'raiders' culminating in the imprisonment of half a dozen of the latter who were however released before the expiry of their term of sentence. The Congested Districts Board intervened purchased the Island of Vatersay where now is a contented crofter population, and thus the trouble ended. But while the exertions of the Congested Districts Board and the Crofter Commissioners who fix fair rents have made for crofter contentment the Highland land problem has not yet reached solution.

There is still considerable heart burning over the question of deer forests. The latest returns show that of those there are 198 with a total acreage of 3,360,936. The Sutherland 'clearances' which resulted in the compulsory emigration of fifteen thousand people within a period of nine years still rankle in the Highland memory. Doctrinaire land reformers are perhaps inclined to exaggerate the agricultural potentialities of the deer forest. However the passing of the Smallholders' Act of 1911 will enable the fertility of those sporting estates to be put to the test. This Act, the most important piece of land legislation in Scotland for many years is a modification of the Pentland Bill which aroused much controversy. It by no means goes the length of that drastic measure although it retains its cardinal principle, enabling an agriculturist with small capital to obtain compulsorily a holding of 50 acres, the landlord being compelled to provide house and steading. But although now on the statute book it will be some time before the Act can be operated to any great extent. The leases of large farms will have to run out before the division of acres can be made. When however the Act does become operative it cannot fail to break up the historic land system of the country. Among the smaller cultivators whose position in Scotland has been peculiarly hard their few and scattered acres being rented considerably in excess of the acreage of the great farms, the Act has naturally been hailed with satisfaction, nor has much opposition been displayed towards it by the large farmers.

The truth is that farming on an extensive scale is no longer the profitable business it was, either for landlord or tenant. Agricultural rent in Scotland has fallen enormously, the rental of large farms being on an average only half what it was twenty years ago. And this drop, while seriously affecting the land owner has not benefited the tenant. The development of agricultural science and the growth of foreign competition have rendered farming on an extensive scale a costly and even a hazardous undertaking added to which the cost of agricultural labour has greatly advanced. The wages of ploughmen have doubled, and in some cases trebled and with the flow of emigration and the scarcity of labour in the rural districts they tend to increase. An important factor in the case is the altered standard of living among the rural population. The cheap and sustaining brose is now a rarity in cottar's house and bothy and even porridge has ceased to be the staple of the morning meal. On the other hand much tea is drunk and there is a large consumption of butcher meat, a commodity almost entirely unknown among the Scottish peasantry of the past. Moreover, the Scottish hind has recently

## SCOTLAND

become pervious to the influence of Trade Unionism, and in 1912 a rural Union was started which already numbers thousands of members. That being the condition of things, the Small Landholders' Act makes a timely appearance. It should have the effect of stemming the tide of emigration checking the migration to the towns, and consequently re-peopling the rural districts. Notwithstanding the disadvantages indicated the agricultural enterprise of Scotland shows astonishing vitality.<sup>1</sup> The question of afforestation in which Scotland, like other parts of Great Britain is far behind other countries has recently been a subject of agitation and the Development Commissioners have recommended that grants should be given for the establishment of a central administration area, along with a school of forestry of not fewer than 5000 or more than 10 000 acres. The recommendation has already had practical effect the Government having agreed to purchase a tract of land in Argyshire.

*Trade and Manufactures*—In regard to trade a retrospect of 1910-12 reveals a period of prosperity tempered by the adverse influence of labour disturbances. Scotland is a country of multifarious industries but the staple of her trade consists of shipbuilding iron and coal mining all of which are interrelated. In the western part of Scotland of which Glasgow is the centre shipbuilding is of prime importance and the measure of activity in the Clyde yards is the truest measure of the industrial prosperity of the district. The Clyde may be described indeed as the industrial pulse of the country and the prosperity or otherwise of her yards is reflected in the national industry.

In the matter of shipbuilding the Clyde of course dominates Scotland. During 1910-12 there were improvements in the trade on the Forth and Tay but the increase of tonnage in those districts was infinitesimal when placed alongside the increase on the Clyde. The following table shows the work done by Scottish builders in 1911 and 1912—

	1912			1911		
	Ves	Tons	I H P	Ves	Tons	I H P
The Clyde	389	640 529	878 326	413	630 583	786 889
The Forth	32	19 054	7 915	31	11 319	9 555
The Tay	28	17 388	10 400	31	17 303	14 770
The Dee etc	71	11 217	18 100	82	12 419	23 614
	520	688 188	914 741	557	671 624	834 628

In the kindred branch of marine engineering a feature is the increasing share in the total output of turbines. In the record for Clydebank a typical yard the total engineering output in 1911 was 104 550 h.p. and of those 71 000 consisted wholly of turbines and 11 250 of combined turbines and reciprocating engines.

In coal mining<sup>2</sup> the west of Scotland also continues to lead although its supremacy in this branch of industry is less secure. The most notable advance in output was in Fifeshire which in 1911 showed an increased production of 375 000 tons and the industry in Fifeshire is advancing rapidly and is likely soon to outdistance Glasgow and the west of Scotland in the matter of shipment. The reason is due to the fact that the extensive Fifeshire coalfield is still in process of development whereas in Lanarkshire the coalfield is almost entirely covered with collieries and there are naturally no new developments. By the application of machinery however notably in coal cutting the capacity of the western mines has been increased. On the other hand large new pits have recently been sunk in Fifeshire and their present output will certainly grow enormously. A feature of the Fifeshire shipping trade is the large and increasing exports to South America. The total shipments of coal from Scotland (export and bunker) amounted in 1911 to 1 680 000 tons compared with 1 640 000 tons in the previous year an improvement of fully 40 000 tons. The increase however

<sup>1</sup> The following figures are taken from returns for 1912 with the increase (+) or decrease (-) per cent on the previous year. Acreage under corn crops 1 230 125 (+0.9) under green crops 615 361 (+1.4) clover and rotation grasses 1 465 514 (-3.0) permanent pasture 1 496 045 (-0.1), wheat 6 463 (-1.6) but in 1911 the greatest increase was recorded since 1899) barley 183 477 (+11.7) oats 949 143 (-1.5) turnips and swedes 439 185 (+0.1) potatoes 149 710 (+5.0) total under all crops and grass 4 821 249 (-0.5) Livestock—horses 204 792 (-0.8) cattle 1 178 936 (-1.8) sheep 6 991 667 (-2.4), pigs 159 391 (-6.9)

<sup>2</sup> Production in 1910. Argyll Dumfries and District 444 033 tons. Ayr 4 018 119, Clackmannan, 405 912. Fife 8 674 404. Renfrew 132 756. Dumbarton 558 381. Linlithgow 2 059 433. Edinburgh 2 991 811. Haddington 1 088 364. Lanark 17 886 137. Stirling 3 075 782.

was only about half that which took place in 1910 compared with 1909 and the falling off must be largely attributed to labour troubles. Glasgow and the west of Scotland took good position with an increase of fully 300 000 tons and in Ayrshire between the ports of Ayr and Troon there was an increase of 150 000 tons. On the other hand the Forth (excluding the Fifeshire ports) made a comparatively poor show. At Grangemouth there was a decrease of 260 000 tons and although Leith improved its position by 130 000 tons due largely to an increasing trade with London. Leith showed a falling off of 120 000 tons. While the condition in the Scottish coal trade on the whole is satisfactory an unpleasant factor is to be reckoned with in German competition. At one time Germany constituted one of the best markets for Scotch coal but now she is entering into active competition.

In the mineral oil industry whose centre is West Lothian the prospect is less bright. This is due chiefly to foreign competition which was severely felt during the past year with the result that prices of oil products never got a chance. The slackness of the Scottish oil market is best indicated by the drop in profits during 1909-1912. During that period Pumpherson dividend has fallen from 50 per cent to 30 per cent. Tabrax from 7½ per cent to 5 per cent. Oakbank from 10 per cent to 5 per cent. Young & Paraffin Oil Co and the Broxburn Oil Company paying percentages respectively of 4½ and 10 per cent.

Foreign competition is being felt also in steel manufacture. This is indicated by the action of Scottish makers in introducing rebates (the outstanding feature in recent developments of the industry) with the object of limiting outside competition. It would be premature to judge of its effects and meantime it has not resulted in any marked improvement there being a falling off in supplies particularly to Canada owing to American manufacturers' prices being lower than those of the home market. A contingent effect of foreign competition is indicated by the continued slackness in locomotive building. The Scottish industry chiefly depended on the foreign market particularly the East and the foreign orders are dwindling although there is a slight improvement in colonial trade.

The three trades already mentioned are the vitals of industrial Scotland. Next to them may be ranked the various branches of textile manufactures. While the woollen trade of the borders has been in a state of almost unexampled prosperity the jute trade of Dundee during 1911 underwent one of the worst periods in its history but entirely recovered towards the end of 1912. The linen trade although satisfactory has been hard hit by foreign competition which has been felt in its chief seat, Dunfermline and the cotton trade has suffered chiefly from the same cause. It is still located principally in the east end of Glasgow but many of the great mills of Bridgeton where once it flourished are now devoted to other enterprises and stand pathetic witnesses of a great decline. The thread industry however continues a huge industrial asset to the West, the headquarters of the great Coats combine being in Paisley. Another branch of the textile trade that of dyeing has undergone a change. The Combine of a few years ago has resulted in the concentration of the industry and many of the smaller works at different points in the west of Scotland have been closed. The total value of produce and manufacture from the chief Scottish ports was Glasgow £29 129 406 Leith £6 875 636 Grangemouth £- 239 581.

A general consideration of the industrial outlook reveals the eastern part of the country as portentous of greatest development and the increased activity here is almost entirely limited to Fifeshire. That county in its western area has grown enormously in industrial importance within recent years. The basis of its prosperity is the wealth and extent of its coalfields and within the coal area many important manufactures have sprung up notably linoleum the staple trade of Kirkcaldy and now extending to other parts of the Kingdom. Fifeshire ports also continue to grow in importance notably Methil which with the completion of the new dock will contribute to make the Fifeshire ports of the Forth serious competitors with the west in the export of coal and iron. The establishment of the naval base at Rosyth in process of construction since 1908 will stimulate industry in the western part of the county and already in the neighbourhood of the dock a town is developing.

**Fishing.**—The fishing industry of Scotland has changed greatly in the manner of its pursuit. Formerly it was interwoven with the work of agriculture particularly in the Western Highlands where crofters profitably combined the harvest of the waters with the harvest of the land. Those were the days of sailing boats the possession of which was within the reach of thrifty fishermen. The advent of the steam drifter is gradually crushing out the modest sailing boats and their humble owners who find it impossible to compete against highly equipped drifters which generally have behind them powerful capitalist influence. The industry is now largely in the hands of large combines who own a fleet of drifters and although the new order has doubtless proved beneficial to the consumer it has been detrimental to the economic welfare of the working fisherman who has to be content with the position as member of a drifter crew with little prospect of ever having a boat of his own. The combine system is rapidly spreading. Salmon fishing on the Tay for example is now monopolised by wealthy companies whereas formerly the fishings were distributed among small fishermen. The effect is seen in the changed complexion of Newburgh whose community until a few years ago was almost entirely engaged in the Tay fishings. It has sunk to a town of little importance in salmon fishing and such prosperity as it still enjoys is based on the manufacture of linoleum. For administrative purposes the Fisheries Board

of Scotland have divided the Scottish Coast into three districts, namely (1) the East Coast—Eyemouth Leith Anstruther Montrose Stonehaven, Aberdeen Peterhead Fraserburgh Banff, Buckie Findhorn Cromarty Helmsdale and Wick (2) Orkney and Shetland (3) West Coast—Loch Broom Skye, Fort William Loch Fyne Campbeltown Rothesay Greenock Ballantrae Stornoway and Barrow. The tonnage of boats belonging to those divisions is as follows: East Coast, 101 721 Orkney and Shetland 22 517 West Coast 15 735 a total of 139 973. While the Fishery Board has rendered good service to the industry the undoubted grievances of native fishermen in regard to foreign trawling remains unremedied. The Scottish Board in 1885 obtained statutory powers to close portions of the territorial waters against trawling and a large area of east coast waters was closed in the interests of scientific experiment. It was found that the closing of those waters gave great satisfaction to both line and drift fishermen and as the Board were anxious to encourage development of those methods of fishing in preference to beam trawling they secured further powers under the Herring Fishing Act of 1889 which enabled them to close against all forms of trawling not only the whole territorial waters of the Scotch coast but a large number of areas defined in the Scheduled Act as lying outside the territorial waters properly so called. Among those scheduled areas were the Moray Firth and the Firth of Clyde. By international law the power of a state to make regulations with regard to methods of fishing is limited to its territorial waters. There are a number of regulations existing with regard to the fishing boats working in the North Sea but these regulations have been made under International Conventions and are to be only obeyed by the subjects of the high contracting states. But apparently Parliament can make regulations which are only obligatory to British fishing vessels. Hence while the latter cannot trawl within the Firth of Clyde or the Moray Firth except in a very limited area foreign trawlers may fish anywhere in the considerable area which lies outside the area known to International Law as Scottish territorial water. Thus Dutch and Norwegian vessels at Fleetwood fish in the Clyde. Some of them are doubtless *bond fide* foreign boats but for the most part they are English vessels registered either in Norway or Holland. Foreign trawlers find it convenient to work Scottish waters and to land their catches in Fleetwood and they are enabled to do so owing to a flaw in the Herring Fishing Act of 1889. A slight amendment prohibiting the landing of fish in England as well as in Scotland by such vessels would remedy the difficulty.

The fishing fleet comprises 9889 vessels with an aggregate tonnage of 139 973 and a total value of equipment and fishing gear amounting to £5 000 028 the number of persons employed in the Scottish fishing trade and industries subsidiary thereto is 92 060 and of those 39 208 man the fleet the remainder being engaged in operations on shore. Eleven vessels employing 4-4 men 145 of whom are British are engaged in whaling. In 1911 730 whales were landed and the value of the products amounted to £71 223. The outstanding feature is the continued decline in the number of boats the quantity and value of the gear and the numbers employed in the industry. The cause of this decline is chiefly due to the replacement of sailing boats by steam and motor driven vessels but fishing like agricultural communities have suffered considerably from the drain of emigration. It is difficult to get fishermen to divulge their earnings but the following figures may be regarded as authentic relating to a particular Scottish district. Steam trawlers (highest) £1610 (lowest) £900 (average) £1388 Motor Boats (highest) £1610 (lowest) £600 (average) £973 Sailing Boats (highest) £910 (lowest) £120 (average) £412. The output of sailing boats steadily declines the number of vessels constructed in 1911 being 164 valued at £7940 compared with 193 valued at £8334 in the previous year. The total quantity of fish exclusive of shell fish landed in Scotland was 8 709 655 cwts valued at £3 100 387. Compared with 1910 this shows an increase of 1 286 470 cwts and an increased value of £211 280 the second highest result on record. In 1911 1 767 544 barrels of herring were exported 311 188 being

Crown branded. The total of cod ling and dried fish exported was 104 058 cwts nearly all to Ireland. The total salmon carried on Scottish railways was 27 390 cwts.

**Railways.**—The profit earning capacity of the Scottish railways has declined due in large measure to the development of the tramway enterprise and the increased use of motor cars. Through the industrial parts of the country there is now a complete system of tramway communication linking districts many miles apart. The extent of the tramway undertaking may be gathered from the fact that the passengers carried in 1911 numbered 276 745 475. The effect on railway enterprise is obvious, and in order to meet the competition the different Railway Companies recently came to an arrangement which has resulted in a considerable curtailment of competing trains, and a general increase in passenger fares. The most important decision in railway law in 1911-12 was that given by the Railway Commissioners sitting in Edinburgh on the demurrage case brought by the Scottish traders against the principal companies. The decision was almost entirely in favour of the Companies, and its importance lies in the fact that it gives them full use of their wagons for their legitimate purpose thus setting loose a large capital previously locked up in rolling stock, which had virtually been seized by the trader as free storage accommodation.

The Scottish railways are behind those of England in regard to electrification a beginning not yet having been made. On the other hand a series of successful experiments were carried out with a small electrical driven vessel and it is probable that the next step will be

the construction of a large ship for service. It is appropriate that this departure should find its home on the Clyde which 100 years ago witnessed the initiation of steam propulsion with the launch of the *Comet*—an event which was elaborately celebrated on the Clyde in 1912. While there has been little in the way of railway development there has been a growing agitation for improved communication by water. An ambitious project has been advocated notably by Sir Charles Campbell that a ship canal should be constructed uniting the Forth with the Clyde on the route of the present shallow canal or by a new route embracing Loch Lomond in its course. From a naval point of view it is urged that such a canal would be an important adjunct to Rosyth dock. So far the scheme has failed to win much support from the commercial communities and obviously the sum that would be required for its fulfilment is of such magnitude that it could not be ventured upon without Government subsidy.

*Education*—The most remarkable feature of recent educational development in Scotland has been the growth of technical education. Technical schools are now established in every important town and under the auspices of the county council the system has been extended to provide instruction for those in rural districts. The chief centre is naturally Glasgow, whose Royal Technical College (the 'Royal' distinction was conferred upon it in 1911) is the largest institution of its kind in the United Kingdom and among the largest in the world. The work of the College is associated with that of the University and an endeavour is being made to bring the relationship still closer. The Scotch Universities themselves are proving responsive to the new spirit in education and although strong as always in the Humanities they are extending their curriculum to include instruction of a more utilitarian sort. This tendency is most marked in Glasgow whose greatest development has been in the direction of Engineering Science and Chemical Research. St Andrews the most ancient seat of Scottish learning which celebrated its quincentenary in 1910 on an impressive if less imposing scale than the sister University of Aberdeen which celebrated her quatercentenary in 1906 remains largely a centre of pure scholarship but utilitarian tendencies are evident in the development of the seats of learning in Edinburgh and Aberdeen. The princely benefaction to the Scottish Universities made by Dr Andrew Carnegie in 1901 has tended to strengthen the democratic character of Scottish Academic life which never indeed has been so exclusive as in the great English universities. With recent developments in Secondary and Higher Grade Schools and the elaborate system of Continuation Classes the Scottish educational system may now claim to link in an unbroken chain the Elementary School with the University.

The most notable legislative event of recent years was the Scottish Education Act of 1908. It greatly extended the powers of school boards in the direction of feeding necessitous children, the medical inspection of pupils and the compulsory attendance at continuation classes. It has also to some extent checked the spirit of sectarianism the great church training colleges being now controlled by representative committees. Sectarianism however has never been a conspicuous blemish in the Scottish educational system and the great Presbyterian bodies the Church of Scotland and the United Free Church who formerly controlled the Training Colleges loyally fell in with the new National scheme. The Act has not however affected to any appreciable extent the old school board areas and it retains the system of cumulative voting which leads to many abnormalities in representation.

*Administration*—Scotland has a comprehensive system of county and municipal government but as regards the country generally there is a lack of co-ordination and greater national control is obviously desirable. Thus it is still necessary when any great scheme of county or city development is promoted to have it considered by Parliamentary committees in London. The Private Bill Legislation Act passed some years ago, has mitigated only to a slight extent this old standing grievance. Perhaps however, it is in educational affairs that the system of administration proves most irritating. The headquarters of the Scotch Education Department are still in London although much of the clerical work hitherto done there has been transferred to Edinburgh. It is felt that the educational authority should be concentrated in Scotland and the desirability of rearrangement seems obvious from the fact that there are in Scotland including Inspectors, 118 officers of the Education Department, and only 50 in London.

In the sphere of municipal activity the most notable event has been the extension of Glasgow boundaries. The total area of the city is now 19,082 acres an addition of 6107 and the population of the city has been increased from 784,456 to 1,010,000. The scheme as

## IRELAND

originally formulated would have increased the area to 33 166 acres and would have embraced large tracts of rural land the object of the promoters being to give effect to the provisions of the Town Planning Act. The original scheme was practically endorsed by the House of Commons Committee but it was curtailed to the extent indicated when it came before the Committee of the House of Lords. Greater Glasgow now includes the adjacent burghs of Govan and Partick and portions of the county areas of Lanark and Renfrew. The places absorbed however are all populous and the density of the population in the extended city is only slightly less being 52·8 per acre against 60·4 and it is still largely in excess of the other large cities of the kingdom. The valuation has been greatly increased. The latest valuation for the smaller area was £6 000 000 and the extension of boundaries is estimated to increase this by about £2 000 000. Under the Boundaries Act however it is stipulated that no increase of rates can be imposed on the places annexed until the lapse of five years so that during that period the cost of improvements will fall upon the ratepayers within the old city boundaries. Dunfermline has also extended her boundaries to include Rosyth and an elaborate scheme of extension is at present under consideration by Dundee.

*Poor Law*—The number of poor in receipt of relief in 1911 was 73 642 and 40 370 dependents and the burden of local rates which steadily advances having increased during a period of 15 years by 1/5 d. or 48·9 per cent is chiefly due to the increase of the poor rate, education and sanitation. The latest available returns 1911 shows the total amount paid on local taxation to be £1 286 396. The most recent development in the relief of the poor is under the Unemployed Workmen's Act of 1905. The total population of the areas in which distress committees are engaged is 1 989 951 being 41·81 per cent of the population of Scotland. The total receipts from all sources from operations under the act amounted in 1911 to £29 182 which includes £14 300 from the Parliamentary Grant £5737 from the rates £2254 from voluntary contributions and £6315 from the work performed by the unemployed. The expenditure was £29 701.

*Religion*—Presbyterianism continues the dominant faith in Scotland but recent years have witnessed a considerable growth of the Roman Catholic community and of the Scottish Episcopal Church. Latest returns give the membership of the Church of Scotland (1687 Churches) at 706 653 United Free Church (1 620 Churches) 501 573 Free Church (150 Congregations) 60 000 Episcopal Church (338 charges) 52 029. The Roman Catholic Church has 398 Churches Chapels and Stations 550 Priests and the Roman Catholic community is estimated at 1 000 000. Politically Scotland has never manifested any aggressive desire for national self government and she has undoubtedly benefited materially from the Union with England. There have been frequent attempts to stimulate interest in Home Rule for Scotland but they have proved abortive owing to the apathy of the people. In another sense however there has been within recent years an undoubted revival of national sentiment reflected in the widespread interest now taken in Scottish customs language and literature. It has found expression in the establishment of a Scottish Chair in the University of Glasgow to further which project a Scottish Exhibition was held in the city in 1911 resulting in a surplus of £20 000 which with other contributions has enabled the foundation of a Chair of Scottish History and Literature. And although there cannot be said to exist a national demand for Home Rule in the form of a National Parliament there is as indicated widespread dissatisfaction with the present conduct of national administration. The creation of the Scottish Office under a Secretary for Scotland has rather added to the confusion and among all sections of the community irrespective of party there is a strong feeling that the Scottish department should be situated in Edinburgh and under the control of a national administrative council. (DONALD MUIR)

IRELAND<sup>1</sup>

The material prosperity of Ireland reached a higher point in 1912 than at any period during the past century. It is true that, according to the census returns published in 1911 the population is still declining but prosperity cannot be reckoned in terms of population alone. The population of Ireland as given in these returns, which refer to the middle of 1910 is 4,381,951. (Details are furnished in Tables A and B.) During 1911 the marriages registered in Ireland numbered 23 473 the births 101,758 and the deaths 72,475. The marriage rate was 5·37 per thousand of the estimated population an increase of 0·32 on the preceding year the birth rate was 23·3 per thousand the same as the preceding year, and the death rate was 16·6 per thousand, 0·5 below the rate of the preceding year. Since the census of 1901 the population has decreased by 76 824 or 1·7 per cent. This is the smallest decrease known since the institution of the census. Not only the decrease but the rate of decrease is rapidly slackening. The decrease is very unevenly distributed over the four provinces—36 966 in Connaught 43 103 in Munster, 7499 in Leinster, and 4254 in Ulster. There is a large growth in the population

<sup>1</sup> See E. B. xiv, 742 *et seq.* and articles on the various counties and towns.

# IRELAND

595

of the cities of Dublin and Belfast—over 18 000 and 36,000 respectively In these cases the increase is due to internal expansion

In certain counties however, a slight but appreciable tendency on the part of the popula-  
tion to move from the rural to the urban districts may be noticed This feature is  
especially marked in County Longford, the West Riding of County Cork County

Cavan and County Sligo, where the urban population has increased by 6 per cent at the expense of the rural, County Roscommon 7 per cent and County Leitrim 8 per cent. Allowing both for the natural growth of the more important towns and the urban expansion in these districts at the expense of the rural population the gross decline of agricultural population for the whole country during the decade is approximately 146 000. The total emigration represents a correspondingly large number but the figures for 1911—31 058—are the smallest on record since early in the century.

*Agriculture*—Most of the decline represented by these alarming figures must be allotted to the earlier years of the decade. Since 1909 the rural decline has been substantially checked. The earlier years of decline in arable cultivation and consequently in agricultural population, were reflected in the increased production from pasture lands and of cattle feed generally and the material increase in the number of store cattle. The cattle industry no longer flourishes directly at the expense of cultivation.

The total area of corn and green crops including flax and fruit in Ireland in 1912 was 2 357 969 acres an increase of 9148 acres on the preceding year. The corn crop growing on 1 265 597 acres showed an increase of 11 166 acres. There was a decrease of 211 acres in the total area under wheat but this was entirely due to the heavy decrease—1110 acres—in Connaught. The area under oats showed an increase of 5736 acres in Ulster the increase was 10 379 acres while the acreage had decreased in the other three provinces. The increase in barley—7186 acres—was distributed over the four provinces. The total area of potatoes was 595 218 acres an increase in the year of 3959 acres there were increases in Leinster and Ulster (876 and 3670 acres) and decreases in Munster and Connaught (1146 and 1441 acres). The acreage under turnips showed an increase of 956 acres to 271 761. The total area of hay was 2 479 159—a decrease of 33 244 acres in all the provinces. The approximate yield per acre was oats 51 1 bushels barley 44 1 bushels wheat 38 bushels. The total yield of potatoes was approximately 3 1 million tons and of hay 5 1 million tons. The area under flax had decreased by 11 701 acres in 1912 to 54 917 the decrease being general throughout most of the flax growing counties. The area of pasture including mountain grazing was 12 418 867 acres—a decrease of 11 931 acres. There were in 1912 4 848 498 cattle in Ireland an increase in the year of 136 778 617 532 horses or +1201 3 828 829 sheep or -78 607 1 323 957 pigs or -91 162 25 525 724 poultry or +77 923.

Two factors have to be taken into account in a consideration of the rural regeneration of Ireland—the growth of co-operative principles and the effect of land purchase. In 1908 the Irish Agricultural Organization Society became involved in a dispute with the Irish Department of Agriculture and Technical Instruction. The political aspect of the question may be disregarded. Its economic aspect is contained in the charge that the Organization Society was an association trading for profit. Mr T W Russell<sup>1</sup>, who succeeded Sir Horace Plunkett<sup>2</sup> as vice president of the Department in 1907 informed the Council of Agriculture in 1908 that he had decided to withdraw the Department's subsidy to the Society but he undertook to continue a diminishing grant for three years £3000 for the first year, £2000 for the second and £1000 for the third. The Agricultural Board later decided that the grant should be withdrawn at the end of 1908. Under the provisions of the Development Fund Act of 1909 the Development Commissioners were empowered to make advances for the organization of co-operation either to a Government Department or through a Government to a voluntary association not trading for profit. In accordance with this provision, the Irish Agricultural Organization Society, like the similar societies in England and Scotland, applied for a grant in aid. The application was referred to the Department of Agriculture which reported adversely. Much delay ensued but, nearly a year after the application was sent in the matter was submitted to the Council of Agriculture. This body endorsed Mr T W Russell's action. Mr Russell then proposed to the Development Commissioners that a grant should be made to the Department for 'non controversial co-operation'. The Commissioners rejected this proposal early in 1912, and decided a few weeks later to make the grant on their own responsibility to the Irish Agricultural Organization Society—a course which had been repeatedly advocated by

<sup>1</sup> B 1841. Originally an Ulster Liberal Unionist (M.P. for S. Tyrone from 1886) and in 1895–1900 parliamentary secretary to Local Govt Bd in Unionist ministry but went over to Liberal side in 1905. A well known Temperance advocate.

<sup>2</sup> B 1856. See *E. B.* xxi 857.

the Chambers of Commerce of Dublin and Belfast, both of which bodies repudiated, as did the Society itself the suggestion that the Society was entering into direct competition with legitimate traders. The Commissioners stipulated, however, that certain changes should be made in the composition of the governing committee of the Society as a condition to the grant of a subsidy. The temporary loss of State assistance does not appear to have injured the vitality or the financial stability of the society. According to the statement made at its annual meeting in 1911, it has about 900 branches, a membership of 100 000, and a turnover of nearly £3 000 000. In the spring of 1912 a Commission of Inquiry began to investigate the system of agricultural credit instituted by the Society. In the course of its proceedings it was found that the Department of Agriculture had lost only £100 out of £18 000 advanced to credit societies, and this loss was more illusory than real since it did not include reference to the interest paid on advances. It thus becomes clear that the department is making a handsome profit out of the agricultural credit societies and that the system is working admirably.

The most interesting event of Irish economic history during 1910-12 was the establishment in 1910 of a society called the United Irishwomen. This body is affiliated to the Irish Agricultural Organization Society and was founded in order to do on the social side of rural regeneration what the Organization Society has done and is doing on the economic. It was intended in effect to develop the principle of 'better living' which is one tenet of the threefold faith of Irish rural reformers. Its policy includes the teaching of cookery, poultry management and dairying and the encouragement of village crafts such as the making of furniture for cottages. Beginning with three branches and finding the district of Connemara one which especially eagerly awaited development the organizers of the United Irishwomen were able in a year to announce the existence of fifteen branches. This work is still rapidly expanding.

Two incidents may be noted as indicating the growth of popular appreciation of Sir Horace Plunkett and his work. In the early summer of 1910 the Department of Agriculture combined with the Estates Commissioners to reconstruct a little patch of rural life in Castletara. The first action of the new land holders was to combine with one another in order to apply co-operative principles. This Mr T W Russell admitted was 'but a sample of what is going on all over the West'. The other incident was an

All Ireland Model Election conducted in December 1911 by the Proportional Representation Society of Ireland. Intended as an 'All Ireland' election it was ultimately confined in operation to Ulster and the immediate vicinity of Dublin. It resulted in the return at the head of the poll of a curious collocation of names—Mr John Redmond, Sir Edward Carson and Sir Horace Plunkett.

The new land purchase policy which was instituted by the Act of 1909 has not been justified by results. The changes from the provisions of the Wyndham Act may be briefly reviewed. Instead of cash payments landlords were to receive stock at 3 per cent. This stock was issued on a falling market and cannot appreciate owing to the embarrassment of Irish estates about half of each issue has had to be thrown back on the market for the redemption of mortgages. Instead of paying £3 5s per £100 tenants were to pay £3 10s without any reduction in the period of repayment. A large proportion of the holdings of Ireland are valued at less than £10 a year. A presumption was created that all holdings below that value were to be deemed 'uneconomic,' with the result that the whole of Connaught with the counties of Donegal, Kerry, and part of Cork became 'congested'. The Congested Districts Board charged with conducting purchase in this area is consequently swollen to unmanageable size. Comparisons between the work of the Wyndham Act and the Burrell Act show the following results. From 1903 to 1909 the number of potential purchasers was 217 299 from 1909 to 1911, or a third of the previous time the number was only 8992—a decrease of over 80 per cent. Under the Act of 1903 landlords were assisted in the repurchase of their demesnes after selling their properties. Under the Act of 1903 the advances on resale to owners sanctioned by the Land Commission numbered 205, under the Act of 1909, up to the end of the financial year 1911, only two.

**Manufactures** —Although agriculture still is and must remain, the chief industry of the country, Ireland is continuing to fall into line as a manufacturing country. Irish expansion in this direction is largely due to the industrial revival movement. Great local forces have been at work in recent years in forwarding this revival. They received a considerable stimulus from the date (1907) of the International Exhibition in Dublin. There have since 1909 been exhibitions on a smaller scale but of a similar nature in Belfast, Cork, Limerick, Drogheda, Londonderry and elsewhere throughout the country. The Uí Breasil exhibition at Ballsbridge in the summer of 1911 gave another immense impetus to the movement. It is a common fallacy to suppose that the industrial life of Ireland is confined to Ulster. This is even less true at the present time than was the case four or five years ago. In many towns of the other three provinces thriving industries are to be found, small, indeed when compared with the industries of Great Britain, but still appreciable. The Made in Ireland movement exercises an increasingly strong protectionist influence. It is supported by various political and economic associations such as the Gaelic League, Sinn Féin, and the Industrial Development Associations. Irish industry covers a far wider range than is commonly supposed. Industrial Development Associations have been formed in addition to the original ones at Dublin, Belfast and Cork in Limerick, Waterford, Wexford, Sligo and other smaller towns. The Cork Association in its annual report for 1911 speaks of an exhibition of Irish goods at its offices as including samples of woollens, linens, flannelettes, calicoes, threads, silk gauze, maps, stationery, mosaics, marbles, lead pipes, etc. The Dublin Association is not unnaturally more successful than any other. This is illustrated by the reports for two consecutive years. In the 1910 report articles which could and ought to be manufactured in Ireland include paper bottles, stained glass, church and school furniture and accessories, shop-fronts, general office requisites, soap, matches, candles and flour. In the report for the next year (1911) it is stated that all these articles are now obtainable in Ireland on competitive lines.

There are at present some twenty hosiery factories and as many tweed mills in Ireland. These new industries appear to be making progress, though it cannot be specifically estimated. The woollen making industry has consolidated its position. A factory in Galway paid in 1912 a dividend of twelve per cent. There are eleven tobacco factories, besides the established ones in Belfast, scattered over the West and South, employing 3000 hands. All of them suffer from the competition of the Imperial Tobacco Trust; this reason was advanced for the closing of a Dublin factory which employed 300 hands in August 1912. The Irish tobacco industry receives a small subsidy from the Treasury but this ceases in 1913.

The linen industry is by far the largest industry in Ireland. The number of spindles is returned approximately at 946,000. The number of power looms shows a large increase to 36,802, of which 21,000 are in Belfast, 13,000 elsewhere in Ulster, while the rest represent small factories in Dublin, Cork, Dundalk, Drogheda and elsewhere. Next in importance is the shipbuilding industry.

The industrial troubles of 1911 and 1912 affected Ireland equally with the rest of the United Kingdom. In August 1911 a strike of the Dublin seamen and firemen interrupted the trade of the capital though only for a brief period. A railway strike (which had no connection with the strike in Great Britain but was begun in sympathy with a portage strike) followed and there were several local disputes, of which the most serious were a bakery strike in Dublin and a transport workers' stoppage at Wexford. The coal strike of March-April 1912 which sent up the supply to famine prices, did an indirect benefit to Irish industry by causing a development which has since been partially maintained, in the output from the collieries at Athy and Kilkenny.

**Fisheries** —That the Irish fisheries are a valuable asset to the country is established by the fact that the total value of fish landed in Ireland and sold was according to recent returns £375,636 against a total of £363,801 in the preceding year. But there has been a serious falling away in the number of vessels engaged in the Irish sea fisheries—a decrease of 324 vessels to 5652. The fisheries give employment to some 20,000 men. The Department of Agriculture and Technical Instruction has granted loans to fishermen for the purchase of boats and gear and the installation of petrol power. A station was established in 1910 at Courtmacsherry where improved methods of curing, classification and packing are taught. The whale fisheries of Inishkea and Blacksod which were decaying, have also been fostered.

by help from the Department. Endeavours to extend the sale of fish in inland towns are being continued. In 1911 there were about 150 towns on the Department's official list.

*Commerce*—In the fiscal year of 1909-10 the value of imports amounted to £63 779 709 and of exports to £60 946 186. In the fiscal year of 1910-11 the value of exports for the first time on record since the institution of these returns in 1904 exceeded that of imports. Imports were returned at £65 044 477 and exports at £65 844 255—an aggregate of £130 888 732. This is nearly £28 per head of the population while the corresponding figure for Great Britain was just over £20. Excepting Holland, Belgium, Switzerland and New Zealand the external trade of Ireland is greater in proportion to its size than that of any country in the world. There is certainly no other country where the figures of external trade more closely approximate to a measure of the actual productive prosperity. The value of the export transit trade to Great Britain is officially estimated at four fifths of the total or about £52 600 000. There has been a substantial increase in the export trade of yarns especially to foreign countries. The value for 1910 was £1 197 000. The increase was especially marked in the exports to the United States; linen goods form two thirds of the Irish trade with that country. In recent years largely as the result of the efforts of the

Made in Ireland movement certain foreign countries have begun to show separate details for Irish imports in their trade returns. These returns illustrate the present variety and extent of Ireland's foreign trade. Those for 1910-11 are the latest available. The value of French imports from Ireland was £141 000 (mainly salted meat, pork, cereals and yarns), Belgian £4000 (iron, steel and linens), Dutch £234 000 (yarn, malt, flax, wool and grass seed), Cuban £216 000 (cotton linen and woollen tissues). These figures represent the direct trade. The actual trade is many times greater but the bulk of it passes through Great Britain and is credited under that heading by the Customs authorities.

The leading article of export from Ireland remains live stock. Nearly all of it is imported by Great Britain. Reference has been made above to the causes of decline under this head. In the year ended March 31, 1912 the numbers of the live stock export had decreased by more than 200 000 as compared with the preceding year. The numbers stood at 1 742 477 and the value at £13 550 754. Cattle accounted for 689 550 of the numbers and for £9 508 083 of the value. At the end of June 1912 the export of cattle to Great Britain came to an abrupt standstill in consequence of the discovery of foot and mouth disease in cattle despatched from Swords, County Dublin, and the subsequent closing of English ports against Irish cattle. The weekly loss to Ireland while this embargo (which was imposed at the height of the fat cattle season) rested was estimated at a minimum of £20 000. The disease was isolated with more success by the Irish Department of Agriculture than was the case in Great Britain but during the first weeks after the outbreak the necessary standstill order resulted in the stagnation of the country fairs as well as the cessation of export. Six weeks after the outbreak all Irish ports except Dublin, Drogheda and Dundalk had been opened but only for immediate slaughter at the English ports of landing. As a result the fat cattle trade suffered enormously and as the season advanced the case of the store cattle trade became even worse. The calamity concentrated the attention of Irish stock raisers on the merits of the dead meat trade whose establishment has been urged for several years past by the *Irish Agricultural Organization Society*. It was also recommended by a *deputation* of Irish farmers which in 1910 at the instance of the Department of Agriculture investigated the dead meat trade of Scotland. A dead meat trade was established experimentally at Wexford and Drogheda and has since flourished. Late in August 1912 a movement to organize the trade throughout the country was set on foot.

The principal items of the Irish import trade remain chiefly the same as those of Great Britain in the past two years. In the case of articles similar to those produced in Ireland however it is noticeable that the bacon import had declined in value (1910-11) to £1 659 000. The butter import for the same year valued £478 000. The decline during the past two years in the Irish butter export was not as an enquiry conducted by the *Agricultural Organization Society* showed due to a decrease in production, but to an increase in home consumption for which the better living in rural districts which the Society promotes is responsible. In this connection the increase of deposits and cash balances in the Irish Joint Stock Banks, Trustee Savings Banks and Post Office Savings Banks (£1 910 000 in 1909 to £2 402 000 at the beginning of 1911) is worthy of notice. Banking accounts also show much larger amounts under the head of advances to customers made mainly for industrial purposes and land improvement.

*Communications*—Railway traffic returns reveal similar features of expansion. The total receipts for 1909-10 were £41 180 023 and for 1910-11 £41 302 720. These returns are the highest on record. The railway strike in the summer of 1911 resulted in a slight setback but this was successfully overcome. In 1910 the main railway companies met for the purpose of developing the inland sale of fish referred to above, the demand for reduced freights and through rates for this traffic. The Great Southern Railway has made arrangements for a junction with the proposed Athy and Queen's County Railway at Athy, a project whose completion will benefit the coalfield of the district. The Midland Railway has completed the doubling of the line between Athenry and Attymon Junction and this

is now being used for traffic. This company contemplates the opening of a new station in County Mayo between Westport and Castlebar. The Dublin and South Eastern Railway has taken in hand the diversion of the line from Kalliney round Bray Head to Greystones since recent dangerous encroachments of the sea have rendered this course necessary. The Viceregal Commission on Irish railways issued its final report in 1910. Its majority report advocated State purchase and nationalisation but a minority report dissented from this recommendation. The Royal Commission on the Canals and Inland Navigation of Ireland issued its final report in the following year. Here again State purchase and control were recommended. This report strongly urged that the problem of arterial drainage and relief from floods should also be attacked by a central authority. The pressing nature of the drainage question has been emphatically evidenced by the flooding during the winter of 1911-12 of the basins of the Shannon, Barrow and Bann and the consequent wholesale damage to property and public health. Nothing has yet been done in any of these directions. Projects for no less than 83 new railways were brought before the Viceregal Commission but even improvements of the existing light railway system had to be abandoned since there is no means of raising new capital under the system of legislation by which they were constructed. Road improvement proceeds slowly but surely under the local authorities. The Local Government Board of Ireland during the year 1911-12 made orders extending the limit of expenditure in 28 rural districts contained in 13 counties. In 16 cases the increase was required to permit road improvement by steam rolling to be undertaken in one case to provide for the repair of sudden damage by the sea and in one case for the widening of dangerous bog roads. Loans of a total amount of £71 500 were sanctioned. In these districts (all in the West) the extension of communication facilities has been rendered desirable by the fact that these parts of Ireland look for an increasing part of their prosperity to the tourist traffic. The operation of the Health Resorts (Ireland) Act has also assisted in the opening up of the remoter districts to the tourist. Local authorities are now empowered to strike a rate for tourist development purposes.

*Local Government*—The Local Government Board for Ireland had occasion up to 1912 to pass in its annual reports favourable judgment on the smooth working of the various bodies created by the Act of 1898 but the report issued in August 1912 contains nothing under this head from which it may be inferred that the Irish County Councils and District Councils are continuing to do satisfactory work. At the beginning of 1912 the restriction preventing women from being members of County and County Borough Councils was removed bringing the Irish law into harmony with that in force in England and Scotland. The new Act became operative for the first time at the municipal elections of January 1912. Three women were successful at the polls one in Dublin (Miss S. C. Harrison, well known for her interest in distress work) and two in Waterford. New Acts in connection with local administration in Ireland which came into force, at the same time were an Act empowering the Dublin Corporation to strike a halfpenny rate for the maintenance of the Dublin Municipal Gallery of Modern Art and an Amending Act to the Irish Labourers Act, which granted another £1 000 000 for the building of labourers' cottages and enabled the Local Government Board to proceed with the scheme already lodged. The working of the Labourers Act gave an opportunity to the United Irishwomen to turn their attention to the provision of a proper water supply in the proximity of labourers' cottages an object in which an active interest was also taken by the Women's National Health Association the organization which the Countess of Aberdeen instituted in 1907 in order to combat the growth of tuberculosis in Ireland. This association has now 150 branches with about 19 000 members. It has established two garden playgrounds in the most congested districts of Dublin and a third is in course of preparation. It has established the Collier Memorial Dispensary for the prevention of tuberculosis which centralises the work previously carried on by the Dublin Hospital Tuberculosis Committee and formed the Dublin Samaritan Committee in connection with the dispensary besides several such committees in connection with different branches. It has established a Preventorium at Sutton a Pasteurised Milk Depot and numerous babies clubs in Dublin and throughout the country. The association has also undertaken in the interval before the County Councils construct the necessary machinery to work the sanatorium benefit under the Insurance Act, and has received £25,000 of the grant to Ireland for this purpose. The Registrar General's return for 1911 attributes some part of the fall in the death rate (16.6 for 1900 or 5 below the rate of the preceding year) to these agencies. It is also due in part to the

operation of the Old Age Pensions Act which under the original estimate in 1909, affected some 1,000 persons in Ireland. This was exceeded by 128 per cent. but a large number of claims were subsequently disallowed. The number of appeals decided during 1911 was 11,727. The operation of the Insurance Act in Ireland cannot yet be estimated. Mr Charles Kinnear was appointed Chief Commissioner. The number of insurable persons is estimated at 1,050,000 and 674,000 persons were returned as members of approved societies when the Act came into force.

*Religion*.—In the census of 1911 the population of Ireland is divided by religions as follows: Roman Catholics 3,238,656, Protestant Episcopalians (Church of Ireland) 574,480, Presbyterians 439,876, Methodists 61,806. The number of Roman Catholics had decreased by 10,005 of Protestant Episcopalians by 5600, of Presbyterians by 3400, and of Methodists by 200 during the decadal period since the last census. In Dublin 83.1 per cent of the population was Roman Catholic, 12.9 per cent Protestant Episcopalian, 1.4 per cent Presbyterian and 0.8 per cent Methodist. In the county of Dublin (which includes the urban districts around the city) the percentages were 71.22, 8.25 and 1.6. In Belfast Roman Catholics numbered 9,245, Protestant Episcopalians 118,173, Presbyterians 130,375 and Methodists 23,782. In County Antrim the numbers were 39,514, 2118, 9196 and 3813.

Owing to the special interest attaching to the Ulster question, mainly a Protestant one, it may be noted that in the N.E. counties constituting Ulster, in the political sense, there were 394,411 Roman Catholics (33.1 per cent) as against 794,140 of other denominations. In all Ulster the Roman Catholics numbered 690,816 (43.7 per cent) as against 890,880 of other denominations. In Munster the Roman Catholics constituted 94 per cent in Leinster 85.2 per cent and in Connaught 96.3 per cent.

Notable changes occurred in the composition of the clergy in the Church of Ireland. Dr Alexander, the Primate of Ireland, retired from the primacy in January 1911 and died shortly afterwards. In February Dr Crozier, bishop of Down, Connor and Dromore, was elected Primate, the see of Down being filled by the transference of the bishop of Ossory. Dean Bernard, dean of St. Patrick's, was appointed to the vacant bishopric. In June 1911 a canonry of St. Patrick's fell vacant and was filled by the appointment of the Rev. James O'Hannay, Rector of Westport, better known as the novelist George A. Birmingham.

*Justice and Law*.—Ireland has been in a very satisfactory condition in respect of crime. In 1911 the prison population was the smallest on record. Drunkenness continued to supply a large proportion, the number of commitments under this and cognate charges being 9258 or 40 per cent of the total number committed to prison. In 1910 the figures were 10,088. During the year 1911, male and 545 female offenders under the age of 21 years were received under sentence. A Borstal Institution for males was established at Clonmel in November 1909 under the Prevention of Crimes Act of 1908. *Nearly all its past inmates placed out are doing well.* During the period under review Ireland has been singularly free from serious crime. In 1909 there was a recurrence of agrarian crime—shooting outrages and cattle driving—in certain counties, notably Tipperary, Clare and Westmeath. But since that year the number of Grand Juries congratulated by the judges of Assize on the satisfactory state of their counties has continued to rise. In 1911 the number rose to 90 per cent and in 1912 it reached 95 per cent. The Recorders of the large towns have also been able to produce testimony as to their comparative freedom from crime. Almost without exception the judge of assize has vigorously protested year by year that agrarian outrage in the western counties—Kerry, Clare and Galway—where it still sporadically appears, is largely due to the unrestricted sale and carriage of firearms. The Irish Game Protection Society and similar associations have also identified themselves with this protest. There have been several changes in the composition of Bench and Bar. In 1909 Lord Justice Fitzgibbon, who had for many years been judge of the Appellate Court, died. The Attorney General, Mr R. R. Cherry, was raised to the Bench and was succeeded by Mr Redmond Barry, whose place as Solicitor General was taken by Mr Charles O'Connor. Sir Samuel

Walker, Lord Chancellor of Ireland died towards the close of 1912, and was succeeded by the Attorney General Mr Redmond Barry. Mr Charles O'Connor became Attorney General and Mr Ignatius O'Brien was appointed Solicitor General.

**Education**—So far as education is concerned, the situation is practically unchanged except for the establishment of the National University. Under the system of payment by results, the amount of the school grant paid to managers of intermediate schools in Ireland on account of the examinations in 1911 was £46,461. In June 1912 the Intermediate Board was requested by the Under Secretary for Ireland to draw up in co-operation with the Board of National Education a scheme of scholarship whereby suitable pupils might pass from the primary to the secondary schools. After conference between representatives of the board and of the teaching profession a scheme was drawn up and sent to the Treasury. The board suggested the extension of the scheme so as to provide increased facilities for agricultural and technical training. The Treasury refused to sanction the scheme. However in July 1912 provision of £10,000 was made for scholarships to enable primary school children to enter secondary schools. These scholarships were to be open to all National School children under 13 years of age and the examination was to be competitive regional and annual conducted by the National Board's inspectors. (Provision of £40,000 was also made to improve the status of secondary teachers an improvement which consecutive teachers' congresses have annually demanded.) It was proposed that when the scholarships expired the holders should be elected to County Council scholarships. The County Councils offered these only on condition that they should be held at the National University. The Chief Secretary insisted that they should be tenable at any Irish University and as a result of the deadlock the scheme remained in abeyance at the end of 1912. The National University of Ireland was the creation of Mr Birrell's Irish Universities Act. The Act instituted University College Dublin and reconstructed the Queen's Colleges of Cork and Galway as constituent colleges. Queen's University Belfast became a separate establishment. Dublin was allotted an annual grant of £32,000, Cork £20,000 and Galway £1,000 out of the new University's share of the original endowment of the Royal University. £150,000 was granted for building purposes to Dublin, £14,000 to Cork and £6,000 to Galway. The preparatory work of the Commission was completed in July 1911 but the authorities of the Dublin College experienced some difficulty in finding a suitable site. Eventually a site adjacent to that of the Royal University buildings was provided by Viscount Iveagh the chancellor of Trinity College Dublin. St Patrick's College Maynooth has been recognized by the senate of the new university. The number of entrants to the university in 1911 was 155 to University College Dublin an increase of 60 on the previous year, 425 to University College Cork an increase of 10 and 155 to University College Galway an increase of 5. An agitation in favour of making Irish compulsory for matriculation was begun by the Gaelic League and the senate finally decided to make a course in Irish compulsory for those who did not take it at matriculation till 1913 in and after which year it is to be compulsory for matriculation. Mr Dennis Coffey was appointed president of University College Dublin. The five Connaught counties have struck a rate in aid of University College Galway. Kerry, Waterford, Cork, Tipperary and Limerick have established scholarships to University College Cork. It is estimated that when the County Council schemes are in full working order the National University of Ireland will derive an additional income of more than £1,000 from this source. The demand for the development of the constituent colleges into independent universities on the plea that a federal system is wasteful and cumbrous has already made itself audible. The proposal is supported by the Cork College and its president Sir Bertram Windle. It is resisted by the Galway College and its president Dr Anderson. Trinity College Dublin celebrated the bicentenary of its Medical School in July 1912. The recommendations in the report of the Science Schools Committee have now been completed by the gift of Lord Iveagh two months earlier of £10,000 to the Trinity College department of geology and mineralogy, which had been prevented by lack of funds from acquiring the apparatus.

tus and meeting the expenses of research assistants, necessary to the carrying on of its work. There has been contrary to expectation no friction between the old and the new universities. The National University played a prominent part in the bi-centenary celebrations of Trinity College. The co-operative principle is working not only in agriculture. It is the key note of the Ireland of to-day.

INDIA<sup>1</sup>

*Census of 1911*—The census was taken in India on March 10 1911 and showed a total population for the Indian Empire of 315 132 537 (compared with the total for 1901 the increase is 0 771 481 or 7 1%). But part of this increase is due to the inclusion of tribal areas on both the N.W. and N.E. frontiers with a population (mostly estimated not actually enumerated) of 1 711 116. In the British Provinces the rate of increase is only 5 5% while in the Native States and Agencies it is as high as 12 9%. The intervening decade had been on the whole favourable to agriculture and a recovery was to be expected in the areas affected by the famines of 1897 and 1900. On the other hand the visitation of plague had been severe and continuous causing more than 6 million recorded deaths chiefly in Northern India where also an exceptional outbreak of malarial fever occurred. In the result both the Punjab and the United Provinces show an actual decrease. The highest rates of increase are in the Central Provinces Burma and Eastern Bengal and Assam.

Classified according to religion some interesting results appear. As on former occasions the rate of increase among Mahomedans (6 7%) is higher than among Hindus (5%). So called Animists (20%) and Buddhists (13%) both have a high rate of increase. Jains show an unexpected decrease (0%) while the reforming sect of the Arya Samaj in Northern India has grown from 92 410 to 243 514. But the most surprising results are in the case of Sikhs and Christians. The former have increased from 2 105 359 to 3 014 466 or by 38% the latter from 2 923 241 to 3 816 196 or by 33%.

This increase of Christian<sup>2</sup> which of course means native converts deserves explanation in detail. The great majority are still to be found in the extreme South where in the two States of Travancore and Cochin more than one fourth of the total population are now Christians and the rate of increase during the past decade was 30%. Though the actual numbers are much less this rate of increase has been exceeded elsewhere. Taking native Christians alone and thus excluding European troops in the United Provinces the number has risen from 25 404 in 1891 to 68 841 in 1901 and 136 469 in 1911 while in the Punjab the number has risen from 19 561 in 1891 to 37 940 in 1901 and 163 220 in 1911. The rate of increase during the past decade has been 90% in Assam 45% in Burma and 33% in Bihar &c. while in the Mahomedan State of Hyderabad it has been threefold. Turning to the several denominations Roman Catholics are still by far the most numerous and their rate of increase has been 2%.

Next come Syrians of various rites and then Anglicans among whom the rate of increase has been only 8 5%. Other Protestant denominations show extraordinary figures. Baptists mainly in Madras and Burma have multiplied from 221 040 to 336 596. Lutherans in Madras and Bihar from 155 455 to 218 499. Presbyterians in the Punjab and Assam from 53 931 to 181 128. Methodists in the United Provinces from 76 907 to 171 754 and Congregationalists in Madras and Travancore from 37 874 to 135 264. Salvationists now number 5 407 mostly in the Punjab Travancore Bombay and Madras.

The statistics of literacy are not strictly comparable for the test has been changed being now the ability to write a letter to a friend and read his reply. The total number of literate persons has risen during the decade from about 15½ to 18½ millions the proportion per thousand having risen from 98 to 106 in the case of males and from 7 to 11 in the case of females. The total number of persons literate in English has risen from 1 125 231 to 1 670 387 the proportion per ten thousand having risen from 68 to 95 in the case of males and from 7 to 10 in the case of females. Excluding the exceptional case of Buddhist Burma Bombay

<sup>1</sup> See E. B. xiv 375 *et seq.* and allied articles.

<sup>2</sup> Here it may be mentioned that those of mixed descent formerly known as Eurasians are henceforth to be officially styled Anglo Indians.

continues to stand first in respect of literacy and the United Provinces last. Among native states Travancore and Baroda are conspicuous

**Finance**—In India financial equilibrium varies with the monsoon upon which agriculture is mainly dependent. In 1908-9 following upon two bad seasons which culminated in famine throughout the United Provinces there was a deficit of no less than 3½ millions entirely due to a fall in land revenue and in receipts from railways. Succeeding years have been favourable though in 1911 the desired rainfall did not fall until as late as September. The consequence has been a succession of surpluses amounting to £606 641 in 1909-10 £3 936 287 in 1910-1 and £4 848 000 in 1911-2. In both the last two years however, no less than two millions of the surplus was due to an unexpected windfall from opium. In 1911-2 the net revenue reached the unprecedented total of 56 millions compared with 49 millions two years before. During the interval the only change in taxation was a new customs duty on silver and increased duties on imported liquors, tobacco and petroleum. It should however be added that the excise duties on liquors and drugs have likewise been raised throughout the several Provinces. As so large a portion of the recent surpluses has been derived from opium a source of revenue that will shortly disappear they have not been applied to the reduction of taxation but have been utilised partly in extraordinary grants for education sanitation &c. and partly in reduction of debt. The cost of the Royal visit (one million) was entirely defrayed out of revenue and it is anticipated that some part at least of the expenditure on the new capital at Delhi will come from the same source.

**The Opium Question**—The subject of opium demands special mention. By arrangement with China the Government of India undertook to reduce the quantity exported after January 1908 by amounts annually increasing until the export should entirely cease after ten years. Under a new agreement in 1911 the total cessation was to be accelerated if China suppressed her own production of the drug and a further limitation was placed on the export to Chinese ports such exports to be specially certified. As a result the number of chests exported was reduced from 61 900 in 1908 to 44 600 in 1911 of which only 30 600 were certified for admission to China. In the meantime of the two Government factories in the Ganges valley that at Patna has been closed while the area under poppy has been reduced from about 500 000 to 200 000 acres entirely in the United Provinces. A result not foreseen is that the restriction on export led to an increased demand and a doubling of the sale price. Thus is explained the windfall from opium which figures so conspicuously in the surpluses of the last two years. Finally it should be stated that in conformity with the international convention signed at The Hague in January 1911 the Indian Government has announced its intention of introducing legislation to discourage opium smoking. It is proposed to prohibit the practice absolutely in saloons or gatherings numbering more than two persons to reduce the amount of the drug which a person may lawfully possess and to increase the sale price to the public.

**Agriculture**—The last three or four years have been characterised by favourable monsoons and consequently by wide spread agricultural prosperity. If prices still range high this must be attributed to the foreign demand for such staples as cotton wheat and oil seeds. A notable example of prosperity is presented by the Canal Colonies in the Punjab where wheat for export is the chief crop and horse breeding is also encouraged. The colonists have been allowed to acquire proprietary rights in their holdings and the cooperative credit movement is making rapid progress. It may be mentioned that as much as £3 000 per acre has here been paid for market sites along the railway that labour at harvest time fetches Rs. 2 (2s. 8d.) a day that sovereigns are common in circulation and that in one year Lyallpur remitted £147 000 by money order to other districts.

The United Provinces recovered with unexampled rapidity from the famine of 1908 owing as much to their previous prosperity as to the efficiency of relief operations. Bengal and Bihar suffered somewhat in 1909 from a poor harvest. But the only real distress has been in Bombay. Here the monsoon of 1911 failed almost entirely in Gujarat including a large area of Native States. No difficulty was experienced in providing work and food for the destitute people and private charity was to some extent successful in saving the cattle alive, for as often happens the drought caused a fodder famine. In 1912 the monsoon again failed in the Bombay Deccan a tract particularly liable to drought.

The most notable feature of recent years apart from the activity of the Agricultural Departments in the several Provinces has been the steady growth of cooperative credit societies. Some of these are urban for the benefit of artisans &c. but the great majority are rural, numbering nearly 5 000 in 1911 with a membership of 236 000 and a working capital of £730 000 of which £105 000 represents deposits by the members. The movement seems to have been most successful in the United Provinces Madras and the Punjab. In

Bombay a Central Cooperative Bank has been founded by a leading Hindu merchant Sir V. D. Thackersey with a Government guarantee on its 4% debentures. It lends only with the approval of the official registrar at an interest which must not exceed 8% and half of its surplus profits above 6% must ultimately be devoted to rebates on the interest payable.

**Mines and Minerals**—The mining of coal which is mainly concentrated in Bengal has recently been subject to vicissitudes. While the total output increased from an average of 10 million tons during the five years ending 1908 to 12 million tons in 1910 the price fell considerably. The difficulties of local transport by both land and sea have become so troublesome that the railways with headquarters at Bombay were compelled in 1912 to invite contracts from Japan and Natal. The production of the gold mines in Mysore remains constant at about 545 000 ounces a year the Hutti mine in Hyderabad yields about 15 000 ounces but the mines in the Bombay district of Dharwar have all closed down owing to disappointing results at deep levels. The production of manganese chiefly in the Central Provinces and Madras has increased from an average of 500 000 tons during the five years ending 1908 to 800 000 tons in 1910 and India may now claim to be the largest producer of high-grade ore in the world. The production of petroleum in Burma has similarly increased from an average of 146 million gallons during the five years ending 1907 to 215 million gallons in 1910 while the refining of the crude oil and the manufacture of petrol paraffin &c. have become an important industry at Rangoon. The iron industry elsewhere languishing has made a memorable start at Sachin on the hilly borders of the Central Provinces and Orissa. Here the Tata Iron and Steel Company with a capital of 1½ millions raised entirely in India began work early in 1912. Equipped with the most modern machinery for smelting puddling forging &c. it is intended to produce 87 000 tons of iron and steel in the year. The Government have erected a laboratory close by at Kalimati for testing the steel rails produced for use on the State railways and Japan has already given a large order for steel.

**Manufactures**—In manufactures the most important event has been the passing of a new Factory Act which came into force on July 1 1912. The chief provisions applying to textile factories are that no person shall be employed for more than 12 hours no woman for more than 10 hours and no child for more than 6 hours in any one day that no person shall be employed before 5.30 a.m. or after 7 p.m. and that mechanical or electrical power shall not be used for more than 12 hours in the day.

The cotton mills chiefly centred in the Bombay Presidency have passed through a long period of depression though the number of both spindles and looms increases year by year. While the spinning of yarn has been generally unremunerative the weaving of cloth especially of the finer fabrics is steadily advancing. During the five years ending 1910-11 the number of looms has risen from 55 000 to 79 000 and the production of woven goods from 159 to 231 million pounds. Another Tata company with a capital of more than a million again raised entirely in India has begun operations at Lonauli in the Western Ghats for providing electrical energy for the many industries of Bombay city. Jute mills which are concentrated at Calcutta and mainly in English hands have enjoyed almost unbroken prosperity. In 1910 the total number of factories under inspection in all India was 2 271 employing 800 000 persons of whom 116 000 were women and 52 000 children. Mention may here be made of the recent development of banks under Indian management and with Indian capital with their headquarters at Bombay. One of these subscribed for the greater part of the Government loan of three crores (2 millions) issued in 1911.

**Commerce**—The foreign trade reflects the series of favourable harvests. During the four years ending 1911-12 imports of merchandise have increased from 81 to 92 millions exports of merchandise from 100 to 151 millions and the net imports of treasure from 11 to 28 millions. The balance of trade in favour of India thus rose from 8 to 31 millions. Among imports while cotton yarn shows a continuous decline other cotton manufactures (almost entirely from England) have increased from 23 to 30 millions. Large increases are also shown in sugar (from Java) and in copper the usual material for household vessels. Among exports raw cotton continues to rank first but the second place is now held by oilseeds though raw jute and jute manufactures combined more than equal cotton. The export of rice depends upon the harvest in Burma as that of wheat does upon the harvest in the Punjab. Within the last year barley has been sent in large quantities to England. About 62% of the total imports come from the United Kingdom but only about 26% of the total exports are consigned thither. A notable feature during 1911-12 has been a fall in the imports of silver accompanied by a very large rise in the imports of gold both bullion and coin. Gold is no doubt hoarded and used for jewellery but sovereigns are now common in circulation in some parts while since 1910 the amount of gold held by Government in the paper currency reserve in India has increased from 9 to 20 millions.

**Railways**—Railways have fully participated in the favourable seasons which India has recently enjoyed. Contrasted with a loss of 1½ millions under this head in the financial year 1908-9 gains are shown of more than ½ of a million in 1909-10 of 2 millions in 1910-11 and of more than 3 millions in 1911-12. But as all the railways do not belong to Government it will be more convenient to take figures for the last calendar year. Between 1909 and 1911 the total length of line open increased from 31 484 to 32 839 miles while the total mileage under construction or sanctioned at the close of 1911 was 2 675 the total capital outlay on

open lines increased from 286 to 300 millions the total number of passengers carried increased from 329 to 410 millions the total weight of goods carried increased from 61 to 76 million tons and the net earnings increased from 13½ to more than 17 millions the percentage of profit on capital rising from 4.81 to 5.71

The most important new line recently opened is that through Rajputana from Muthra to Kotah which affords communication from Northern India to Bombay on the broad gauge of the Bombay and Baroda system The most important work in hand is the construction of a bridge across the Ganges at Sara in Bengal which will bring the traffic from the north of the river (at present ferried over) direct to Calcutta The most interesting project sanctioned is that of connecting the railway systems of India and Ceylon by means of a ferry service for which a bridge along Adam's Reef may possibly be substituted Three turbine steamers were in 1912 being built on the Clyde for this ferry service The passage is about the same distance as from Dover to Calais through practically smooth water at all seasons

Complaints have often been made of the inadequacy of the railways to carry the increasing goods traffic These culminated in the spring of 1912 under a combination of exceptional circumstances the recent Durbar the coal strike in England the demand for fodder in the famine districts of Gujarat a deficiency of water in some places and the heavy bulk crops for export The provision of rolling stock has been the chief item of capital expenditure for several years past It is now recognised that the most pressing need is the adaptation of the railways to heavier and more frequent traffic by the doubling of lines strengthening of bridges increase of sidings and improvements at terminal stations

*Irrigation*—According to the financial accounts the net revenue from irrigation remains pretty constant at about £600 000 a year But this gives a most inadequate conception of the important works undertaken by the Government During the four years ending 1910-1 the capital outlay increased from 34½ to 39½ millions while the total area irrigated and the net receipts showed little change and consequently the percentage of profits fell from 6.74 to 6.33 Punjab is the province where the existing canals are the most necessary and also the most remunerative and it is in the Punjab that the most important work is now under construction This is known as the Triple Canal in the Upper Jhelum the Upper Chenab and the Lower Bari Doab which will be completed in 1915 at a total cost of nearly 8 millions In the United Provinces a series of minor canals have been constructed for the protection against famine of Bundelkhand while a large scheme is under consideration to increase the supply of the Ganges and Jumna Canals from the overflow of the Sarda river in Oudh The important project of throwing a barrage across the Indus at Sukkur and thus effecting perennial irrigation in Sind still awaits final sanction These projects involve such heavy expenditure in this case nearly 6 millions that delay is justifiable Minor works have been carried out on the Godavari river in Bombay and also in the Central Provinces but large schemes in Madras on the Kistna and the Kaveri rivers are still under consideration

*Education*—No subject connected with India has attracted more attention of late than education, starting from the reform of the universities in 1904 This reform has been slow in accomplishment but the aim has now been effected by which the academic syndicates have gained control over the affiliated colleges and have themselves undertaken to conduct postgraduate courses and research Towards the end of 1910 a member for education in the person of Sir Harold Butler was appointed to the Viceroy's executive council At the Delhi Durbar one of the boons announced by the King was a grant of 50 lakhs (£333 000) for education which has been devoted mainly to primary schools The Hon G. K. Gokhale, the recognised leader of Indian opinion introduced a bill in the Viceroy's Legislative Council for the gradual introduction of compulsory education, which was rejected by a large majority in March 1912 The alternative proposals of the Government were explained by Mr Montagu, Under Secretary of State in his budget speech to the House of Commons on July 30 1912 Leaving compulsion for the future, it was pointed out that free education already exists for all girls and also for a proportion of boys varying from one fifth to one third in the several Provinces What is now required is to augment the number of schools and to improve the teaching in the schools that already exist The additional amount provided for education (higher as well as primary) in the estimates for 1912-3 was ½ of a million

During the ten years ending 1910-1 the total number of boys at school increased from 3,513 000 to 5,489 000 and the total number of girls increased from 446 000 to 866 000 while the total expenditure from all sources increased from £2 700 000 to £4 800 000 In 1911 the proportion of pupils to the population of school going age which is taken at 15 % of the total population, was 28 % for boys and 4 % for girls The attendance at Secondary schools which is almost equivalent to education in English increased during the ten years by 44 % and it is noteworthy that two thirds of the cost is derived from fees The number of students at Arts colleges increased from 17 430 to 23 714 Of those who graduated B.A. in 1911,

Brahmans numbered 530 non Brahman Hindus 492 Mahommedans 173 and native Christians 31. An interesting movement is that for the creation of new universities. The Government has resolved to found one at Dacca in Eastern Bengal which will probably be followed by others—at Rangoon for Burma and at Patna for the new Province of Bihar. Meanwhile the Mahommedans have been collecting large subscriptions in order to raise the Aligarh college to the status of a university and the Hindus for a college at Benares.

In this connexion mention may be made of the scheme organised by the Secretary of State for the benefit of Indian students who come over to complete their education in England. The number of these is estimated at nearly 2 000 of whom 800 are in London. Prof T W Arnold formerly at Aligarh and Lahore was appointed in 1909 with the title of educational adviser to superintend an office in Cromwell Road London for information guidance and guardianship. The house in Cromwell Road contains bedrooms for students on their arrival and also provides accommodation for two associations which promote social intercourse. So successful has the scheme been that in 1912 it was found necessary to make the additional appointment of a secretary at the India Office who will be responsible for making arrangements for students in universities &c outside London. Also a departmental committee was constituted to consider the means by which engineering and other technical students could obtain better facilities in England for practical experience in workshops and factories.

### *Political History*

*The Unrest* —Within the brief period of half a dozen years the political surface of India usually so unruffled has undergone two changes as sudden and as strange as the burst and the passing away of the annual monsoon. To assign their proper value to all the causes that contributed to provoke the spirit of political and social unrest would be a hopeless task. The Japanese victories over Russia the partition of Bengal, racial antipathy, misdirected education inflammatory publications and preachings each played their part. The result was an unexpected outbreak of anarchical crimes such as are really alien to the Indian character and which could only be met by stern measures of repression. But while these crimes naturally attracted most attention in England, those responsible for the government of the country always recognised as others can now see plainly that the deepest and most permanent feeling beneath the 'unrest' was a growing self consciousness of nationality with an inarticulate cry for greater sympathy in the administration. In 1909 when sedition was at its height the Imperial Parliament passed an act enlarging the legislative councils by the introduction of an elected element, and also authorising the appointment of an Indian member to the executive councils of Madras, Bombay and Bengal. The following year when officials and representatives of the people met in friendly debate and shared in the responsible work of legislation ushered in a period of appeasement, transfigured into effusive loyalty by the Royal visit.

Nevertheless out of regard to historical truth it is necessary to summarise the chief incidents of the black period. Though it was only in Bengal that sedition and outrage became endemic, under the influence of secret societies and the preaching of a sort of religious anarchism the first overt signs of trouble were manifested in the Punjab, the recruiting ground of the Indian army, and in the remote south of Madras. The Punjab soon quieted down after one of the ring leaders had been deported to Burma and a real grievance in connexion with the canal colonies had been redressed. In Madras also order was restored by severe punishments on the offenders. Meanwhile at Poona, in the Bombay Deccan, the Chitpavan Brahmins of the same caste as the former Peshwa of the Marathas had long been fomenting disaffection. Their leader, Mr Tilak a man of great ability and a Sanskrit scholar traversed the country to promote the cult of Sivaji, the founder of Maratha nationality. He was responsible for breaking up the National Congress held at Surat in December 1907, when the Extremists definitely separated themselves from the Moderates. After he was sentenced in July 1908 to six years' transportation for sedition, the local agitation suffered a check, but in truth it was only driven underground. In January 1909 the Queen Victoria Memorial at Nagpur was desecrated by a student of the agricultural college on November 15th a bomb was thrown at Lord Minto when entering the city of Ahmadabad, and on December 23d Mr Jackson, magistrate of Nasik was assassinated. The thrower of the bomb was nev

er discovered but the actual murderers of Mr Jackson were promptly tried and executed, though one of the conspirators (Savarkar), by escaping for the moment from a British steamer to the quay at Marseilles furnished occasion for a reference to the international tribunal at the Hague which decided against his extradition to France. It was also in 1909 that London was startled on July 2d by the assassination of Sir W Curzon Wylie and a Parsi doctor at the Imperial Institute. The murderer a student from the Punjab, was duly hanged on July 27th. It may be emphasised that most of the anarchical crimes were committed by youths of imperfect education and morbid temperament. In January 1910 a Mahommedan superintendent of police was shot in a corridor of the Calcutta High Court while the final appeal in the Alipur bomb case was being heard and in the same month an attempt was detected to tamper with the fidelity of a native regiment in garrison at Calcutta. Subsequently despite an isolated outrage here and there however the spirit of conciliation overcame the demon of 'unrest'. An Indian member had been admitted to the executive council or cabinet of the Viceroy and elected members sat on all the legislative councils. In February 1910 the government found themselves justified in releasing the nine persons who had been deported or imprisoned without any charge two years before at a time when Bengal was honey-combed with *samitis* or secret societies. At the end of the year a further stage of conciliation was reached when Sir W Wedderburn a retired Bombay civilian of the highest character went out to India to be president of the National Congress held at Allahabad, and to promote good will between Hindus and Mahommedans.

*The New Viceroy* —With the arrival of the newly created Baron Hardinge of Penshurst (b 1858) as Viceroy, in November 1910 it was everywhere tacitly recognised that a new chapter had opened in the political history of India though no one dared to foretell the Royal visit and its marvellous results. Lord Hardinge had from 1906 been as Sir Charles Hardinge at the head of the Foreign Office in London and intimately associated with King Edward (see *E B* viii 999b) and in succeeding Lord Minto who had been personally popular with all classes he brought a varied official experience to bear on the problems of Indian government. Though 1911 was marked by one serious political crime the murder of Mr R W D Ashe a Madras magistrate on June 19th events proved that the end of an anxious period was in sight. Nor need this verdict be upset by the deplorable outrage on Lord Hardinge himself at the end of 1912 when on December 22 a bomb was thrown at the Viceroy as he entered Delhi in state injuring him somewhat severely and killing an attendant. The occurrence of such a crime is serious enough no doubt but represents the spent force of pure anarchism and not any widespread movement.

*The Royal Visit* —The Royal visit to India announced in the speech from the throne on February 6, 1911, is known to have been undertaken on the King's own initiative in spite of some not unnatural warnings. Never before since Angevin times had an English sovereign left his own realm for a state progress through his dominions beyond the sea. From first to last its success exceeded anticipation being marred by no untoward incident. The P & O S.S. 'Medina' was chosen for the Royal yacht and manned with a crew from the navy. She sailed on November 11th and the first Indian port at which she touched was Aden where the King and Queen landed. Bombay was reached on December 2d and here three days were spent the King and Queen sleeping on the Medina. The chief public functions were a welcome on the Apollo Bandar where a Saracenic archway and a pavilion had been erected, a procession through the streets of the city, and a children's fête. On the night of December 5th they departed from Bombay by the recently opened railway through Central India and Rajputana arriving at Delhi on the morning of December 7th. Here ten days were crowded with ceremonial duties first a procession from the Fort through the city to the Darbar camp then the reception of ruling chiefs whose visits were returned by the Viceroy the laying of the foundation of the All India memorial to King Edward the presentation of colours to British and Indian regiments, and a review of 50,000 troops. The culminating scene

was the Durbar on December 12th in an immense amphitheatre constructed for the purpose within which the King and Queen in their royal robes received the homage of the ruling chiefs and their coronation was proclaimed to the assembled people. Among the boons then announced were a grant of 50 lakhs (£333,000) for education, half a month's pay to all soldiers and subordinate officials and the admission of Indian soldiers to the Victoria Cross. But what caused these to be ignored was the further announcement altogether unexpected that Delhi would henceforth be the capital of India in substitution for Calcutta and that Bengal would be reunited under a governor-in-council. From December 16th to 29th the King went for a hunting trip to Nepal, where the Maharaja minister welcomed him in person and many tigers and rhinoceros were shot while the Queen visited Agra and several cities of Rajputana. After meeting again near Patna they arrived at Calcutta on December 30th and stayed there for nine days. Apart from the exuberant loyalty of the people the most interesting incident was the historic pageant organised to represent the two festivals of the Hindu Dashara and the Mahommedan Nauroz. The return journey to Bombay was broken for an hour at Nagpur and the *Medina* sailed on January 10 1912 stopping at Port Sudan in the Red Sea and at Malta. The intention and the result of the Royal tour could not be better expressed than in the words which the King evidently uttered from his heart on leaving Bombay —

It is a matter of intense satisfaction to me to realise how all classes and creeds have joined together in the true hearted welcome which has been so universally accorded to us. Is it not possible that the same unity and concord may in the future govern the daily relations of their public and private life? The attainment of this would indeed be a happy outcome of our visit to India. To you I deliver this our loving message of farewell to the Indian Empire.

What may be taken as a reply was sent by the Viceroy to the Prime Minister on the day of the King's arrival in England —

The Princes and people of India desire to take the opportunity afforded by the conclusion of the Royal visit to convey to the great English nation an expression of their cordial goodwill and fellowship. Their Imperial Majesties by their gracious demeanour their unfailing sympathy and their deep solicitude for the welfare of all classes have drawn closer the bonds that unite England to India. We are confident that the great and historic event marks the beginning of a new era ensuring greater happiness prosperity and progress to the people of India under the aegis of the Crown.

*Domestic Affairs* — The legislative council of the Viceroy on which an official majority is required by the regulations contains 60 additional members besides those of the executive council or cabinet. Of these 25 are elected by various representative bodies. For example the non official members of each of the provincial legislative councils the Mahommedan community and the landholders in the larger provinces and the chambers of commerce of Bengal and Bombay each have at least one representative. In the result among these elected members in 1912 there were 12 Hindus 9 Mahommedans two Englishmen one Parsi and one Buddhist from Burma. Of 35 nominated members 6 were officials and the remainder included two Hindus and two Mahommedans and a representative of the domiciled Anglo Indian community.

Undoubtedly the most conspicuous among the Indian members alike for his knowledge of affairs his eloquence and his moderation has been Mr Gopal Krishna Gokhale C.I.E. (b 1866) one of the two representatives of the Bombay council. He is a Chitpavan Brahman from Poona where he was for some years professor at the Fergusson College and where he recently founded a society called the Servants of India for the study of social and economical questions and for their propagation by missionary effort. He has paid several visits to England the latest in 1912, and in October 1912 he went to South Africa to examine on the spot the vexed question of the exclusion of Indian immigrants and to promote a conciliatory settlement.

The first Indian member to be admitted to the Viceroy's executive council was Mr Satyendra Prasanna Sinha (b 1864) a Hindu barrister who had previously officiated as advocate general for Bengal. He was appointed legal member in April 1909 and on his retirement in November 1910 he was succeeded by Syed Ali Imam, a Mahom-

*medan barrister from Patna* It is perhaps worthy of note that both of these have sent their sons to be educated at public schools in England

The enlarged legislative councils came into being in January 1910, and as the period of membership was for three years fresh elections and fresh appointments were due at the end of 1912 Debates on bills and discussions on the budget have always been conducted without friction resolutions proposed by Indian members have afforded useful opportunities for the pronouncement of official explanations and the privilege of asking questions has been abundantly availed of It is significant that almost the first Act passed by the legislative council of the Viceroy (in July 1910) was one empowering the Government to prohibit indentured emigration to any country whenever it considers that sufficient reason exists Such emigration has accordingly been prohibited to Natal Nothing excites so much feeling among all sections of Indians as the disabilities to which they are subjected in some of the self governing British colonies

During 1911 three important Acts were passed a Factories Act which had been long under consideration and of which the chief provisions are specified above a Patents and Designs Act, on the lines of the English measure and a Prevention of Seditious Meetings Act renewing an expiring Act of 1907 with certain amendments the most noteworthy of which permits the holding of meetings for the discussion of political subjects generally A stringent Act for the regulation of the press passed early in 1910, still remains in force, its chief provision being the requirement of security which may be forfeited and the press confiscated on the publication of seditious matter

In 1912 swelling revenues resulted in a large surplus part of which was devoted to the pressing needs of improved sanitation The monsoon was on the whole very favourable and trade was unusually brisk In the Viceroy's legislative council the most important event of the year was the rejection as premature of the Hon G K Gokhale's bill for a considered scheme of free and compulsory education An Act passed Parliament for carrying into effect the new constitution of Bengal and also the formation of legislative councils in Provinces under a chief commissioner A Royal Commission was appointed with Lord Islington as chairman and including the English labour leader, Mr Ramsay Macdonald to examine and report on all matters connected with the various branches of the civil service with special reference to the further employment of Indians and the present division of the services into Imperial and Provincial

Echoes of the recent troubles were aroused during the year by two legal judgments given on appeal after prolonged litigation by the Privy Council and the Calcutta High Court both of which justified executive action taken by magistrates at a time of crisis In the Mymensingh case which dates back to 1907 the district magistrate had personally conducted a search for arms in a house near which an outrage had been committed the day before No arms were found The occupier of the house brought an action for trespass against the magistrate and obtained a judgment for £33 as damages which judgment was confirmed by the High Court at Calcutta Ultimately after long delay this judgment was reversed by the Judicial Committee of the Privy Council in July, 1912 on the ground that the magistrate was acting within his powers as a criminal court of first instance The circumstances of the Midnapur case are more complicated Here there is little doubt that a seditious conspiracy existed in 1908 when several suspected persons were arrested One of these who had been soon discharged brought an action against the magistrate and two Indian police officers for illegal arrest After a trial before a judge of the Calcutta High Court which lasted for nearly 200 days he was awarded £66 as damages Here it may be remarked that in India all civil actions are tried without a jury On appeal to three judges of the High Court one of whom was an Indian this judgment was unanimously reversed in August 1912 and the plaintiff was condemned to pay the costs estimated at £20 000

*Foreign Affairs*—Foreign affairs which for India are almost equivalent to frontier affairs, may be briefly treated Anarchy in Southern Persia has required the despatch of a native cavalry regiment to open the roads and protect trade In the Persian Gulf the traffic in rifles and ammunition has been suppressed by combined naval and military

operations supported by restrictions imposed by the Sultan of Muscat. The Amir of Afghanistan has continued to maintain a not unfriendly attitude. In 1910 he agreed to the appointment of a joint commission for the settlement of boundary disputes, which resulted in an agreement for the removal of outlaws from both countries to at least fifty miles from the border. Tibet has suffered from more than one revolution and the end is not yet in sight. In 1910 the Dalai Lama who had fled to China before the British occupation of Lhasa, took refuge in India from the tyranny of the Chinese and was hospitably entertained visiting the sacred sites of Buddhism. Afterwards as a result of the revolution in China the Tibetans rose against the Chinese with more or less success and invited the Dalai Lama to return. An agreement was concluded at Lhasa in August 1912 between the Tibetans and the Chinese, in the presence of the representative of Nepal in accordance with which the Chinese garrison was to be repatriated by way of India. But fighting subsequently broke out afresh. In these troubles the Indian Government has taken no part except by stopping a Mongolian mission that wished to proceed from Calcutta to Tibet. With Bhutan on the other hand relations have become more intimate. A formal treaty was executed in March 1910 with the new ruler or Zimpon whose full style and name is 5 Sris Ugyen Wang chuk. In July 1911 he was invested with the title of Maharaja and granted a salute of 15 guns and at the Delhi Durbar where he was a conspicuous figure in his Tibetan dress he was created K C S I. Further east at the end of the Assam valley the wild tribe of Abors murdered Mr. Williamson a political officer and most of his party in April 1911. A strong military expedition under the command of General Bower moved into the Abor country in October and succeeded in punishing the culprits. Though there was little fighting the natural difficulties to be overcome were very great owing to dense jungle steep hills unfordable rivers and perpetual rain or mist. An attempt to survey the gorge by which the Brahmaputra cuts through the Himalayas—one of the few unsolved problems of geographers—was not successful. At the same time a survey party was sent out from Sadiya east through the Mishmi country toward Rima, where the Chinese were said to be encroaching.

*Obituary.*—Among the native Indians who have passed away during the period the most notable name is that of BEHRAMJI MERWANJI MALABARI the Parsi social reformer who was born at Baroda in 1853 and died at Simla from heart failure on July 18 1912. His boyhood was straitened by poverty, and he was unable to pass beyond the matriculation of the Bombay university. His first literary effort was a collection of Gujarati verse entitled *Nityanodo* (1875). This was followed by a volume of English poetry—*Indian Muse in English Garb* (Bombay 1876)—which was dedicated to Miss Mary Carpenter and attracted the notice of Florence Nightingale Max Muller Lord Shaftesbury and John Bright. Encouraged by letters from these he now became a journalist and devoted the rest of his life to the cause of social reform. In 1880 he became proprietor and editor of the *Indian Spectator* which he conducted almost unaided for 20 years. Since 1901 he had edited *East and West*. He will be remembered best for the agitation he conducted for many years on behalf of Indian women touring throughout the country and thrice visiting England. The result was the passing after bitter controversy of the Age of Consent Act in 1891 by which the age for consummation of marriage in the case of a girl was raised from 10 to 12 years. Later undertakings of his were to found the Seva Sadan a society for the improvement of women by women and to establish with the help of native princes and others a sanatorium for consumptives at Dharampur in Northern India. He also conceived but did not live to carry out the foundation of a Morley chair for the philosophy of history at Bombay. Latterly his health broke down and he lived the life of a recluse. He is understood to have refused the Kaisar-i-Hind gold medal and also knighthood.

A strong contrast is presented in SYED ALI BILGRAMI, the most versatile Mahomedan of his time who died at Hardoi in Oudh on May 23 1911. A half brother younger by seven years of Syed Husain the first Mahomedan member of the Secretary of State's Council, he was born at Patna in 1851. Educated first at Patna College, he

graduated at the Calcutta University with double first class honours, taking Sanskrit as his second language. He then attended the Thomason Civil Engineering College at Rurki for a time but having attracted the notice of Sir Salar Jung the great minister of Hyderabad he came in his suite to England in 1876 and joined the Royal School of Mines where he passed the examination for the Associateship and was awarded the Murchison medal in geology. At this time he also travelled on the continent and made himself proficient in French and German. Returning to India in 1879 he served for many years in Hyderabad in the departments of public works, mines and education. In 1892 he went up for the law examination at Calcutta passing at the top of the list and winning the gold medal. Retiring from service in 1901 he settled with his wife in England being appointed lecturer in Marathi at Cambridge and also employed in cataloguing the Delhi collection of Arabic and Persian MSS in the India Office. In 1907 he was called to the bar at Lincoln's Inn and then returned to India to devote himself to work for the Muslim League and the Aligarh College. Among his numerous publications are a monograph on the Book of Kahlil and Dinnah, Notes on the Educational Value of Persian as compared with Sanskrit, and a translation into Urdu of *Le Bon s Civilisation des Arabes*.

Yet a third type is represented by VENKATARAMA KRISHNASWAMI AYYAR C.S.I. a Brahman lawyer who died on December 28, 1912 at Mylapore, a suburb of Madras at the age of 48. In 1909 he had been appointed a judge of the High Court and in January 1911 a member of the executive council. When attending the Durbar at Delhi his health broke down. Though a supporter of the National Congress and always maintaining very independent views the esteem in which he was universally held was shown at a public meeting summoned by the Sheriff of Madras at which the Governor was present when it was resolved to erect a memorial statue of him. Another memorial is the Sanskrit college which he himself founded at Mylapore. Almost his last words are said to have been 'I want to do something yet for the country. I do hope God will not take me away before I have done it.'

**Bibliography**—Among recent books on India the following are specially notable: *Indian Unrest* by V. Chirol (1910); *Administrative Problems of British India* by J. Chailley (1910); *India under Curzon and After* by L. Fraser (1911); *Studies in Indian Life and Sentiment* by Sir B. Malherbe (1910); *India and the Durbar* being a Reprint of the Indian Articles in the Times of May 24, 1911; *The Awakening of India* by J. R. Macdonald (1910); *Education and Statesmanship in India* by H. R. James (1911); *The Renaissance in India Its Missionary Aspect* by C. F. Andrews (1912); *The Economic Transition in India* by Sir T. Morison (1911); *Der Heutige Indien* von Prof. Dr. Georg Wegener (Berlin, 1912); *The Indian Scene* by J. A. Spender (1912); *Narrative of the Visit of the r. M. J. King George V and Queen Mary and of the Coronation Durbar held at Delhi 12 Dec. 1911* by the Hon. J. Fortescue (1912); *The King and Queen in India 1911-2* by Stanley Reed (Bombay, 1912); *In Abor Jungles* being an Account of the Abor Expedition, the Mishmi Mission, and the Mimi Mission by Angus Hamilton (1912); *On the Track of the Abor* by Powell Millington (1912).

(J. S. COTTON)

### *Indian States, Provinces and Cities*

Notes are appended giving recent information on the more important states, provinces, and cities, supplementary to the accounts given in the *Encyclopaedia Britannica*. For convenience of reference they are given in alphabetical order.

**ADEN**—The population of Aden in 1911 was 46,165 showing an increase of 5% during the decade. The trade, almost entirely a transit trade, does not increase, partly owing to troubles in the interior, but also to the development of French and Italian ports in the Red Sea. Aden was the first spot of Indian territory visited by the King and Queen on November 27, 1911, when they came ashore for a few hours and received an address from Mr. Cowasji Dinshaw, the leading Parsi merchant.

**AGRA**—The population of Agra city in 1911 was 185,449 showing a decrease of 14% during the decade. Both the district and the division show still larger decreases. On the occasion of the royal visit to India the Queen spent three days at Agra, including a trip to Fatehpur Sikri, while the King was shooting in Nepal.

**AHMEDABAD**—The population of Ahmedabad city in 1911 was 215,835 showing an increase of 16.1% during the decade, which follows upon an increase of 25.3% during the previous decade. This prosperity is mainly due to its cotton mills, which number 54. The population of the district increased by only 4%. The Arts College, formerly managed by

local society has recently been transferred to Government. By the munificence of a wealthy merchant Sir Chinubhai Madhavlal a Science Institute with separate buildings for a hall and a library are now being added.

**AJMER**—The population of Ajmer city in 1911 was 86 222 showing an increase of 16.8 % during the decade. The minor province of Ajmer Merwara shows an increase of only 5.1. On the occasion of the royal visit to India the Queen spent three days at Ajmer in December 1911 while the King was shooting in Nepal. She visited the Mayo College Peshkar lake sacred to Hindus and the tomb of the Mahommedan saint Muin ud-din Chisti.

**ALLAHABAD**—The population of Allahabad city in 1911 was 171 697 showing a decrease of 2 % during the decade. The population of the district likewise decreased by 1.6 % due to the prevalence of plague. On November 11 1910 the Viceroy paid a visit to Allahabad to lay the foundation stone of a pillar in Minto Park on which have been inscribed the two historic proclamations of Queen Victoria and Edward VII. In December of that year while the National Congress was being held under the presidency of Sir W. Wedderburn the largest exhibition yet held in India was opened by the Lieutenant Governor. The agricultural court which was a conspicuous success has greatly stimulated the interest of landowners in the use of labour-saving implements power plant for pumping and the manufacture of white sugar by machinery. A new bridge across the Ganges to connect with the Oudh and Rohilkhand Railway was opened in October 1912 while the railway bridge across the Jumna is being widened to carry a double line. Other public works in progress are a senate hall and a library for the university while a new building for the High Court has been sanctioned. A trust fund has been formed for the purpose of opening out congested areas.

**ALWAR**—The population of this native State in 1911 was 791 688 showing a decrease of 4.4 % during the decade. The Maharaja Sir Sawai Jai Singh has created K.C.I.E. at the Delhi Durbar.

**AMRITSAR**—The population of Amritsar city in 1911 was 157 756 showing a decrease of 6 % during the decade. The population of the district also decreased by 1.4 % due to plague and malaria. As a result of the malaria conference held at Simla in 1909 Amritsar has been selected for a laboratory. Lectures are here given to medical officers and a periodical is published.

**ANDAMAN ISLANDS**—The population of Port Blair (the penal settlement) in 1911 was 16 324 showing an increase of 4 % during the decade while in the rest of the Andamans only 1 317 persons were enumerated showing an apparent decrease of 30 %. In the Nicobar Islands however which are under the same jurisdiction there was an apparent increase of no less than 35.4 %.

**ASSAM**—The population of Assam (which was incorporated with Eastern Bengal in 1905 but was again constituted a separate Province under a chief commissioner in 1912) was 7 059 857 in 1911 showing an increase of 17.1 % during the decade. This high rate of increase more than three-fold that for all British India may be ascribed partly to the immigration of labourers on the tea estates but still more to recovery from the results of a severe epidemic fever. The tea industry has been very prosperous in recent years demand having exceeded production. The total number of labourers on the tea estates in 1911 was 763 239 of whom only 20 868 were under the Act specially enforcing contracts which it is proposed shortly to repeal. In 1912 Sir A. Farle was appointed chief commissioner of Assam and it is proposed to give the province a legislative council under the powers conferred by the Act of Parliament passed in that year.

A valuable series of monographs on the more important tribes of Assam is being published by the Government.

**BAHAWALPUR**—The population of this native State in 1911 was 780 641 showing an increase of 8.3 % during the decade. The Nawab a boy of only 7 was a conspicuous figure at the Delhi Durbar riding at the head of his camel corps in the military review. In February 1911 a feeder railway of 22 miles constructed at the expense of the state was opened by the Lieutenant Governor of the Punjab.

**BALUCHISTAN**—The population of British Baluchistan in 1911 was 414 412 showing an increase of 8.5 % during the decade. In the Baluchistan states the population of Las Bela likewise increased by 9.1 % while that of Kalat (excluding Kharan) shows an apparent decrease of 10 % due to the fact that the earlier figure was based upon an estimate not upon actual enumeration. In British territory the recent period has been peaceful except for raids by Afghan outlaws from across the frontier in consequence of which it has been found necessary to re-arm the levy corps with Martini Henry rifles. The value of transfrontier trade though still small exhibits an increase. The state of Kharan was disturbed after the death of its old chief in June 1909 and his successor was assassinated in April 1911. The ex-Khan of Kalat who was dethroned in 1893 died at Pishin on May 20 1909. A severe shock of earthquake was felt throughout Kalat on October 21 1909 causing great loss of life and property.

A Gazetteer of Baluchistan has been published in 8 vols.

**BANGALORE**—The population of Bangalore city (including the civil and military station under British jurisdiction) was 189 485 in 1911 showing an increase of 19.1 % during the decade. The Mysore state proposes to introduce an electric tramway service for ten miles through the city and its suburbs.

**BANGANAPALLE**—The population of this native State in 1911 was 39 344 showing an increase of 21.9% during the decade.

**BARODA**—The population of this native State in 1911 was 2 032 798 showing an increase of 4.1% during the decade and the population of the city was 99 345 showing a decrease of 4.3%. The Maharaja Gaekwar with the Maharani was absent during the greater part of 1910, visiting Japan, the United States (where his second son was at college) and England. They again came to London in 1911 for the Coronation. Concerning his act of homage at the Delhi Durbar the description of the official historian may be quoted. One chief only marred the proceedings for a moment by a laboured ungainliness of bearing which lent itself to misinterpretation. His third son at Oxford has played cricket more than once for the university eleven. Baroda maintains its claim to be the most progressive state in India. In 1911 the length of railways open was 300 miles and 100 miles more were under construction. In addition £218 000 was spent on other public works. Export and import duties generally have been abolished and also octroi in municipalities. Education in primary schools is compulsory and free. A bank and many factories have been established with official encouragement. The legislative council is active in passing laws and regulations. There is also a state council presided over by the minister. See *A Year with the Gaekwar of Baroda* by E. St. C. Weeden (1912).

**BASTAR**—The population of this feudatory State in 1911 was 433 310 showing an increase of no less than 41.4% during the decade due partly to recovery from famine. In February 1910 there was a serious rising of the aboriginal tribes which was not suppressed without the intervention of regular troops. Two British officers have since been deputed to assist the Raja and many reforms have been introduced in the administration.

**BEHAR AND ORISSA**—This is the name of the new province in India which was created on April 1 1912 in accordance with the announcement of the King at the Delhi Durbar and the provisions of a subsequent Act of Parliament. Including Chota Nagpur in addition to the two historic tracts after which it is named it has a total area (with native States) of about 116 000 sq. m. and a total population (1911) of about 38½ millions among whom Hindu greatly predominate over Mahomedans. The capital has been fixed at Patna and a hill station will probably be found on the Chota Nagpur plateau. The first Lieutenant Governor is Sir Charles Bayley transferred from Eastern Bengal and Assam and the first Indian member of the executive council is the Maharaja of Darbhanga a wealthy landowner in Behar.

**BENARES**—The population of Benares city in 1911 was 203 804 showing a decrease of 4.4% during the decade while the population of the district increased at the rate of 1.7%. In November 1910 it was announced that the Raja of Benares Sir Prabhu Narayan Singh G.C.I.E. who already possessed the rank of His Highness and a salute of 13 guns would be recognised as a ruling chief and he was formally invested in April 1911. The new native State thus created the first in Indian history consists of what were before known as the Family Domains with a total area of nearly 1 000 sq. m. in the two districts of Benares and Ghazipur and a rent roll of about £66 000. In addition the Raja owns private estates with a rent roll of about £46 000 subject to land revenue. He is descended from the father of Chet Singh who rebelled against Warren Hastings and was dethroned in 1781.

**BENGAL**—The Province of Bengal while retaining the same official title has undergone two fundamental changes of area within seven years. In 1905 the original province practically identical with that comprised in the Diwani grant of 1765 was reduced by the separation of Eastern Bengal from a total area of about 190 000 sq. m. to about 150 000 sq. m. while the population was reduced from over 78 millions to over 54 millions. On April 1 1912 in accordance with the announcement of the King at the Delhi Durbar and under a subsequent Act of Parliament Eastern Bengal was reunited while Behar Orissa and Chota Nagpur were separated to form a new Lieutenant Governorship and the province was at the same time raised to the rank of a Presidency under a Governor with powers and privileges similar to those of the Governors of Madras and Bombay.

In 1911 the population of the Province (as then existing with the inclusion of native states) was 57 206 430 showing an increase of 4.8% during the decade. The population of the Province as now reconstituted is about 46 millions with Mahomedans in a slight majority over Hindus. The first governor is Lord Carmichael, transferred from Madras and the first Indian member of the executive council was Rai Kison Lal Goswami Bahadur appointed in November 1910 when an executive council was constituted under the Indian Councils Act of 1909. The same statute authorised the enlargement of the legislative council which now consists of 52 members including 25 elected by variously composed constituencies. In the total there were 20 Hindus and 7 Mahomedans. Calcutta remains the capital of Bengal with Darjiling as the residence of the Governor during the hot season but it has been solemnly promised that Dacca the former capital of Eastern Bengal and a centre of Islam shall always be occupied by the entire administration for a certain period of every year. In 1912 when the Province was reconstituted the Indian member appointed to the executive council of the Governor was Dyed Shams ul Huda a Mahomedan advocate.

**BHARATPUR**—The population of this native State in 1911 was 558 785 showing a decrease of 10.8% during the decade. The Maharaj, who is still a minor recently spent two years in England returning in October 1910. He was a page of honour at the Durbar.

**BHOPAL**—The population of the Bhopal Agency in 1911 was 1 050 735 showing an increase of 13.4% during the decade due to recovery after famine. The population of the city was 56 204 showing an apparent decrease of no less than 27% due to plague at the time. The Begam of Bhopal who is a most enlightened ruler and travelled lady was a conspicuous though veiled figure at the Coronation in London and also at the Delhi Durbar where one of her sons acted as an A.D.C. and another as a page of honour. She received the decoration of G.C.S.I. on January 1 1910 and that of C.I. in December 1911.

See 4 *Pilgrimage to Mecca* by the Begam of Bhopal (Trans. Calcutta 1906), and *An Account of My Life* by the Begam of Bhopal (Trans. 1912).

**BIKANER**—The population of this native State in 1911 was 700 983 showing an increase of 19.9% during the decade due to recovery after famine. The Maharaja as A.D.C. to the King was a conspicuous figure at the Coronation and also at the Delhi Durbar where one of his sons acted as a page of honour. He was created G.C.S.I. on the occasion. In June 1911 he had received the honorary degree of LL.D. at Cambridge. In September 1912 he celebrated the twenty-fifth anniversary of his own accession by opening the Dugar Memorial College in his capital named after the elder brother to whom he succeeded and by announcing the formation of a legislative council. He has recently converted an infantry regiment 500 strong into Imperial Service troops and he has offered to contribute towards the construction of a railway through his state to connect Delhi more directly with Karachi. The town of Bikaner is now lighted throughout by electricity. An English officer has been lent to the state to reform the land revenue system.

**BOMBAY CITY**—The population of Bombay city in 1911 was 979 445 showing an apparent increase of 26.2% during the decade. But when the Census of 1901 was taken plague was raging in Bombay and a special enumeration in 1906 returned a total of 959 537. It is also suggested that again in 1911 many persons had left the city owing to depression in the cotton industry or through fear of plague infection.

Bombay city has enjoyed almost unbroken peace and prosperity its citizens being too well to do and too sensible to be affected by the unrest that manifested itself in other parts of the Presidency. The only serious trouble was caused in December 1909 by riots of a non-political character between rival sects of Mahomedans at the Muharram festival. It was found necessary to call out the troops who fired on the mob and 20 lives were lost. Bombay was the scene of the arrival of the King and Queen in India and also of their departure and it was there that the King delivered two of his sympathetic speeches. It has been decided to commemorate the Royal visit by erecting an archway on the historic Apollo Bandar.

Two undertakings of the first magnitude are in progress at Bombay. One is the work of the Improvement Trust which has already reclaimed 90 000 sq. yards from the foreshore for buildings, opened two wide roads through former slums and erected sanitary chauls or lodging houses for 15 000 poor persons. With the aid of a special grant of £335 000 from the Government of India it is now engaged in opening out the north of the island which is difficult of access and sparsely inhabited. The other is the work of the Port Trust which should be completed in 1913 at a total cost of more than £5 000 000. This consists in the construction of the Alexandra Dock 50 acres in extent with a dry dock 1 000 ft long and a mole where the mail steamers can lie alongside and the reclamation of 600 acres for export traffic and a new railway station. Three other projects may be mentioned: the provision of electrical energy from water power in the Western Ghats which has been commenced by a company with more than £1 000 000 of Indian capital under the auspices of the Tatta firm; a grandiose scheme still in embryo for the reclamation of no less than 1 000 acres in Back Bay at an estimated cost of nearly £2 000 000 to be taken in hand by the Government and the proposed electrification of all the railways in the island.

See *Gazetteer of Bombay City* 3 vols. (Bombay 1910).

**BOMBAY PRESIDENCY**—The total population of the Bombay Presidency in 1911 (including Sind, Aden and native States) was 27 084 317 showing an increase of 6.3% during the decade due mainly to recovery after famine. Agricultural seasons were on the whole favourable except in Gujarat in 1911 but plague continued to be prevalent. In British territory alone (excluding Aden) the population was 19 626 477 and in native States 7 411 675 the rate of increase in each being almost equal.

Bombay claims to be the province where education is most widely spread and also most efficient. Under the stimulus of encouragement from the Governor Sir George Clarke (who retired at the end of 1912 with a peerage as Lord Sydenham) great progress has been made in recent years especially as regards the higher teaching of science. The university has revised its courses and made arrangements for post graduate study. In Bombay city three wealthy merchants have subscribed £126 000 for the establishment of a Science College and their example has been followed at Ahmedabad (q.v.). Consequently the Science College at Poona has been converted into a college for engineering. A first class agricultural college has been built at Poona. Nor has primary education been neglected. During the two years ending 1911 no less than 1 100 new schools were opened but it is admitted that there are still 100 000 children whose parents would willingly send them to school if there were schools for them.

The first Indian member to be appointed to the executive council was Mr. Mahadev

**Bhaskar Chaudal** an advocate of high standing who has since been nominated to serve on the Royal Commission to enquire into the civil service. The legislative council as reconstituted in 1919, contains a majority of non-official members. Of the total of 46 Hindus number 20, Mohammedans 7 and Parsis 3.

See *Rural Economy in the Bombay Deccan* by G. Keatinge (1912).

**BUNDI**—The population of this native state in 1911 was 218 730 showing an increase of no less than 27·7% during the decade due to recovery after famine. In December 1911 the Queen paid a visit to Bundi while the King was shooting in Nepal. There being no railway within the state she travelled by motor from Ajmer (100 miles). She was hospitably entertained at the capital, and the Maharao who afterwards came down to Bombay to bid farewell there received from the King the decoration of G C V O.

**BURMA**—The population of the Province of Burma in 1911 was 12 115 217 showing an increase of 15·5% during the decade more than double the rate of increase for all India. Of this increase about 53 000 is due to an estimate for tribes on the frontier not formerly included. It is noteworthy that the number of Chinese has risen from 62 000 to 123 000 of whom only 17 000 are females.

Burma is happy in the possession of no exciting history. The wave of unrest which recently ran through India never reached its borders. Its prosperity depends almost entirely upon rice and even when the harvest has not been good this has been compensated by high prices for export. Teak ranks next in importance to rice and by the extension of working plans over the virgin forests the supply of timber is being maintained. In 1910-1 the net revenue of the forest department amounted to £440 000. Petroleum is another valuable product though the supply of oil is apparently not increasing. The ruby mines cannot be considered a success but in 1910-1 lead was produced to the value of £168 000 and rich discoveries of wolfram have recently been reported. What Burma most needs is an improvement in communications for which purpose it has been proposed to levy a cess upon the rice exported from Rangoon. A line of railway is now being constructed into the Southern Shan States and a small line has also been opened in the Northern Shan States by the Burma Mines Company. On the northern border which marches with Chinese territory occasional raids of Chins, Kachins, and other wild tribes occur but these have never assumed a serious form. The Shan States are on the whole successfully administered by their own Sawbas or chiefs.

Under the recent reform Burma has a small legislative council with a majority of non-officials but the elective system has not been introduced. In a total of 15 members there are 4 Burmans, one Mohammedan, one Parsi and one Chinese.

**CALCUTTA**—The population of the city of Calcutta proper in 1911 was 896 067 showing an increase of 5·7% during the decade but if the suburbs and also Howrah on the opposite side of the Hughli be added the total population would be raised to 1 222 313 and the rate of increase to 10·4%. The increase is entirely among Hindus, Mohammedans and Christians showing an actual fall while females constitute less than one third of the total.

Though the climate does not enjoy a favourable reputation Calcutta is fortunate in escaping endemic plague. In 1911 the registered death rate was only 27·2 per thousand as compared with an average of 32 per thousand for the previous five years. The municipality has recently completed two large projects for doubling the supply of filtered water and for improving the system of drainage. It has also taken over the lighting of the city and by laws have been passed relating to dairies, stables, public buildings and markets. During the past ten years the rateable value has increased by 58% to £2 365 000 while the total debt is £3 222 000. In August 1911 an Act was passed by the Bengal legislative council constituting an Improvement Trust (similar to that at Bombay) to undertake schemes for clearing congested areas and making street improvements the cost to be met from an increased duty on property transfers, a terminal tax on passengers, and a cess on jute, with contributions from the municipality and the government. The Port Trust has to provide for a trade that has doubled within the last ten years. The more important works completed or in progress are—the extension of docks and sidings, the acquisition and reclamation of land and the provision of a coal depot, a landing stage and four ferry steamers. In 1910-1 the receipts amounted to £855 000, while the debt was £5 622 000. Under the stimulus of recent reforms the Calcutta University has advanced far towards becoming a teaching institution with no less than 49 lecturers and more than 500 students for post graduate study. The newest college is one founded by Marwaris for commercial education at a cost of £60 000 while a Hindu lawyer has promised £93 000 for the foundation of a College of Science.

The visit of the King and Queen to Calcutta from December 30 1911 to January 8 1912 was even more notable for a popular demonstration of loyalty than the Delhi Durbar. It cannot however be disguised that the transfer of the imperial capital to Delhi has been badly received especially by the English residents who will lose not only the attractions of a seasonal court but also the advantage of contact with the heads of the administration. Indians on the other hand are glad that Bengal is reunited and that a civilian Lieutenant Governor has been replaced by a Governor from England. Apart from a possible fall in house rent there is no reason to suppose that the material prosperity of Calcutta will suffer.

**CAWNPORE**—The population of Cawnpore city in 1911 was 178 557 showing an apparent decrease of no less than 12% but plague was raging at the time and a later enumeration

raised the number to 195,498. The population of the district likewise shows a decrease of 9%, due to plague and malaria. An agricultural college has recently been opened at Cawn pore, and a trust fund formed for opening out congested areas.

**CENTRAL INDIA**—The total population of the Central India Agency in 1911 was 9,356,980 showing an increase of 10%, during the decade due to recovery after famine. For the more important states see *Bhopal Gwalior Indore and Rewa*.

A *Gazetteer* of the Central India Agency has been published in 9 vols.

**CENTRAL PROVINCES**—The total population of the Central Provinces and Berar (which form a single administration since 1905) was 16,033,310 in 1911 showing an increase of 17.9% during the decade due to recovery after famine. In the feudatory states alone with a population of 2,117,002 the rate of increase was as high as 29.8%. Native Christians have increased from 20,115 to 24,106 among whom the Quaker mission counts 1,140 converts. The province with its large Maratha population did not altogether escape the prevalent spirit of unrest and in January 1909 the Queen Victoria Memorial at Nagpur was desecrated by a student of the agricultural college. But on the whole prosperity has followed upon good harvests the crops for export being cotton, oilseeds and wheat. As a result of the Irrigation Commission a number of small tanks have been excavated to protect precarious tracts and sanction has been given for the construction of three large canal systems from many rivers. On January 9, 1912 the King and Queen on their railway journey back from Calcutta to Bombay stopped for an hour at Nagpur to visit the fort and show themselves to the people. Under the Act of Parliament passed in 1912 it is proposed to give the Province a legislative council but this can only apply with restrictions to Berar which is not strictly British territory. The Viceroy visited Nagpur on December 17th to lay the foundation stone of the council hall.

**CHAMBA**—The population of this native State in 1911 was 135,873 showing an increase of 6.3% during the decade. A full account of the inscriptions found in the State and also of the people and their dialects is given in the *Chamba State Gazetteer* (Lahore, 1911).

**COCCHIN**—The population of this native State in 1911 was 918,110 showing an increase of 13.1% during the decade. Christians number no less than 233,092, mostly Syrians of different rites and Roman Catholics. The state has been exceedingly prosperous of recent years, much attention having been paid to all departments of the administration, especially forests and navigable canals. In January 1911 the Raja's salute was increased to 19 guns as a personal distinction and he was created G.C.I.F. at the Delhi Durbar.

**COORG**—The population of this minor province in 1911 was 174,976 showing a decrease of 3.1% during the decade due to the decline in the coffee industry. Out of 3,333 Christians no less than 2,830 were Roman Catholics.

**CUTCH**—The population of this native State in 1911 was 513,499 showing an increase of 5.2% during the decade. There are no railways in the State and the proposal to construct a direct line from Bombay to Karachi through Cutch remains in abeyance.

**DACCA**—The population of Dacca city in 1911 was 108,551 showing an increase of 21.0% during the decade while both the district and the division increased by more than 11%.

Dacca was the capital of the new province of Eastern Bengal and Assam created in 1905 and now that Bengal has been reunited in 1912 a solemn promise has been made that Dacca shall be occupied by the government for part of every year. Important buildings have been erected for the residence of officials and for the secretariat. The remodelling of the water works has been completed and schemes for improving the drainage are in hand. Education, especially in English, is making rapid advance. Hostels and a hall have been opened for Mohammedan students and it is announced that Dacca will shortly have a local university. At the Delhi Durbar the Nawab Sir Khwaja Salimulla was created G.C.I.E.

**DELHI**—The population of Delhi city in 1911 was 232,837 showing an increase of 11.6% during the decade due to the growth of commerce and industries while the population of Delhi district fell by 4.6% and that of Delhi division by as much as 8.9% owing chiefly to plague and malaria.

An account of the Delhi Durbar is given above. Here it may be briefly said that the Royal visit which lasted from December 7 to 16, 1911, was an *unqualified success* from the popular point of view. The canvas city along the historic ridge covered a total area of 25 sq. m. the amphitheatre erected for the crowning ceremony accommodated 100,000 spectators and 50,000 troops were present at the review. To the Indian mind the most attractive incident was when the King and Queen showed themselves to the crowds below from a balcony in the Fort where the Mogul emperors had been wont to view spectacles.

The site of the new capital is not that of the Durbar nor does it include the spot where the king performed the ceremony of laying a foundation stone. In accordance with the advice of an expert commission which included the chairman of the London County Council it will be on a high and unoccupied tract S.W. of the city where convenient space and healthy conditions can best be secured. Here at a distance of about 3 m. from the city walls and separated from them by a wide belt of park will be built the Viceroy's palace, the council chamber and other government offices, at a cost provisionally estimated at £4,000,000. The style of architecture to be adopted was still under discussion in 1912 though designs had been invited from architects in India.

Meanwhile, as the Government will not return again to Calcutta temporary residences and offices were erected at Delhi at a cost of about £333,000 of which it is estimated that one-third will eventually be recovered. On October 1st an enclave surrounding the city with an area of 557 sq. m. and a total population of about 392,000 was by proclamation separated from the Punjab and constituted a new province under a Chief Commissioner while the laws in force in the Punjab and the jurisdiction of the Chief Court at Lahore are preserved by an Act of the legislative council.

**DHOLPUR**—The population of this native State in 1911 was 263,188 showing a decrease of 2.9% during the decade. The Maharaja Rana Captain Sir Ram Singh Lokindar K.C.I.E. died on March 29, 1911 and has been succeeded by his brother Udaibhan Singh Lokindar.

**EASTERN BENGAL**—The population of Eastern Bengal and Assam (which was created a separate province in 1905 but ceased to exist in 1912) was 34,018,527 in 1911 showing an increase of 11.5% during the decade. Under the reform it received in 1910 a legislative council with a non-official majority. Of the total of 40 members Hindus numbered 13 and Mahomedans 8.

**GARHWAL**—The population of the British district of Garhwal in 1911 was 480,167 showing an increase of 11.7% during the decade and the population of the native state of Tehri Garhwal was 300,819 showing an increase of 11.9%. The Raja Sir Kirti Sah K.C.S.I. is a member of the legislative council for the United Provinces. For both district and State see *Garhwal Gazetteer* (Allahabad 1910).

**GWALIOR**—The population of the Gwalior Residency in 1911 was 9,356,980 showing an increase of 10% during the decade due to recovery after famine. The population of Lashkar or Gwalior city was 46,952 showing an apparent decrease of no less than 47% for plague was present at the time of the Census. A later enumeration gave a total of 60,931. The Maharaja Sindha was a conspicuous figure as A.D.C. to the King at the Coronation and also at the Delhi Durbar. While in England he received the honorary degrees of D.C.L. from Oxford and LL.D. from Edinburgh. His personal salute has been increased to 21 guns and he has been raised to the rank of honorary major general in the British army. The *Gwalior State Gazetteer* consists of four volumes (Calcutta, Bombay and Lucknow 1908) one of which contains nearly 400 photographs of places of historical and archaeological interest while another is an atlas of 15 maps.

**HILL TIPPERA**—The population of this native State in 1911 was 229,613 showing an increase of no less than 32.5% during the decade due to agricultural prosperity. Valuable deposits of limestone, kaolin and red ochre have recently been reported. The Raja Birendra Kishore Manikya who succeeded his father in 1909 married in August 1910 a cousin of the Maharajadhiraj (nominal king) of Nepal.

**HOWRAH**—The population of Howrah city in 1911 was 179,006 showing an increase of 13.6% during the decade and the population of the district was 943,507 showing an increase of 10.9%. It has been determined to reconstruct the pontoon bridge connecting Howrah with Calcutta on the opposite side of the Hugh.

**HYDERABAD**—The population of Hyderabad State in 1911 was 13,374,676 showing an increase of no less than 20% during the decade. The population of Hyderabad city (including the British cantonment of Secunderabad) was 500,673 showing an increase of 11.6%.

The late Nizam (E.B. xiv 32) died on August 29, 1911, at the age of 45, having succeeded when only two years old. He was always constant to the tradition of his family as the loyal ally of the British Government. One of his latest acts was to prohibit the dissemination of seditious literature in his state. He was succeeded by his son Usman Ali Khan to whom the Viceroy paid a visit of congratulation in October 1911. At the Delhi Durbar he was a conspicuous figure as the first ruling chief to pay homage, clothed in plain black with a green turban of Mughal pattern. On the previous day he had been created G.C.S.I. On the occasion of his birthday in July 1912 he announced a change in the administration. Salar Jung, grandson of the famous minister of the same name, was appointed to the office of prime minister with the Nawab Imad ul Mulk (better known as Sayid Husain Bilgrami, the first Mahomedan member of the Council of India) as his special adviser. The most important recent work has been the construction of the Musi reservoir for flood protection and the water supply of the city at a cost of about £666,000. There was a serious outbreak of plague in the early part of 1912.

**INDORE**—The population of Indore state in 1911 was 979,360 showing an increase of 16.3% during the decade due to recovery after famine. The population of Indore city was 44,947 showing an apparent decrease of no less than 48% for plague was present at the time of the Census. A subsequent enumeration gave a total of 68,733. The young Maharaja Holkar who had spent the greater part of two years in England and on the continent was installed with ruling powers in November 1911. He takes over a state that has been vastly improved by the administration of a council during his minority. The most important addition to Indore city has been the completion of Daly College for the sons of Central India chiefs.

**JAIPUR**—The population of Jaipur State in 1911 was 2,635,647 showing a decrease of 8% during the decade. The population of the city (the only one in Rajputana with more than 50,000 inhabitants) was 137,098 showing a decrease of 14.4%. Jaipur city was visited

by the Queen in December 1911 while the King was shooting in Nepal. She was entertained by the Maharaja. An excursion was made to Amber, the former capital, now in ruins.

**JAISALMER**—The population of this native State in 1911 was 88 311 showing an increase of 20.4 % during the decade due to recovery after famine. The Maharawal who was born in 1887 and succeeded in 1891 was granted ruling powers in December 1908.

**JHALAWAR**—The population of this native State in 1911 was 96 271 showing an increase of 6.7 % during the decade due to recovery after famine. The Maharaj Rana paid a visit to England in 1912 when he was a conspicuous figure of the London season. His predecessor dethroned for persistent misgovernment in 1896 died at Benares in October 1912.

See *Picture Travels The Record of a European Tour* by Sir Ghawan Singh Maharaj Rana of Jhalawar (1912).

**JIND**—The population of this native State in 1911 was 271 728 showing a decrease of 3.6 % during the decade. The state has recently suffered from repeated outbreaks of plague. See *Phulkian States Gazetteer* (Lahore 1909).

**JODHPUR**—The population of Jodhpur State in 1911 was 2 057 553 showing an increase of 6.3 % during the decade due to recovery after famine. Large sums have recently been expended upon irrigation and many new schools have been opened. The Maharaja who died in March 1911 has been succeeded by his son a minor who acted as a page of honour at the Delhi Durbar and has since been brought to England for education. A regent has been found in Sir Pertab Singh (b. 1845) who had been regent to the boy's father his own nephew. Sir Pertab Singh resigned for this purpose the state of Idar in Bombay to which he had succeeded in 1900. He was a conspicuous figure as A.D.C. to the King at the Coronation and also at the Delhi Durbar when he was created G.C.V.O.

**KALAT**—The population of this native State (excluding Kharan) was 335 227 in 1911 showing an apparent decrease of 10 % during the decade but in 1901 the figures had been based on an estimate not on actual enumeration. While Kalat proper has enjoyed an uneventful history serious troubles have occurred in the subordinate state of Kharan. The chief Sir Nauroz Khan K.C.I.E. died in June 1909 and was succeeded by his son Sardar Yakub Khan who repudiated the conditions imposed by the British representative on his accession and was ultimately killed by his own troops in April 1911. The succession of his son Habibullah Khan has been recognised and measures taken for the administration of the state during his minority. The ex-Khan of Kalat Khudadad Khan G.C.I.E. who had been deposed in 1893 died at Pishin in May 1909.

**KAPURTHALA**—The population of this native State in 1911 was 268 133 showing a decrease of 14.7 % during the decade due to repeated outbreaks of plague. The Maharaja is accustomed to pay frequent visits to England and the continent leaving his state under an administrative council presided over by an English official lent by the Government. He was created G.C.S.I. at the Delhi Durbar.

**KASHMIR**—The population of this native State in 1911 was 3 158 126 showing an increase of 8.7 % during the decade. The population of Srinagar the chief city though the Maharaja resides at Jammu within the Punjab was 126 344 showing an increase of 5 %. The Maharaja is a British major general and was created G.C.I.E. at the Durbar.

Apart from a serious epidemic of cholera from June to November 1910 the state has recently enjoyed a period of prosperity. The total revenue has risen from about £666 000 to £761 000 while the cash balance in 1911 amounted to £225 000. In the meantime large sums have been expended upon public works especially upon an electrical power scheme on the Jhelum river and education has been encouraged. The introduction of sericulture has been a notable success the number of rearers between 1910 and 1911 having increased from 27 000 to 36 000 and the weight of cocoons produced from 37 000 to 42 000 maunds.

**KHAIRPUR**—The population of this native State in 1911 was 223 788 showing an increase of 12.3 % during the decade. The Nawab who succeeded his father in March 1909 was created G.C.I.E. at the Delhi Durbar.

**KOLHAPUR**—The population of this native State was 833 441 in 1911 showing a decrease of 8.4 % during the decade due to plague. The Maharaja was created G.C.I.E. at the Delhi Durbar. In 1911 his two sons were brought to England for education.

**KOTAH**—The population of this native State in 1911 was 659 089 showing an increase of 17.3 % during the decade due to recovery after famine. The Queen paid a visit to Kotah in December 1911 while the King was shooting in Nepal and to commemorate the occasion the Maharao who had been created G.C.S.I. at the Delhi Durbar offered a lakh of rupees to be sent for the benefit of the women of India. It has been decided that this shall form the nucleus of a fund for founding the Queen Mary College and Hospital for Women at Delhi towards which other princes and Indian noblemen have already contributed £100 000.

**KUCH BHFAR**—The population of this native State in 1911 was 592 952 showing an increase of 4.6 % during the decade. The Maharaja (E.B. xv 937) who had come to England to attend the Coronation died at Bexhill on September 18 1911. As a colonel in the British army his body was conveyed to the crematorium at Golder's Green with military ceremony and a funeral service was read in accordance with the rites of the Brahmo Samaj. He was succeeded by his eldest son educated in England. A legislative council has been

instituted in the State and one of its first measures was a Tenancy Act. The state railway has been converted from the 2 ft 6 inch to the metre gauge.

**LAHORE**—The population of Lahore city in 1911 was 228 687 showing an increase of 12·7 during the decade due to its growing importance as a railway centre with the workshops of the North Western State Railway. In the district the population has slightly decreased while in the division the decrease amounts to as much as 8·7 % due to plague and malaria. A water supply for the city has recently been completed.

**LUCKNOW**—The population of Lucknow city in 1911 was 259 798 showing a decrease of 1·6 % during the decade the population of both the district and the division likewise decreased at about the same rate. A trust fund has been formed for the purpose of opening out congested areas in the city and improvements are being made in water supply and drainage. A medical college the only one in the province is now approaching completion and the Canning College has been reconstructed.

**MADRAS PRESIDENCY**—The total population of the Madras Presidency (including native States) was 46 217 245 in 1911 showing an increase of 9 % during the decade. In native states alone the rate of increase was as high as 14·9 %. In British territory the population numbered 41 405 404.

Madras usually so tranquil did not escape from the prevalent spirit of unrest. Apart from isolated disturbances the most serious occurrence was the assassination of Mr R W D Ashe collector of Tinnevely at a railway station on June 19 1911. The actual murderer committed suicide but several of his accomplices were convicted by a special tribunal of the High Court after a prolonged trial. The monsoons and therefore the harvests have recently been favourable permitting an increase in the export of cotton and ground nuts. The co-operative credit movement has taken a firm hold. As regards irrigation a project is under consideration for constructing a reservoir in the valley of the Kaveri which (it is said) will be the largest in the world. Apart from indentured emigration to British colonies labour flows freely from Madras to Ceylon Burma and the Straits Settlements. The number of emigrants to the Straits rose from 49 000 in 1910 to 85 000 in 1911.

The first Indian member appointed to the executive council was the Raja of Bobbili who resigned after a few months being created C C I E at the Delhi Durbar. He was succeeded by V. Krishnaswami Aiyar a Brahman judge of the High Court who died in December 1911 (see above) and was succeeded by P. S. Sivaswami Aiyar an advocate of the High Court. The legislative council as reconstituted in 1909 consists of 46 members with a non-official majority. Of the total 19 are Hindus and 3 Mahomedans. Under revised regulations for the second election in December 1912 the number of elected members has been raised from 19 to 21 and the number of nominated members correspondingly reduced while the electorate has been increased by about 30 %. The new Governor Lord Pentland took his seat in October 1912 in succession to Lord Carmichael transferred to Bengal. The districts in Madras are exceptionally large so that it has recently been found necessary to create three new ones by redistribution namely Guntur Chittoor and Rannad.

**MADRAS CITY**—The population of Madras city in 1911 was 518 660 showing an increase of 1·8 % during the decade. As compared with Calcutta and Bombay the notable feature is the equal number of males and females for the workers here bring their families to reside with them. The registered death rate in 1910 was as high as 40 per thousand due partly to the large proportion of children. The municipality completed in 1911 a scheme for distributing the water supply and a project for drainage is in hand. The harbour has been so much improved that P & O steamers now call at the port and further improvements are being made. In 1911 the debt of the Port Trust amounted to £58 000.

**MANDALAY**—The population of Mandalay city in 1911 was 138 299 showing a decrease of 24·8 % during the decade and the population of the district was 340 770 showing a decrease of 7 % both of which decreases are due to the decay of the former capital for in the agricultural country around the number of inhabitants largely increased. A scheme for water supply and drainage improvements is in hand.

**MANDI**—The population of this native State in 1911 was 181 110 showing an increase of 4·1 % during the decade. In May 1909 popular discontent in the state culminated in a serious disturbance which necessitated the despatch of troops from Simla. Order was quickly restored and an official of the Civil Service has been lent to the state to conduct a settlement of the land revenue. The Raja Bhawani Sen died in March 1912.

**MYSORE**—The population of this State in 1911 was 5 806 193 showing an increase of 4·8 % during the decade. The population of Mysore city was 71 306 showing an increase of 4·7 %. The most important event has been the renewal of all the leases on the Kolar Gold Fields for a further term of thirty years from March 22 1910. In 1911 the total production of gold was 547 746 ounces all sent to London for refining. Another mineral product is manganese ore of which 43 000 tons were raised in 1910. Apart from an epidemic of plague the condition of the state has been prosperous. An economic conference was held for the first time in June 1911 and cooperative societies have been placed upon a satisfactory basis. An interesting institution is the State Life Insurance Fund in which policies are held by more than 7 000 persons, assuring a bonus of £447 000 for a monthly premium of £1 500. The

government has proposed a bill for the tentative introduction of compulsory education. The Yubharaja brother and heir of the Maharaja was created K. C. I. E. at the Delhi Durbar.

**NABHA**—The population of this native State in 1911 was 248,887 showing a decrease of 16.5% during the decade due to the prevalence of plague and malaria. The Raja, the honoured type of an old-fashioned Sikh chief, died on December 25, 1911, at the age of 68, having been too ill to attend the Delhi Durbar. He was succeeded by his son, Ripridaman Singh, born in 1883, who paid a visit to England in 1910 and who, as a member of the Viceroy's Legislative Council, introduced the Anand Marriage Act (passed in 1909) to validate a certain marriage rite of the Sikhs.

**NICOBAR ISLANDS**—The population of the Nicobar Islands in 1911 was 8,818 showing an apparent increase of no less than 35.4% during the decade. For the first time most of the tribes were actually enumerated while the savage Shom Pen, of whom not even an estimate could be formed, accidentally supplied the defect. At the very time of the Census they issued a declaration of war, accompanying it with two tall sticks on which notches were cut to indicate the number of fighting men in their settlements; the several settlements being marked off by lateral notches.

**N. W. FRONTIER PROVINCE**—The total population of the North West Frontier Province in 1911 was 3,819,077 showing an apparent increase of no less than 79.7% during the decade. But these figures are misleading. They include estimates of 1,084,824 in the agencies and of 519,441 in the trans-border tribal areas under political control which were omitted from the Census of 1901. In British and administered territories alone the population was 2,196,933 showing an increase of 76%—2,039,994 were Mahomedans.

Agricultural seasons have been favourable, especially for the important wheat crop. There has, however, been a great increase in crime, not of a political nature and not connected with border feuds, and a regrettable outbreak of Mahomedans against Hindus occurred at Peshawar in March 1910. Education is very backward, but the proposal to found an Islamic college at Peshawar has been warmly taken up.

The peace on the frontier has nowhere been seriously disturbed. The large agency tract to the north, consisting of Dir, Swat and Chitral, shows steady progress and development and a high standard of discipline and behaviour is maintained by all the militia corps. Raids there have been, especially by the Mahsuds, but they are being conciliated partly by the offer of work on roads and railways and partly by enlistment in the army. The most important matter has been the appointment of a joint commission with the Afghan government, which met from May to October 1910 for the settlement of outstanding disputes which came to an agreement for the removal of outlaws from both countries to a distance of fifty miles from the border. Caravan traffic through the Khyber Pass has gone on without interruption, and two of the Amir's motor cars ran through to Peshawar from Jalalabad.

**PATIALA**—The population of this native State in 1911 was 1,407,659 showing a decrease of 11.8% during the decade due to the prevalence of plague and malaria. The young Maharaja was invested with full powers on November 3, 1910, by the Viceroy, who visited the state for the purpose. In the following year he came to England for the Coronation and on one or two occasions played cricket with success for the Indian team. At the Delhi Durbar, as the leading Sikh chief, he organised in person the Sikh religious service of loyalty that attracted much notice, and he was created G. C. I. E. The Maharani on the same occasion presented to the Queen an address from Indian ladies with an historic jewel.

**PATNA**—The population of Patna city in 1911 was 136,153 showing an apparent increase of 1% during the decade, but plague was raging at the time of the Census in 1901 and if comparison be made with an enumeration taken later in that year there would appear a decrease of 11.4%. The district and of the division both show a small decrease.

Patna, or rather the adjoining civil station of Bankipur, has been chosen as the capital of the new province of Bihar and Orissa, constituted on April 1, 1912. In addition to the official buildings required, it is proposed to provide a High Court and also probably a University, both independent of Calcutta. The existing college has recently been equipped with hostels for students. The King twice passed in a steamer along the river front of the city in December 1911, when going to and returning from his shooting trip in Nepal.

**POONA**—The population of Poona city in 1911 was 158,856 showing an increase of 3.6% during the decade; the population of the district was 1,071,512 showing an increase of 7.7% due to recovery after famine. The Agricultural College has recently been completed and official buildings for the secretariat &c. are in progress. A water supply scheme estimated to cost £116,000 has been begun. Among the most interesting modern institutions are the Servants of India Society, founded by the Hon. G. K. Gokhale for preparing graduates by further study for careers of national usefulness, and the Seva Sadan, sisterhood, under the direction of the widow of Justice Ranade. The memorial to King Edward VII has taken the form of a hospital for women and children.

**PUDUCHOTTAI**—The population of this native State in 1911 was 411,886 showing an increase of 8.3% during the decade. Owing to continued ill health the Raja has been absent in Europe for almost the whole of the last three years.

**PUNJAB**—The total population of this Province in 1911 was 24,187,750 showing a decrease of 2.3% during the decade due to the prevalence of plague and malaria. For the native

States alone the rate of decrease was as high as 4.8%. In British districts the population was 19,974,956 showing a decrease of 1.7%. It is noteworthy that the number of native Christians has risen from 37,980 to 163,220 mostly Presbyterians.

The spirit of unrest which found its first overt manifestation at Rawalpindi in 1907 died away very rapidly throughout the province though there is still some friction between Hindus and Mahomedans. In this connexion it may be mentioned that the reforming Hindu sect of the Arya Samaj now number nearly 100,000 compared with only 9,000 males above fifteen who returned themselves as such in 1901. Despite heavy mortality from plague and malaria the Punjab has enjoyed a large measure of prosperity owing to the extension of irrigation and a succession of bountiful harvests. In 1910-1 the total area irrigated from government canals was 6 million acres showing an increase of more than 400,000 acres in two years. The canal colonies are so prosperous that they can afford to hold up their wheat for a favourable price and at the same time to indulge in the luxury of hoarding gold. It is officially stated that £4,000,000 in sovereigns was absorbed by the Punjab during two years. What is known as the Triple Canal Project on the Upper Jhelum, Upper Chenab and Lower Bari Doab is now nearing completion at a total cost of about £6,500,000. Education is making steady progress especially education in English. The Sikhs the Mahomedans and the Arya Samaj each support an Arts college of their own. In 1910 the percentage of boys of school going age attending public institutions was 23.3 for Sikhs 17.7 for Hindus and 11.3 for Mahomedans.

In accordance with the reforms of 1909 the legislative council now consists of 24 members of whom only 5 are elected. Of the total 6 are Mahomedans, 5 Hindus or Sikhs and one a Parsi. The Land Alienation Act of 1900 designed to protect hereditary land owning tribes from expropriation by money lenders has been extended to certain small tribes who are really agriculturists and it is believed that the old land owners are now recovering part of what formerly passed out of their hands. Tenants in the canal colonies have been encouraged to purchase hereditary rights in their holdings. An Agricultural College was opened at Lyallpur in December 1910. See *The Industrial Punjab* by A. Latifi (1911).

**RAJPUTANA**—The total population of the Rajputana Agency in 1911 was 10,530,432 showing an increase of 6.9% during the decade due to recovery after famine. For the more important states some of which were visited by the Queen in December 1911 see *Bikaner Bharatpur Bundi Jaipur Jodhpur Kotah and Udaipur*.

**RAMPUR**—The population of this native State in 1911 was 531,217 showing a decrease of 4% during the decade. The population of Rampur city was 74,316 showing a decrease of 5.6%. As A.D.C. to the King the Nawab was a conspicuous figure at the Delhi Durbar when he was created G.C.V.O. He has recently converted six companies of infantry into Imperial Service troops. Though a Pathan he is a Shiah and is honoured as the head of that Mahomedan sect in Northern India. Large sums have been spent on the improvement of the capital old mud houses and shops having been replaced by brick while a new brick fort full of palaces has a circumference of nearly a mile. The library of Oriental MSS. has few superiors and there is a large collection of pictures by European artists. A new sugar factory and distillery yield large profits and the finances of the state are satisfactory.

**RANGOON**—The population of Rangoon city which forms a district by itself was 293,316 in 1911 showing an increase of 19.5% during the decade. In recent years the city has been almost reconstructed partly by land reclamation and partly by rebuilding. In 1911 the total debt of the municipality was £1,245,000 of which £403,000 was due to reclamation works. The incidence of direct taxation was 13s. per head. A new pumping station was completed. Rangoon now almost monopolises the trade of Burma and conducts about 8% of the whole foreign trade of India. In 1910 the Port Commissioners who found themselves in an embarrassed position resolved to derive their revenue in future mainly from port and river dues instead of from landing shipping and warehousing charges. Their chief task is the construction of river training works on which the welfare of the port must depend. In 1911 the debt amounted to £1,634,000. Within the last ten years the revenue has increased from £100,000 to £225,000. A local company with European directors called the Bank of Burma failed disastrously in 1912 and a public prosecution has been ordered.

**REWA**—The population of the Baghelkhand Agency (almost co extensive with Rewa state) was 1,772,574 in 1911 showing an increase of 14.1% during the decade. The eldest son of the Maharaja acted as one of the pages of honour at the Delhi Durbar.

**SANDUR**—The population of this native State in 1911 was 13,526 showing an increase of 20.8% during the decade. The Raja who is a minor is being educated in the Court of Wards College in Madras. In 1909-10 the export of manganese ore from this little state by the General Sandur Mining Company reached 60,000 tons.

**SIKKIM**—The population of this protected State in 1911 was 87,920 showing an apparent increase of 49% during the decade following after an increase of 94% in the previous decade. The Maharaja, in his quasi Tibetan dress was a conspicuous figure at the Delhi Durbar on which occasion he was created K.C.I.E. Both he and his son (educated at Oxford) take an active interest in extending education.

**SIRMUR (or Nahar)**—The population of this native State in 1911 was 138,520 showing

an increase of 2 1 % during the decade The Raja died on July 4 1911 and has been succeeded by his son Amar Parkash

TONK.—The population of this native State in 1911 was 303 081 showing an increase of 10 9 % during the decade due to recovery after famine

TRAVANCORE.—The population of this native State in 1911 was 3 428 975, showing an increase of 16 2 % during the decade which follows upon an increase of 15 4 %. No further evidence is necessary to prove the extraordinary prosperity of the state which is likewise indicated by the high standard of education but it is noteworthy that native Christians have increased faster than the general population and now number more than one fourth of the total The revenue has reached £780 000 and the value of the exports £3 658 000 In August 1912 the Kodyar irrigation works were opened constructed at a cost of 70 lakhs to irrigate about 70 000 acres the area of the reservoir will ultimately be 7 sq m

(DAIPUR (or Mewar).—The population of this native State in 1911 was 1 293 776 showing an increase of 25 6 % during the decade due to recovery after famine At the Delhi Durbar the Maharana as recognised first in rank of all Rajput princes was appointed to the dignity of ruling chief in waiting on the King Emperor and was created G C I E.

UNITED PROVINCES.—The total population of the United Provinces of Agra and Oudh in 1911 was 48 014 080 showing a decrease of 1 % during the decade due to the prevalence of plague and malaria The native state of Tehri-Garhwal alone showed an increase of 12 %. In British territory the population was 47 182 044 the rate of decrease being 7 % in Agra and 2 1 % in Oudh It is noteworthy that the number of native Christians has risen from 37 980 to 163 220 mostly Methodists

The province has been happy in escaping almost entirely from the unrest This may be ascribed mainly to the efficiency of the local administration under two popular Lieutenant Governors There is indeed some friction between Hindus and Mahomedans and the numbers of the Arya Samaj or reforming Hindu sect have increased in ten years from 65 000 to 131 000 The prosperous condition of the people is proved by their rapid recovery from the famine of 1907-8 Relief was so efficiently administered that deaths from starvation were practically unknown and the large sums then advanced for agricultural improvements were quickly repaid Harvests have since been generally good Irrigation has been extended through the precarious tract of Bundelkhand and a comprehensive scheme is now under consideration to supplement the system of canals that take their water from the Ganges and the Jumna by diverting the overflow of the Sarda river in Oudh The exhibition at Allahabad during the winter of 1910-1 was the means of popularising labour saving implements and machinery for sugar making and an agricultural college has recently been opened at Cawnpore Special attention has also been paid to technical education and the encouragement of industries It must however be admitted that the United Provinces still lag behind in the matter of primary instruction

In accordance with the reforms of 1909 the legislative council now consists of 48 members of whom 18 are Hindus and 9 Mahomedan One of its most important measures has been a Court of Wards Act for the disqualification of spendthrifts Sir J P Hewett whose term of office was marked by friendly cooperation with Indian sentiment was succeeded as Lieutenant Governor by Sir J S Meston in September 1912 It was understood that an executive council with an Indian member as in Behar and Orissa would shortly be given to the United Provinces (J S COTTON)

# CEYLON<sup>1</sup>

The population of Ceylon in 1911 (census March 10) inclusive of military and shipping was 4 109 470 as compared with 3 578 333 in 1901 an increase of 531 137 or nearly 15 % The figures for the nine provinces of the island were as follows—

Provinces	Population	Increase per cent	Provinces	Population	Increase per cent
Western	1 110 393	18 84	North Western	433 958	21 86
Central	671 806	7 76	North Central	86 269	8 94
Northern	369 654	8 65	Uva	216 655	16 42
Southern	628 491	10 89	Sabaragamuwa	408 524	26 97
Eastern	183 720	6 02			

A feature of the decade was the movement of population into the towns Colombo with its population of 211 284 increased by 32 5 % and Kandy with 29 928 by 25 82 % Newara Eliya the health resort with 7 412 shows an increase of 36 43 % The only town of any importance showing a decrease of population is Trincomalee where the naval yard has been closed and the military garrison taken away There has been a satisfactory increase of 21 % in the number of Europeans who are now twice as numerous as in 1871 Of the native races the low Country Sinhalese show the highest percentage 18 7 of increase The Moors show 16 8 the Kandyans 14 2 the Tamils 11 3 and the Malays 9 9 There has been an increase in the number of Buddhists and Christians and a decrease in that of Hindus In 1901 there were 8 806 females to 10 000 males and in 1911 8 878

<sup>1</sup> See E B v 780

## CEYLON

*Agriculture*—Messrs A M & J Ferguson the authors of the *Ceylon Handbook and Directory* estimate that out of a total of 15 809 280 acres in the island there were in January 1912 about 3½ million acres under cultivation a slight increase on the corresponding estimate made by them in July 1908. Coco nuts occupy 770 000 acres rice 620 000 acres and palms other than coco-nuts about 300 000 acres.

The acreage under tea about 395 000 acres has not varied much since 1909 any increase due to newly planted fields being cancelled by the dying out of those where rubber has been interplanted. The crop for 1911 187 674 990 lbs though 6 000 000 lbs in excess of that for 1910 fell short of the record crop for 1909 by 4 000 000 lbs. The estimate by the Planters Association of the 1912 crop is 193 000 000 lbs.

In rubber planting there has been very rapid development. An area of 184,000 acres in 1909 has risen to 217 000 acres in 1912 while the shipment of 1½ million lbs in the former year increased to over 7 million lbs in 1911. It was estimated that in 1912 the shipments would again be more than doubled. In cocoa about 32 000 acres and cardamoms about 8 000 there has been no increase of area under cultivation. Coffee and cinchona bark once leading products have practically disappeared from the list of exports. In cinnamon no change is recorded. Immigrant labour brought over from southern India under a system of money advances, has from the first been the life blood of Ceylon planting. In 1910 the arrivals and departures were respectively 118 000 and 64 000. In January to June 1911 they were 40 000 and 36 000. The system has for the most part worked admirably. But in the last few years an excessive strain has been thrown on it by the vast area brought under cultivation for rubber both in Ceylon and in the Federated Malay States and in the keen competition for coolies the amounts advanced have so increased as to leave small hope of recovery in full. To meet this proprietors of tea and rubber estates have formed The Ceylon Proprietors Labour Federation with the object of limiting the amount of advances and ultimately of substituting for the present system one under which all the initial expenses of the immigrant shall be paid in such manner that he shall start work in Ceylon free of debt.

*Commerce*—The last Government Blue Book in place of giving figures as previously for the calendar year gives them for 18 months January 1 1910 to June 30 1911 as follows. Imports 164 864 703 exports 173 717 722. The increase since 1900 is about 18%.

*Finance*—The public revenue has risen from Rs 27 325 930 in 1900 to Rs 39 332 860 in 1909 and to Rs 65 612 640 in the 18 months January 1 1910 to June 30 1911. Assuming that the figures for 1910 must have exceeded Rs 41 000 000 the increase in the present century has been fully 50%. Public expenditure has risen to correspond.

The public debt on June 30 1911 was loans raised in London £5 962 700 equivalent at 1s 4d to the R to Rs 89 440 500 local loans Rs 3 064 027 the total debt Rs 92 504 527 less sinking funds Rs 12 425 330 making a net debt of Rs 80 079 197 or the equivalent of £5 338 613 equal to about 2 years revenue.

*Railways*—The mileage open for traffic increased from 563 in 1908 to 604 in 1912 and 130 miles more are either in course of construction or have been sanctioned. Sanction has been sought for other 72 miles which should be complete within four years. The railways have from the first been a fruitful source of revenue to the government to which they belong. In the 18 months from January 1 1910 to June 30 1911 the receipts were Rs 13 583 160 and working expenses Rs 6 337 583 showing a profit of Rs 7 245 577. It is calculated that this is a return of 7½% on the capital expended.

*Shipping*—The total tonnage of vessels calling at Ceylon ports in 1910 was 9 371 097 as against 8 453 236 in 1909. Over 90% was entered at Colombo where the harbour like the railways (though in a less degree) has become a source of government revenue. The estimated receipts for 1911-12 (July 1 to June 30) were Rs 2 609 380 and the estimated expenditure Rs 2 085 656 showing an estimated profit of Rs 523 724. As the annual charge for the public debt only slightly exceeds Rs 4 000 000 or not much more than half the profits of the railways and harbour the financial condition is quite sound.

*Political and Social Progress*—The Legislative Council hitherto consisting of the governor ten official members and eight unofficial members has been reformed by Ordinance 13 of 1910. In the past the unofficial members were all nominated by the governor who as a rule placed the nominations in the hands of the various representative bodies of the island. Three of the eight seats were held by Europeans the other five by native. The reformed council consists of the governor eleven official members and ten unofficial members. The new official member is the government agent for the time being of the Southern Province. Of the unofficials four are elected by constituencies created under the above ordinance and are styled the European urban member the European rural member the burgher member and the Educated Ceylonese member the electors being (1) Europeans resident in Colombo, Calcutta and Kandy (2) other Europeans resident throughout the island (3) the Burgher community (4) natives who can read and write English. The other six unofficial members are nominated as before by the governor.

The first elections took place in November and December 1911. For the European seats there was no contest and as under the old system leading members of the Chamber of Commerce and Planters Association were elected. The native seats were warmly contested. The reformed council held its first sitting on January 16 1912. The reduction of the num

ber of European unofficial members from three to two has been severely criticised. Committee work is perhaps the most important part of the work of the council and no committee can be counted complete without one European unofficial member on it. With only two members available it will hardly be possible to provide a representative on every committee.

Under the *Excise Ordinance* of 1911 introducing the Madras system into Ceylon 1140 toddy taverns have been recently opened under Government regulation. This has led to protests being lodged with the Secretary of State in London by the Native Races and Liquor Traffic United Committee and by many influential native gentlemen.

Education has become more widely diffused with the increase of prosperity. In 1911 there were 299 620 pupils under instruction an increase of about 63 since 1901. The government has a training college with about 100 students but there is not yet any general provision for higher technical education. Sir H. E. McCallum G. C. M. G. (b. 1852) resigned the governorship of the colony on Dec. 12, 1912, owing to a breakdown in health. (W. MARTIN LEAKE)

### BRITISH MALAYA ETC.<sup>1</sup>

**Straits Settlements**<sup>2</sup>—Exclusive of the floating population in 1911 the residents in the Straits Settlements proper (excluding Christmas Island and the Cocos-Keeling Islands) numbered 705 405, males being nearly 2 to 1. Singapore had 303 321, Penang 141 559, Province Wellesley 198 978, Malacca 124 081. The Dindings 7466. Chinese comprised more than half the total population numbering 366 765, then came the Malays and allied races with 235 762, Indians 81 928, and Europeans and Americans 7276. The military at Singapore (including dependent) numbered 3714.

As regards religions, the census returns gave the following statistics: Non-Christian and non-Mahomedan Chinese 359 760, Mahomedans 261 154, Hindus 52 579, Christians 27 414, Buddhists (non-Chinese) 2758, Jews 38, Sikhs 372.

In 1910 there were 216 321 Chinese immigrants, but in 1911 a fresh record was established with 269 854, made up of 226 129 men, 22 738 women, 16 030 boys and 4 957 girls. Most of them proceeded to the Malay States to work in the tin mines and on rubber estates, and a few went to neighbouring Dutch possessions. The number of Indian immigrants also established a record—108 471 in 1911 as against 83 723 in 1910.

The large increase in the number of immigrants from southern India of the free coolie class is due to the requirement of the rubber planting industry. In 1911 the system of indentured labourers ceased. In 1910 37 829 adults and 1251 children returned to India, and in 1911 46 754 adults and 5614 children, so that the net gain to the Indian population of the Settlements in 1911 was 56 103.

The number of births in the Colony in 1911 was 18 069 against 18 012 in 1910, and the number of deaths 33 075 against 27 484 in 1910. The birth rate was 25.38 as against 27.5 per mille, and the death rate 46.45 as against 41.88 per mille.

In 1911 the police force had a total strength of 2450, made up of 100 Europeans, 31 Sikhs and 1979 Malays, Tamils and Chinese. The number of arrests during the year was 17 954, a decrease of 1769 on 1910. There were 484 banishments against 643 in 1910.

During 1900 the Education Board was appointed to assist the government in the control of money spent for educational purposes. All school fees and other sums collected by the Department are credited to the account of the Board. The levying of an education rate, which was new in 1910, has relieved the government of a large proportion of the expenditure on education. In 1911 Singapore had 33 schools with an average enrollment of 1714 pupils, Penang 102 with 10469 pupils, Malacca 83 with 6183 pupils. The total amount expended (£427 225) was slightly higher than in 1910, and the net average expenditure per pupil was \$10.73 as against \$11.03 in 1910 and \$16.52 in 1909. The largest number of schools are for Malays. At the English schools the average attendance increased from 11 232 in 1910 to 11 456 in 1911. The number of girls attending school continues to increase especially among the Chinese.

The years 1909 and 1910 witnessed a remarkable development of agricultural activity, especially in Malacca and Province Wellesley. In Singapore considerable acres of waste land were put under rubber, which was planted also through the pine apple fields. At the end of 1911 there were 29 150 acres of rubber on this island alone. The expansion of rubber planting has led to the neglect of fruit cultivation and other forms of agriculture, but there is a slight increase in coco nut planting, and several new plantations of pepper and gambier, which has been inclined to disappear, and a slight increase in indigo, citronella grass, ginger and ground nuts. Sugar is going out as a product of Penang and Province Wellesley owing to the sale of plantations to rubber companies and spices are still cultivated only to a small extent. In Malacca rubber planting expands at the expense of tapioca. At the end of 1911 there were 80 000 acre alienated for rubber estates. The actual acreage planted in rubber in the whole of the Settlements was 80 629 as against 60 568 in 1910.

<sup>1</sup> For information contained in this section the Editor is indebted to the Malay States Information Agency, London.

See E. B. xxv, 980.

There are 165 square miles of forest land about 10% being forest reserves

The trade shows a steady growth. The total imports in 1911 were valued at £46 437 339 as against £42 521 576 in 1910 and exports £39 887 145, as against £37 822 142

The values of the leading articles of import and export in round figures were as follows — Imports Tin and tin ore £9 780 879 rice and other grains £6 679 620 cotton piece goods £2 600 383 opium £1 735 070 fish £1 275 400 provisions £1 211 000 coal £851 670 machinery £561 400 silk piece goods £428 050 cycles motor cars and accessories £167 170 Exports Tin £10 737 770 gums (including rubber) £4 279 920 copra £1 984 150 spices £1 600 090 tapioca £520 920 rattans £515 085 gambier £502 600 sago £486 735 phosphate of lime £383 485 coco nut oil £265 420 preserved pines £288 750

It should be stated that the trade of the ports is chiefly a transit trade and that these statistics refer largely to the trade of the whole of the Malay Peninsula augmented by transshipments from and to neighbouring countries

The merchant shipping entered and cleared (exclusive of native craft) in 1911 amounted to 24 086 904 tons including 14 277 754 tons British

Revenue in 1911 amounted to \$11 409 220 and expenditure to \$9 085 389. The position of the Loan Account—an additional sum of £2 750 000 having been raised in 1910—was as follows on December 31 1911—3½% S S Inscribed Stock £6 913 352 4° S S Debenture £1 030 100 total £7 943 452. Provision is made for repayment of this loan by a sinking fund which will come into operation in 1917. The charge on account of interest in 1911 was \$2 449 243 as against \$1 608 865 in 1910. The greater portion of this charge however is borne by the Tanjong Pagar Dock Board and other bodies to whom portions of the loan funds have been allocated. The actual sums paid by the Colonial Government in 1910 and 1911 respectively were \$103 667 and \$806 961

The revenue and expenditure of the Singapore Penang and Malacca municipalities for 1910 and 1911 were as follows—

	Revenue		Expenditure	
	1910	1911	1910	1911
Singapore	\$2 512 507	\$2 961 876	\$2 446 041	\$2 976 626
Penang	1 103 587	1 206 244	1 116 307	1 128 605
Malacca	76 853	91 828	76 282	90 895

The debt of the three municipalities at the end of 1911 was as follows—Singapore \$7 067 300 Penang \$2 630 000 Malacca \$33 800

In 1909 the excise farms were abolished. Towards the end of the year the Government Monopolies Department was formed and arrangements made for taking over not only the preparation and sale of opium but also the collection of duty on liquors and at midnight on December 31 the farmers handed over premises stock and utensils to the superintendent of the Department. In addition to supplying the Colony the Department also arranged to supply the districts included in the Perak Selangor and Negri Sembilan Coast Farms and also the State of Johore and from January 1 1911 the whole of the Federated Malay States were included in the operations of the Department. In 1911 the cash receipts for opium for consumption in the Colony were \$7 707 068 against \$6 612 918 in 1910. The collections in respect of duty on intoxicants in 1911 were—Singapore \$665 258 Penang \$505 537 Malacca \$164 386

For five years extensive works have been in progress to increase the wharfrage accommodation at Singapore and Penang and otherwise to improve the harbour at Singapore where a new graving dock the largest in the Far East has been constructed. The harbour works at Singapore include a new sea wall and reclamation at Teluk Ayer and a lagoon wet dock and additional wharfrage at Tanjong Pagar

A ferry now connects the railway system with the mainland at the straits of Johore and a through service of trains night and day runs between Singapore and Penang by way of Kuala Lumpur the capital of the Federated Malay States. The journey occupies 23 hours

Improvements have taken place in the postal telegraph and telephone services since the new treaty brought Kelantan Trengganu Kedah and Perlis under British suzerainty

The mean temperature of Singapore and Penang in 1911 was 82° of Province Wellesley 83·7° and of Malacca 82·1. The rainfall recorded in 1911 was—Singapore 88·10 inches Penang 77·25 Province Wellesley 90·47 and Malacca 81·41 inches

**Labuan**—By the census of 1911 the population amounted to 6 546 (3 662 males 2 884 females) of whom 34 were Europeans 1 799 Chinese and 4 434 belonged to the Malay race. There were 189 births and 183 deaths compared with 235 and 267 respectively in 1910. Census returns gave 116 inhabitants as Christians and 4 430 Mahomedans

The revenue in 1910 was \$82 926 44 and in 1911 \$78 990 44 the expenditure \$104 855 98 in 1910 and \$105 989 87 in 1911. Imports in 1910 were valued at \$1 437 390 and in 1911 \$1 258 884. Exports \$1 217 132 in 1910 and in 1911 \$1 074 737

The shipping entering Port Victoria was 282 742 tons (British, 152 668) in 1910 in 1911 136 884 tons (British 42 288)

<sup>1</sup> See E B xvi 31

A noteworthy feature in the history of the island in 1911 was the closing of the mines at Coal Point belonging to the Labuan Coalfields Co. Ltd. In 1909 there was an output of 61 835 tons and of 86 689 in 1910 the export in the respective years being 57 268 and 92 223 tons. Only 17 748 tons were exported as cargo and bunker coal in 1911. The shrinkage in trade was due entirely to the stoppage of mining.

A fortnightly mail service is maintained by German steamers between Labuan and Singapore. The rainfall was 151.25 inches in 1910, 99.82 inches in 1911.

**Cocos-Keeling Islands** <sup>1</sup>—The annual official visit to the Cocos Islands was made in September–October 1911 by Mr. Charleton Maxwell. A wireless telegraph installation had been erected on Direction Island in March. Messages have been sent a distance of 2 300 miles and have been exchanged over a radius of 1 600 miles.

According to the census of 1911 there was a population of 749 (411 males, 338 females) of whom 39 were Europeans and 668 belonged to Malay races (including 33 Bantamese contract coolies). At the time of Mr. Maxwell's visit the population was recorded as follows:—Home Island 640 (3 Europeans), Direction Island 64 (27 Europeans), total 704. The Europeans on Direction Island are members of the Eastern Extension Telegraph Company's staff. There were 50 Christians and 660 Mohammedans when the census was taken.

There are no independent trades or industries. Every able-bodied man and every boy over fourteen years of age is in the direct employment of the proprietor, Mr. Clunies-Ross. There are 172 men and boys rated for pay according to their ability, apprentices receiving 1 rupee per week and competent artisans 7 rupees. Fishing is done only as a recreation in spare time. One man is rated as a fisherman and supplies the proprietor's household with fish. Soap, vinegar and salt are manufactured locally. The soap is made from coco nut oil and the ashes of the coco nut husks; the vinegar from the palm wine, *tuwak*, and the salt from sea water evaporated over a fire in iron pans. Mr. Clunies-Ross proposes to start a small export trade in shark's liver oil for the manufacture of cod liver oil. Since the typhoon of 1909 a large number of coco nuts have been used as seed and the replanting of the entire area of the islands was nearly completed in October 1911. The area available for planting is 10 square miles or 6 400 acres and is planted with 1 216 000 trees. In the typhoon there were over 1 000 000 trees and only 3 per cent were left standing. No copra was exported in 1911 but export was expected to be renewed in 1913. In 1910 the export was 371 tons.

The rainfall of 1911 was 70.5 inches.

**Christmas Island** <sup>2</sup>—In 1911 the population amounted to 1 369 (1 328 males, 41 females), 19 being Europeans, 1 252 Chinese and 44 Malays. Christians 32, Mohammedans 46.

The rainfall of 11.43 inches in 1909 was a record but was eclipsed in 1910 with 136.93.

In 1909 the only export was phosphate of lime (105 481 tons) but in 1910 in addition to 137 700 tons of phosphate there were exported 1 200 lbs. of cotton. Extension works are in hand to increase the output of phosphate. As the present quarry will be exhausted in a few years the Company is building a light railway 15 miles long to open up phosphate beds hitherto untouched on the south east end of the island. Value of imports (1911) \$229 513, exports \$3 288 208. Revenue (1910) \$85 023.34, expenditure \$14 107.25.

**British North Borneo** <sup>3</sup>—According to the census of 1911 the population was 208 183 (79 141 men, 60 081 women, 35 774 boys and 33 187 girls) compared with 104 527 in 1901, an increase of 103 656. In Sandakan the seat of government there were 8 256 inhabitants and in Jesselton 2 666. The total of 208 183 included 355 Europeans, 167 586 natives of Borneo (of whom 87 951 were Dunsuns, 25 314 Muruts and 22 587 Bajaws), 26 000 Chinese, 5 510 natives of the Dutch East Indies, 5 503 natives of the Sulu Archipelago and 246 Japanese. Divided by religions there were 3 156 Christians, 61 165 Mohammedans, 24 076 Confucianists, 164 Buddhists, 150 Hindus, 173 Sikhs and 119 299 pagans. Agriculturists numbered 74 469, labourers 18 865 and fishermen 3 528. Steps are being taken to attract agricultural immigrants and arrangements have been made for the immigration of labourers.

Recent years have witnessed an enormous development in British North Borneo and the Court of Directors of the Chartered Company by which its affairs are administered have every reason to be satisfied. Seconded by the Colonial Office for the purpose, Mr. J. Scott Mason (b. 1873) in 1912 assumed the governorship in succession to Mr. F. R. Ellis for a period of two years but on December 5 he was killed by a fall from his horse and Mr. Aylmer Pearson formerly acting governor at once returned from England to take up the office. To aid the governor and the staff of civilians in the local administration, a legislative council was created in 1911 upon which the commercial, planting, Chinese and native communities have representatives. Sanitary Boards have been established at Sandakan, Lahad Datu and other townships.

The reorganization of the medical department is in progress, and a full station for Europeans is in contemplation. Increased grants in aid have been made to the missionary bodies in whose hands educational affairs are at present.

There are 125 miles of railway on the north west coast connecting Jesselton with Weston in Brunei Bay and Tenom inland. The gross earnings amounted to £16 936 in 1911 against £13 214 in 1910. A sum of £28 000 was spent in improving and strengthening the

<sup>1</sup> See E. B. vi. 712.

<sup>2</sup> See E. B. vi. 294.

<sup>3</sup> See E. B. iv. 262 et seq.

hne during the year. The Court has under consideration a scheme for the construction of roads to supersede the present bridle paths. There is a regular weekly service of steamers between Singapore and North Borneo ports. It is also hoped to arrange a weekly service between Hongkong and Sandakan in place of the present uncertain fortnightly service. Other schemes are for the reclamation of land at Jesselton, the improvement of its wharf and pier, the provision of adequate water supplies for that port and for Sandakan, and the lighting of the coast. There are about 800 miles of telegraph lines. Their maintenance is costly and the Court has decided to erect wireless installations at various points.

The revenue was £247,599 in 1910 and £180,646 in 1911, the expenditure £95,107 in 1910, and £96,745 in 1911. The revenue for 1910 included £60,000 derived from concessions, £16,792 from land sales, £13,593 from railway receipts, £54,257 from customs, and £39,587 from excise and licences, while the expenditure included £17,180 for railway working expenses and £13,647 for constabulary. In 1911 customs brought in £59,005, excise farms and licences £43,135, and railway receipts £17,040; there was no income from concessions and only £397 from land sales. The railway working expenses amounted to £20,125 and the cost of constabulary had fallen to £9,816.

Following the policy of the Straits Settlements, the British North Borneo Company has created an Opium Monopoly Department as from January 1, 1913.

The total volume of trade in 1910 was valued at £981,000 and in 1911 at £1,101,000, an increase of £120,000. Out of 47 headings, 39 showed increases in 1911. Estate rubber heads the list, 149,000 lbs. exported being valued at £41,096 as compared with 54,000 lbs. and a value of £22,866 in 1910. Successive years should show a large increase as more estates come into bearing, but as cultivated rubber is free of export duty for another 43 years this item does not affect the revenue. At the end of July 1912, out of 30 companies operating in the territory, the majority were engaged in rubber growing, while others are engaged in coco nut and tobacco cultivation. There were upwards of 23,000 acres under rubber. One company had a crop of 280,410 coco nuts in 1911 and the export of copra was 1,183,866 lbs. against 1,034,533 lbs. in 1910. The output of tobacco was 13,750 bales as compared with 13,508 bales in 1910. The export of timber amounted to 1,311,559 cubic feet against 1,218,967 cubic feet in 1910. The British Borneo and Burmah Petroleum Syndicate have acquired a large tract in the Klias peninsula where they had located an oil field. Following upon this discovery, they have taken up on lease 440 square miles of territory and are prospecting extensive areas. The output of coal in 1911 amounted to 38,920 tons. The Cowie Harbour Coal Company have satisfied the Court of Directors that the collieries are at present sufficiently developed to yield up to 500 tons of coal a day, provided that labour is available and some expenditure incurred to put the surface coal handling arrangements in order.

**Brunei.**—The census of 1911 shows 6,380 males, 7,193 adult females, 4,139 male and 3,986 female children, with a total of 21,718. Of these 20 were Europeans and 736 Chinese. The only town of any size, Brunei or Dar ul Salam (city of peace), has a population of 9,767, including 8 Europeans. It is composed of houses built in the river on nibong piles. With the establishment of peace and order, the natives are gradually learning the advantages of cultivation and are migrating to terra firma. At Muara Damit (Brooketon) leased to Raja Brooke, where there is a colliery, there is a settlement of 1,447 persons. Since the appointment of a resident British official, the common people have shown eagerness to take up land and plant coco-nuts. The wild rubber tree, Jelutong (*Dyera costulata*), is common and is worked for export. Land suitable for cultivation of Para rubber (*Hevea brasiliensis*) is alienated by the government at an extremely low rental and several European companies have taken out grants and are proceeding with planting. At Brunei Town, the Island Trading Syndicate has its cutch factory, employing several hundreds of hands. The value of the cutch exported in 1911 amounted to \$262,216.

Coal is worked on Berembang and at Raja Brooke's Brooketon collieries. The gross output of coal from these collieries in 1910 was 18,418 tons and in 1911 25,607 tons.

The principal imports are piece goods, tobacco, kerosene and sugar. The main exports are cutch, sago, hides and jungle produce of various kinds. The imports at Brunei Town amounted to goods of a declared value of \$70,000 in 1909 and of \$82,000 in 1910. The exports from Brunei Town for the same years reached a value of \$237,000 and \$246,000.

That oil in payable quantities is to be found in Brunei can no longer be doubted. Bores are being sunk at Jenidong and in the Belait District, with every hope of success. Prospecting leases are granted on exceptionally easy terms.

Revenue (1911) \$261,865, expenditure \$247,930. There is a public debt of \$400,000 and the state has investments to its credit of a capitalised value of \$444,744.

**Federated Malay States.**—Each year witnesses a steady growth in the progress and prosperity of the Federated Malay States. In 1911, though the output of tin was not greatly in excess of 1910, the enhanced value brought benefit, while the rapid expansion of the plantation rubber industry is reflected in the statistics of the various departments. The demands for labour in the mines and on the plantations have hampered to some extent the development of public works, but much has been done to construct new roads and

<sup>1</sup> See E. B. IV 661.

<sup>2</sup> See E. B. XVII 478 et seq.

waterworks to extend the railway system to improve the harbours and to carry out other public works necessitated by the expansion of commerce and the growth of industries.

In 1912 Benker Semang a small tract of territory 20 miles square between the states of Kedah and Perak was formally transferred from Kedah to the latter state.

Between 1901 and 1911 the population of the Federated Malay States increased by 358,404 persons or 52.8 per cent. In the latter years of the decade the extension of rubber planting was very rapid and labour was introduced to meet the demands of the numerous new estates. Towards the end of 1907 there began a slump in the tin mining industry. The closing down of many of the lower grade mines threw numbers of Chinese out of employment and led to much emigration. But the slump in the mining industry was well over before the last census was taken and the tide of immigration had set in with augmented force owing to the increased demand for Chinese labour on rubber estates. A comparison of the population enumerated in the censuses of 1891, 1901 and 1911 shows the remarkable increase from 418,509 in 1891 to 678,595 in 1901 and then to 1,036,909 in 1911. Of the latter total 725,062 were males and 311,937 females. The races represented were as follows—Europeans 3,284; Eurasians 649; Malays 420,840; Chinese 433,244; Indians 172,465; others 4,517. The religions professed were—Mahommedan 406,860; Hindu 140,068; Christian 22,902; Sikh 7,406; other non-Christian religions 420,381 not given 12,164. In 1911 there were 108,471 Indian immigrants (the highest number recorded) against 83,723 in 1910. The excess of Chinese immigrants over emigrants in 1911 was 38,033 against 7,794 in 1910.

The total amount spent by the Education Department in 1911 was \$330,563. Schools increased from 156 in 1910 to 369 with an average enrolment of 22,566 pupils (19,585 boys, 2,981 girls) and an average attendance of 18,384. At the English schools 3,171 boys and 909 girls were in average attendance.

Throughout the year the battalion of Malay States Guides was kept up at full strength of 895, mainly Sikhs, Pathans and Mahommedans. The rank and file of the Malay States Volunteer Rifles composed of Europeans numbered 578. The police force was 2,882.

Revenue (1911) \$15,956,544; expenditure \$25,292,749. The largest amounts collected were—customs \$11,313,173; licences and excise \$9,574,437; railway \$7,039,789; land \$1,771,317; interest \$1,383,981; municipal \$1,183,760; land sales \$519,646.

The actual Federal revenue (as distinct from the whole Federated Malay States revenue) was \$9,568,590 an increase of \$1,466,885 over that of 1910, of which railway revenue contributed \$1,043,140. The Federal expenditure was \$15,144,696 an increase of \$1,993,771 over that of 1910, of which \$7,550,513 was spent on railway account. The balance to the credit of the Federated Malay States is now \$52,537,647.

Rubber is now the principal agricultural product. The number of estates increased in 1911 to 700 against 435 in 1910; the labour force to 166,015 from 118,446 and the output to 21,809,617 lbs. from 12,563,270 lbs. For the first eleven months of 1912 the output was 31,024,086 lbs. Copra exports in 1911 reached approximately 8,000 tons, the value being \$1,553,000. It was a bad year for padi; the acreage under cultivation shrinking from 119,724 in 1910 to 103,278 in 1911. The output was 3,313,437 bushels. The following statistics show the agricultural acreages in 1911 exclusive of padi and horticulture—rubber 35,974; coco nuts 142,774; coffee 11,313; other cultivations 18,751. 153 square miles were added to reserved forests bringing the total area reserved to 1,161 square miles out of a total area of 27,750 square miles. It was a prosperous year for mining owing to the high average price for tin. From all sources the revenue of the Mines Department was \$9,416,779 against \$7,753,143 in 1910. Of this amount \$8,818,764 was on account of the export duty on tin and tin ore against \$7,162,026 in 1910. The output of tin was 44,149 tons in 1911 and the value \$69,645,466 against \$57,116,989 in 1910. The total labour force in mines was 196,427 against 170,361 in 1910. The output of wolfram was 88 tons of a value of \$84,500 in 1911 against a value of \$47,400 in 1910. There was a falling off in gold production the output being 9,228 ounces valued at \$306,514 against 16,767 ounces in 1910 valued at \$574,868.

In the states of Perak, Selangor and Negri Sembilan 3,890 fishermen were employed in 1911 on the fisheries compared with 3,765 in 1910.

Again there was an increase of trade on the record for 1910, the aggregate value including bullion and specie being \$182,812,906 against \$156,107,141 in 1910. The leading exports were—coffee \$302,608; rice \$752,973; sugar \$235,343; gambier \$241,473; tapioca \$312,286; copra \$1,294,301. Para rubber \$39,931; 123 tin and tin ore \$69,756,215 (total \$116,280,927).

The number of vessels exclusive of native craft entered and cleared in 1911 was 9,667 with a tonnage of 3,870,329 compared with 9,014 and 3,504,667 in 1910.

The provision of means of communication with a view to the development of the natural resources of the country has been a consistent policy of the Federal Government and in addition to the construction of new roads every year sees an improvement in roads already existing. At the end of 1911 the lengths of roads and paths were—Metalled cart roads 1,988 miles; unmetalled 234 miles; bridle roads and paths 1,542 miles. New roadways are under construction in all the states. The total mileage of railway open to traffic at the end of 1911 was 560, an addition of 20 miles during the year; the capital account for railway and motor services being £6,383,200 or £340,074 more than in 1910.

The profit in 1911 was equivalent to a dividend at the rate of 6.03 per cent. The department was authorised to expend nearly £600,000 in new construction work in 1912.

**Perak** is the most populous of the four states containing (1911) 494,057 persons (344,238 males 149,819 females). Of these 1,396 were Europeans, 845 Eurasians, 199,034 Malay, 217,206 Chinese, 73,539 Indians and 2,037 others. Religions were—Mahomedan 192,991 Hindu 56,988 Christian 9,734 Sikh 3,918 other non-Christian 213,386 not given 3,690. Ipoh in the mining district of Kinta had 23,978 inhabitants. Taiping (the capital) 19,556 and Kampar 11,604. Ipoh and Kampar nearly doubled their population in ten years. The aboriginal population is given as 12,632 against 7,982 in 1901. Births numbered 8,946 or 1/95 per mille against 10,406 in 1910. Deaths numbered 14,026 or 28.16 per mille against 13,118 deaths with a death rate of 33.03 in 1910. There were 6,498 deaths from malaria in 1911. There was an excess of 19,053 Chinese immigrants over emigrants.

The strength of the police force was 1,180.

The total enrolment at 215 schools was 13,126 with an average attendance of 78 per cent. English was taught at 15 schools to 2,246 pupils, the majority being Chinese. The expenditure on education was \$149,025.

The revenue in 1911 was \$19,081,190, expenditure \$13,071,195. Balance of assets at the credit of the state \$33,194,146. The revenue from land was \$860,277, land sales \$218,307, customs \$6,271,813, licences excise etc. \$4,584,938. There was an increase of \$3,106,837 under the last due mainly to the establishment of the government chandu monopoly.

A record was created in the value of both imports and exports—Imports (1911) \$29,349,234, exports \$55,535,590. Of exports the principal values were—Rice \$725,724, padi \$463,458, sugar \$233,196, tin and tin-ore \$41,105,822, copra \$973,811, rubber \$10,994,087.

There was an increased alienation of land for rubber and coco nut cultivation over the areas so allocated in 1910 and 1909. Of the 262,487 acres alienated for rubber 124,681 were reported to be opened and 31,532 acres to be producing. The total crop for the year was 6,041,763 lbs. as against 2,962,218 in 1910. The total acreage under padi was 78,735 and the yield in a year of poor crops was 2,596,290 bushels. The fruit harvest on the other hand was the best on record. Under coco-nuts there were 73,120 acres as against 66,088 in 1910. Practically the whole delta between the Bernam and Perak rivers has been alienated for cultivation, and in a few years this vast plain which was dense jungle four years ago will present an unbroken field of coco-nut palms.

The total area of forest reserves is 422 sq. miles, an increase of 46 sq. miles during 1911.

The acting Resident (Mr. Oliver Marks) comments on the difficulty of obtaining contractors to undertake the construction of new roads, the prosperity in the planting industry having attracted both contractors and labourers. Nevertheless 8½ miles were added to the metalled roads (now 745 miles) and 6½ miles of earth road were metalled. Several bridges were constructed and waterworks for Taiping and Kampar completed.

The number of vessels entered and cleared at the ports of the state (exclusive of native craft) was 3,990 as against 3,550 in 1910, with a tonnage of 439,926 as against 383,976 in 1910.

Taiping recorded the largest rainfall 147.09 in. Linggong the lowest 69.90 in.

In **Selangor** the population was 294,035 in 1911, a gain of 74.2 per cent. There were 220,939 males and 73,096 females. Resident in the state were 1,348 Europeans, 64,952 Malays, 150,908 Chinese, 74,067 Indians and Sakai (aboriginals) 1,739. Christianity was professed by 10,447, Mahomedanism by 66,639 and Hinduism by 62,940. Chinese immigrants numbered 46,598 and emigrants 24,512. There were 46,718 inhabitants (33,034 males, 13,684 females) in the capital Kuala Lumpur, the largest town in the Federation.

Births numbered 5,036 against 4,456 in 1910, the rate per mille being 16.94. Deaths numbered 11,903 against 10,797 in 1910. The death rate was 40 per mille.

Pasture and agriculture employed 88,388, mining 56,073.

The police force had a total of 681 of all ranks.

There were 58 schools—49 Malay, 1 Tamil, 1 Chinese vernacular school maintained by the government and the remainder English teaching schools in receipt of a grant in aid. The average enrolment was 4,397 and the average attendance 3,837 compared with 4,092 and 3,615 respectively in 1910. Two girls' schools had an average attendance of 61. The expenditure on education was \$62,548.

Total revenue (1911) \$12,330,045, expenditure \$8,715,718. The balance of assets amounts to \$27,073,607. A Chandu Monopoly Department was created on January 1, 1911. Its total sales amounted to 67,067 tahils, and there was a net profit on the working of the Department of \$2,206,641. Land revenue was \$695,906 as against \$659,705 in 1910.

The year was marked by an expansion in rubber, coco nut and coffee production. There were 413,499 acres alienated for agriculture comprising 145,222 acres under rubber, coco nuts 33,355 acres, coffee 9,575, rice 4,312 and gambier 746 acres. 253 estates produced 11,438,996 lbs. of rubber. Forest reserves totalled 201,265 acres. There were 71,353 acres alienated for mining, mostly for tin. The recently discovered coal field at Rawang promises well. A manufacturing plant has been established at Batu Caves for high class cement.

Imports (1911) \$30,196,834, exports \$47,433,952. The principal exports were—rubber \$23,852,273, tin and tin ore \$21,724,430, copra \$294,676 and wolfram \$40,503.

Ocean going steamers using Port Swettenham numbered 469 against 448 in 1910, with

a tonnage of 1 673 067 against 1 503 510 in 1910. Altogether there entered 1 335 of coasting merchant vessels during the year with a tonnage of 1 422 741. All but six were British.

During 1911 22 miles of new roads were added to the state.

Sanitary Boards deal with such municipal affairs as roads and bridges, lighting, sewage and registration of vehicles at Kuala Lumpur, Klang and four other towns, and in April 1911 an Advisory Board was appointed for Port Swettenham, one of the members being nominated by the Selangor Chamber of Commerce.

In 1911 the Volunteers became a Federal force. Selangor contributed two companies totalling 209 officers and men.

The rainfall in 1911 ranged from 79.37 inches at Kuala Lumpur to 111.26 at Kuala Kubu.

In Negri Sembilan, out of a population of 130 199 (87 651 males, 42 548 females) there were 403 Europeans, 69 745 Malays, 40 843 Chinese and 18 248 Indians in 1911. There were 69 330 Mahomedans, 15 700 Hindus and 2 212 Christians. On 89 estates 26 688 persons were employed and in mining 9 657. The birth rate was 23.5 per mille and the death rate 7.36 per mille.

The police force included 369 of all ranks.

In the 65 schools 3 893 pupils were enrolled as compared with 4 253 in 1910. Of the schools 59 were for Malay boys and 3 for Malay girls; there were 2 English teaching schools and 1 Tamil school. There is a growing desire amongst the Malays for English education.

A company of Volunteers was raised for the Federal battalion in 1911 and 108 officers and men were enrolled.

Revenue (1911) \$2 512 002, expenditure \$1 768 733. Land revenue amounted to \$295 989 against \$272 578 in 1910 and the new Chandu Monopoly Department collected \$837 644 against the \$349 969 derived from the spirit and opium farms in 1910.

The balance of assets at the credit of the state amounts to \$1 471 644.

Rubber leads in agricultural produce with 151 estates and a planted area of 75 356 acres. The output in 1911 was 4 297 715 lbs. To rice 48 306 acres were devoted, to coco nuts 19 584 and to gambier 15 049. There is a tendency to abandon rice and gambier cultivation in favour of rubber and coco nuts. The rice crop was a failure in 1911. There were 239 sq. miles of forest reserves. The total acreage of mining land was 22 857.

Imports (1911) \$1 630 404, exports \$8 419 046. These figures however are no true index to the total trade of the state as much of the merchandise produced and consumed in the state is imported via Selangor. On the export side rubber was valued at \$5 039 968, gambier \$168 457 and tin and tin ore \$750 108.

The number of vessels cleared at the ports (exclusive of native craft) was 1 328 with a tonnage of 363 360 against 1 548 and 496 380 respectively in 1910.

The rainfall in 1911 ranged from 64.35 inches at Jelebu to 96.50 at Port Dickson.

In Pahang the population was 118 081 in 1911 (72 234 males and 46 474 females). Of these 137 were Europeans, 87 109 Malays, 24 287 Chinese and 6 011 Indians. There were 509 Christians, 77 900 Mahomedans, 4 440 Hindus and 967 Sikhs. Aborigines numbered 10 213. With the smallest population of the four states Pahang has the highest birth rate and the lowest death rate. It is the only state in which the birth rate exceeds the death rate. The birth rate per mille was 27.13 and the death rate 26.40.

The police strength is 384.

The country is being opened up steadily by the extension of the road and railway systems. 20 miles of new trunk railway through the eastern states were opened on the Gemas-Kuala Semantan section between Triang and Semantan. 34½ miles of the permanent way laid from Semantan to Kuala Tembeling and progress made with the extension into Kelantan. Out of 173 miles of telegraph lines in course of construction 125 miles were completed.

Revenue (1911) \$1 133 307, expenditure \$1 641 102. The state debt stands at \$9 201 749. Revenue from the new Chandu Monopoly Department amounted to \$335 595.

The acreage alienated for agriculture amounted to 117 945 but the acreage planted was only as follows—Coco nuts 16 715, rice 8 201, rubber (31 estates) 7 715, tapioca 500, coffee 97. There were 31 144 lbs. of rubber exported. The live stock comprised 28 348 buffalos and 3 274 cattle, being 340 buffalos and 458 cattle fewer than in 1910. Forest reserves amounted to 106 208 acres. For mining 44 439 acres were alienated.

Imports (1911) \$2 277 768, exports \$4 890 639. Among the exports tin and tin-ore accounted for \$4 129 974, dried fish \$174 817, rattans \$54 008, getah grip \$47 192, rubber \$28 319, tapioca \$24 645 and copra \$17 185.

Rainfall in 1911 ranged from 81.20 inches at Temerloh to 153.14 at Sungai Lembing.

**NON-FEDERATED STATES.—Johore.** Great progress has to be reported since the Sultan obtained the services of a General Adviser from the Governor of the Straits Settlements in his capacity of High Commissioner to the Malay States. Mr Douglas Campbell, C.M.G., was lent by the Federated Malay States in 1909 and several officers were also seconded from the same service to organise and conduct government departments. Legislation was at once introduced and the outcome is increased prosperity in the finances of Johore while vast improvements are reported in administration, the opening up of roads and other means of

<sup>1</sup> See E. B. xvii 482 et seq.

See E. B. xv 475.

communication and increased cultivation. A trigonometrical survey of the country is in progress, road and railway extensions are being carried out and newly-created Town Boards in Johore Bahru, Bandar Maharam and Penggaram (Batu Pahat) have been able to effect improvements in sanitation, etc.

The census of 1911 showed a population of 180,412 (122,129 males, 58,283 females). Of these 205 were Europeans (161 British), 71,315 Malays, 63,405 Chinese, 30,904 Japanese and 5,659 Indians. By religion 110,939 were Mahomedans, 843 Christians, 847 Pagans, 251 Buddhists and 4,455 Hindus. The capital, Johore Bahru, has 22,636 inhabitants. Malarial fever was rife in 1910 and 1911 and in 1911 there was a severe outbreak of smallpox. Two government vaccinators have been appointed and are doing good work.

As yet little attention has been devoted to mining in Johore, which is largely covered by jungle, but in 1911 276 tons of tin were exported. Under the new Land Enactment grants of land are now made in perpetuity on conditions similar to those in force in the Federated Malay States. Gambier, pepper and tapioca are going out of cultivation. Coco nuts and areca nuts are greatly favoured by Malay and Javanese agriculturists and the export value of these crops in 1910 was \$2,150,000. The area under rubber at the end of 1911 was 75,205 acres and the export of rubber in that year amounted to 1,244,500 lbs. against 613,600 lbs. in 1910. The total area leased mostly by rubber companies is 281,900 acres and a large amount of land is taken up by Japanese. Most exports pay a specific export duty. Rubber and coco nuts, however, if grown on land held on a title on which annual rent is reserved to the state pay 2½ per cent *ad valorem*; if otherwise 5 per cent.

Revenue (1911) \$3,954,901; expenditure \$3,469,571. The expenditure for 1911 includes the repayment of \$500,000 of the capital sum lent by the Federated Malay States on account of the Johore State Railway. The Public Debt is \$11,168,578 representing capital outlay on the State Railway.

The railway through the state, connecting Singapore with the Federated Malay States system, was completed in 1909. Along its 120 miles it provides access to the extensive areas of valuable forest lands not conveniently reached by the natural waterways. In 1910 some 295 square miles of land adjoining the railway were alienated for cultivation. The expenditure on the railway was \$388,091 in 1911 and the profit on the last quarter's working was \$6,683. A narrow gauge railway 11 miles long has been constructed to facilitate the shipment of produce from the district south of Bandar Maharam. Its extension for a further 28 miles is in progress. This railway made a profit of \$12,336 in 1910 and of \$4,076 in 1911. Road construction is being pushed on and in 1910 the Sultan sanctioned the construction of a main road across the peninsula about 88 miles long from Batu Pahat on the west to Mersing on the east, crossing the railway at Mengkilob.

The government maintains 39 schools, at two of which (Johore Bahru and Muar) with attendances of 300 and 140 English is taught. It is proposed to start an English boarding school on the lines of the school for the children of well-to-do Malays at Kuala Kangsar in Perak. At the 37 vernacular schools 2,529 pupils were enrolled.

Consisting solely of Malays, the police force made up of 23 officers, 116 non-commissioned officers and 450 constables is distributed over 42 stations. It was arranged in 1912 that an European officer should take charge. The Sultan maintains and commands a regiment of Malays comprising 220 regulars and 300 volunteers, as well as a force of 65 Pathan artillerymen.

In 1910 the rainfall was 106.05 inches.

**Kelantan.**—The most important event in the history of Kelantan since the British Adviser (Mr J. S. Mason) took over the supervision of its affairs from Mr W. A. Graham the Siamese Commissioner on July 15, 1909, was the determination in 1912 of the agreement between the Sultan and the Duff Development Company and the resumption by the government of the sovereign powers conceded to the company over nearly two thirds of the state. A new working agreement has been prepared under which the government of Kelantan undertakes to pay the company £300,000 and to grant to them the following rights: (a) The sole right to select blocks of land for agricultural purposes amounting in the aggregate to not more than 50,000 acres; (b) the sole prospecting rights for minerals over the area of the concession; (c) the sole prospecting right over an area of approximately 78 sq. m. in the Sokor district and the right to take up mining leases and certain other rights.

Great activity has characterised the administration with a view to bring about a more effective centralised government of the country. In 1909 the State Council held 10 meetings and passed six important enactments; in 1910 when 12 meetings were held 18 enactments were passed. In 1909 a beginning was made with an educational system. A government school was started at Kota Bahru with 119 pupils and the enrolment had risen to 277 at the end of the year. 29 of the pupils taking up the study of the English language. Only four members of the royal house attended—one in the English class but in 1910 when the average attendance was 117 a son of the Sultan was amongst the students. Three new schools were opened in that year and a night school for clerks at Kota Bahru. The Kelantan Malays are keen on education, the boys are industrious students and there is great eagerness to learn English. The Mosque school at Kota Bahru, a sort of theological in-

Regular steamship communication has been established with Singapore and Bangkok. On August 1 1909 postal rates were reduced from 9 cents to 3 cents between Kelantan and the Straits Settlements and the Federated Malay States and in November to 8 cents for places within the Imperial Penny Postage Union. In spite of the reduced rates the postal revenue has steadily increased. At the end of the year the cash on-delivery system was introduced for parcels and a money order system established with the Federated Malay States. The telephone and telegraph systems were extended and the rate for telegrams to the Straits Settlements and the Federated Malay States reduced from 15 to 11 cents per word. In 1910 commission on money orders was reduced to half per cent with a substantial increase of business. A start was made with the construction of roads and at the end of 1909 there were 11 miles of gravelled roads and 6 of earth roads and several hundreds of miles of foot tracks and bridle path. In 1910 the road making was continued and the most important work of the year was the beginning of a trunk road through the state.

The population (1911) is 286 751. There were 109 deaths from cholera in 1910.

The police force numbering 232 men with a European as Chief Police Officer was reorganised on the Federated Malay States system in 1910. As the administration of justice had fallen into an unsatisfactory state the opportunity was taken on the resignation of the Siamese judge in 1909 to appoint the Assistant Adviser as judge. The result was an immediate improvement in the *personnel* and conduct of the Courts.

Revenue (1910) \$419 327 expenditure \$403 552. Principal sources of revenue customs \$129 560 licences \$197 508 land \$104 474. The public debt at the transference of the suzerainty was \$150 000 upon which Siam charged 6 per cent. This debt was taken over by the Federated Malay States interest being reduced to 4 per cent.

In 1910 only about 124 200 acres were reported to be under cultivation in a country of approximately 6 500 square miles. This comprised 95 000 acres devoted to padi 18 250 to coco nuts and 5 400 to rubber. Rubber planting however is spreading and 64 500 acres were alienated in 1910 for this purpose mostly to European companies. 3 763 tons of copra were exported and 7 261 head of cattle 1 480 sheep 115 044 poultry and 684 pigs were exported to Singapore. Arrangements are being made to improve the breeds of cattle and sheep. The revenue from land in 1910 amounted to \$104 474—a large increase in the collection under the Siamese régime. A saw factory was installed at Kota Bahru in 1910. Many unworked mining concessions were cancelled in that year. The dredging operations for alluvial gold in the Galas Nenggiri and Lebri rivers were scarcely successful in 1910 as in the previous year the gold won amounting to 3 698 oz against 8 507 oz in 1909. On the other hand the output of tin ore though small showed an increase.

The total value of trade in 1910 was returned at \$3 003 955 against \$2 648 571 in 1909. Chief among the exports were—Copra \$632 040 cattle \$217 830 betel nuts \$143 048 gold \$129 465 fish \$64 904 rice and padi \$45 342. The principal imports were—Cotton piece goods \$141 337 kerosene \$111 886 opium tobacco salt and woollen goods. Ship ping amounted to 206 560 tons, an increase on 1909.

In 1910 the rainfall was 123.4 inches.

**Trengganu**—Though the suzerainty was transferred from Siam to Great Britain on July 14 1909 it was only on April 22 1910 that the Sultan signed an agreement providing for a British agent to reside at Kuala Trengganu to fulfil the functions of a Consular official for the control of the foreign affairs by Great Britain and for the limitation of mining and agricultural concessions to persons other than natives and subjects of Trengganu.

The population (1911) 1 146 920 of Kuala Trengganu 13 991.

In 1910 the Sultan issued his *kuasa* empowering the British agent to adjudicate as a magistrate jointly with the Hakim according to Mahomedan law and the state regulations and five suits were disposed of in that year.

Several Europeans have taken up concessions for rubber planting in which industry the Sultan shares and a Japanese subject obtained a concession for coco-nut planting in 1910.

No less than 1 986 fishing boats were on the register at Kuala Trengganu in 1910 as well as 385 sailing vessels of a burden ranging from 25 to 100 tons. These sailing vessels were all built by native Malays for trade in the Archipelago. A bright future is predicted for Trengganu as a mining country tin wolfram and gold having been found while traces of natural oil are reported near Dungun in the north east.

The following were the values of imports and exports in 1910—Imports: Rice \$209 528; cotton goods \$69 731 opium \$60 909 sugar \$49 420 sarongs \$38 521 raw silk \$36 100 tobacco and cigarettes \$31 930 petroleum \$21 645. Exports: Tin ore, \$313 177 fish \$464 288 copra \$281 813 padi \$174 295 black pepper \$152 707.

Revenue is raised by means of Farms and duties on all kinds of exports.

Mr W D Scott's report for 1910 says. The area is estimated at 6 000 square miles. There are no main roads railways or telegraphs communication with the interior is by means of the rivers and by good native paths. Regular steamship communication is maintained with Singapore and in order to obtain a good port of call a survey is to be made of Chendering lying seven miles south of Kuala Trengganu. The state joined the Imperial penny postage system and the Postal Union on January 1 1911.

Rainfall in 1910 (for nine months) 101.98 inches.

**Kedah.**—The years 1909 and 1910 were devoted largely to a reorganisation of the internal affairs of this state with a view of bringing its governmental system into line with the Federated States of Malaya. With the transfer of the suzerainty under the Anglo Siamese Treaty of 1909 Mr W G Maxwell of the Federated Malay States Civil Service as British Adviser succeeded Mr G C Hart the Adviser appointed by the Siamese government. In that year the state council held 25 meetings and passed 13 enactments or decisions by some of which forced labour was abolished and new methods introduced for raising revenue for state purposes. The administration is entrusted to departments and in each district there are now district officers who interest themselves in the work of the land office mines office hospital gaol public works etc. A sanitary board was brought into existence in the capital (Alor Star) and is doing good work. In 1910 the State Council held 75 meetings 16 enactments were passed. They enable the central authorities to exercise closer control of finance and a more thorough management of business. Special mention should be made of the legislation for the speedy abolition of debt bondage a peculiar feature of ancient Malay life. A survey department has been constituted. Road making bridge building and canal extension are features of the new regime and a tracing has been made of an extension of the railway from Province Wellesley into Kedah as far as Alor Star. New post offices have been established throughout the country the money order system introduced and telegraph and telephone systems extended. The telephones are being connected with Penang.

Education is making rapid progress. Before 1905 there was only one school in Kedah. In 1910 there were 20 Malay schools with 37 masters and 1 675 pupils enrolled. There is a growing demand for schools and the extension of accommodation in existing schools. An English school at Alor Star had 97 boys on the register in 1910 and an average daily attendance of 80 including two of the Sultan's sons. There is a girls' school at Alor Star.

There are 37 police stations with a total police force of 419 men of whom 2 are Europeans and 335 Malays. A Courts Enactment passed in 1910 constitutes the various courts of the state and defines their powers. The Court of Appeal which had formerly consisted of the State Council without the President and Adviser but with the Assistant Adviser and two experts in Mahomedan law in their place now consists of officers specially selected to be judges. At any appeal at least five judges must be present. Members of the State Council are not eligible to be the judges but if any case appears to be of exceptional difficulty or importance the Court may ask the State Council to sit with it. The enactment provides for a judge of the High Court sitting with two Assessors at the hearing of any murder case or criminal case of unusual importance or difficulty. It also gives the High Court full powers of revising on its own initiative the decisions of the District Courts. The powers of the Adviser in sitting in civil and criminal cases in which British subjects are defendants are the subject of special sections of the enactment. The efficiency of the High Court has been much improved and the arrangements for the Chief Justice to go on circuit saves much trouble expense and delay. Most of the work is done by the nine District Courts.

Population (1911) 245 986 (male 137 139 females 108 847) of these 195 411 were Malays 33 746 Chinese 8 135 Siamese 6 074 Indians and 136 Europeans (128 British). There were 198 720 Mahomedans in the state 5 002 Hindus and 642 Christians. A smallpox epidemic in 1910 caused 36 deaths and over 33 000 persons were vaccinated. The Kedah Malays believe in the efficacy of vaccination.

Revenue (1910) \$1 449 116 expenditure \$1 285 342. Seventy three per cent of the revenue is derived from the opium monopoly land revenue and export and import duties. The revenue from land in 1910 was \$398 034 against \$242 873 in 1909.

In 1910 693 tons of tin were exported as against 744 tons in 1909 and 12 tons of wolfram. Agriculture is the mainstay of Kedah at present. An epidemic of rinderpest having swept the country in 1908-9 carrying off 9 000 head of cattle valued at \$300 000 left many villages in the north without animals enough to plough the rice fields. The State Council in 1910 came to the rescue of the cultivators lending money against the security of title deeds at 6 per cent interest (against the 24 per cent formerly charged by native money lenders) the principal being repaid in instalments. An excellent harvest induced many of the cultivators to repay half the principal in the first year. The state veterinary surgeon reports that Koch's anti rinderpest serum is less efficacious in Kedah than it appears to be in India which is possibly due to the Indian cattle possessing a modified immunity through their ancestors having had rinderpest or to the deterioration of the serum in the Kedah climate. During 1910 16 741 head of cattle were licensed either as imported or born in the country as against 11 125 in 1909. 15 808 sales were registered as against 6 599 in 1909. Exports (1910) of rice were 614 080 gantangs of padi 13 653 936 gantangs (1 gallon = 1 gantang).

Canals have been extended for irrigation in the rice growing districts. There has been great activity in rubber planting and out of 40 agricultural estates registered at the end of 1910 only one had no rubber trees. The total acreage was 94 005 of which 20 034 acres were under rubber 3 679 coco nuts and 10 005 tapioa.

The passing of a Timber and Forest Produce Passes Enactment was the first step towards protecting the forests of the state. No forest reserves have yet been created.

The rainfall in 1910 ranged from 89.92 in in South Kedah to 135.38 in in North Kedah. Perlis.—The chief work of the British Adviser (Mr Meadows Frost) in 1909 and 1910 was

to reorganise the administrative departments of this small state. The population (1911) numbers 32 746 persons (16 808 males and 15 938 females). Of these 29 497 are Malays 1 627 Chinese 1 388 Siamese and only 5 Europeans (3 British) 29,665 are Mahomedans and 8 Christians.

The state is governed by the Council consisting of the Raja the Adviser and three other members. In 1910 it passed 8 enactments, one abolishing debt bondage. The State Council is the Appeal Court. There is a police force of 65—Malays and Indians.

As there was no proper register of titles for land and no rent roll Mr Frost soon after his arrival in 1909 set himself to draw up both with the result that the collection of land rent in 1910 realised \$20 580 as compared with \$14 875 in 1909. The land office has issued a notice that no unregistered grant will be considered valid after a certain date.

Revenue (1910) \$114 854 expenditure \$101 495. When the transference of suzerainty from Siam to Great Britain occurred in 1909 there was a debt of \$474 796 which the Federated Malay States took over. In 1910 the debt was reduced by \$20 000.

In 1910 the State Council abolished the miscellaneous import duty of 3 per cent on all imported goods not specifically mentioned and now the only duties raised are on spirits, beer wine tobacco and kerosene or other oils used for heating or lighting purpose. The miscellaneous export duty of 5 per cent on all goods not specifically mentioned (such as tin ore and guano) has also been abolished.

Except in the Coast districts where there were excellent crops and plenty of cattle the padi season of 1910 was a failure. Owing to the lack of bullocks the cultivator could not plough and thus left off hand tillage till it was too late. Rinderpest wiped out the cattle upwards of 7 490 head succumbing to the disease. The direct loss to the small cultivators was \$113 000 but there was a large indirect loss as well. The State Council came to the aid of the people and loans are granted for restocking against land title.

In 1910 there were 150 tons of tin ore exported.

Many of the limestone hills of Perlis contain caves rich in deposit of guano. A company has been formed by some Dutchmen in Penang called the Straits Guano Company to work the deposits and they have obtained a lease of seven hills. (The government retained the best known hill for the use of the local cultivators). The company has made two miles of earth road which opens up good country where people are anxious to take up land. The quantity of guano exported in 1910 was 838½ tons which paid export duty at the rate of \$2 00 per ton. After a certain date the company is bound to extract not less than 500 tons per month and the export duty will be 10 per cent *ad valorem* of the market price in Penang.

#### HONG-KONG<sup>1</sup>

According to the census taken on May 25 1911 the civil population of the colony numbered 456 739. The non-Chinese community numbered 12 015 while the Chinese population was thus distributed—City of Victoria (including the Peak) 10 386 villages of Hong Kong 16 106 Kowloon (including New Kowloon) 67 602, New Territories 80 617, population afloat 60 048. The general death rate for 1911 was 21.15 per 1000 among the Chinese community and 13.38 among the non-Chinese.

**Public Health**—The colony has outlived its former notoriety for unhealthiness. The influence of the young pine forests created by the Afforestation department and the training of nullahs on the slopes have tended to check malaria while the attention recently bestowed on sanitation has also had beneficial effects.

The gradual replacement of old Chinese dwellings by new premises erected in accordance with the Public Health and Building Ordinance of 1903 is effecting an improvement in the healthiness of the native quarter but the abnormal influx of refugees estimated at some 20 000 who arrived in Hong Kong during the revolutionary movement in South China, somewhat discounted the improvement by contributing largely to the number of cases of plague and smallpox which occurred towards the end of 1911. The number of deaths from beriberi during 1911 was only 320 as compared with 566 during 1910. This reduction was in some measure due to the dissemination of a circular of information among employers of coolie labour which set forth the cause of beriberi and advised the use of beans for food with rice in the absence of fresh meat or fresh fish.

The records at the Observatory Kowloon showed in 1911 a highest temperature of 93.1 F in August a lowest temperature of 47.1 F in February, and a rainfall of 90.55 inches occurring on 145 days.

**Industries**—Of the total area of the colony which including the New Territories is estimated at 249 551 acres some 41 967 acres are cultivated that is practically the whole available area the remainder being steep hillsides. The government Pine Plantations occupy 6800 acres and there are about 43 000 acres of Licensed Pine Plantations. With the exception of brewing the manufacturing industries of the colony under European supervision increased in importance yearly although the Chinese revolutionary disturbances in 1911 were adverse.

<sup>1</sup> See F B XII 657

to trade. The manufacture of lard is one of the important Chinese industries in the colony most of the lard being sent to the Philippines and during 1911 a lard and meat factory was started for the Philippine trade. Since the middle of 1910 a steam trawler has been engaged in the fishing industry and has contributed its hauls to the local markets.

**Commerce**—Hong Kong is a free port. The total reported imports during 1911 amounted to 3,995,793 tons as against 4,292,194 tons in 1910. The exports for 1911 show an increase of 71,672 tons or 3.1 per cent. Transit cargo shows an increase of 66,109 tons or 1.6 per cent. Of the more important articles of import kerosene oil shows a remarkable increase. The imports of raw opium and the trade in compounds of opium have decreased considerably owing to recent legislation. The failure of the southern rice crops in 1911 caused a decrease in the rice imports and a corresponding increase in the import of American flour which is used as a substitute for rice and rice-flour.

The demand for labour in the rubber plantations of Malaya is responsible for the continued increase in the number of Chinese emigrants to the Straits Settlements. The table which follows illustrates the extent of the Hong Kong immigrant and emigrant trade—

Year	Emigrants to Straits Settlements	Total Number of Emigrants	Total number of Immigrants (returning Emigrants)
1909	48,016	77,430	144,821
1910	76,705	111,058	149,564
1911	100,906	135,565	149,894

The total of the shipping entering and clearing at ports in Hong Kong during the year 1910 was the highest reached in the history of the colony. The number of vessels engaged in foreign trade was 40,714 of 23,160,256 tons in 1910 and 44,978 of 23,063,108 in 1911 when 24.0 per cent by number and 50.7 per cent of the tonnage was British.

**Finance**—In 1911 the revenue was £7,497,231 and the expenditure £7,077,177. The amount of the Consolidated Loan (Inscribed Stock Loans of 1893 and 1906) at the end of 1911 stood at £1,485,737 and in addition the advances by the Crown Agents for railway construction amounted to £340,000. The rateable value has doubled since 1900-01 and for 1911-12 stood at £11,161,390. The colony pays a military contribution fixed at 20 per cent of the revenue; the cost of volunteers is borne entirely by the colony.

**Communications**—Hong Kong has unrivalled steam communication with all parts of the world and there is a weekly European Mail service. During 1910 the Hong Kong Post Office began to forward parcels to Great Britain and Germany via Shanghai, Dalny and the Trans-Siberian railway. The cash on delivery service for parcels exchanged with the United Kingdom was adopted on May 1, 1909. From Jan. 1, 1911 the Hong Kong government was relieved by the Imperial government of the charge of the postal agencies in China.

Extensive resummptions of land at Kowloon Point were effected during 1909 to provide a site for the terminal station of the Kowloon Canton Railway. The British section of this railway, 21.78 miles in length and of 4' 8½" gauge was opened on October 1, 1910 by Sir Henry May. A two foot gauge branch from Fan Ling to Sha Tau Kok, a distance of 7½ miles was commenced in May 1911 and a length of 6¼ miles of this branch was opened for traffic on December 21st. The Chinese section of the railway was opened and through traffic between Kowloon and Canton established on October 4, 1911.

**Government**—Sir Frederick Lugard who was appointed Governor in July 1907 left the colony in March 1912 to become Governor of Nigeria. He was succeeded by Sir Francis Henry May, K.C.M.G., formerly Governor of Fiji and High Commissioner for the Western Pacific who had previously been acting Governor.

In accordance with the resolutions of the International Opium Conference which met in Shanghai in February 1909 the opium ordinances have been amended and consolidated, and additional restrictions and safeguards have been imposed in respect of morphine, compounds of opium and cocaine. Twenty-six opium divans were closed in 1909 and all that remained both in the island of Hong-Kong and the New Territories were closed in 1910. A grant of £9000 was made to the colony by the Imperial Government for the year 1910 on account of the loss of opium revenue and a grant of £12,000 for the same purpose for the year 1911-12. In order to replace the revenue lost on opium a law was passed by the Legislative Council on September 17, 1909, imposing duties on intoxicating liquors consumed in the colony. The 34 ordinances passed in 1910 were chiefly concerned with the consolidation of the ordinances relating to the New Territories, copyright, crown suits, lepers, midwives, oaths and the volunteer

reserve. In 1911 the ordinances passed numbered 65, the largest number ever dealt with in one year. They related chiefly to defence, the consolidation of the liquor laws, the university, stamp duties, civil procedure laws for the more effectual control of clubs and societies and for the registration of Chinese partnerships with limitation of liability.

A conference lasting from June till November 1909 was held in Hong Kong between the Portuguese and Chinese Commissioners for the delimitation of the boundaries of Macao. In July 1909 there was trouble in Macao with pirates on Colowan Island in which Portuguese troops and gunboats were engaged. Some of the pirates escaped and were afterwards arrested at Cheung Chow Islands in the New Territories.

*Police and Crime*—The strength of the police force in 1911 totalled 1080, the force is composed of 134 Europeans, 309 Indians and 547 Chinese. The District Watchmen Force composed of 14 Chinese patrols the Chinese quarters of the city of Victoria under the supervision of European police. The daily average of prisoners confined in the Victoria Gaol in 1911 was 595 as compared with 726 in 1904, the highest previous average. The average percentage of prisoners to population for the last ten years has been 0.14, but owing to the large floating population which is constantly moving between the colony and Canton, this percentage does not convey an accurate idea of the comparative criminality of the residents of the colony. The Chinese community in Hong Kong was profoundly stirred by the revolutionary movement in China, and for some days in the early part of November 1911 great excitement prevailed. A proclamation under the Peace Preservation Ordinance was issued November 29th and remained in force until February 26, 1912. The police succeeded in preventing any serious outbreak of lawlessness, though the influx of undesirable characters from Canton and other parts of China caused many cases of disorderliness, assaults and petty thieving. Military assistance had to be provided and special constables enlisted.

*Education*—Education is provided at 67 government and Grant Schools comprising 20 upper grade schools (average attendance 4107) and 74 lower grade schools (average attendance 2196). On September 7, 1911 a Board of Chinese Vernacular Primary Education was constituted to promote efficient Chinese vernacular education and to collect funds to supplement the government subsidy made to the Board. The amount of the government subsidy for the year 1912 was £4,100. Higher education is represented by the Technical Institute where instruction is given in scientific, technical and commercial subjects. The Hong Kong University building was opened on March 12, 1912. The first chairs were to be those of medicine, engineering and the arts; the medium of instruction will be English. The primary object of the University is to train the character and morals of students and so far as is possible to inculcate western ideals. It will be open to all races and creeds, but owing to the position of Hong Kong, it is chiefly intended for the Chinese. At the end of 1911 the University endowment fund amounted to £40,098. The British government has promised a sum of £300 a year scholarships (King Edward VII Scholars).

*Social*—The Victoria Recreation Club, which under the style of the Victoria Regatta Club held its first regatta in 1849, celebrated its 60th anniversary on July 10, 1909, in a new club house which had been built on an extension of what was formerly Murray Pier. The Club Germania commemorated its fiftieth anniversary on November 27, 1909. On June 22, 1911 the coronation of King George V was celebrated by a public holiday. The whole of the colony was illuminated for three nights, all the men of war in the harbour combining in the display.

During the past three years the colony has lost several of its prominent men by death, including Mr. George Murray Bain, who came to the colony in 1864 as sub-editor of the China Mail, of which paper he ultimately became proprietor; he died April 21, 1909. Sir Hormusjee Modji, the donor of the Hong Kong University buildings, died on June 26, 1911. On October 28, 1911 Mr. W. D. Barnes, the Colonial Secretary, who had only recently been transferred to Hong Kong from the Federated Malay States met with an untimely death on the polo ground. (H. SPOONER.)

#### Wei-hai-wei<sup>1</sup>

The population in 1911 was 14,171 (146,840 Chinese and 293 of other nationalities). This gives a density of about 510 per square mile. The European element numbers 213. It consists chiefly of the Royal Naval contingent on the island of Liu Kung and of school boys most of whom have their homes in Shanghai. Of the native male population about one-fifth is engaged in occupations other than agricultural. This frac-

<sup>1</sup> See E. B. xxviii, 494.

tion includes merchants (shopkeepers and employees) fishermen, carpenters and builders smiths boatmen and teachers—named in order of their numerical importance. As the inhabitants are mostly small holders many of them combine several occupations.

Weihaiwei is now a regular port of call for many China coasting steamers sailing northwards from Shanghai and there is also a regular weekly service carrying mails and passengers between Shanghai and Weihaiwei subsidised by the Government. The mails are landed and shipped at Port Edward where the main Post Office has been established and which is now the principal anchorage for steamers instead of as formerly on the Island of Liu Kung. The shortest time in which a mail has arrived from London via Siberia is 15 days. The number of steamers that called during 1911 was 615, net tonnage 519,399.

Of the total area which is 285 square miles it is estimated that not more than two-fifths is arable land. The principal export crop is ground nuts (*Arachis hypogaea*) the export of which amounted in 1911 to 547 tons of nuts and 8510 tons of seeds. Shark fishing has been carried on by the Japanese since 1908 but only seven boats were engaged during 1911.

Revenue in 1911-12 was \$71,673 expenditure \$153,591 and grant in aid £6000.

The 1911 census returned 8637 males and 40 females of the Chinese population as able to read and write that is just below 6 per cent of the total population or over 11 per cent of the male population. The people of the territory have voluntarily agreed to levy a small tax on theatrical performances for the improvement of the standard of education in village schools which is very low. The government Free School during the year 1911 had an average attendance of 60 pupils. There are several other schools for boys and girls under the management of Europeans. From the Chinese treaty ports and Hong Kong boys are now sent to the Weihaiwei School for European Boys. The average attendance is about 50 and the school is now the home of the First North China Troop of Boy Scouts.

The inhabitants of the territory are for the most part of an orderly nature and crime is rare. In 1911 there were 786 convictions. Gambling is responsible for a large proportion of these. The prisoners are employed on labour of a useful kind such as roadmending and treeplanting. The total strength of the police force is 3 European inspectors 3 Chinese sergeants and 52 constables an average of one policeman to 2830 of the population.

The territory is remarkable for the number of suicides—31 males and 63 females in 1911.

In 1909 the Provincial Assemblies were inaugurated in China. On the Weihaiwei register of the electors entitled to vote or to become members of the Provincial Assembly of Shantung appeared about 500 names.

An ordinance was introduced in 1909 prohibiting generally the importation sale and smoking of opium or any other hypnotic except on medical grounds. A refuge was opened under the control of a medical officer for those who desired to rid themselves of the opium habit. The number of persons licenced to smoke opium in 1911 was 42 as compared with 50 in 1910 and 110 in 1909. The licenced smokers are either over 50 years of age or suffer from a chronic disease. The opium habit is becoming less prevalent and there are few young men who indulge in it. On the other hand cases of drunkenness which till recent years were very rare among the Chinese of Weihaiwei are now becoming more numerous.

The Revolution in China in 1911 caused an outbreak of disturbances on the Weihaiwei frontier which necessitated employing marines to guard the boundary. On the withdrawal of the marines a force of a hundred men of the Royal Inniskilling Fusiliers was sent from Tientsin to take their place. The city of Weihaiwei following the lead of the Treaty port of Chefoo declared itself in favour of the Republican party on the 14th of November.

The Commissioner of Weihaiwei is Sir James Haldane Stewart Lockhart K.C.M.G.

(H. SPOONER)

### Fiji

The total population at the end of 1911 was 142,661 as compared with 137,588 in 1910. During 1911 4,216 Indian immigrants entered as against 3,879 during 1910.

The colony continues to progress satisfactorily. A large area of native land has been taken up on leasehold and the industries have increased. The Sigatoka district, now opened up, promises to be one of the principal sugar producing districts. The field work of the trigonometrical survey of Viti Levu was completed during 1911.

In March 1910 the colony was visited by a hurricane which did considerable damage to buildings and plantations. Banana plantations and many acres of sugar cane were entirely destroyed, the latter being affected more particularly by floods in the low lying country where cane is principally grown. Damage to coco nut plantations was also considerable, but rubber plantations were unaffected by the wind.

Finance.—The revenue for 1911 amounted to £240,395 or £28,442 more than for 1910.

<sup>1</sup> See E B x 335

and £33 098 in excess of the original estimate. The expenditure for 1911 amounted to £265 347 which was £28 686 in excess of 1910. The principal increase in expenditure was for Public Works Extraordinary.

*Trade*—The bulk of the colony's trade continues to be conducted through Australia and New Zealand. The total trade during 1911 amounted to £2 233 285. In 1910 the figures were £1 833 847. The total trade with the United Kingdom and British possessions which is 88 per cent of the total trade increased from £1 747 283 in 1910 to £2 138 827 in 1911. An extraordinary increase in the quantity of green fruit exported is noticeable. This is due to the fact that the banana industry was not in 1911 affected by any serious cyclonic disturbance. The total area of land under sugar cane in December 1911 was estimated at 43 358 acres, from which was produced 488 534 tons of sugar cane. The estimated cultivated area under banana and pine apples was 4 692 and 230 acres respectively. The area under coco nuts was estimated at 37 562 acres. The principal minor export in 1911 was trocas shell locally known as *sica*. It is found abundantly on the reefs surrounding the greater part of the colony and is exported for use principally in France and Japan for the manufacture of buttons. It was placed on the list for the first time in 1910 and the export for 1911 amounted to £14 252 in value.

*Government*—Sir Francis Henry May, K.C.M.G. was appointed Governor of Fiji and High Commissioner for the Western Pacific in 1911 to succeed Sir Everard im Thurn, K.C.M.G., C.B. who retired in 1910. In 1912 Sir Ernest Bickham Sweet Escott, K.C.M.G. succeeded Sir F. H. May who was appointed to the governorship of Hongkong.

Among legal enactments during 1910 and 1911 was an ordinance providing for the raising of a loan of £100 000 for the reclamation of the Suva harbour and of harbour works at Suva and of works for the general sanitation of the town. Other ordinances relate to the taxation of buildings, the extension of restrictions regarding the sale of spirituous liquors and the consolidation and amendment of laws relating to lepers and the constitution of a Central Board of Health.

*Education*—During 1911 a special grant of £300 was allowed the Suva Public School for building purposes. The school has five teachers with an average attendance of 137.2. The Levuka school has two teachers and an average attendance during 1911 of 142.7. The education of natives is conducted mainly by the Wesleyan and Roman Catholic Missions. The former has 1002 schools with a total attendance of 16 525. The Roman Catholic Mission has 124 schools and in 1911 2293 native children were on the school rolls. The general question of education within the Colony was the subject of a commission which sat throughout 1909 but the steps to be taken are still under consideration.

*Judicial*—The total number of offences reported to the police was 6160 which was 14 more than in 1910. Of these reported offences 776 were offences against the person, 372 larceny, 141 offences against property (other than larceny) and the greater portion of the balance were offences against labour laws by indentured labourers.

*Climate*—The rainfall recorded at Suva during 1911 was 108.346 inches. In the previous year the rainfall was 107.812 inches. The greatest rainfall in any one day throughout the year was 15.907 inches on November 12th.

*Shipping*—The number of vessels visiting the Colony during 1911 was 151 with a tonnage of 295 477 as against 140 with a tonnage of 262 273 in 1910.

#### GILBERT<sup>1</sup> AND ELLICE ISLANDS PROTECTORATES

The population of the Protectorates in 1910 was about 30 000 of whom 150 were Europeans and 50 Asiatics. The natives are nearly all engaged in the copra industry but about 700 are employed by the Pacific Phosphate Company at Ocean Island and 100 by the owners of Fanning Island. An epidemic of dysentery caused a heavy death rate in 1908-09. The financial statement for 1910 showed an excess of liabilities over assets amounting to £5966. This adverse balance was caused by the purchase of the S. S. Tokelau and the erection of several residences for Government officials in 1909. The trade of the Gilberts was very much affected during the year by the prevailing drought which reduced the export of copra. But little progress was made during the year, the energy of the native officials being concentrated on combating famine. The export of phosphate of lime from Ocean Island amounted to 166 695 tons as against 119 425 tons in 1909.

#### TONGAN<sup>2</sup> ISLANDS PROTECTORATE

The population in 1909 was 21 958. The latest report dated 1910 and issued in 1912 stated that the islands are in a satisfactory financial and commercial condition, a condition of affairs brought about by the absence of drought and hurricane for a number of years. The general revenue for 1910 amounted to £44 007 as compared with £40 456 in 1909. The expenditure for these years amounted to £42 617 and £34 739 respectively. The imports in 1910 totalled £160 543 as against £152 870 in 1909 and the exports £245 946 in 1910 as compared with £217 155 in the previous year. The trade of the Protectorate could be considerably increased if the native government exercised a more efficient administration and made provision for an adequate supply of labour. Climate and soil are greatly

<sup>1</sup> See E B xii 11

<sup>2</sup> See E B ix 291

<sup>3</sup> See E B xxvii 3

in favour of agricultural development but labour is scarce and expensive. Copra continues to be the principal export 12 998 tons valued at £232 866 being sent away in 1910. About one quarter of the total output is shipped to Europe the balance going to Australia. The Tongan Islands are now a place of call for a line of steamers running between Australia and San Francisco. The shipping returns for 1910 consequently show a considerable increase. In that year 59 vessels with a tonnage of 104 403 entered. The Government College at Nukualofa was advanced by the appointment of a technical instructor in carpentry and the commencement of a Technical School.

#### SOLOMON ISLANDS<sup>1</sup>

The natives of the Protectorate are estimated to number 150 000. In March 1911 the white and foreign population numbered 443 as against 251 in 1909. The number of indentured labourers employed in the Protectorate at the end of March 1911 numbered 4500. In 1909 the number was only 2284. The revenue for 1910-11 amounted to £14 130 and the expenditure to £9493. The loan of £2000 made from the funds in the hands of the High Commissioner for the Western Pacific for the purpose of extinguishing certain claims to land preferred by German claimants in the islands ceded by Germany to Great Britain in 1900 was paid off in 1909-10 and the Protectorate is now free from debt. The imports for 1910-11 were £103 147 and the exports £88 890. Almost the whole of the import and export trade is with New South Wales. The coconut plantations in the Protectorate are developing rapidly. It is estimated that the area of these plantations owned by white men amounts to about 18 000 acres. The quantity of copra exported during 1910 amounted to 4030 tons and seems likely to increase. Ivory nuts rank next in importance to copra among the agricultural products. The nut is the fruit of a species of sago palm (*Calococcus solomonensis*) peculiar to the Solomon Islands. It grows naturally in swampy ground where it is also being cultivated. The nuts are used in the manufacture of buttons and other similar articles. Bananas of high quality are now being produced and have lately come upon the Sydney market but this industry is only in infancy. Rubber cotton and other fibres are still in an experimental stage but give promise of development. The shipping returns show that the number of British and other foreign going vessels entered and cleared in the Protectorate during 1910-11 numbered 82 with a total tonnage of 63 257. The total rainfall registered at Tulagi in 1910 was 133 40 inches. (A. BRUCE JACKSON)

#### Gibraltar

The population on April 2, 1911 was 25 367 (14 145 males, 11 222 females) in addition to 8 050 men on board H.M. ships in harbour.

Revenue (1910) £80 929 (1911) £94 573. Expenditure (1910) £76 410 (1911) £73 390. The shipping entered and cleared amounted in 1911 to 11 704 165, of which 7 143 083 tons were British. A scheme is in hand for the improvement of commercial facilities at Waterport. In August 1911 the removal of coal hulks was considered as their presence, as offering shelter to torpedo boats, was held to be dangerous in war, on the other hand their removal was viewed with concern by those interested in the coal traffic of the port.

The naval establishment was inspected on June 6, 1912 by Mr Asquith, Mr Winston Churchill and Admiral H.S.H. Prince Louis of Battenberg.

#### Cyprus<sup>2</sup>

The census of April 2, 1911 gave a total of 2,4 108 including the military population of this number 56 428 were Mahomedans and 217 680 non Mahomedans. There were 4658 males in excess of females.

**Agriculture**—As the result of two bad harvests in succession the year 1910 was not a prosperous one for Cyprus. There was a serious falling off in revenue and a trade depression which reacted on every industry and activity in the island. Wheat was below the average of the preceding five years, barley was a poor crop. The production of cotton on the other hand was almost double that of the previous year and there was a substantial increase of olives, carobs, grapes, pomegranates, oranges, lemons and silk. An exceptionally severe winter, succeeding late rains, had a disastrous effect on the flocks in the Famagusta district there was a decrease of nearly 12 000 sheep and 1500 goats. The outlook for the wine industry was gloomy and the relief works were continued in the Limassol district for the benefit of the vine growers. The crisis in the wine industry was suddenly relieved however by events in France and Italy which caused a brisk demand there for Cyprus wines. The output of wine was good and satisfactory prices were obtained.

In the seven nursery gardens in various parts of the island more attention is now given to the production of fruit trees, vegetables and economic plants than to the cultivation as heretofore of purely forest trees. In the experimental garden at Nicosia several thousand

<sup>1</sup> See E. B. xxv 364.

<sup>2</sup> See E. B. xi 938.

<sup>3</sup> See E. B. vii, 695.

fruit trees were planted during the year and a number of vines were also planted to provide cuttings later on. The cotton experiments with the varieties previously tried again gave good results. The distillation of essential oils is an important item in the work of the Agricultural department though the market appears to be somewhat limited. The art of basket making is now taught and a number have been made for fruit transport. The export of potatoes to Egypt has shown considerable expansion 35,271 cwt (value £8472) being sent away in 1911 as against 14,983 cwt (value £3839) in 1910.

The agricultural depression of 1910-11 affected the sale of building timber the receipts from which amounted to £3592 as against £3762 during the previous year. Two new forest stations have been started in the Famagusta and Nicosia districts. The expenditure on the forestry department amounts to about £13,000 per annum exclusive of the vote for special tree planting and the revenue represents at present only about 35 per cent of the cost though the foundations are being gradually laid of a large revenue in the future. Now that the destruction of trees has been stopped and systematic planting undertaken the island may again become one of the best timber producing areas in the Levant.

*Mining*—The asbestos mining industry is progressing steadily under considerable difficulties as regards labour and transport. During the year 417 tons of dressed asbestos were exported. It is hoped to increase production with the aid of improved machinery. Asbestos is present in practically unlimited quantities but the fibre is for the most part very short and the output does not in consequence possess a high market value.

*Trade*—The value of imports during the year 1910 exclusive of specie was £493,475 and the value of the exports £511,841 an excess of exports over imports of £18,366 whereas in 1909 there was an excess of imports over exports amounting to £130,643 due to importations of flour and the partial failure of the cereal and carob crop. The imports from the United Kingdom represent 26 per cent of the whole the exports to the United Kingdom 27 per cent of the total. The total number and tonnage of steam and sailing vessels entered and cleared in the foreign trade was 2,268 with a tonnage of 742,584 being a decrease of 90 steamers with 48,967 tons and an increase of 180 sailing vessels and 6517 tons.

*Finance*—The revenue collected in 1910-11 was £786,848 grant in aid £40,000 total £826,848. Expenditure £-51,521 tribute £92,799 total £544,320. The excess of expenditure over revenue was due to the fact that surplus balances of £17,670 were drawn on to meet a special Forest Estimate of £5,000 and a special Public Works Estimate of £12,670.

*Political*—Major Sir Henry Hamilton John Gould Adams G C M G K C B, was appointed High Commissioner in succession to Sir Charles A. King Harman K C M G and arrived in October 1911 to take over the administration.

On September 3, 1911 the Legislative Council was dissolved and elections for a new council subsequently took place.

On May 27, 1912 the troops had to be called out to quell a riot between Greeks and Turks. Four persons were killed 80 wounded. No Englishmen were hurt.

In August 1912 a deputation from the Greeks of Cyprus conferred with the British Colonial Secretary and asked for administrative reforms including an increased proportion of Greeks to Turks on the Legislative Council and also for the abolition of the tribute to Turkey of £42,000 a year.

Several measures of local utility were passed during the session of 1910. Of the most important was the law providing for the registration of trade marks.

*Education*—In 1910-11 there were 583 primary schools with 707 teachers and 30,779 scholars an increase of 12 schools 25 teachers and 1,203 scholars over 1909-10. The average daily attendance excluding harvesting time is estimated at 26,910. The schools were supported at an expense of £16,859 raised locally by assessment contributions from religious funds or individuals. The schools are apportioned amongst the following religious communities: Moslem (187) Greek Christians (387) Armenian (5) Maronite (4). The average attendance in Moslem schools was 4059 and in Greek Christian schools 22,159.

*Public Health*—At the end of 1910 an outbreak of smallpox occurred but this was checked by vigorous measures of isolation and vaccination. Malarial fever was less prevalent than in former years 6074 cases being returned as compared with 7450 in 1909 and 10,476 in 1908. The hospitals of the islands show an all round increase in attendance and admissions and important improvements have been made. At the close of the year the inmates of the Leper Farm numbered 99 and their lot has been considerably relieved by a substantial increase to the grant allowed them by the government.

*Climate*—The weather in Cyprus during 1911 was extremely varied as regards heat and cold. Snow fell on the central plains and remained on the ground some days an event which had not occurred for 13 years. The average rainfall over the whole island was 23.49 inches.

(A. BRUCE JACKSON)

Malta<sup>1</sup>

The civil population of Malta on April 1, 1912, was estimated at 215,332 as against 215,395 on the corresponding date of 1911. The total number of births in the two years was 7211. The birth rate in 1911-12 was 33.49 as compared with 36.12 per thousand in the previous year. The total number of deaths was 5286, as compared with 4612 in 1910-11. The death rate of the civil population in 1911-12 was 24.42 per thousand as against 21.42 in 1910-11. The general state of health in the island during the year was satisfactory except for an extensive epidemic of measles and some cases of cholera. Cholera broke out in an encampment which was formed to shelter refugees from the war in Tripoli. There were 116 cases, 85 of which proved fatal. The preventive measures taken were successful in stamping out the disease.

*Agriculture*—The total area of land under cultivation in 1911-12 was 41,866 acres while the area of uncultivated land was estimated at 4707 acres. The total area under cereals was 13,444 acres. The total yield of cereals including wheat, barley and mischriato (a mixture of both) was 22,457 quarters. The area under beans and other pulse was 2004 acres with a total yield of 3902 quarters. The area planted with potatoes was 4147 acres and the total yield was 448,454 cwt. Cummin seed was planted on 1594 acres. The total yield amounted to 11,430 cwt. The total quantity of oranges, lemons and mandarines gathered is estimated at 176,000 dozen. The acreage of land under cotton was 1100 acres the total yield was 187,340 lbs. The average price obtained was 6½d per lb. The quantity exported was 122,041 lbs. of this 22,015 lb were exported to the United Kingdom.

*Finance and Trade*—The revenue for 1911-12 amounted to £448,114 and the expenditures £467,783. The total expenditure on the garrison (including Militia) was £511,649. In 1910-11 the expenditure was £510,033. The total declared value of goods imported exclusive of bullion and specie and of goods imported for transshipment was £2,413,687. The total declared value of goods exported (exclusive of transshipments) was £750,427.

*Shipping*—The number of British steamers which called during 1911-12 was 997, tonnage 2,219,643. The number of foreign steamers was 1427, tonnage 1,871,595.

*Royal Commission*—In 1911 a Royal Commission sat to enquire into the unsatisfactory economic condition of the island and as to the best means to restore its prosperity. The conditions show a financial deficit, a decline in the shipping trade and an increasing population above the economic capabilities of the island. Malta has suffered severely from the gradual reduction of the Imperial garrison, naval and military, since 1902—a reduction which includes two battalions and six battleships. Moreover, the fleet has for the past few years been more or less frequently absent from Malta and it is estimated that this absence means a loss to the island of at least £1000 a day. On the whole the reduction of the garrison must mean a loss to the industries of Malta of not less than £400,000 annually. The financial position is now such that while the government expenditure continually increases the revenue diminishes.

In 1906 when the Admiralty works were completed the extra demand for labour which had arisen a few years before ceased and there began the growth of unemployment from which Malta is now suffering and which has been aggravated by a rapid increase in population. The former prosperity depended to a large extent upon Imperial expenditure in connection with the fortifications and military works and upon the expenditure of the garrison and the fleet. In 1905 9175 men were employed in the Naval establishment as compared with 5181 in 1911 while the reduction of employment under the War department has also been considerable. The demand for Maltese lace has greatly fallen off in recent years owing to the competition of machine made lace, chiefly from Germany. It has been suggested that a government agency for the sale of genuine Maltese lace should be established.

The Commission composed of Sir Francis Mowatt (chairman), Mr Russell Rea, Sir Mackenzie Dalzell Chalmers and Mr D. L. H. Baynes (secretary) emphasized in their report the fact that the difficulties, both financial and economic, from which Malta is at present suffering can be traced almost entirely to the growth of her population without a corresponding increase in the means of subsistence, no alteration in the system of taxation or other measure serving as more than a temporary palliative. The Commission also refers to the density of population and the impossibility of providing adequate employment by the development of existing industries or by the introduction

<sup>1</sup> See *E. B.* xvii, 307.

of new ones. This condition is yearly intensified by the high birth rate, and thus the standard of living tends continually to fall and poverty to increase.

The Commission makes the following recommendations among others—that in view of the importance of the agricultural industry to Malta this department should be developed and placed under an officer who would give his whole time to the work; that a committee should be appointed to conduct a thorough investigation into the expenditure of the government and to report what economies can be effected; that the scale and amount of expenditure on public works extraordinary should be cut down; that the annual contribution of £5000 paid to the Imperial government in aid of military services should be discontinued or that alternatively the island government should be authorised to charge a fair rent for all sites or buildings required by the Army or Navy for purposes other than fortifications; that the tax on imported grain should be reduced by half; the revenue thus lost being made up by increases in the duties on imported tobacco, beer and sugar, and the liquor license duties, and by the imposition of a general *ad valorem* duty on imported articles at present untaxed; and that information with regard to opportunities for emigration should be made readily accessible.

**Legislation**—Twelve ordinances were passed by the Council of Government during 1911. The most important of these relate to the management and regulation of customs, the criminal laws and the manufacture of spirit and artificial wine in the island.

**Education**—There are 101 day schools and 42 night schools. The enrollment in the day schools in September 1911 was 19,282. The night schools were attended by 2666 pupils. The strength of the teaching staff during the year was 766. The total cost of the elementary schools was £28,265. An average of 175 students attended the secondary school for girls. The average daily attendance in the secondary school for boys was 66. The daily average number of students in the Lyceum was 484. The average number of students who attended the University was 149 as against 222 in the previous year.

On January 24, 1911, the islands were visited by King George V and Queen Mary, who remained from the 24th till the 27th and received an enthusiastic reception.

**Climate**—The meteorological returns show a mean temperature for the year of 63.02° F. The total rainfall was 24.230 inches. Earthquakes were felt locally on September 30, October 16 and November 15, 1911. (A. BRUCE JACKSON)

## BRITISH EAST AFRICA

British East Africa comprises (1) the East Africa Protectorate, (2) the Uganda Protectorate, (3) the Sultanate of Zanzibar. The first two are administered through the Colonial Office and in status closely approximate to crown colonies. The Sultanate of Zanzibar is a protected State, its affairs being supervised by the Foreign Office. The East Africa Protectorate by itself is popularly known as 'British East Africa' but all three protectorates come strictly under the designation.

**The East Africa Protectorate**<sup>1</sup>—In 1912 the white population of the East Africa Protectorate was about 4,000, the Indian about 20,000. The native population was estimated at 4,000,000. The period 1900-12 witnessed a great development in the Highlands, that part of the protectorate suited for permanent occupation by Europeans. The area so available does not exceed Ireland in size. Nairobi the capital had (1911) 14,000 inhabitants (800 whites, 3,000 Indians). It contains handsome public and private buildings. A wireless telegraph station was erected in 1912. The whites are almost wholly engaged in agriculture, including dairy farming and stock raising. Sisal, hemp, black wattle (for tanning) and coffee are the chief products. Wheat, barley, maize, vegetables and cotton are also cultivated. Besides cattle, sheep and pigs, there are ostrich farms. During 1907-10, 62,000 acres of freehold and 1,718,000 of leasehold land were taken up, 1,141,000 being for grazing. Large areas near the coast have been planted for coco nuts, rubber, tobacco &c. The only mineral exploited is carbonate of soda, but coal was found in 1911 near the railway at Mackinnon Road Station.

Excluding government stores and specie exports rose in value from £515,000 in 1907-8 to £962,000 in 1910-11. Import (chiefly cotton goods, foodstuffs and agricultural implements) in the same period rose from £799,000 to £1,000,346. In 1911 60% of the imports came from the United Kingdom or British possessions and 10% from Germany. Of the exports

<sup>1</sup> See *E. B.* IV 601 *et seq.*

40% went to the United Kingdom France Germany and the United States taking nearly all the remainder in about equal proportions. The revenue rose from £485 000 in 1908-9 to over £700 000 in 1911-12. In the same period expenditure was approximately £700 000 each year. Up to 1912 grants in aid were made by the British treasury the amount so found in 1910-11 being £130 000. In 1912 the Protectorate became self supporting.

Traffic on the Uganda railway increased very rapidly as a result of the great agricultural development in Uganda as well as in the East Africa Protectorate. The total tonnage handled advanced from 60 000 tons in 1909-10 to 77 000 tons in 1910-11 and 100 000 tons in 1911-12. In 1912 nearly half a million passengers were carried double the number of three years previously. A new railway 93 miles long starting from the Uganda railway 282 miles from Mombasa was built in 1911-12 to the Magadi Soda Lake which lies towards the German frontier. It is owned by the company exploiting the soda but worked by the government. Another railway (30 m long) was built from Nairobi N.E. to the Thika river opening up one of the best parts of the Highlands. The Imperial government made in 1912 a loan of £750 000 towards railway improvements and the provision of a deep water pier at Kulindini. On July 2 1912 Mr H. A. F. Currie C.M.G. (b. 1866) who had been manager of the Uganda Railway since 1903 died. He was succeeded (in Oct.) by Mr H. B. Taylor Superintending Engineer Indian State Railway.

The passing of ten years since the first settler (Lord Delamere the 3d baron) made the Highlands his home has proved that climate and soil admirably suit the European constitution. The bulk of the farm work is done by the Kikuyu a race which has distinct aptitude for agriculture. The settlers were largely recruited from the upper and middle classes of England and by the end of the decade the Highlands were furnished with churches schools roads race courses fenced farms and substantial farm houses newspapers etc.

Sir J. Hayes Sadler, the governor was in July 1909 succeeded by Sir Percy Girouard. He achieved the somewhat difficult task of working in harmony with the white settlers, who chafed under crown colony administration and the long delays in obtaining land grants. In September 1911 the indignation of the whole white community was roused by the deportation of Mr Galbraith Cole (a pioneer settler and brother in law of Lord Delamere) by order of the British Colonial Secretary. Mr Cole after vainly seeking protection from native stock thieves shot dead a Kikuyu caught sheep stealing who attempted to escape. Tried at Nairobi for murder the jury had acquitted Mr Cole without leaving the box. One result of this episode was an endeavour by the administration to afford the settlers better protection. On July 17 1912 the resignation was announced of Sir Percy Girouard who had accepted an offer to join the engineering firm of Armstrong, Whitworth & Co. in England. Mr H. C. Belfield the new governor who had served for 25 years in the Malay States reached East Africa in October 1912.

**Uganda.**—The delimitation of the western and south western frontiers of the Uganda protectorate, where they adjoin Belgian Congo and German East Africa was completed in 1912. As a result a large tract of country north of Lake Kivu was brought under British administration while that part of the protectorate west of Lake Albert was handed over to Belgium. The area of the protectorate is now given as 117 681 sq. m.

At the 1911 census the population was returned at 2 843 325 including an estimate of 378 000 for natives in districts not under administrative control. The European population was 640 (including 203 government servants and 187 missionaries). Asiatics numbered 2,216 (chiefly traders and clerks). The increase in population despite the ravages of sleeping sickness<sup>2</sup> was testimony to the prosperity of the country. The Baganda (most of whom are Christians) totalled 558 000, the Banyoro the next largest race 270 000. Mengo had 32,441 inhabitants, Entebbe, on Victoria Nyanza 9,569.

The years 1909-12 witnessed an unexampled development of cotton growing the firm establishment of coffee plantations and a general expansion of trade. Besides cotton and coffee there is a large trade in chillies and in hides and skins and in 1911 plantation rubber as apart from wild rubber first appeared in the export list. Wheat is grown in Toro and on the foot hills of Mt. Elgon. The cultivation of the cotton is almost entirely in the hands of natives the purchasing and collecting being the work mainly of Indians while the ginning and exporting is done by European firms. In 1912 as the result of three year investigation, pure long staple varieties of cotton—Sunflower and Allen's Improved—

<sup>1</sup> See E. B. xxvii 557 *et seq.*

<sup>2</sup> By 1910 in which year the deaths from the disease were 1 546 sleeping sickness had been got under control.

were substituted for the hybrids previously cultivated. The value of the cotton crop £41 000 in 1908-9 was £165 000 in 1910-11 and over £250 000 in 1911-12. The imports (merchandise only) rose in value from £288 000 in 1909-10 to £347 000 in 1910-11 and exports increased from £225 000 to £340 000. In 1909-10 revenue (including a grant in aid of £103 000) was £268 000 in 1910-11 it was £287 000 though the grant in aid was reduced to £96 000. The expenditure in the two years was £240 000 and £252 000.

The railway from Jinja near the Ripon Falls along the Victoria Nile was completed to Namasagali—58 m—in December 1911. It cost £170 000. This railway connects with a steamer service on Lake Kioga and opens up Bukedi where a rich soil and a well defined dry season provide exceptional opportunities for cotton growing. In 1912 the Imperial parliament voted £100 000 for the provision of metalled roads suitable for motor traffic in this region. A railway from Port Bell to Kampala (20 m) built 1912 marked the beginning of a trunk line from the Victoria to the Albert Nyanza.

The Baganda continue to prove themselves a most progressive type of negro. Some 8 000 are in government service over 32 000 of their children were in Anglican schools alone in 1911. The native government is in the hands of Sir Apolo Kagwa, K C M G and two co regents. The Kabaka (king) Daudi was 16 on August 8 1912.

In March 1911 Mr F J Jackson C B, succeeded Capt H E S Cordeaux (who was appointed to St Helena) as governor of Uganda. Jackson had played an important part in bringing Uganda under British protection and since 1889 had served continuously either in Uganda or in the East Africa Protectorate.

**Zanzibar**—The Sultan of Zanzibar Ali bin Hamud abdicated November 15 1911 and on December 9th his son Khalifa bin Harub a child of six was proclaimed Sultan by the British. Ali bin Hamud had been educated in Europe and he preferred the freer life and wider interests of Europe to his throne. The native administration is under the general control of the British Agent—Mr Edward A W Clarke who succeeded Mr Basil S Cave (appointed consul general at Algiers) in 1909. Capt F R Barton C M G is First minister to the council of regency.

The population of Zanzibar island at a census taken in 1910 was 114 069 that of Pemba being 85 130. Zanzibar city had 35 262 inhabitants. The Arab aristocracy—large land owners—number about 20 000 there are an equal number of British Indians and about 300 Europeans. The transshipment of goods to and from the mainland of East Africa and the growing of cloves are the main sources of wealth. The value of cloves exported in 1910 was £253 000 compared with £330 000 in 1909. In 1911 the crop was estimated at £300 000. Copra cultivation is increasing the export in 1910 was £19 000 almost double the figure for 1909. Nearly all the other exports figure also as imports they are goods in transit. Zanzibar has been to some extent replaced by Mombasa (British East Africa) and Dar es Salaam and Tanga (German East Africa) as the distributing centre for Indian and European goods. This is due to the extension of direct steamship communication between India and Europe and the mainland of East Africa and to the establishment of equal rates of freights to Zanzibar and the coast town. The exports from Zanzibar to the mainland of East Africa piece goods petroleum rice sugar &c received from abroad and transhipped fell in the ten years 1901-1910 from £54 000 to £348 000. In the same period the value of goods received from the mainland decreased from £341 000 to £242 000. But Zanzibar retains its position as the chief city of East Africa in native estimation and it remains the headquarters of the principal Indian merchants trading with East Africa and the centre of the dhow traffic on the coast. The tonnage of vessels clearing the port in 1910 was 682 000 the external trade was valued at £2 026 000. The British proportion of the trade declined from 55% in 1908 to 47% in 1910. Customs revenue in 1910 was £107 000 the total revenue £181 000 and the expenditure £192 000.

See the Colonial Office reports on East Africa Protectorate and on Uganda, and the Consular reports on Zanzibar. Lord Cranworth *A Colony in the Making* (London 1912). Ward and Milgum *Handbook of British East Africa* (Nairobi and London 1912). John Roscoe *The Baganda* (London 1911). (F R. CANA)

<sup>1</sup> See E B xxviii 957 et seq

BRITISH SOMALILAND<sup>1</sup>

During 1910 the British troops were withdrawn from the interior of Somaliland. The arrangements made for organising the tribes in the protectorate and providing them with arms for defence against the Mullah Mahammed—the Mad Mullah—led only to inter tribal fighting and anarchy. The Mullah remained in Italian territory and in October 1912 was officially reported to be suffering from an incurable disease.

The revenue for the years 1909-12 varied from £30 000 to £32 000. The expenditure £192 000 in 1909-10 (owing to military operations) had dropped in 1911-12 to £74 000. Deficits are met by grants. The trade was valued at £490 000 in 1909-10 and £484 000 in 1911-12.

Gums (Arabic myrrh etc.) hides and skins, ghee, coffee and pearls are the chief exports. The decrease of trade between Zaila and Harrar continued owing to the competition of the railway from Jubbti. The pearl fisheries at Zaila increased in value. Berbera was placed in wireless telegraphy communication with Aden in 1911.

Mr H A Byatt C M G who became commissioner of the protectorate in 1911 had served in Somaliland since 1905.

See the Colonial Office Reports and R E Drake Brockman *British Somaliland* (London 1912) (F R CANA)

## NYASALAND

The period 1910-12 was one of prosperity in Nyasaland. The population in 1911 was natives 969 183 (as against 927 355 in 1907). Europeans 766. Asiatics 481. The natives proved both peaceful and contented. Witchcraft and trial by ordeal were rendered illegal in 1911. Sleeping sickness slowly extended despite every effort to arrest it. The spread of the tsetse fly involved the closing of many roads to animal transport. This difficulty being met by the construction of metalled roads along which motor vehicles can ply, but of the 3 156 miles of road in the Protectorate in 1911 only 23 miles—between Blantyre the chief commercial centre and Zomba the administrative capital—were macadamised.

The external trade of the Protectorate in 1910-11 amounted to £368 000 and in 1911-12 to £446 000. To the United Kingdom in 1911-12 went produce valued at £179 000 and from it came goods valued at £194 000. The cultivation of coffee at one time Nyasaland's staple product gradually diminished since 1899-1900. In 1909-10 the export of coffee was valued at £15 500 in 1910-11 it had dropped to under £7 000. In 1911-12 it rose to £16 000 a temporary increase due to exceptionally suitable weather conditions. Cotton (£59 000) was the chief export in 1910-11 having more than doubled in a year. Owing to late export of part of the crop there was a drop in 1911-12 to £58 000. Tobacco exports were £42 000 in 1910-11 and £53 000 in 1911-12. Rubber exports in 1911-12 were £10 000.

A great obstacle to the expansion of trade was the inadequate communication with the outer world due to the persistent diminution of water in the lower Shire so that steamers ascending the Zambezi were frequently unable to reach Port Herald whence a railway runs to Blantyre. During 1912 the Imperial Government arranged to extend the railway south from Port Herald to the Zambezi the line to be continued eventually to Beira. In October 1912 the Portuguese government signed a contract with a Belgian group of financiers for the building of the part of the line from Beira to the Zambezi.

The revenue of the Protectorate was £94 980 in 1910-11 and £97 356 in 1911-12. Expenditure was £112 369 in 1910-11 and £118 070 in 1911-12. Deficits are made good from the British treasury. The institution in 1911 of a land tax of one halfpenny an acre per annum on all lands held by non natives became a valuable source of revenue. The tax on native huts was raised in 1911 from 3s to 4s and from 6s to 8s for low and high grades respectively. The tax yielded in 1911-12 £50 900.

Sir Alfred Sharpe (b 1853) who had served in official capacities in Nyasaland since 1891 and had governed the Protectorate since 1897 retired in 1910. He was succeeded by Sir W H Manning (b 1863) the officer who raised the Central Africa regiment and commanded the Somaliland Field Force in 1902-3 (see E B xxv 382a) and who from January to November 1910 was Commissioner of that Protectorate. (F R CANA)

MAURITIUS<sup>2</sup>

The population of Mauritius at the census of 1911 was 368 791 a decrease of 2 232 compared with 1901. Males exceeded females by 22 000. Port Louis the capital had a pop of 50,060 a decrease of 2 680. As Mauritius has an area of only 716 sq miles the density of population—514 per sq mile—is one of the greatest in the British Empire. Indian immigrants and their descendants constituted about 70% of the total population while the negro type had almost disappeared. The dependencies had 6,690 inhabitants in 1911. Rodriguez the largest (area 42 sq miles) had a population of 4 829.

Mauritius continues to yield practically nothing for export besides the products of the

<sup>1</sup> See E B xxv 381.

<sup>2</sup> See E B iv, 595 et seq. (British Central Africa.)

<sup>3</sup> See E B xvii 913 et seq.

sugar cane. Moreover it produces little else for home consumption. Dependent on a single industry the colony suffers when that industry is depressed. Owing to the high price fetched by sugar the colony during 1910-11 attained however a sounder position than it had held for years. The value of imports in 1909 was £1 800 000 in 1910 it had increased to £2 333 000. Exports in 1909 were valued at £2 295 000 and in 1910 at £2 435 000. About 79% of the total imports came from the United Kingdom and British Possessions to whom went nearly 99% of the exports.

The sugar crop of 1910-11 exclusive of sugar for local consumption was 214 372 tons (metric) as compared with the record 1909-10 crop of 246 560 tons the value was £2 000 000. Over 144 000 acres one third of the whole area of the island were in 1910 under sugar cultivation. There were at the same time sixty two sugar factories working. The colony's three largest customers for sugar were in 1910 British India 146 510 tons (metric), the United Kingdom 47 316 tons and Cape Colony 19 137 tons. Great improvements have been made in the manufacture and steam ploughs have been introduced for work in the cane fields but much of the land under cultivation is rocky and hand labour has not been superseded. Aloe fibre and vanilla are the only other exports of any note. Imports of tea have increased considerably although locally grown tea has been found very satisfactory and nearly £60 000 worth of culinary oils etc. was imported in 1910 notwithstanding that the soil and climate are eminently suited to the cultivation of oil bearing plants and trees. Experiments in the cultivation of cotton have been made.

The revenue for the financial year 1909-10 was £720 000 considerably exceeding that of any previous year. The expenditure was £630 000. In 1910-11 the revenue was £742 000 and the expenditure £638 500. The net debt of the colony in 1911 was £1 296 000.

Sir Cavendish Boyle (b. 1849) after serving as Governor of Mauritius for eight years retired in 1911. He was succeeded by Major John Robert Chancellor (b. 1870) an officer who had served with distinction in the Tirah Expedition (1897-98) and in other campaigns and who had been Secretary to the Imperial Defence Committee.

See A. Walter *1911 Census Report* (Port Louis 1911) and *Report of the Mauritius Royal Commission* (Cd. 5186) issued in 1910 a valuable guide to the economic condition of the colony. (F. R. CANA.)

#### SEYCHELLES<sup>1</sup>

The population of Seychelle at the 1911 census was 22 691 (148 per sq. m.) of whom only 2 159 were not born in the islands the increase in ten years was 3 454 or 18 per cent. 85 per cent. are Roman Catholics.

The value of exports in 1911 fell to £126 867 from £149 467 in 1910 and imports were £90 163 as against £98 460 in the previous year. The United Kingdom and British Possessions took about a quarter of the total. France with purchases to the extent of £47 000 was the colony's best customer. The chief article of export was copra valued at £51 000 guano (£43 800) coming second. It is estimated that at the present rate of exploitation the supply of guano will not last beyond 1920. Vanilla (£15 533) was spoiled by unseasonable rainfall and the crop was one of the smallest on record since 1907 when the value of the harvest was nearly £67 000. Cinnamon bark comes fourth on the list the trees were introduced during the French rule about 1775 but their cultivation was abandoned almost immediately and the trees spread through the forest and were neglected until 1908. A ton of tortoise shell was exported to London and Paris. Experiments have been made in the rearing of young turtles from the eggs in enclosed areas. The turtles grow more quickly in confinement and the weight of the shell is proportionately greater. Most of the imports came from the United Kingdom and British Possessions the total for 1911 being £74 067 as against £16 047 from other countries. The chief import was rice which India supplied to the value of £16 333. Methods of agriculture have been improved and coco nut plantations in particular show the results of more scientific treatment. Many thousands of seedlings have been planted out from the seeds of rubber trees growing in Seychelles and in 1911 rubber appeared for the first time as an export.

The revenue in 1911 was £36 333 and the expenditure £34 133.

In October 1912 Mr W. E. Davidson (b. 1859) who became Governor of Seychelles in 1904 was appointed Governor of Newfoundland and Lieut. Col. C. R. M. O'Brien (b. 1859) Colonial Secretary of the Gambia (who had served with distinction throughout the Anglo-Boer War 1899-1903) was made Governor. (F. R. CANA.)

#### BRITISH WEST AFRICA

In West Africa the British colonies and protectorates form separate governments directly dependent upon the Colonial Office in London. They are (1) the Gambia (2) Sierra Leone, (3) the Gold Coast with Ashanti and the Northern Territories, (4) S. and N. Nigeria. In every part of British West Africa the outstanding features of the period 1910-12 were practically unbroken public peace and a remarkable development of trade.

<sup>1</sup> See E. B. xxiv 751 et seq.

and improvement of means of communication. But the need of securing the natives in the unfettered enjoyment of their lands, as a condition necessary for the permanent prosperity of each of the colonies and protectorates led to the appointment (June 26 1912) of a Committee by the Colonial Secretary (Mr L. Harcourt) to consider the laws relating to the transfer of land in British West Africa with a view to seeing how far it was feasible to extend the system adopted in N. Nigeria where the whole of the country is held in trust for the native inhabitants. Sir Kenelm Digby was appointed Chairman of the Committee whose members included Sir F. M. Hodgson an ex Governor of the Gold Coast and Mr E. D. Morel well known for many years persistent advocacy of native rights on the Congo and elsewhere in tropical Africa.

**Gambia** <sup>1</sup>—The census taken in 1911 showed that the population of the Island of St. Mary at the mouth of the Gambia on which is built Bathurst, the capital was 7,700 compared with 8,807 in 1901. The population of the protectorate mainly Jolloff and Mandingo was 138,401 or 15,000 fewer than was estimated for 1907. In 1911 for the third successive year the revenue (£86,454) exceeded previous records the expenditure being £71,390. In 1910 for the first time the value of the trade reached over a million sterling the figure being £1,134,460 and in 1911 it rose to £1,499,000 imports being valued at £807,000 and exports £682,000. The ground nut industry is the main occupation of the people and while it continues so lucrative the efforts of the Administration to widen the basis of prosperity meet with little success. In the five years 1907–11 the value of the crop varied from £245,000 to £437,000 (1911 tonnage 47,000).

Consisting of a narrow strip of land on either side of the lower Gambia the protectorate is hemmed in by French West Africa and the commerce (though not the shipping) is largely in the hands of French firms established at Bathurst. The trade in ground nuts is almost wholly with France and in 1911 84.8 p.c. of the exports (excluding specie) went to France and her Colonies. The British Empire took 6.3 p.c. and Germany 5.6 p.c. France had also about 4.5 p.c. of the import trade Great Britain coming next with about 3.0 p.c.

In September 1911 Sir George Denton (b. 1851) who had administered the Gambia for nearly eleven years retired. He was succeeded by Col. Sir H. L. Galway (b. 1859).

See H. F. Reeve *The Gambia* (London 1912) an excellent monograph by a retired official Sir G. Denton. Twenty Three Years in Lagos and the Gambia. *Int. African Soc.* Vol. XI (1912) and the Annual Reports issued by the Colonial Office.

**Sierra Leone** <sup>2</sup>—By a treaty with Liberia signed on the 21st of January 1911 the south-eastern district of Sierra Leone lying south of the Morro river was ceded to the Republic in exchange for the district of Kanre Lahun (see map in E. B. XI. 04). Immediately north of the Anglo-Liberian frontier the Anglo-French boundary underwent a modification (exchange of notes July 6, 1911) resulting in the transference to Sierra Leone from French Guinea of a narrow strip of territory with an area of 1,559 sq. m. The census of 1911 gave the population of the Colony at 75,572 while that of the Protectorate was estimated at 1,327,560. The figures for the chief tribes were: Mendi 44,000 Sherbro 107,000 both pagan Timini 347,000 Limba 110,000 Konnoh 61,000 the last three Moslem (more or less). The European population was 650 (as against 309 in 1901), while the Syrians (who have obtained a considerable share of the petty trade of the country) had increased from 4, in 1901 to 175. Freetown the capital and one of the finest ports in West Africa, had a population of 34,090. There has been a general increase both in commerce and in agriculture but the primitive and wasteful methods of farming adopted by the natives are leading to the disappearance of the dense forest lands—with unfortunate results, especially on the mountain slopes and tops where in two years virgin forest may be turned into bare rock (see "Forestry" by Mr G. B. Haddon Smith in the Colonial Office report on Sierra Leone for 1910). The first step towards the reservation of forest land was made in 1911.

The commercial prosperity of Sierra Leone continues to be bound up with the products of the oil palm—constituting 72 p.c. of the domestic exports in 1911. Next in importance comes the Kola nut a universal article of diet among the natives of West Africa, scarcely any of the nuts reach Europe. In the five years 1907–11 the value of the exports rose from £831,000 to £1,300,000 that of the imports from £988,000 to £1,267,000. The total revenue for the same period increased from £359,000 to £457,000 the corresponding figures for

<sup>1</sup> See E. B. XI. 437 *et seq.*

<sup>2</sup> See E. B. XXV. 54 *et seq.*

expenditure being £345 000 to £432 000. At the close of 1911 the colony had a funded debt of £1 255 000. Great Britain's share of the import trade in 1911 was 75% of the export trade 24%. Germany ranks first (30%) in the export trade as a result of the gravitation of the palm kernel trade to Hamburg where there are large factories with the most modern machinery for extracting the oil from the kernels and making use of the waste products. The shipping statistics for 1911 showed a total tonnage of 1 246 000 68% being British compared with a tonnage of 993 000 in 1910 when the British percentage was 77%. The German tonnage rose from 13 55 in 1910 to 18 67 in 1911.

The expansion of trade depends largely on opening up new oil palm districts and as the tsetse fly renders animal transport impossible attention is directed to other means of locomotion. A branch line (90 m. long) from the main railway begun in 1910 and completed in 1912 runs northward from Boia (S.E. of Freetown) and crossing the Rokell river reaches Makene the centre of one of the richest palm belts in the country. The opening up of the Hinterland by feeder roads also continues. A notable feature in the history of the country is the spread of Islam coupled with a general desire for education. During 1911-12 a Government Model School was built at Freetown. In districts where Moslem influence is strong a high degree of sobriety and of amenability to good order prevails.

The visit of the Duke of Connaught to Freetown in December 1910 was an event of more than ceremonial importance. There were present from the Protectorate chiefs of many tribes which had fought hard against British dominion and the cordial manner in which they were received by the uncle of King George has been told in every corner of the country. In April 1911 Sir Edward Marsh Merewether (b. 1858) formerly Lieut. Governor of Malta became Governor in succession to Sir Leslie Probyn transferred to Barbadoes. By the death of Dr E. W. Blyden at Freetown on February 7 1912 at the age of 80 the British Empire lost a distinguished negro scholar and official (see *E. B.* xxv 56d and vii 541d).

See the annual reports on Sierra Leone issued by the Colonial Office. J. F. Aldridge *Sierra Leone and its Commercial Expansion* *United Empire* Vol. 2 1911. Major R. G. Berry *The Sierra Leone Cannibals* *Proc. Ryl. Irish Assn.* 1912.

**Gold Coast**<sup>1</sup>—The census of 1911 gave the total population of the Gold Coast Ashanti and the Northern Territories as 1 503 386 equal to 18/ per square mile. The number in the Gold Coast proper was 853 766 in Ashanti 287 814 in the Northern Territories 361 806. In all there were 1 625 Europeans. The increasing prosperity of the Gold Coast is shown in the returns of trade and revenue in the absence of inter tribal disputes, in the development of agriculture and in marked improvement in sanitation.

The revenue for the financial year 1911 which amounted to £1 111 000 surpassed that of all previous years and exceeded the expenditure by £197 000. The revenue in 1910 had been £1 006 000 and the expenditure (including £149 380 repayment of loans) £924 862. The public debt on December 31 1911 was £2 489 000. The value of the seaborne trade increased from £5 049 000 in 1909 and £6 137 000 in 1910 to £7 576 000 in 1911. The imports for 1910 were £3 439 000 for 1911 £3 784 000 the exports for 1910 were £697 000 for 1911 £3 792 000 an increase of 40%. Cotton goods and spirits are the principal imports. The Gold Coast in addition imports much machinery and lumber for the mines. Cocoa gold rubber and palm oil and kernels are the chief exports. The cocoa industry which is entirely in native hands has had a great development. In the two years 1910-11 the export was almost doubled in quantity and more than doubled in value. The figures for the three years 1909-11 were 1909 quantity 45,277 000 lbs. value £755 000 1910, quantity 50,692 000 lbs. value £866 000 1911 quantity 88,987 000 lbs. value £1 513 000.

The gold mining industry is firmly established. The value of the gold mined during the first ten months of 1912 was £1 215 000 as against £1 069 000 for the whole of 1911 which was itself an increase of £313 000 over the figures of 1910. The mines of the Ashanti Goldfields Corporation export nearly half the total yield. About 20 000 natives are employed in the mines or in dredging the river beds for alluvial gold 15% of the gold being obtained from alluvium. Besides cocoa and gold rubber lumber and oil palm products are the chief exports. Some 80% of the total trade is with the United Kingdom but Germany has a large share of the shipping the tonnage of the German ships cleared in 1911 being 438 000, British ships 773 000 and French ships 113 000—the total tonnage being 1 326 000.

Sir John Pickersgill (1851-1910) who had been Governor for seven years retired in September 1910, and shortly afterwards died in England. He was succeeded by Mr J. J. Thorburn—who had previously served in Ceylon and Lagos. Mr Thorburn retired from the Colonial service in August 1912, and Sir Hugh Clifford (b. 1866) then Colonial Secretary of Ceylon, was appointed Governor. During 1911 Sir William Brandforth Griffith, Chief Justice since 1895, who had done much to codify the colony's laws retired and was succeeded by Sir P. C. Smyly, Chief Justice of Sierra Leone.

<sup>1</sup> See *E. B.* xxi 203 et seq.

A new and valuable direction has been given to education by the adoption of a combined system of literary and technical instruction in every Government assisted primary school. A Government Training Institution for teachers and a Technical School have been opened at Accra. The new system has the cordial co-operation of the missionary societies on whom has fallen hitherto the bulk of the burden of education.

The history of Ashanti<sup>1</sup> has been one of marked development. Much of the success of the administration is attributable to the wise guidance of Mr F. C. Fuller, Chief Commissioner since 1905. The Ashanti and allied tribes, having a comparative high mentality, have adapted themselves more readily than was expected to the changed conditions following the establishment of British rule and have become keen agriculturists—cultivating cocoa, rubber and kola nuts. The town of Kumasi (pop. 18,853 in 1911, 93 being Europeans and 23 Syrians) is a great trade centre and contains many handsome buildings, some of them owned by Ashanti chiefs. Christianity is making progress—the Christian population in 1911 was 6,000—while Islam finds few converts.

In the Northern Territories of the Gold Coast—an open park-like country for the most part—there is a marked improvement in the condition of the people, the last tribe to dispute the authority of the British—the Zouaragu—having been subjugated in 1910. The protectorate is purely agricultural and pastoral; the chief exports, which are sent mainly to Kumasi, being live stock, shea butter and dawadawa. A small amount of cotton is raised. The energies of the Government have been largely directed to establishing and maintaining the legitimate authority of the chiefs, the country formerly being in an anarchical condition when each man did what was right in his own eyes.

See the Annual Reports on the Gold Coast on Ashanti and on the Northern Territories published by the Colonial Office, London. Major F. G. Guggisberg, *Mapping the Gold Coast and Ashanti in Trans. Liverpool Geo. Soc.* 1910. Mary Gaunt, *Alone in West Africa* (London 1912). J. A. Barbour James, *The Agricultural and Other Industrial Possibilities of the Gold Coast* (London 1911). L. P. Bowler, *Gold Coast Palayer* (London 1911).

**Nigeria**<sup>2</sup>—The unification of the protectorates of Southern and Northern Nigeria was decided upon early in 1912. Sir Frederick Lugard (*E. B.* xvii, 115) was selected as Governor of both protectorates, succeeding Sir Walter Egerton in S. Nigeria and Sir Hesketh Bell in N. Nigeria. Sir Frederick (whose appointment was gazetted on May 17th) did not arrive in Nigeria till October 1912. In both protectorates there was a marked development of trade in the period 1910–12, while the social condition of the people underwent rapid changes. The only part of S. Nigeria not brought under administrative control by the middle of 1912 was a small area in the N.E. corner inhabited by the Munshus, a wild pagan tribe.

The population of Nigeria is approximately 18,000,000 of whom 400 are Europeans. The census of 1911 gave S. Nigeria 7,858,689 inhabitants and N. Nigeria 8,110,631, but 9,270,000 is considered a more accurate figure for the northern protectorate. The population per sq. m. is 98 in S. Nigeria and about 40 in N. Nigeria. Yoruba numbers about 2,000,000, Ibo about 3,000,000. The Yoruba—readiest of all West African tribes to adapt themselves to Western civilisation—inhabit the Western Province of S. Nigeria through which the railway from Lagos to the Niger passes. Their chief towns are Ibadan (pop. 75,000 in 1911), Ogbomosho (80,000), Abeokuta (51,253), Oshogbo (59,821). In contrast to the Western Province, where Yoruba is practically the only language, the census of 1911 revealed in the Central and Eastern provinces of S. Nigeria 57 different languages with 82 distinct tribes. In N. Nigeria two to three hundred different languages are spoken, Hausa being the widest spread. The only towns of more than 30,000 inhabitants in N. Nigeria are Kano (39,368 in 1911) and Ilorin (36,343).

In S. Nigeria the energies of the administration were chiefly concentrated on sanitation, the clearing of the network of waterways which form the Niger delta, the building of roads, and the putting down of inter-tribal disputes. At Lagos, the capital (pop. 73,766 in 1911), great harbour works were begun to enable steamers draught 24 ft. to lie alongside the quay. Large areas of swamp land have been reclaimed at Lagos and

<sup>1</sup> See *E. B.* ii, 724 et seq.

See *E. B.* xix, 677 et seq.

Forcados (pop 3 180) the port for steamers ascending the Niger. Throughout Yoruba land increased attention has been paid to education—several technical schools being established—and there is springing up a group of intelligent thinking men, born and educated in Southern Nigeria, who are imbued with love of their country and are devoting themselves to its service. In the Hausa States and Bornu in N Nigeria—as among the Yoruba in S Nigeria—the administration rules through the native governments. The establishment in 1911 of a *Beit el Mal* (State Treasury) in all the Hausa Emirates was an important step towards securing purity in the public services. From the *Beit el Mal* the native judges and other functionaries receive fixed salaries. At the same time the Emirs were given civil lists in lieu of depending upon what share they could get from the imposts levied on the people. The Land and Native Rights Ordinance 1911 established the system of native land tenure on an inalienable basis.

Nigeria with 80 000 sq m of dense forest still depends mainly upon itsylvan products but since 1910 its mineral resources have leapt into importance. The mineral survey of S Nigeria revealed the existence of lignite at Asaba 15 m W of the Niger and of enormous deposits of coal at Udi some 50 m E of the Niger at Onitsha. A survey for a railway to connect the Udi coalfield with Onitsha was made in 1912. In N Nigeria the exploitation of the tin fields in the province of Bauchi attained large proportions. Mining which began in a small way in 1902 attracted little attention till 1909. Since then over £3 000 000 capital has been invested in the field which is alluvial and covers some 2 500 sq m. Exports of tin ore rose from £38 000 in 1909 to £72 000 in 1910 and £181 000 in 1911. In that year 1 470 tons of tin were exported from Jan 1st to July 31 1912 the export was 1 489 tons (value not stated). In October 1912 the Colonial Office announced that pending a systematic survey of the tin mining area no mining leases or prospecting licences would be granted to new applicants.<sup>1</sup> Rich reefs of galena carrying a considerable silver return have been found in the province of Muri along the middle Benue.

The completion of the railway from Fero to Kano in March 1911 proved a potent factor not alone in the development of trade but in its influence on native life and thought. In the first year of working the receipts on the Fero-Kano railway came to about £70 000. The railway is 3 ft 6 in gauge and 356 miles long. In 1911 also the railway from Lagos was extended till it joined the Northern Nigeria line at Minna (250 miles from Lagos) the Niger being bridged at Jebba. A 2 ft 6 in gauge railway was built in 1911 from Zaria on the main line eastward to Rahammi at the foot of the Bauchi Plateau and 40 m W of Naraquta the headquarters of the tin field. It is 90 m long and cost £2 000 a mile. Like the other Nigerian railways it is State owned and State worked.

During 1909–11 the volume of trade passing through S Nigeria rose from £8 600 000 to £10 388 000 excluding the goods in transit to Porto Novo in Dahomey. In 1910 £546 000 and in 1911 £726 000 of the total was credited to N Nigeria as the value of imports and exports by commercial firms. Palm kernels valued in 1911 at £2 574 000 and palm oil (£1 696 000) were the chief exports. Rubber and cocoa were next in importance. The export of cocoa in 1911 (9 858 000 lbs) showed an increase of 50% over 1910 its value was £164 000. Cotton despite fluctuations in the crops gave promise of expansion. Cotton cultivation for export also progressed in Northern Nigeria. Up to 1912 the price fetched by native cotton for local manufacture exceeded one penny per lb the highest price offered by the British Cotton Growing Association. From N Nigeria the chief exports during 1910–12 were palm kernels shea nuts rubber gum and tin. The bulk of the trade of Nigeria, as also the shipping is in British hands though increasing competition is being met with from German and French firms.

In 1911 the revenue of S Nigeria was £1 956 000 the highest on record. Of this £975 000 was derived from duties on imported spirits and £307 000 (£130 000 net profit) was railway revenue. Expenditure was £1 717 000. On March 31 1912 the public debt of S Nigeria was £6 471 000. A loan of £5 000 000 was floated in 1911 calls to the end of the year being £5 223 000. In N Nigeria in the financial year 1910–11 the total local revenue was £275 000 compared with £178 000 in 1908–9. In 1911–12 it was £545 000 (including a sum of £106 000 on account of native local administration, the corresponding sum not being shown in the 1910–11 statement). The expenditure in 1910 was £565 000 compared with £540 000 in 1908–9. In 1911–12 it was £827 000. In N Nigeria the importation of trade spirits is forbidden and the chief source of revenue is the land tax—in reality a *pro rata* property tax—which increased from £124 000 in 1908–9 to £217 000 in 1911–12. (The land revenue is really double the figures given one-half the amount collected being retained by the native government for local needs.) Deficits on the N Nigeria revenue were met by grants in aid from the Imperial government and as to £70 000 from the S Nigeria treasury.

<sup>1</sup> In some districts the presence of prospectors was resented. Mr Campbell a mining engineer was murdered in June 1912 at Ninkada Nassarawa province by Mada pagans against whom a small force was sent the Mada sustaining about 180 casualties.

ury The revenue of the *Beit-el Mal* amounted to over £200,000 in the first year of its institution In N Nigeria in the Moslem regions (i.e. the Hausa States and Bornu) all government schools where purely secular education including crafts and agriculture is given Hausa is taught in Roman characters As among the Yoruba and the Ben of S Nigeria the chiefs in N Nigeria are keenly interested in the schools

### St. Helena<sup>1</sup>

The population in 1911 was 3 520 (1 658 males 1 862 females) Revenue (1910) £9 306 (including a grant in aid of £2 500 from the Imperial Exchequer) (1911) £8 622 Expenditure (1910) £9 596 (1911) £9 129 The Government flax fibre mills have been working only intermittently having been opened in 1907 they were closed in 1910 the supply of leaf being exhausted and they have remained so since except during a few weeks There is a lace school but it does not support itself Jamestown was visited by 51 ships in 1910 and 64 in 1911 On October 24 1910 H.R.H. the Duke of Connaught visited the island no member of the Royal Family having done so since the Duke of Edinburgh in 1860 Capt H E S Cordeaux C.B. C.M.G. became governor in 1911 in succession to Lt Col Sir H L Galway K.C.M.G. transferred to Gambia

### Falkland Islands

According to the census of 1911 the population including South Georgia was 3 275 The large increase since 1901 (pop. 2 043) is due to the development of the whaling industry The population in 1911 was thus distributed—East Falklands and adjacent islands 1 608 West Falklands (including New Island) 664 South Georgia (including a shipping population of 563) 1 003—in 1901 it was uninhabited

The average number of births during 1908–1912 was 52 and of deaths 18 The average density of population was—Falkland Islands (6 500 sq miles) 34 South Georgia (1 000 sq miles) 1 003 The total number of males and females was 2 370 and 905 respectively or an average of only 38.2 females to every 100 males The small population of females is due to the large number of men engaged in the whaling industry In the statistics relating to religious beliefs 1 821 persons are returned as belonging to the Church of England 769 as Lutherans and 63 as Baptists Of the total population 2 107 were returned as British subjects 13 of these being naturalised Of the 1 093 foreigners 980 were natives of Sweden and Norway the majority of these being engaged in the whaling industry

With the exception of small government reserves the whole of the land of the colony is in the hands of sheep farmers Closer settlement is thus rendered impossible and in spite of the high wages paid for labour there is no opening for new settlers About one fifth of the colony is composed of peat but nothing has yet been done to develop it

The rainfall registered at Port Stanley during 1911 amounted to 37.06 inches as compared with 27.68 inches in 1910

*Industries*—Sheep farming and whaling continue to be the principal industries The number of sheep in the colony during 1911 was 706 170 which is 18 566 less than in 1910 The number of sheep slaughtered in 1911 was 76 315 as against 69 704 in the previous year This increase is partly due to the establishment of two mutton-canning factories capable of dealing respectively with 600 and 300 sheep daily They began work in 1910 employing 100 men and producing 25 000 tins of preserved meat

Whaling round the Falkland Islands was not so successful in 1911 as in former years one company producing only a total of 7 400 barrels of oil and 50 tons of whalebone In the dependencies however the whaling industry has developed rapidly and appears to be rivaling sheep-farming as the mainstay of the colony In South Georgia eight companies are now established and employ 1000 men in their factories ashore and afloat During the 1910–11 whaling season oil and guano were produced worth £534 715 The South Orkneys and the Sandwich Islands were each visited by one company and ten companies held licences for the South Shetlands and Graham's Land The total catch from these dependencies was 156 770 barrels of oil and 400 tons of whalebone together worth over £468 500 The total value of the products during 1911 was £1 026 415 The export of whale oil in 1911 was 12,174 tons valued at £270 762 more than double the export in 1910

Trade is expanding steadily The exports during 1911 amounted to £471 156 as compared with

<sup>1</sup> See E B xxiv 7

See E B x 151

pared with £308 930 in 1910. The imports were valued at £93 913 as against £94 294. The principal exports are whale oil and wool. Over 4½ million lb of wool valued at £150 134 were sent away in 1911 a slight decrease on 1910. The other articles of export are tallow sheep skins hides seal skins whale oil whalebone whale plates and tinned meat.

The total general revenue during 1911 amounted to £36 146 exceeding that of 1910 by £9 566. The total general expenditure amounted to £23 407 an increase of £5,464 over 1910. The average excess of ordinary revenue over expenditure during 1908-12 was £2 910. At the end of 1911 the assets of the colony were £167 727 and the liabilities £76 546.

**Communications**—The Pacific Steam Navigation Company's steamers call at Stanley on their voyage out to Callao and on their return voyage a fortnight later thus making a monthly communication by letter with England and fortnightly by cable *via* Monte Video and Chile. The hitherto isolated state of the colony will shortly be terminated by the erection of a wireless telegraph station the tender of the Marcom Wireless Telegraph Company having been accepted for a 5 kilowatt installation capable of communicating at night with Buenos Aires or Monte Video.

The number of sailing vessels that entered inwards in 1911 was 14 with a tonnage of 12 940 an increase of 6 159 in tonnage but no increase in the number as compared with 1910. The number of steamers entering was 64 with a tonnage of 141 929 an increase of 6 in number but a decrease of 7 192 in tonnage.

**Social Progress**—Among legal enactments of the year 1911 were new regulations concerning whaling sealing and the importation of animals an ordinance dealing with the sale of liquor in the Falkland Islands and South Georgia the imposition of an export duty of 3d a barrel on whale oil and a publication of a new edition of the laws of the colony.

The volunteer force on December 31 1911 had two officers and 117 non commissioned officers and men. The Boy Scouts held their first meeting on July 23 1911.

The results of the educational year in the government school are satisfactory. There is a further advance in the numbers on the roll and a considerable improvement in the average attendances. The number of children educated during 1911 was 435.

The new hospital to be erected from a fund subscribed by the colonists as a memorial to King Edward VII was begun towards the end of 1911 it will have accommodation for 12 patients. A new town hall to take the place of the Stanley Assembly Room recently destroyed by fire is also in the course of erection.

In 1911 there were only 60 convictions for various offences as against 81 in 1910.

The reports of the medical officers indicate a general improvement in the public health of the colony.

(A. BRUCE JACKSON)

### THE BRITISH WEST INDIES

The history of the British West Indies is still that of the several colonies no practical scheme for federating the islands British Guiana and British Honduras having been forthcoming. During 1910-12 steady progress has, however, been made in the direction of securing greater uniformity in all matters concerning these colonies. The question of closer trade with Canada has helped to bring the various units together.

The preference of 3½ per cent given by the Dominion on British sugar had continued to attract West Indian produce to the Canadian market, the value of the preference was, however, reduced by the privilege given to the best refiners of Canada for three years from 1909 of importing at the British preferential rates two tons of sugar for every ton of Canadian beet refined and by the further privilege extended to the Canadian refiners generally in the same year of importing foreign sugar to the amount of 20 per cent of their requirements on the terms of the British preference in view of an alleged combination of the West Indian producers to raise prices. In August 1909 a Commission consisting of Lord Balfour of Burleigh the Hon. William Stevens Fielding the Hon. William Paterson Sir John Poynder Dickson Poynder M.P. (now Lord Ishington) and Sir Daniel Morris with Mr. H. R. Cowell as Secretary, was appointed to enquire into the question of trade relations between Canada and the West Indian colonies. The terms of reference included improvement of transportation and telegraphic communication. The Commissioners visited Canada in September 1909 and the West Indian colonies in January 1910. Evidence was also taken in London. In their Report they warmly advocated the establishment of reciprocal trade arrangements between Canada and the West Indies and the improvement of steamship and telegraphic communication. With regard to steamship communication, they advocated the establishment of a service between the West Indies and the Mother Country via Canada but this did not commend itself to the West Indian colonies and the scheme was dropped in favour of

direct steamship communication. In April 1910 a conference of delegates from British Guiana and the West Indian islands (the Bahamas, Jamaica and Grenada excepted) met at Ottawa and an agreement was arrived at on the basis of the grant of mutual preferential terms on the principal articles of import into the West Indies from Canada and vice versa. During 1912 the agreement was approved by the Legislatures of all the West Indian colonies concerned and by the Imperial government. A resolution approving of it was passed by the Dominion House of Commons in November 1912.

Since 1905 when the transatlantic mail contract was abandoned the Royal Mail Steam Packet Company had carried the transatlantic mails on a poundage basis. In 1910 the Company gave notice to terminate the arrangement and in November the direct service ceased, causing much inconvenience and loss to trade. On November 18th an intercolonial conference was held in Barbados and the West India Committee strongly urged upon the Imperial Government the need for a mail subsidy. The government at last agreed to offer a subsidy of £40,000 and a contract was entered into with the Royal Mail Company for a transatlantic service to run until 1917 or concurrently with the intercolonial service (conducted for a subsidy of £25,000 payable half by the Imperial Government and half by the colonies served) for a subsidy of £63,000 to which Trinidad contributes £16,300, Barbados £4,000 and British Guiana £2,700. Under the new service which was inaugurated in 1911 Trinidad succeeded Barbados as headquarters and port of transshipment for the intercolonial steamers. In 1911 the direct service carried on since 1901 by the Imperial Direct West India Mail Service between Avonmouth and Jamaica under contract with the Imperial and Jamaica Governments ceased; the subsidy of £40,000 not being renewed. In the same year the Imperial Government discontinued the subsidy of £13,500 to the mail service between Canada and the West Indies which is now conducted by the Dominion alone.

#### THE LEEWARD ISLANDS<sup>1</sup>

The census of 1911 disclosed the population of the islands constituting this colony to be as follows: Antigua 32,265; Barbuda 7,15; St. Kitts 26,283; Nevis 12,045; Anguilla 4075; Dominica 33,863; Montserrat 12,196; Redonda 120; Virgin Islands 5,567. During the financial year 1910-11 there were 4640 births and 3456 deaths. Of births 1762 were legitimate and 2,887 or 62 per cent illegitimate. The death rate of the Colony is conspicuously low, Montserrat enjoying the minimum with 13.15 per 1000. Next in order come Anguilla (14.64), the Virgin Islands (15), Barbuda (18), Nevis (23.62), Dominica (23.99), Antigua (27.38) and St. Kitts (29.37).

Sugar is the chief industry and the principal source of revenue in Antigua and St. Kitts. Antigua during 1910-11 exported 13,488 tons (6397 tons of 96° grey crystals and 7091 tons muscovado). The central factory at Gunthorpes (Antigua) manufactured 5400 tons of crystals and Benda's factory 1015 tons. Extensions at Gunthorpes during the year increased its manufacturing capacity to about 8000 tons of grey crystals in a crop. Consequently more estates have abandoned the muscovado process and now sell canes to the factory. The quantity of peasants' canes purchased in Antigua was 7718 tons as against 4579 in 1909; the price paid averaging 12s. 1d. per ton in 1910 as against 9s. 6d. a ton in the previous year. In St. Kitts a central factory has been established with a maximum output of 10,000 tons of crystals. Further extensions of the central factory system the success of which has been so pronounced are also contemplated. In the cotton industry during 1910-11 prices fell somewhat from the high figures prevailing during the previous year and trade depression in England early in 1911 also affected the sale. From the cultivators' standpoint however yields gave no cause for disappointment. The area planted was extended and there was comparative freedom from insect pests, a freedom not enjoyed by sugar planters who were handicapped to a certain extent on this account. In the Presidency of Antigua where 560 acres—an increase of 215—were cultivated the average return amounted to 173 lb. of lint per acre. In St. Kitts 1600 acres—an increase of 600—were planted the average yield being 200 lb. of lint per acre. A like yield was obtained in Nevis (the highest since the island turned its attention to cotton) where 1400 acres were cultivated—an increase of 500 acres. A similar return is reported in the case of Montserrat which possesses the largest area under cotton—2000 acres. In the Virgin Islands there is no estate cultivation, the cotton being purchased from growers and ginned and exported by the Government.

<sup>1</sup> See E. B. xvi, 371 and allied articles.

Ever increasing prosperity attends the cultivation of the lime (*Citrus acida* var. *medica*) the principal industry of Dominica. In 1910-11 lime crop for the year 369 000 barrels, showed an increase of 85 000 barrels as compared with 1909-10. The export of citrate of lime amounted to 5194 cwt. valued at £16 880—an increase of 1747 cwt. A second citrate works was established and the operations of an existing works extended. In Montserrat the total export of limes was valued at £9000. In a minor degree Antigua, Nevis and the Virgin Islands devote attention to this industry.

Dominica also exported cacao to the extent of 11 012 cwt. valued at £23 769. Cacao also engages a certain measure of attention in some of the other islands. Dominica has also embarked on rubber cultivation, a considerable area having been planted with *Hevea brasiliensis*. It is estimated that 40 000 plants are already in various stages of growth.

The cultivation of coconuts attracts attention in Antigua and Nevis and in the latter island and in Dominica vanilla is receiving notice.

The only manufactures of importance are connected with sugar in Antigua and St Kitts, Nevis and the cultivation of lime in Dominica. In St Kitts rum is distilled.

The total imports were valued at (1909) £471 016 (1910) £541 713 and exports (1909) £420 800 (1910) £537 832. The separate figures for imports in 1910 were—Antigua £170 033, St Kitts-Nevis £192 541, Dominica £140 925, Montserrat £29 718, Virgin Islands £8496. For exports—Antigua £196 184, St Kitts-Nevis £195 506, Dominica £109 529, Montserrat £30 003, Virgin Islands £6610. The imports came chiefly from—the United Kingdom £729 193 in 1910 (an increase of £45 667), British Colonies £102 738 (+£21 130) and the United States £191 148 (+£1041). The exports went chiefly to—the United Kingdom £188 984 (+£41 666), British Colonies £271 020 (+£68 934) and United States £43 462 (+£5175).

The total revenue was (1909-10) £149 670 (1910-11) £164 375 and expenditure (1909-10) £149 906 (1910-11) £159 263. The revenue was raised by the respective Presidencies in 1910-11 in the following proportions—Antigua £52 326, St Kitts-Nevis £52 748, Dominica £41 473, Montserrat £12 262, Virgin Islands £5566.

The surplus of assets over liabilities on March 31 1911 amounted to £54 845. The public debt of the Colony amounted to £73 250, the sinking fund stands at £80 688.

There are 24 573 children on the registers of the Government and grant aided schools of the Colony, the average daily attendance being 12 082. There are 7 secondary schools in receipt of grants from local funds. The Colony also assists a Moravian Training College for females in Antigua, and furnishes an allowance for the training of local male students at the Mico College, Jamaica. From Imperial funds grants are made towards Antigua and St Kitts Grammar Schools and Dominica Agricultural School. The Presidencies maintain in Antigua an industrial school to which boys are sent from each Presidency.

The total number of persons committed to prison during 1910 was 1144, 3140 offences were reported to the police, 13 458 persons were brought before the magistrates, and the summary convictions numbered 6802. Convictions in the Superior Court totalled 39.

Sir Henry Hesketh Bell, K.C.M.G., was appointed Governor of the Leeward Islands in 1912. The Administrators were: St Kitts-Nevis Hon. T. L. Roxburgh, C.M.G.; Dominica Hon. L. Douglas Young, C.M.G.; Montserrat Lt. Colonel L. B. Davidson-Houston, C.M.G. (Commissioner); and the Virgin Islands Hon. T. L. H. Jarvis.

#### BRITISH GUIANA<sup>1</sup>

During 1909-12 the Government continued to obtain information with regard to the extent and value of the vast forest resources of British Guiana, and an officer of the Department of Lands and Mines with special qualifications for the work was appointed to make a systematic and detailed examination of the Forest Lands. In 1910-11 the Commissioners appointed to enquire into the question of the sea and river defences of the colony presented their report. Their recommendations which included the execution and maintenance in future of the sea defences by the Public Works Department and the division of the colony into sea defence districts were approved by the Combined Court, which decided that the cost should be met by the estates, villages and other properties within each district, and by the Government in the proportion of  $\frac{2}{3}$  for the estates, villages and other properties, and  $\frac{1}{3}$  from General Revenue.

The census of April 1911 showed a population of 295,713, exclusive of the aboriginal Indians in the unfrequented portions of the Colony. During 1910 there were 8332 births registered (27.5 per 1000), a slight decrease on the previous year. Of the births so registered 60.1 per cent were illegitimate. The deaths registered were 10 424 (or 105, more than in the previous year), giving a death rate of 34.4 per thousand. Mortality among children continues high, 234 per thousand.

<sup>1</sup> See E. B. xii 676 et seq.

## WEST INDIES

The acreage devoted to the principal products of the Colony stood as follows at the end of 1910—sugar cane 69,735 rice 31,680 cacao 2200 coffee 2546 rubber 1700 coconuts 9466. Sugar and its by products constitute 72 per cent of the export of locally grown produce and 64·01 of the total exports. The export for 1910-11 declined by 7579 tons and the prices realised were below those of the previous year. The cultivation in certain districts suffered to such an extent from the ravages of insect pests that it was decided to obtain the services of an economic biologist. The experimental cultivation of canes was continued during the year by the Board of Agriculture and on the plantations the area planted with varieties of cane other than Bourbon increased from 39 850 to 45 484 acres. Excellent rice is grown—largely by East Indians who settle in the colony after the expiration of their indentures on the sugar plantations. The export which is absorbed mainly by the British West Indies has risen from a few thousand pounds to a quantity running into seven figures. There is an enormous area available for rice cultivation and although the output for 1910-11 was below that of the previous year the industry is firmly established. The export of cacao fell considerably during 1910-11 but this is explained principally by an increased local consumption of sweets. Rubber as a local industry is still in its infancy. Cultivation is being prosecuted vigorously and the Government carries on experimental work. The export of coconuts has increased considerably. Cattle rearing is an important branch of local industry and a low estimate gives the number of cattle as 71 500.

In 1910-11 the output of rum was upwards of 2 515 000 gallons a falling off of half a million gallons as compared with 1909-10. This decline is attributed to the downward tendency in the price in the United Kingdom.

The output of gold for 1910-11 was 54 989 ozs—a decrease compared with the previous year of 9841 ozs. The search for diamonds was actively prosecuted although the output (3035 oz.) was below that of 1909-10.

Perhaps the most striking success has attended the balata industry the amount collected in 1910-11—1 340 924 lb—being the highest on record. Four new companies were floated and commenced work and new areas are being prospected.

The forest resources of the Colony are practically limitless and of those resources timber is of the first importance. During 1910-11 256 845 cubic feet were exported showing an increase of 58 648 cubic feet on the previous year. Woodcutting licences to the number of 218 were issued covering an approximate area of 70 000 acres.

The total imports were valued (1909-10) at £1 774 457 and (1910-11) £1 749 766 the exports (1909-10) £1 985 337 and (1910-11) £1 820 198. Of the imports in 1910-11 the United Kingdom sent 47·64 per cent the United States 24·41 per cent and Canada 8·2, per cent. Of the exports the United Kingdom took 40 per cent Canada 31·60 per cent and the United States 14·20 per cent.

The revenue was (1909-10) £540 269, and (1910-11) £563 100 the expenditure (1909-10) £546 711 and (1910-11) £542 757. The excess of assets over liabilities on March 31 1911 was £48 116. The public debt of the colony was then £887 115. Of this amount £817 115 represents sums borrowed for public purposes, the balance £70 000 having been raised for immigration purposes. £280 186 stood at the credit of the sinking fund account.

During the financial year 1910-11 the sum of £28 294 was distributed in grants in aid among 224 schools with an average daily attendance of 21 555 the number on the rolls being 34 562. Secondary education is provided for in the case of girls mainly by private enterprise. For boys the Government maintains Queen's College. There are also two or three private schools. There is a system of scholarships under which pupils from primary schools can pass to the secondary schools these scholarships being open both to boys and girls. In a country pre-eminently agricultural like British Guiana instruction in the principles of agriculture is of the first importance and this fact is fully recognised by the Government. Model gardens and gardens attached to schools are found throughout the colony. The establishment of an Agricultural School has also been determined upon. At the school founded for the reception and training of vagrant boys and youthful male offenders the large majority are educated in agriculture the institution being worked as a farm school and possessing 80 acres of land under cultivation.

During 1910-11 8795 offences were reported to the police. There were committed to prison 4562 persons and there were three cases of capital punishment.

In 1911 the Combined Court voted an increased salary for a Governor of tried administrative ability and Sir Walter Egerton K C M G received the appointment in 1912.

WINDWARD ISLANDS<sup>1</sup>

**Grenada.**—This island is the headquarters of the Government of the Windward Islands, the governor in 1912 being Sir James Hayes-Sadler, K C M G. The population on December 31 1910, estimated on the basis of natural increase, was 75 254. The census of 1911 however disclosed a total of 66 730. The discrepancy is attributed to emigration. The birth rate in 1911 was 39·92 per thousand, and the death rate 19·66.

<sup>1</sup> See E B XII 578

Cocoa, nutmegs and cotton represent the principal products and in past years have practically absorbed the attention of the agricultural population. A healthy tendency however is now being manifested to open up other sources of development. The record cocoa crop of the island—73 863 bags—was reaped in the year ending September 30 1910. In the following year it was 67 144 bags. Land settlement schemes have been initiated in the dependency of Carriacou where a lime industry has been established and also in Grenada itself where rubber cultivation is extending. Practically the only manufacture is rum of which 63 356 gallons were made in 1911; a soap factory is also in operation. The total imports for 1910 were valued at £279 368 and for 1911 at £309 227 and the exports at (1910) £291 760 (including cocoa £259 365) and (1911) £264 640 (cocoa £223 104).

The revenue was (1909-10) £71 224 (1910-11) £81 415 (1911-12) £98 645; the expenditure (1909-10) £73 282 (1910-11) £75 561 and (1911-12) £81 012. The Colony's assets stood on March 31 1912 at £56 419. The public debt was £123 670 and the accumulated sinking fund for its redemption between 1917 and 1942 amounted to £30 270. The Government owns and maintains 9 of the 49 existing schools, the remainder being grant-in-aid schools (22 Roman Catholic, 11 Anglican, 5 Wesleyan and 2 Church of Scotland). The number of scholars on the roll was 10 905 and the average attendance 5377.

**St. Lucia**—The census of April 1911 showed a population of 48 637 as compared with 49 883 in 1901. The birth rate for 1910 was 30·1 per thousand and the death rate 16·6. In 1910 the Government made its first comprehensive attempt to combat the malaria problem by means of the free distribution of quinine.

The principal products are sugar and cocoa which represent 92 per cent of the domestic exports. Lime cultivation is steadily increasing while honey and cotton are also produced, though cotton does not appear to find favour with the planters. The Botanic station and special agricultural services involved an expenditure during 1910 of £638 and £507 was spent on the maintenance of the Agricultural School. Plants to a total number of 54 909 were distributed by the Agricultural Department. Local sulphur deposits are worked but the quantity obtained in 1910 was so small that none was exported. The position of the rum industry is indicated by the following returns: distilled 49 256 gallons consumed, 42 456 gallons exported, 4692 gallons. In 1909 the experiment was tried of shipping rum to Canada. In 1910 however this was found unprofitable owing to the low prices obtainable. Consequently less rum has since been manufactured. The outlook in regard to the trade of the port of Castries is encouraging. This remark applies especially to the extending coal trade. The total value of all imports was (1909) £266 228 (1910) £277 208 and of exports (1909) £250 674 and (1910) £238 955. The revenue was (1909-10) £65 739 and (1910-11) £65 066 and the expenditure (1909-10) £64 446 and (1910-11) £67 288. The Colony's surplus on March 31 1911 stood at £25 014 in addition to the Public Buildings Insurance Fund (£3895). The Public Debt amounted to £146 929. There were 53 elementary schools in 1910 having 7259 scholars on the roll with an average attendance of 4625.

The Administrator in 1912 was the Hon. Edward J. Cameron, C.M.G.

**St. Vincent**—The census of April 1911 showed a population of 41 877. The births in 1910-11 totalled 1661 (831 males, 830 females), 38·21 per cent being illegitimate. Deaths totalled 835 (19·93 per thousand), infant mortality standing at 24·91 per cent.

During recent years St. Vincent has taken up the cultivation of cotton with enthusiasm. The extent of the acreage and the quantity of the export in 1910 were the largest since the revival of the industry in the island. Sea Island cotton was planted over 3 587 acres and 561 56 lb of lint were produced, the average yield of lint per acre being 156 lb. The total cotton production was 521 956 lb, valued at £38 409.

The success attending this cultivation has set up a serious rivalry with arrowroot which has held pride of place in the exports for many years, but so long as cotton retains its average value of 18d per lb of lint it must constitute the staple crop of the Colony. Arrowroot can be grown on any land where cotton is cultivable, whereas the production of cotton is confined to the coast lands. Meanwhile arrowroot continues to receive increased attention. Towards the end of 1910 a Growers' and Exporters' Association began work, and it is notable that the price has advanced from 1½d to 3½d per lb. The soil and climate of the Colony appear to be better suited to arrowroot production than those of any other West Indian island. Sugar is produced chiefly in the Carib country, the only noticeable feature being an increase in the export of the crystallised, and a decrease in that of muscovado. Land settlement continues satisfactory.

The ginning of cotton is the principal industry, the Central Ginnery established by the Government in 1903-04 having proved a profitable—and indeed indispensable—factor in the success of cotton culture. The working of the establishment in 1910 yielded a profit

<sup>1</sup> See *E. B.* xxiv 27

<sup>2</sup> See *E. B.* xxiv 50

## WEST INDIES

of £480. The sale to the ginnery of seed cotton is compulsory in the case of lots of less than 100 lb weight. Any amounts up to 4000 lb may also be sold by anyone to the ginnery. This cotton is bought on a profit-sharing basis. The law providing for this method of sale and purchase has proved highly popular among small cultivators. In addition to the Government establishment there are three private ginneries. The price of lint during the year was good reaching 26d per lb in the case of some special bales. The average price however was 17d to 20d for Sea Island cotton. Marie Galante selling at from 6d to 10d per lb.

The whale oil industry would appear to be in a decadent state there being a great fall in the value of the export. Efforts are being made to establish a sponge industry in the Grenadines. Turtling is carried on but here again the exports disclose a conspicuous decrease. The total value of the imports was (1909) £87 810 (1910) £97 737 and of exports (1909) £88 698 and (1910) £101 180. The revenue was (1909-1910) £28 440 (1910-1911) £30 125 and the expenditure (1909-1910) £31 350 (1910-1911) £30 343. The excess of assets over liabilities amounted on March 31 1911 to £6524. There is no public debt the last loan instalment having been repaid in May 1910. The Colony is responsible for the unpaid balance of the Hurricane loan to planters from the Imperial Treasury which on March 31 1911 stood at £10 450 but against that amount there is a sinking fund of £2335. This loan is being steadily redeemed.

There are 28 primary schools, and 4552 scholars on the rolls with an average attendance of 2260. There is also a secondary school and satisfactory results are obtained from the Agricultural School. Special effort is made to teach the cultivation of cotton.

The Administrator in 1912 was the Hon C Gideon Murray.

BRITISH HONDURAS<sup>1</sup>

The development of British Honduras proceeds slowly. The Stann Creek Railway begun in 1907, was nearing completion in 1912. It runs 20 miles inland and opens up an extensive area suitable for banana cultivation. In 1911 a Town Board was constituted for the City of Belize. The population according to the census of 1911 was 40 809 (20 526 males 20 283 females). The birth rate in 1911 was 42 393 and the death rate 24 8 malarial fever being the principal cause of mortality. Tuberculosis has seriously increased, and preventive measures are being adopted with some success.

The total imports for 1911 were valued at \$2 886 677 (~\$67 460 on 1910) and the exports at \$2 685 849 (~\$341 469) the bulk of the trade being with the United States. The revenue in 1910-11 was \$459 295, and the expenditure \$542 810. The loan debt on December 31 1910 amounted to £168 815. Provision for the repayment of loans has been made by the investment of sinking funds which total \$92 173. There were 46 primary schools in 1911 with 4725 pupils. The cost of primary education was \$34 259. Of this sum the Government contributed \$20 103.

The Governor in 1912 was Sir E J F Swayne KCMG.

BARBADOS<sup>2</sup>

In 1912 the House of Assembly voted £900 to defray the cost of a complete survey of the island, with a view more particularly to the investigation of the extent and position of the petroleum deposits. The existence of petroleum has been proved, but the industry has not yet been placed on a commercial footing. The survey was entrusted to Mr E H Cunningham Craig. In 1912 the Legislature passed a Bill granting to the Anglo Mexican Petroleum Products Co Ltd the exclusive right of supplying imported fuel oil to calling steamers for a period of twenty five years.

With an area of 166 square miles, Barbados is for its size the most densely populated British possession. The census of April 1911 showed a population of 171,417 (69,912 males and 101,505 females). The population and prosperity of the island are affected by two factors—the emigration of labourers to the Panama Canal Zone and the influx of visitors from abroad. The Panama Canal has been constructed mainly by West Indian labourers of whom no fewer than 20,000 were natives of Barbados in 1909. It is claimed that any disturbance of the local labour supply has been more than compensated for by the remittances sent home by Barbadians from the Panama Canal Zone and by the money brought back to the island by returning emigrants. In 1909 £80 000 was remitted, in the following year nearly £83 000. Tourists also help to circulate money. In 1910 5491 first and second class, and 12,441 steerage and deck passengers reached the

<sup>1</sup> See *E B* iv 615

<sup>2</sup> See *E B* iii 380 381

island. The tourist business is assuming considerable dimensions with a view to stimulating it a Barbados Improvement Association was started in 1911.

The birth rate in 1910 was 37.2 per thousand and the death rate 25.5 per thousand. Of the births 58.8 per cent were illegitimate. Infantile mortality stands at 268 per thousand.

Sugar has always been the chief product of Barbados. The crop for 1910 amounted to 35,906 hogsheads of muscovado, 3993 hogsheads of vacuum pan crystals and 77,722 punchcons of molasses or 22,104 hogsheads of sugar and 8686 puncheons of molasses more than that of the previous year. Barbados was one of the first West Indian Colonies to participate in the revival of the cotton industry in the West Indies and remarkable results were obtained within a comparatively brief period. In 1910 however the acreage reaped declined from 5768 to 4121 the decrease being due to the low price and poor yields obtained in 1908. The remunerative prices obtained during 1909 and 1910 resulted in an increase of the acreage from 4121 to 4741. Bananas are cultivated to some extent and during 1910 13,137 bunches were exported. 226,169 gallons of rum were manufactured in 1910 as compared with 207,239 gallons in 1909. Sea Island cotton is ginned locally.

The imports and exports in 1909 and 1910 were valued as follows — (1909) exports £888,086 imports £1,119,543 (1910) exports £1,038,830 imports £1,345,194. United Kingdom imports £480,823 in 1909 rose to £592,641 in 1910. United States £353,809 in 1909 to £399,649. Canadian £131,910 in 1909 to £151,985. Canada in 1910 occupied only third place in the list of importing countries but her advance is steady. The principal commodities purchased from Canada in 1910 were flour (£31,144) and white pine (£31,409), other articles all of which show an increase include oats iron nails staves and shooks beef cordage fruit and vegetables grain and shingles. Fish butter sulphate of ammonia and hay are also obtained from Canada. Of the total exports in 1910 £783,125 represented produce of the colony and £305,705 the produce of other countries. Exports to the United Kingdom £70,487 in 1909 rose to £117,223 in 1910. Those to Canada £348,707 in 1909 to £484,108 those to the United States £37,219 in 1909 to £77,650. Exports of sugar (£396,004) showed an increase of £243,092 as compared with 1909. Canada alone taking £268,455 as against £107,422 in 1909.

The revenue in 1909-10 was £195,803 and in 1910-11 £213,298. The expenditure in 1909-10 was £109,625 and in 1910-11 £211,949. Public debt stood at close of the year at £422,900 and the sinking fund at £85,940.

The primary schools number 166 (Anglican 132 Wesleyan 18 and Moravian 16) scholars on the rolls numbering 27,658 and the average attendance being 16,829. The government grant towards these schools amounts to £11,204. The colony's total expenditure on education in 1910 was £19,209. First and second grade schools in receipt of annual legislative grants number 9 (7 boys and 2 girls) the largest grant (£1000) being made to Harrison College (boys). The number of pupils on the rolls of these schools totals 635. The colony makes provision for scholarships tenable by students enrolled at Codrington College and for a further scholarship tenable at a European or Canadian University. At the close of 1910 there were 4 ragged schools having 285 scholars with an average attendance of 173.

During 1910 there were 9888 summary convictions and 40 convictions in Supreme Courts. The percentage of convictions to population is 5.79. The daily average number of prisoners in Glendairy prison was 210 for 1910, the number of persons committed to penal imprisonment 1785. There were 134 boys in the Industrial school on December 31, 1910. The proceeds of its agricultural work amounted to £1937 and the expenditure to £2483.

The Governor in 1912 was Sir Leslie Probyn, K.C.M.G.

#### JAMAICA<sup>1</sup>

The census of April 1911 showed a population of 931,383 (females 433,944 males 397,439). Compared with the previous census of 1891 this return reveals an increase of 191,892 or 30 per cent compared with an increase of 26.3 per cent between 1871 and 1891. Every parish except Port Royal contributed to this increase, notably St. Mary 70 per cent and Portland 53.7 per cent. Labour requirements on the Panama Canal in Cuba and in Costa Rica have affected the emigration and immigration returns. 13,109 labourers set out from the Colony during the year ending March 31, 1912 and 8,984 arrived at Kingston. The marriages celebrated during the financial year 1911-12 numbered 360, — a rate of 4.2 per thousand as compared with 4.0 in 1910-11. Both these rates show a remarkable decline when compared with 1907-08 when owing to the emotional effects of the earthquake at Kingston in January 1907 the rate rose to 7.4. As a result in 1908-09 the return of illegitimate births declined to 60.59 per thousand. The total births registered in 1911-12 numbered 32,750 representing a rate of 39.0 per thousand and the rate for illegitimate births being 64.1 per cent. The death rate stood

<sup>1</sup> See *E. B.* xv 132 *et seq.*

## WEST INDIES

at 22.1 per thousand, the total number of deaths registered being 18,631. Of these 8,871 were due to infantile mortality, 38.9 per cent of the children born in Kingston and 35.5 per cent of those born in St. Andrew dying before the age of 5.

The total acreage under cultivation returned in 1911-12 was 2,171,709 distributed as follows—tilled lands 280,286 guinea grass 143,592 commons 517,830 wood and runcate 1,230,001. This return shows an increase over the average for the four preceding years of 24,552 acres or 8 per cent in tilled lands, an increase of 3,902 acres or 3 per cent in guinea grass, of 28,589 or 6 per cent in commons and of 24,888 acres in wood and runcate.

Tilled lands classified under the agricultural products give the following returns—sugar cane 34,766 coffee 24,473 coconuts 16,691 bananas 82,435 ground provisions 74,723 mixed cultivation 30,167 cocoa 13,355 minor products 3676. These returns disclose an increase over the average for the four preceding years of 4450 acres in cane, of 3440 acres in coconuts, of 14,862 in bananas, of 3163 in cocoa. Ground provisions including mixed cultivation show a decrease of 146 acres, coffee 668 acres and minor products 603 acres.

During 1910-11 the Sugar Experiment Station was operated, the Imperial Grant enabling the station to be equipped with laboratories and an experimental distillery and to provide for experimental plants on estates. The operating expenses of the station were also provided for a period of 7 years. A central sugar factory at Rose Hall in St. James recently completed will deal with the produce of nine sugar estates. The work of agricultural instruction received considerable impetus as the result of the appointment of four additional instructors. The rubber industry engaged attention during 1911 *Castilloa* of which three distinct species have been established, giving the most promising results.

The total value of the imports and exports for 1909-10 and 1910-11 was—(1909) imports £2,561,674 exports £2,628,307 (1910) imports £2,614,943 exports £2,568,222 and (1911) imports £2,865,553 exports £2,948,067.

The principal articles of import were textiles (£638,331 in 1911) hardware (£304,128) wheat flour (£255,207) dried and salted fish (£150,746) and lumber (£106,893).

The principal articles of export were bananas (£1,456,581 in 1911) sugar (£247,413) logwood & logwood extract (£265,138) coffee (£154,131) and rum (£85,916).

In 1910-11 the imports from the United States were for the first time slightly in excess of those from the United Kingdom. In the following year, however, imports to the value of £1,201,923 or 45.1 per cent came from the United Kingdom and £1,200,345 or 41.8 per cent from the United States and £249,546 or 8.5 per cent from Canada.

Of the exports the United States took 61.9 per cent in 1911, as against 54.1 in 1910, the United Kingdom 14.7 per cent as against 20.6 and Canada 8.6 per cent as against 8.4.

The revenue was (1909-10) £992,976 (1910-11) £990,399 and (1911-12) £1,161,014 and the expenditure (1909-10) £1,033,794 (1910-11) £987,304 and (1911-12) £1,155,208. The Government closed the financial year 1911-12 with a surplus of £190,191, having also £100,000 invested as an insurance fund to provide for the repair of damage to Government property by hurricane fire or earthquake. The Public Debt of the island, most of which is represented by productive investments, amounted to £3,871,305 on March 31, 1912. The sinking funds amounted to £759,865 leaving a net liability of £3,111,440.

In 1911 there were 698 schools on the annual grant list, average number of scholars 98,576, average attendance 61,669, percentage 62.55, total payments to elementary schools and teachers £60,503. On January 1, 1911, the regulations for compulsory education in Kingston district, Falmouth and Lucea came into effect. The work of school inspection was facilitated in 1911-12 by the addition of an Assistant Director and of three Inspectors. A reduction from 100 to 70 of the number of schools in each inspector's district improves the oversight.

Serious crime finds no place in the social life of Jamaica. No execution of capital punishment took place in 1911-12. Committals to prison totalled 5676, a decrease of 101 as compared with 1910-11 but an increase of 716 as compared with 1909-10. Reconvictions during the year amounted to 1442. Persons bound over as probationers numbered 103.

Work is proceeding on an extension of the Jamaica Government Railway from May Pen to Chapeltown to be constructed at an estimated cost of £90,000. It will open up the fertile valley of the Rio Minho and render 17,000 acres available for cultivation.

The western end of the island was visited by a destructive storm of hurricane violence in November 1912.

The Governor in 1912 was Sir Sydney Oliver, K.C.M.G., but at the end of the year he resigned on being appointed secretary of the Board of Agriculture in England.

TRINIDAD<sup>1</sup>

The estimated population on March 31, 1911, was 368,014. Arrivals in the Colony during the year numbered 22,845, and the departures 16,719, giving a net increase to the population by immigration of 6126. Included in these figures were 3286 East

<sup>1</sup> See E. B. xxvii, 284.

Indians brought to the Colony under indenture, and 622 who returned to India after the expiration of their indenture. The birth rate was 31·8 per thousand, and the death rate 20·5. The health conditions show steady improvement. During 1911 there were only two fatal cases of yellow fever, and twelve cases of plague.

Cocoa and sugar represent the chief products of Trinidad. Coconuts also engage widespread attention, and this remark holds good with regard to rubber,—large areas being planted under *Castilloa*, *Funtumia* and *Hevea brasiliensis*. During 1910-11 7376 lb of rubber valued at £1395 were sent out of the Colony. Fruit principally bananas is cultivated but the progress of this industry was arrested during 1910-11 by the uncertainty (now remedied) as to the continuance of a regular steamship service providing cold storage. Minor industries are greatly encouraged in Trinidad by means of the distribution of plants and seeds from the Botanic Stations at reasonable rates.

The establishment and progress of the oil industry represents one of the most striking developments within recent years of industrial activity in the tropics. The most important borings are located in the South western portion of the island in the vicinity of the celebrated Pitch Lake, which for many years has provided immense quantities of asphalt exported largely to Great Britain and the United States—a principal source of the Colony's economic wealth. The use of oil fuel in the British Navy promises to enhance the importance of Trinidad as a British possession. During the financial year 1910-11 considerable advance was made in the industry, drilling being commenced on private lands at five centres. An aggregate depth of 15 347 feet was drilled, the number of wells in progress being 22. Thirteen have yielded fair results. Since prospecting commenced a total depth of 32 072 feet has been drilled, the number of wells being 44. The area affected by approved licences comprises 78·37 acres.

In addition to the oil and asphalt industries, manioc mining is carried on and limestone quarries are worked. The manufacture of sugar and rum and molasses is an important characteristic of the colony's industry, apart from the quantity exported about 8 000 tons of sugar (valued at £135 000) and 335 045 gallons of rum (valued at £29 000) were manufactured for local consumption in 1910-11. Also five million coconuts were used locally in the manufacture of 85 000 gallons of oil valued at £16 000, nearly all of which was consumed in the colony.

Imports were valued at (1909) £3 288 826 (1910) £3 343 011, exports (1909) £3 218 092 (1910) £3 467 588. The increase in imports in 1910 as compared with 1909 is made up of £30 743 under raw materials (principally coal and lumber) and £83 719 under manufactured articles (chiefly machinery for the oil fields), less a decrease of £6 657 under live stock, food, etc. The growth of the coaling business of Port of Spain, the capital, is a striking feature of the Colony's trade. In 1910 80 067 tons were imported (as compared with 23 235 tons in 1906-07), 44 205 tons being supplied to vessels (as against 6 703 tons in 1906-07). The value of machinery imported in 1910 was £12 788 as compared with £52 676 in the previous year. The raw material chiefly imported is coal, patent fuel, manure and lumber. The chief importing countries were—the United Kingdom £936 427, United States £860 903, Venezuela £213 086, Canada £134 609. The principal exports were—cocoa £1 230 097, sugar, rum and molasses £743 969, coconuts and copra £85 359, fruit £19 952, asphalt £179 146. The chief countries taking the exports were—United States £919 047, United Kingdom £599 240, France £403 211, Canada £354 484.

The revenue in 1909-10 was £853 565 and in 1910-11 £948 383, the expenditure (1909-10) £863 253 (1910-11) £927 033. The revenue for 1910-11 was the largest ever collected in the colony, the chief increases being under customs (£67 340) and licences (£24 770). As regards expenditure the recurrent expenses amounted in 1910-11 to £843 050 as compared with £798 262 in the previous year, whilst the extraordinary (public works, roads and bridges) amounted to £83 984 as against £64 991 in 1909-10. The surplus balance was £104 925 on March 31, 1911, assets totalling £696 630 and liabilities (exclusive of funded debt) to £591 705. The funded debt stood on the same date at £1 051 093, and the sinking funds at £174 426, a loan of £450 000 has also been authorised by Ordinance.

The elementary schools exclusive of private schools numbered 263 on March 31, 1911. Government schools totalling 53 and assisted schools 210. The assisted schools are as follows—Roman Catholic 79, Anglican 51, Presbyterian Canadian Mission 56, Wesleyan 12, Moravian 12. Children on the rolls totalled 47 661, the average daily attendance standing at 27 083. The expenditure on elementary education from public funds amounted to £51 111. Practical agriculture and nature study are taught in nearly all primary, boy or mixed schools. Secondary education for boys is provided from public funds at Queen's Royal College (Port of Spain) and two affiliated schools, St. Mary's College (Port of Spain).

## WEST INDIES

and Naparima College (San Fernando). St. Joseph Convent School for Girls is now affiliated to Queen's Royal College. A Board of Industrial Training carries on small night classes for apprentices artisans also attending.

Offences reported to the police during 1910-11 numbered 20,928, the total number of persons arrested or brought before the magistrates being 23,787. Summary convictions numbered 13,857. Convictions in the supreme court totalled 185. The death penalty was imposed in 4 cases. Persons were committed to prison to the number of 4,780. The cost of prison administration during the year was £12,365. Prisoners' earnings were £7,749. During 1911 the first sod of the Tabaquite Poole Railway extension which will open up 10,500 acres of fertile land, was turned and work on an extension to Siparia which will serve an area of 14,100 is in progress.

The Governor in 1912 was Sir George Le Hunte, K.C.M.G.

The Bahamas<sup>1</sup>

In 1910 the Legislature passed a resolution authorising the Governor to ascertain on what terms the Canadian Dominion could incorporate the Bahamas, but the resolution was purely tentative. The Bahamas did not participate in the reciprocal Trade Conference at Ottawa in 1912. During 1910-12 the tourist business continued to increase, and the Legislature voted £1,000 for advertising the Islands in 1909-10.

The census of April 1911 gave a population of 55,872, a net increase of 2,137 since 1901. The islands showing an increase were Andros (1,252), Abaco (1,146) and New Providence (1,020). On the other hand Eleuthera showed a decrease of 2,203. During 1901-11 about 6,000 labourers (accompanied in some cases by their families) emigrated to Florida, Mexico and Yucatan. The births during 1911 numbered 34.1 per thousand and the deaths 21.7 per thousand. Nearly every industry has recently shown a decline. The export of tinned pineapples has fallen off owing to poor stock, Hawaiian competition and the effect of the American tariff. Sisal fibre cultivation is the most important industry, some 20,000 acres being planted, but the price is low and the rapid extension of the industry in other countries has had its effect on the Bahamas. The sisal is all shipped to the United States.

The exports of grape fruit which amounted to 365,000 in 1909 fell in 1911 to 309,194. The output of oranges which in 1907 amounted to a million and a half valued at £3,000 fell in 1911 to 15,400 valued at £20. The feeling with regard to agricultural prospects is reflected by the decision of the Legislature to abolish the Board of Agriculture after an existence of six years and the expenditure of £5,000 of public money. The one industry which has shown signs of progress has been sponge fishing. The sales of sponges during 1911 reached £79,102 as against £70,000 in 1910 and the total exports £110,740 as against £87,657.

The trade figures are—(1909) exports £171,442 imports £343,489 (1910) exports £193,803 imports £59,014 (1911) exports £209,251 imports £311,095.

Out of a total of £511,095 imports to the value of £203,550 came from the United States and imports to the value of £82,360 from the United Kingdom in 1911. It should be explained, however, that in the absence of direct communication with the United Kingdom many goods from the mother country being transhipped in America are classified as American. The United States is also the best customer of the Bahamas, having taken produce to the value of £98,975 out of a total of £174,895, the United Kingdom ranking next with £29,349. Here again it must be remembered that as New York is the port of transhipment many goods destined for Canada and the United Kingdom are classified as going to the United States.

The financial figures are (1909-10) revenue £77,578 expenditure £92,858 (1910-11) revenue £84,391 expenditure £85,315 (1911-12) revenue £85,592 expenditure £82,675.

The excess of assets over liabilities on March 31, 1912 stood at £15,482. The public debt stands at £51,568, the annual charge for interest and sinking fund being £6,580. The existing debt will be wholly liquidated by 1926 unless anything unforeseen arises.

The number of primary schools (exclusive of private and denominational schools) is 64 (46 board schools and 18 grant-in-aid schools). Pupils number as follows—Board Schools 6,534 Aided Private Schools 1,492 Church of England 1,625 Roman Catholic 531 Private Schools 222 Wesleyan 167 total 10,621.

The annual vote to the Board of Education amounts to £6,000. There is no State secondary education, but five private organisations provide instruction for 153 pupils.

The number of persons committed to Nassau Prison in 1910 was 189 as against 214 in 1909. The police force—largely recruited from Barbados—numbers 81 men.

Mr. G. Hadden Smith was appointed to succeed Sir William Grev Wilson, K.C.M.G. as governor in 1912.

Bermuda<sup>2</sup>

The population of Bermuda at the Census of 1911 was 18,994. The revenue for 1911 was £79,248, and the expenditure £90,101. No official report on the colony has been issued since 1907, but in 1910 the exports totalled £106,508 and the imports £517,074.

<sup>1</sup> See E. B. III 207 et seq.

<sup>2</sup> See E. B. III 793.

CANADA<sup>1</sup>

*Area*—In 1911 the fifth decennial census was taken. The area is given as 3 720 665 sq. m. of land and water, 15 900 sq. m. less than in 1901, the reduction being partly due to the Alaska award and partly to the new map measurements.

The areas of the separate provinces in sq. m. are—Alberta 255 285, British Columbia 355 855, Manitoba 73 731, New Brunswick 27 985, Nova Scotia 21 427, Ontario 260 862, Prince Edward Island 2 184, Quebec 351 873. The population per square mile was 1.93 in 1911 as against 1.44 in 1901, the corresponding figures for the provinces being as follows (1901 in parentheses)—Alberta 1.4, (26), British Columbia 1.09, (.50), Manitoba 6.18, (3.46), New Brunswick 12.61, (11.83), Nova Scotia 22.98, (21.45), Ontario 9.67, (8.37), Prince Edward Island 42.91, (47.27), Quebec 5.69, (4.69), Saskatchewan 1.95, (.36), in Yukon and the North West Territories there have been decreases.

*Population*—The population of Canada according to the census of 1911 was 7 204 838, an increase of 1 833 523 since 1901 or 34.13 per cent. The following were the populations of provinces and territories with the increase or decrease per cent since 1901 in parentheses: Alberta 374 663 (+413.08), British Columbia 392 480 (+119.68), Manitoba 455 614 (+78.5), New Brunswick 351 889 (+6.27), Nova Scotia 492 338 (+7.13), Ontario 2 523 274 (+15.58), Prince Edward Island 93 708 (+9.3), Quebec 2 002 712 (+21.46), Saskatchewan 49 432 (+439.48), Yukon 8 511 (—68.73), North West Territories 17 196 (—15.19).

The rural population in 1911 was 3 924 394 and the urban population 3 280 441, the increase since 1901 being 17.16 per cent for the former and 62.25 per cent for the latter. In Alberta the increase of rural population in the ten years was 180 327 and of urban 121 314. In British Columbia the increase of rural population was 100 318 and of urban 113 505 and in Manitoba the rural increase was 70 511 and the urban 129 89. New Brunswick lost 1 493 rural and gained 22 262 urban, while Nova Scotia lost 23 981 rural and gained 56 745 urban. Ontario lost 52 114 rural and gained 39 511 urban. Prince Edward Island gained 15 urban but lost 9 546 rural. Quebec shows gains of both rural and urban population, being 39 951 for the former and 313 863 for the latter. Saskatchewan also shows gains in both classes, being 287 336 for the former and 11 815 for the latter. In Yukon the rural loss was 13 430 and the urban loss 5 277. In the North West Territories whose population is wholly rural the loss was 2 933.

The cities with populations exceeding 24 000 in 1911 were: Montreal, 470 480, Toronto 376 538, Winnipeg 143 518, Vancouver 100 401, Ottawa 87 062, Hamilton 81 969, Quebec 78 190, Halifax 46 610, London 46 300, Calgary, 43 704, St. John, 4 511, Victoria 31 660, Regina 30 215, Edmonton 4 900.

The total Indian population of the Dominion on March 31, 1912, was 104 956, and in addition there were 4 600 Eskimos within the confines of Canada, making a total native population of 109 556, a slight increase on the previous year. Of the Indians 43 382 were in Ontario, Quebec and the Maritime Provinces, 36 791, in the three Prairie Provinces and the northern territories and 4 781 in British Columbia.

*Immigration*—The total immigration to Canada during the fiscal year 1911–12 was as follows: From the United Kingdom 138 121, U.S.A. 133 710, other countries 8 406. For 1910–11 the total was 311 084 (British 123 011, U.S.A. 121 451) and for 1909–10 208 794 (British 59 790, U.S.A. 45 206). The British immigrants in 1911–12 included 96 806 English and Welsh, 32 988 Scotch, 8 327 Irish.

*Boundaries*—Important measures extending the boundaries of the provinces of Quebec, Manitoba and Ontario were passed by the Canadian parliament during the session 1911–12. The boundary of Quebec was extended to include the whole of the mainland north of her old boundary, excepting such territory over which Newfoundland has lawful jurisdiction, the additional territory being approximately 355 000 square miles. The eastern boundary of Manitoba was extended northerly to the 60th degree of latitude and the eastern boundary north easterly to the point where the eighty ninth meridian of west longitude intersects the southern shore of Hudson's Bay, an addition of about 178 100 square miles. Additional territory to the north was also given to Ontario amounting to approximately 146 500 square miles. This arrangement gave to Manitoba possession of the two ports on the Hudson's Bay—Fort Churchill and Port Nelson.

<sup>1</sup> See *E. B. v. 142 et seq.*

It was, however, provided by Order in Council that access to the Bay should be provided for the Temiskaming and Northern Ontario Railway, a line belonging to the Ontario government. For this purpose Ontario is to be given a strip of land five miles wide, running from the new Boundary of Manitoba to the Nelson River, and terminating in a half mile strip along the east shore of that river. Should the Dominion government decide to extend the Hudson's Bay Railway to Fort Churchill Ontario is to receive an additional strip 200 feet wide from the Nelson River to the nearest point on that railway, and to have running powers over that line to Hudson's Bay. On April 21, 1912 it was officially announced that the new district of Ontario is to be known as 'Patricia.'

*Agriculture*—The details of area, yield and value of the principal crops for 1911 were as follows: Wheat 10 373 958 acres, 215 851,300 bushels, value \$138 567,000; oats, 9 219 920 acres, 348,187 600 bushels, value \$126,814 000; barley, 1 404 352 acres, 40 641 000 bushels, value \$23 004 000; hay 7 903 242 acres, 12 694 000 tons, value \$146 596 000. The total estimated wheat production of Canada for 1912 was 05 685 300 bushels; oats 381 502,000 bushels; and barley 43 895 300 bushels, the quality of these three crops being above the average of the two preceding years.

At the close of the fiscal year 1911-12 fifteen government experimental farms and stations were in operation throughout the Dominion in addition to sub-stations. While much of the work done has been a continuation of years past, some of the features are practically new, especially in connection with the encouragement of mixed farming.

*Conservation*—In February 1908, an international conference on the conservation of the natural resources of the North American continent was held at Washington when the United States, Canada, Newfoundland and Mexico were represented by delegates. A declaration of principles was adopted respecting the use, development and conservation of land, water, forests, minerals and game, and the conference advised the establishment in each country of a permanent commission for the conservation of natural resources. The question having come before the Canadian parliament a Commission of Conservation was created by statute. This body consists of thirty-two members including the Dominion Ministers of the Interior, of Agriculture and of Mines respectively, and the member of each of the nine provincial governments who is charged with the administration of the natural resources of the province, together with twenty other members appointed by the Governor in Council. Of these twenty appointed members at least one from each province must be a member of the faculty of a university (if any) within the province. It is the duty of the commission to take into consideration all questions which may be brought to its notice relating to the conservation and better utilisation of the natural resources of the country, to make inventories, collect and disseminate information and frame recommendations. The first annual meeting of the Commission was held in Ottawa in January 1910. Seven committees of the Commission were formed for lands, water and water powers, minerals, forests, public health, fisheries, game and fur-bearing animals and press and co-operating organisations. A staff has been appointed and constituted as a department of the government at Ottawa, and in addition to the work of the Committees numerous important subjects have been investigated and reported upon. One instance of a recommendation acted upon is that of setting aside the eastern slope of the Rocky Mountains as a forest reserve. This has been embodied in an Act of Parliament, and some 14 600 square miles will be reserved and protected. An exhaustive work containing the various regulations in force throughout Canada bearing upon lands, fisheries and minerals has been compiled and published under the auspices of the Commission, and a report has been issued dealing adequately for the first time with the extensive water powers of the country. Other reports bear on agriculture, insanitary housing, etc.

*Fisheries*—An amendment to the Fisheries Act, R.S. 1906 c. 45 provides for the licensing in British Columbia of salmon canneries, and manufacturers of oil from sea lions, hair seals, sharks or dog fish, and alterations are made in the method of calculating the license fees to be paid by lobster canners.

*Commerce*—The value of the total exports, imports and goods entered for consumption

# CANADA

665

tion in Canada, with the duty collected thereon for 1910, 1911, and 1912 are shown below. The figures in each case are for the fiscal year ended March 31st.

	Total Exports	Total Imports	Entered for Consumption	Duty
1910	\$301 358 529	\$391 852 692	\$375 833 016	\$61,024 239
1911	297 196 365	472 247 540	461 951 318	73 312 367
1912	315 317 250	559,320 544	547 482 190	87 576 036

The aggregate trade with the United Kingdom, the United States, Germany, France and the West Indies for the same period is also given.

	United Kingdom	United States	Germany	France	West Indies
1910	\$244 984,407	\$336 652 587	\$10 436 421	\$12 750 192	\$13,284,809
1911	246 901 573	404 331 540	12 710 357	14 345 865	15,603 170
1912	268 760 435	476 889 112	14 904 919	13 868 369	15 391 818

**Manufactures**—Although the complete details showing the results of the census of 1911 are not yet available, some useful preliminary figures have been made public by the census and statistics office at Ottawa. Every factory in operation during the whole or part of the census year which had given employment during any part of the year to five or more persons was required to make a report. Some places, such as brick or tile works, butter and cheese factories, electric light and power plants, fish curing plants, flour and gristing mills, lime kilns, saw and shingle mills, may however be operated to yield large products with less than five hands. With these exceptions, factories employing five hands and over in 1910 made an average product of \$60 6,1 as compared with \$45 483 in 1905 and \$ 6 21,3 in 1890, being an increase per factory of 25 per cent in the ten years 1890 to 1900 and 84 per cent in the ten years 1900 to 1910. Or compared by the production per head of the whole population it was \$,6 in 1890, \$89 in 1900 and \$161 in 1910. The total value of products of this class of factories grew from \$481 055 375 in 1900 to \$718 352 603 in 1905, and \$1 165 9,5 639 in 1910. In the five years 1900 to 1905 the growth was 47 per cent and in the next five years it was 61 per cent. For the same class of factories the earnings of salaries and wages were in 1910 \$241 008 416, being an increase of 112 per cent in the decade. The average of wages and salaries in 1910 was \$46, in wages alone \$418.

Classified by provinces, the values in dollars of manufactured products were as follows: Alberta (1900) 1 313 575 (1910) 18 788 826; British Columbia (1900) 19 447 778 (1910) 65 204 235; Manitoba (1900) 12 927 439 (1910) 53 673 609; New Brunswick (1900) 20 972 470 (1910) 55 422 302; Nova Scotia (1900) 2,592 515 (1910) 52 706 184; Ontario (1900) 241 533 486 (1910) 579 810 225; Prince Edward Island (1900) 2 326 708 (1910) 5 136 470; Quebec (1900) 158 287 994 (1910) 350,901 656; Saskatchewan (1900) 651 667 (1910) 6 332 132. It will be seen that Ontario and Quebec more than doubled their values, showing increases respectively of \$338 276 739 and \$192 613 662, but the four western provinces have shown rates of increase considerably higher, ranging from 1 323 78 per cent for Alberta to 871 68 per cent for Saskatchewan.

The principal manufacturing centres with the values in dollars of products in 1910 are:—Montreal 166 296 972 (71 099 750 in 1900); Toronto 154 306 948 (58 415 498 in 1900); Hamilton 55 125 946 (17 122 346 in 1900); Winnipeg and St. Boniface 39 400 608 (8 616 248 in 1900); Ottawa 20 924 331 (7 638 688 in 1900); Maisonneuve 20 813 774 (6 008 780 in 1900); Quebec 17 149 385 (12 779 546 in 1900); London 16 273 999 (8 122 185 in 1900); Brantford 15 866 229 (5 564 695 in 1900); Vancouver 15 070 105 (4 990 152 in 1900); Halifax 12 140 409 (6 927 552 in 1900); Windsor and Walkerville 12 113 279 (3 278 126 in 1900); Berlin and Waterloo 12 078 783 (4 359 690 in 1900); Peterborough 10 633 119 (3 789 164 in 1900); St. John 10 081 667 (6 712 769 in 1900); Sydney 9 395 017 (631 396 in 1900); Sault Ste. Marie and Steelton 7 842 384 (738 472 in 1900); Calgary 7 751 011 (599 444 in 1900); Guelph 7 392 356 (3 689 183 in 1900); Hull 7 259 301 (3 182 050 in 1900); Lachine 6 295 716 (2 909 847 in 1900); St. Catharines 6 024 217 (2 070 543 in 1900); Galt 5 252 600 (2 225 343 in 1900); Stratford 5 133 840 (1 935 176 in 1900); Chatham 5 023 560 (2 714 977 in 1900); Edmonton 4 493 304 (243 778 in 1900); Victoria 4 244 034 (2 617 573 in 1900).

Capital increased from \$331 635 499 in 1890 to \$446 916 487 in 1900 and to \$1 47 583 609 in 1910; salaries and wages in the same years from \$79 234 311 to \$113 283 602 and to \$241 008 416; and products from \$368 696 723 to \$481 053 375 and to \$1 165 975 639. The averages of the values of twelve out of fifteen groups of products were greater at the end of the first decade than in 1890, and at the end of the second they were greater for all groups.

the lowest showing an increase of 81 per cent. At the end of twenty years the increase in the values of all products was 216.54 per cent as compared with an average of 50.47 per cent in the first decade and of 142.13 per cent in the second.

In 1910 there were three hundred kinds of manufactures as compared with 264 ten years before. The cost of raw materials in 1900 was \$266,527,858 which when deducted from the value of products gave \$214,525,517 or 80.26 per cent as the value added by manufactures compared with \$601,509,018 as the value of raw materials and \$564,466,621 or 93.76 per cent as the value added by manufactures in 1910.

**Railways.**—The total railway mileage for the year ended June 30, 1911, was 25,400, an increase of 669 miles over 1910. Seventy per cent of this increase was in the western provinces. On the same date there were about 1600 additional miles of railway in actual operation which were officially regarded as being still under construction. The mileage under construction was—graded or being graded 6,223 track laid or being laid 3,833. In addition to these figures some 2,500 miles of additional line were located, surveyed or being surveyed.

New construction on the Canadian Pacific Railway system between June 30, 1910 and June 30, 1912 amounted to 1,753 miles. On the Grand Trunk Pacific Railway the Prairie Section (main line Winnipeg to Wolf Creek, 916 miles) was completed at the beginning of 1910 of the Mountain Section (main line Wolf Creek to Prince Rupert, 837 miles) 100 miles from Prince Rupert eastward to Copper River were completed at the beginning of 1910 the remaining 257 miles being under contract from Copper River eastward to Bulkley Summit 175 miles were to be completed in the spring of 1913 from Wolf Creek westward 185 miles is completed and a further distance westward to Second Crossing of Fraser River (120 miles) was also completed at the end of 1912.

From 1909 to the end of 1912 849 miles of branch lines (of which 747 were graded) were constructed as follows—Regina Boundary Branch 155 miles Regina Moose Jaw Branch 40 miles Moose Jaw North West Branch 48 miles Weyburn Branch 15 miles Prince Albert Branch 111 miles Battleford Branch 48 miles Cut Knife Branch 50 miles Harte Brandon Branch 25 miles Biggar Calgary Branch 105 miles Calgary Branch 202 miles Alberta Coal Branch 50 miles.

During the year 1912 over 586 miles of newly constructed tracks were added to the Canadian Northern system the average mileage operated being 3,888 miles. Great progress has been made in the construction of the transcontinental line of the Canadian Northern System which was expected to be completed by the end of 1913 the line through British Columbia to connect the western lines of the railway with tidewater at the Pacific coast has advanced rapidly. In addition to the advantage of easy gradients the location of the line enters without competition into a large territory the physical characteristics of which are expected to attract a desirable class of settlers. The line will also give access to a hitherto unknown section of the Canadian Alps.

During the year \$61,650,300 was added to the stock and use of railways operating in Canada and \$56,741,214 to funded debt. These additions brought the aggregate capital liability up to \$1,528,689,201. The aggregate earnings from all sources for the year were \$188,733,493 an increase of 8.7 per cent over 1910.

**Ports.**—Much attention has been and is being devoted to the provision of adequate dock accommodation and other shipping facilities. The harbour at Montreal has been vastly improved and a new floating dry dock was launched by the Governor General on November 18, 1912 thus providing complete modern equipment for the repair and examination of large vessels. At Victoria, British Columbia a contract has been let to an English firm for the construction of a breakwater as a first instalment of an important scheme of harbour improvement and at Courtenay Bay, St. John, New Brunswick another English firm of contractors were in 1912 undertaking dock and breakwater works on a large scale so as to enable the port to meet the demands that would be made upon it through the great railway extensions.

**Postal Development.**—During 1911-12 a very considerable expansion was witnessed. The number of post offices increased by 437, and there was an increase of 670 miles in the extent of the system over which mails were carried by railway. The number of miles over which mails were carried by railway and water routes and ordinary land routes was greater by 3,422,080 miles than it was for the year before. The increase in the number of letters and postcards sent during the year was over fifty-two millions and a quarter or more than ten per cent greater than the year before. An Order in Council was passed during the year increasing to \$1500 the amount the Post Office Savings Banks are authorised to accept in any one year and increasing the maximum limit of an account to \$5000 exclusive of interest. Formerly the maximum amount that could be accepted from a depositor in one year was \$1000, and the maximum limit of an account was fixed at \$3000. The increase in value of postage stamps sold was \$1,068,607 or about 10½ per cent.

**Finance.**—The federal revenue increased from \$71,186,072 in 1905 to \$136,108,217 in 1912 and the expenditure from \$78,804,138 to \$137,142,082. A large amount of this expenditure is chargeable to capital and represents outlays in respect of railways, canals and public works, bounties, etc. The total debt in 1912 was \$508,338,591, the total assets \$168,419,131 and the net debt \$339,919,400.

*The Governor General*—The Earl and Countess Grey embarked at Quebec for England on October 13 1911 when His Excellency relinquished the office of Governor General. Appointed on September 26th and assuming office on December 10 1904 Lord Grey's tenure of office was in 1909 extended beyond the usual term of five years, and again for another year after the death of King Edward in 1910. He had thus held office longer than any of his eight predecessors since Confederation. In January 1911 it was notified that the Duke of Connaught would be appointed to succeed Lord Grey and on March 21st he was formally gazetted as Governor General and Commander in Chief for a period of two years. On October 12 1911 the Duke and Duchess were welcomed at Quebec, where the new Governor General was formally sworn in.

*Imperial Conference* 1911—At the Imperial Conference in London in May and June 1911 the Canadian representatives were Sir Wilfrid Laurier<sup>1</sup> Prime Minister, Sir F. W. Borden<sup>2</sup> Minister of Militia & Defence and Mr. L. P. Brodeur (b. 1862), Minister of Marine & Fisheries.

Among the resolutions adopted of particular interest to Canada was Resolution I proposed by the Imperial government which provided that (a) the Dominions shall be afforded an opportunity of consultation when instructions are being framed for British delegates at future meetings of the Hague Conference and that Conventions affecting the Dominions provisionally assented to at that Conference shall be circulated among the Dominion governments for their consideration before any such convention is signed (b) that a similar procedure where time and opportunity and the subject matter permit shall as far as possible be used when preparing instructions for the negotiation of other international agreements affecting the Dominions. Moreover in connection with the most favoured nation clause in certain Treaties still in force between Great Britain and other countries Resolution XIX was adopted on the motion of Sir Wilfrid Laurier as follows: That His Majesty's Government be requested to open Negotiations with the several foreign governments having Treaties which apply to the Overseas Dominions with a view to securing liberty for any of those Dominions which may so desire to withdraw from the operation of the treaty without impairing the treaty in respect of the rest of the Empire. Steps were subsequently taken by the Imperial government towards the opening of negotiations with the countries concerned.

Resolution XX also adopted on the motion of Sir Wilfrid Laurier suggested the appointment of a Royal Commission to investigate and report upon the natural resources of the Empire and the development of mutual trading relations. Effect was given later in the year to this suggestion and Mr. George E. Foster the Minister of Trade & Commerce in Mr. Borden's cabinet was appointed on the Dominions Royal Commission.

*Parliamentary Politics*—The political history of Canada in 1910-13 centres round the two great questions of Reciprocity with the United States and Canadian naval policy in relation to the Empire. On July 18 1911 parliament reassembled after the Coronation adjournment and on July 10th the government of Sir Wilfrid Laurier who had been Premier since 1896 decided to recommend the dissolution of parliament and to submit their proposals for commercial reciprocity with the United States (see below) to the judgment of the Canadian people at a general election which was fixed for September 21st. While the chief question before the electors was the Reciprocity Agreement, the question of Canada's Naval Policy (see below) received much attention especially in the province of Quebec. The result was a complete defeat for the government and the Reciprocity party. What had been a Liberal majority of 45 was converted into a Conservative Liberal and Anti Reciprocity majority of 40. Mr. Fielding and Mr. Paterson who were responsible for the negotiations with the United States were both defeated together with Sir F. Borden and four other ministers. On October 6th Sir Wilfrid Laurier and his administration resigned office. Sir Wilfrid Laurier retained his seat, however, and decided to remain at the head of his party now in Opposition.

Mr. R. L. Borden<sup>3</sup> leader of the Conservative party, being called upon to form an Administration accomplished this task on October 10, 1911 and the new ministry was

<sup>2</sup> B. 1847 see *E. B.* iv 245

<sup>3</sup> Robert Laird Borden (see *E. B.* iv 45) was born in Nova Scotia in 1854. Becoming a leading lawyer in his province he entered the Dominion parliament in 1896 and in 1901 became leader of the Conservative Opposition.

constituted as follows R L Borden Premier and President of the Privy Council George Eulas Foster<sup>1</sup> Trade and Commerce, Robert Rogers (b 1864) Interior F D Monk (b 1856) Public Works, Francis Cochrane (b 1852) Railways and Canals, William T White<sup>2</sup> Finance, Louis P Pelletier (b 1857) Postmaster General, John D Hazen (b 1860) Marine and Fisheries and Naval Service, Charles J Doherty (b 1853), Justice Samuel Hughes (b 1853) Militia and Defence, William J Roche (b 1859), Secretary of State Thomas W Crothers (b 1850) Labour Wilfrid B Nantel (b 1857) Inland Revenue and Mines John D Reid (b 1859) Customs Martin Burrell (b 1858) Agriculture George H Perley (b 1857) Albert E Kemp (b 1858), and James A Loughheed (b 1854) members without portfolios On October 22 1912 Mr Monk resigned on the question of Mr Borden's naval policy (see below) and his portfolio was taken over by Mr Rogers Mr W J Roche becoming Minister of the Interior in his place The office of Secretary of State was filled by Mr Louis Coderre (b 1865) the member for the Hochelaga division of Montreal On October 23 1911 the Hon. Auguste Landry was appointed Speaker of the Senate and on November 15th Dr T S Sproule was elected Speaker of the House of Commons

The twelfth parliament of the Dominion of Canada was opened on November 15 1911 by the Governor General in person The address in reply to the speech from the throne was voted on November 29 and on December 7th parliament adjourned over the Christmas recess until January 10 1912 On resuming the main business was financial estimates including supplementaries being submitted for \$169 389 716 divided as to \$117 981 831 to Consolidated Fund Account and \$51,407 885 to Capital Account On April 1 1912 parliament was prorogued

When the new session opened on November 21, 1912 it was known that the announcement of Mr Borden's naval programme would be the business of outstanding importance The Governor General in the speech from the throne stated that his advisers having consulted with the Imperial government it had been concluded that it would be the duty of Canada at this juncture to afford aid for the purpose of strengthening the effective naval forces of the Empire and on December 5th (see below) the Premier announced an Emergency Contribution Bill leaving the permanent Naval Policy for future consideration

*The Reciprocity Question*—Sir W Laurier's government had begun their official negotiations for Reciprocity with the United States in January 1911 as the result of private discussions in the previous year The terms of the proposed Agreement were announced in the Canadian parliament by Mr W S Fielding the Finance Minister in Sir W Laurier's cabinet on January 26 1911 It aimed at more free interchange of products by removing duties on certain articles and reducing them in others

Among those which were to enter free in each country if of the growth product or manufactures of the other were live animals poultry wheat and other grain vegetables fruit dairy products honey cotton seed oil and certain oil seeds grass garden field and other seed fish except those preserved in oil certain fish oils timber (not sawn) brass (not polished) rolled iron or steel sheets 14 gauge or thinner galvanised coated with zinc or tin crucible cast steel galvanised iron steel or wire typewriting and typesetting machines barbed fencing wire coke (round) wire rods wood pulp and cream separators Among the articles to be admitted into Canada from the United States and into the United States from Canada at identical rates were the following—Fresh meats 1½ cts. per lb bacon and hams not in tins or jars 1½ cts. per lb meats dried and preserved 1½ cts per lb canned meats and poultry 20 per cent lards etc., 1½ cts per lb barley malt per 100 lbs 45 cts cereal foods 12½ cts per 100 lbs biscuits wafers cakes 25 per cent confectionery 32½ per cent farm wagons 22½ per cent farming implements of various kinds 15 per cent portable engines with boilers and traction engines for farm purposes 20 per cent roofing slates 55 cts per 100 ft. cutlery plated or not 27½ per cent, clocks watches etc 27½ per cent automobiles 30 per cent Arrangements were made for special rates of duty on a moderate scale to cover a large number of other commodities

<sup>1</sup> See E B x 732 Born in New Brunswick in 1847 In 1885 he was Minister of Marine and Fisheries, and in 1888-96 Minister of Finance

<sup>2</sup> Born at Bronte Ontario in 1866 He became a successful financier in Toronto occupying until recently the position of Vice President of the National Trust Company

The case presented for the adoption of this agreement was that reciprocal trade relations had been the policy of all parties in Canada for generations, that many efforts had been made to secure a treaty without success, and that Sir John Macdonald's National Policy Tariff (18,9) contained a standing offer of reciprocity with the United States covering a large portion of the products included in the present agreement. The United States having approached Canada with fair offers, it was claimed that they should be fairly met and that in making the arrangement the government were realising the desires which the Canadian people had expressed for half a century and also that in promoting friendly relations with the neighbouring republic the best possible service to the empire was being done. As Canada was seeking markets everywhere for her surplus products, subsidising steamship lines, and sending out commercial agents, it would be absurd to refuse to avail herself of increased facilities in the markets at her doors.

A denial was given to the expressed fear that the imports from Great Britain would be seriously affected. It was pointed out that the greater part of the agreement dealt with natural products which did not come from Great Britain and that the range of manufactures affected was small. It was further denied that there was any foundation for the assumption that the tariff rates agreed upon discriminated in favour of the United States and against Great Britain. The promoters of the agreement promised that in every case Great Britain would have the same rate or a lower one and held that Canada's right to deal with the British preference as she pleased remained untouched.

The opposition to the agreement took the ground that the arrangement had been entered into hastily without its effects being fully appreciated and that the question should be referred to the people. Attention was drawn to the success which had attended the efforts to build up a nation and bind the country together from east to west and it was contended that as the arrangements proposed would primarily affect the question of transportation by promoting a tendency to make trade move north and south the immense efforts which had been made would be sacrificed and the markets which had been secured in Great Britain abandoned. The action of the United States in approaching Canada with a desire to make such an agreement after declining on so many occasions to consider the question when asked to do so by Canada was looked upon with suspicion and it was suggested that the balance of advantage would remain with the United States the speeches of some of her most prominent public men being freely quoted in support of this view—notably one by Mr. Champ Clark in Congress and another by President Taft himself. It was held that the impelling cause was the desire of the United States to have access to the abundant natural resources of Canada her own reserves of wood, coal and other minerals and much of her farm land having shown signs of exhaustion. It was thought the better plan was to conserve Canadian resources for Canadian use. A further objection to the proposals was that while they would change the whole current of Canadian industries and be likely to dislocate the national development the new markets proposed would be so entirely unstable and insecure that after having had the benefit of them for a few years they might be withdrawn causing a reversion to the position of 25 years ago, and necessitating the rebuilding of home industries and re-making their reputation in markets which in the mean time had been entirely occupied by old competitors. Great importance was attached to the restriction on legislation which it was alleged this agreement would cause as no trade aggrieved under it could obtain redress without the arrangement as a whole being upset. It was also urged that under it concessions in the tariff would have to be made in accordance with existing treaties, to countries from which no equivalent advantages could be obtained and it was declared that if this Reciprocity policy was pursued the ties of empire would eventually be cut for it would lead to complete commercial union and in the end the political domination of the United States, to which Canada would simply be an annexe.

The debates in connection with the matter lasted for almost the remainder of the session but on February 22, 1911, on the motion of Mr. F. D. Monk, the House adopted unanimously the following as an amendment to the motion for going into Committee

**of Ways and Means** ' But before resuming the discussion of the terms of the agreement concluded between the government of Canada and the President of the United States, and with a view to dispel the feeling of unrest created in Canada by comments made in both countries as to the political consequence of the agreement, the House wishes to affirm emphatically its determination to preserve intact the bonds which unite Canada to the British Empire and the full liberty of Canada to control her fiscal policy and internal autonomy "

A Bill to give effect to this Reciprocity Agreement on the part of the United States was introduced in the American Congress on January 29th and in due course passed the Senate on July 22nd it being enacted that its provisions should become operative as soon as the necessary counterpart legislation had been passed by the Canadian parliament. Discussion continued in the Canadian House of Commons but no progress was made towards the adoption of the proposals, and on July 29 1911 the government decided to recommend the dissolution of parliament and to submit the matter to the judgment of the people at a general election. The defeat of the government followed the result being greatly influenced by the strong opposition to Reciprocity which was shown by such well-known Liberals as Mr Clifford Sifton (b 1861 formerly Minister of the Interior in the Laurier cabinet) Mr Lloyd Harris and Mr Wm German and by the steps taken by a body of prominent Liberals of Toronto assisted by Sir Edmund Walker President of the Canadian Bank of Commerce.

**Sir W. Laurier's Naval Policy** — An outcome of the Imperial Conference of 1906 had been the determination of the Canadian government to establish a naval service, and on January 12 1910 a Bill for this purpose was introduced into the House of Commons and became law on May 4 1910. It provided for the creation of a Naval Department and transferred to it from the Department of Marine and Fisheries the wireless telegraph fisheries protection hydrographic and tidal survey branches. It empowered the government to appoint a Naval Board to advise the minister and to organise and maintain permanent reserve and volunteer forces and to place at the disposal of His Majesty for general service in the Royal Navy ships or men of the Canadian naval service. Provision was also made for a naval college. During the debate on the Bill, Sir Wilfrid Laurier announced that it was the intention of the government to construct in Canada if possible four cruisers of the improved Bristol class and six destroyers of the improved 'River' class. At conferences with the British Admiralty it was agreed that the naval stations for Canada should be two—one on the Atlantic to include the waters north of 30° N lat and west of the meridian of 40° W and one on the Pacific to include the waters north of 30° N lat and east of the meridian of 180. Halifax Dockyard was taken over from the Imperial authorities on January 1 1906 and the dockyard at Esquimalt on November 9 1910. On August 28, 1911 it was announced that the King had approved of the naval forces of Canada receiving the style of "The Royal Canadian Navy" and of the ships of war of that navy being designated as "His Majesty's Canadian Ships". On December 16th the following regulations were published with regard to the flag and pennants to be flown by the Royal Canadian navy. All ships and vessels of the Royal Canadian Navy shall fly at the stern the white ensign as the symbol of the authority of the Crown, and at the jack-staff the distinctive flag of the Dominion of Canada, such distinctive flag being the blue ensign with the Arms of the Dominion inset in the fly. The white pennant will be flown at the masthead.

In pursuance of Sir Wilfrid Laurier's naval policy, H M's cruisers "Niobe" and "Rainbow" were purchased and taken over in the autumn of 1910. On July 29 1911 however H M C S "Niobe" sustained damage by grounding on the coast off Cape Sable her repairs were undertaken at Halifax and took fifteen months to complete. The building of the proposed new cruisers and destroyers had however not been commenced at the time of the resignation of Sir Wilfrid Laurier's government.

**Mr Borden's Naval Policy** — The naval policy of Sir Wilfrid Laurier's government was that of a Canadian built and Canadian-controlled navy but this was criticised by the Opposition as involving a large expenditure a disunited Imperial navy and the construc-

tion of obsolete types of ships. Upon Mr Borden's acceptance of office, the naval question became one of renewed interest. Mr Borden stated that in his view the question of permanent co-operation between the Dominion and the rest of the Empire ought to be fully debated and that the Canadian people should be given an opportunity of pronouncing upon it. Pains would be taken to ascertain in the meantime what were the real conditions confronting the Empire. In pursuance of this object Mr Borden, with several of his colleagues visited London in July 1912 and were cordially welcomed by Mr Asquith's government who enabled them at meetings of the Imperial Defence Committee and otherwise to obtain all the information available as to the problems of British foreign policy and the naval situation as it presented itself to the British Admiralty. The proposals which the Canadian government founded on the understanding thus arrived at were left however to be made public first in the Dominion Parliament after it met in November.

Mr Borden's speech on December 5 1912 must always be historic in the relationship between Canada and the Mother country. It was notable for announcing two steps forward in a common Imperial policy. In the first place his Bill to Authorize Measures for Increasing the effective Naval Forces of the Empire proposed to contribute £1,000,000 (\$3,000,000) for the construction and equipment of three first class battle ships to be under the control of the British Admiralty as part of the Royal Navy subject to arrangements for their being at the disposal of the Canadian government if ever a separate Canadian Navy were established. And in the second place by the agreement of the Imperial government to include a Canadian Minister as one of the permanent members of the Committee of Imperial Defence the principle was recognised that if the Dominions took their share in Imperial defence they must also have a share in determining Imperial policy.

The proposal for an 'emergency contribution' of three battleships to the British Navy was founded on a memorandum (published in England on December 31st as a Parliamentary paper) drawn up by the Admiralty for the information of the Canadian government as to the existing international situation from a naval point of view and Mr Borden read this out in the course of his speech. It is given in full elsewhere in the YEAR BOOK (see Part I sect. 1 'The World's Navies') and need not here be repeated. But the view taken by the Canadian government can best be shown by quoting the salient passages of Mr Borden's speech.

As regards the vital need of naval security for the very existence of the Oversea Dominions as part of the British Empire and the grave danger to that security indicated by the relative decline in the power of the British navy owing to the growth of other navies Mr Borden said:

*This Empire is not a great military power and it has based its security in the past as in the present almost entirely on the strength of its Navy. A crushing defeat upon the high seas would render the British Islands or any Dominion subject to invasion by any great military Power. Loss of such a decisive battle by Great Britain would practically destroy the United Kingdom shatter the British Empire to its foundations and change profoundly the destiny of its component parts.* There is therefore grave cause for concern when once the naval supremacy of the Empire seems on the point of being successfully challenged.

The great outstanding fact which arrests our attention in considering the existing conditions of naval power is this. Twelve years ago the British Navy and the British Flag were predominant in every ocean of the world and along the shores of every continent. To-day they are predominant nowhere except in the North Sea. The paramount duty of ensuring safety in home waters has been fulfilled by withdrawing or reducing squadrons in every part of the world and by concentrating nearly all the effective naval forces in close proximity to the British Islands. In 1902 there were 55 British warships on the Mediterranean station to-day there are 19. There were 14 on the North American and West Indies station to-day there are three. There were three on the south-east coast of South America to-day there is one. There were 10 on the Cape of Good Hope station to-day there are three. There were eight on the Pacific station to-day there are two. There were 42 on the China station to-day there are 31. There were 12 on the Australian station to-day there are eight. There were ten on the East Indies station to-day there are nine. To sum up in 1902 there were 160 ships on foreign and Colonial stations against 76 to-day. Do not imagine that this

result has been brought about by any reduction in expenditure for the case is practically the reverse. Great Britain's total naval expenditure in 1902 was less than \$152 000 000 (£30 400 000). For the present fiscal year it exceeds \$220 000 000 (£44 000 000). Why then has the naval force of the Empire been so enormously reduced while at the same time the expenditure has increased nearly 50 per cent? For the simple reason that the increasing strength of other navies, and especially of the German Navy, has compelled Great Britain not only to increase her fleet but to concentrate it in the vicinity of the British Islands.

It is neither necessary nor desirable to debate or discuss the probability or imminence of war. The real test of our action is the existence or non existence of absolute security. It should never be forgotten that without war without firing a shot or striking a blow our naval supremacy may disappear and with it the sole guarantee of the Empire's continued existence.

The fact that trade routes vital to the Empire's continued existence are inadequately defended and protected by reason of the necessary concentration in home waters is exceedingly impressive and even startling. Even during the present year the battleships of the British Mediterranean Fleet based on Malta have been withdrawn and based on Gibraltar in order that they might become more easily available for necessary aid in home waters. The Atlantic Fleet based on Gibraltar has been withdrawn to the vicinity of the British Islands for the same reason. Under such conditions the British flag is not predominant in the Mediterranean and with every available exertion of the whole Empire it may be impossible to regain the necessary position of strength in that great highway before 1915 or 1916. Austria-Hungary with only 140 miles of sea coast and absolutely no colonial possessions is building in the Mediterranean a formidable fleet of Dreadnoughts which will attain its full strength in about three years and which will be supported by strong battleships of the pre-Dreadnought type and by cruisers, torpedo craft and other necessary auxiliaries. The fleet of Italy in the same theatre will be even more powerful and more formidable. The withdrawal of the British flag and the British Navy from so many parts of the world for the purpose of concentration in home waters has been necessary but unfortunate. Our Navy was once dominant everywhere and the White Ensign was the token of naval supremacy in all seas. Is it not time that the former conditions should in some measure be restored? Upon our own coasts both Atlantic and Pacific powerful squadrons were maintained 12 years ago. To-day the flag is not shown on either seaboard. I am assured that the aid which we propose will enable such special arrangements to be consummated that without courting disaster at home an effective fleet of battleships and cruisers can be established in the Pacific and a powerful squadron can periodically visit our Atlantic seaboard and assert once more the naval strength of the Empire along these coasts. I do not forget however that it is the general naval supremacy of the Empire which primarily safeguards the Oversea Dominions. New Zealand's battleship is ranged in line with the other British battleships in the North Sea because there New Zealand's interests may best be guarded by protecting the very heart of the Empire.

As regards the three Canadian battleships now to be added to the navy, Mr. Borden pointed out that under the Admiralty the Empire now had what he had convinced himself was the most thorough and effective naval organisation in the world of which it was the best Canadian policy to make use. The hazardous and costly experiment of building up a separate naval organisation for Canada was quite unnecessary and in any case could only provide a poor and weak substitute. In the present emergency the Canadian ships were best employed as part of the Empire navy under the Admiralty of the mother-country.

Those ships will be at the disposal of His Majesty the King for the common defence of the Empire. They will be maintained and controlled as part of the Royal Navy, and we have the assurance that if at any time in the future it be the will of the Canadian people to establish a Canadian unit of the British Navy, these vessels can be called by the Canadian government to form part of the Navy in which case of course they will be maintained by Canada and not by Great Britain. In that event there will necessarily be reasonable notice and indeed Canada would not desire or suggest the sudden withdrawal of so powerful a contingent from any important theatre in which the naval forces of the Empire might be exposed to severe and sudden attack. In the meantime I am assured that special arrangements will be made to give Canadians an opportunity of serving as officers in these ships.

The ships will be built under Admiralty supervision in the United Kingdom for the reason that at present there are no adequate facilities for constructing them in Canada. The plant required for the construction of Dreadnought battleships is enormous and it would be impossible at present to have shipbuilding in this country on such a scale. In any case only half could be built in Canada because the machinery for armour and guns would necessarily be constructed or manufactured in the United Kingdom. The additional cost of construction in Canada would be about 12 million dollars for three and it would be impossible to estimate the delay. No one is more eager than myself for the development

of the shipbuilding industries in Canada but we cannot upon any business or economic considerations begin with the construction of Dreadnoughts and especially we could not do so when these ships are urgently required within two or three years at the outside for rendering aid upon which may depend the Empire's future existence. According to my conception the effective development of the shipbuilding industries in Canada must commence with small beginnings and in a businesslike way. I have discussed the subject with the Admiralty and they thoroughly realise that it is not to the Empire's advantage that all shipbuilding facilities should be concentrated in the United Kingdom. I am assured therefore that the Admiralty are prepared in the early future to give orders for the construction in Canada of small cruisers, oil tank vessels and auxiliary craft of various kinds. The plant required is relatively small as compared with that which is necessary for Dreadnought battleships and such an undertaking will have a much more secure and permanent basis from the business standpoint. For the purpose of stimulating so important and necessary an industry we have expressed our willingness to bear a portion of the increased cost for a time at least. I see no reason why all the vessels required in future for our government service should not be built in Canada even at some additional cost. In connection with the development of shipbuilding I would not be surprised to see the establishment of a high class of engineering works which will produce articles now imported and not at present manufactured in Canada. Therefore although the sum which we propose to devote for necessary naval aid at this critical juncture is to be expended in Great Britain yet we believe that this step will result under the conditions which I have described in the very marked development of more than one industry in Canada and that even from a purely economic and material standpoint the step has much to commend it.

The Canadian expenditure now proposed was in Mr Borden's view a moderate one regarded not as the beginning of a system of periodical contributions but as an emergency aid at a moment of crisis.

If we should neglect the duty which I conceive we owe to ourselves and if irreparable disaster should ensue what will be our future destiny? Obviously as an independent nation or as an important part of the great neighbouring Republic. What then would be our responsibilities and what would be the burden upon us for a protection on the high seas much less powerful and less effective than that which we enjoy to day? Take the case of one nation whose territory, resources, population and wealth may fairly be compared with those in Canada. The naval estimates of Argentina for the four years from 1909 to 1912 inclusive amounted to \$35 000 000 (£7 000 000). No information is available as to the exact proportion of the last mentioned sum which has been appropriated for naval purposes but it is understood that the far greater portion is for naval construction. It is safe therefore to estimate that during the past four years Argentina has expended for naval purposes not less than from \$65 000 000 to \$70 000 000 (£13 000 000 to £14 000 000). The Federal and State expenditure of the United States comprises a total outlay for armaments of between \$250 000 000 and \$300 000 000 (£50 000 000 and £60 000 000) or at the rate of \$2.75 per head. Similar expenditure by Canada would mean an annual outlay of some \$20 000 000 to \$25 000 000 or between \$80 000 000 and \$100 000 000 during the same period.

It is apparent therefore that the aid which we propose to bring at this juncture is of a moderate and reasonable character. For 45 years as a Confederation we have enjoyed the protection of the British Navy without the cost of a dollar. So far as official estimates are available the expenditure of Great Britain on naval and military defence for the provinces which now constitute Canada during the nineteenth century was not less than \$400 000 000 (£80 000 000). Even since the inception of our Confederation and since Canada attained the status of a great Dominion the amount so expended by Great Britain for the naval and military defence of Canada vastly exceeds the sum which we are now asking parliament to appropriate. From 1870 to 1890 the proportionate cost of the North Atlantic Squadrons which guarded our coasts was from \$125 000 000 to \$150 000 000 (£25 000 000 to £30 000 000). From 1853 to 1903 Great Britain's expenditure on military defence in Canada runs closely to \$100 000 000.

As regards the voice which it had been arranged that Canada should have on the Committee of Imperial Defence, Mr Borden said:

With increasing power and influence there has necessarily come by sure and gradual steps a certain development in our relations with the United Kingdom and the other Dominions.

In this constitutional development we are necessarily confronted with the problem of combining co-operation with autonomy. It seems most essential that there should be such co-operation in defence and in trade as will give to the whole Empire an effective organisation in these matters of vital concern. On the other hand each Dominion must preserve in all important respects the autonomous government which it now possesses.

The responsibility for the Empire's defence upon the high seas in which is to be found the only effective guarantee of its existence and which hitherto has been assumed by the United Kingdom has necessarily carried with it the responsibility for and the control of

foreign policy. When Great Britain no longer assumes sole responsibility for defence upon the high seas she can no longer undertake to assume sole responsibility for and sole control of foreign policy which is closely vitally and constantly associated with that defence in which the Dominions participate. The great Dominions sharing in the defence of the Empire upon the high seas must necessarily be entitled to share also in the responsibility for and in the control of foreign policy. Not only His Majesty's Ministers but also the leaders of the opposite political party in Great Britain have explicitly accepted this principle.

I have alluded to the difficulty of finding an acceptable basis upon which the great Dominions co-operating with the mother country in defence can receive and assert an adequate voice in the control and moulding of foreign policy. We were brought closely in touch with both subjects when we met the British Ministers in the Committee of Imperial Defence. That committee is peculiarly constituted but in my judgment is very effective. It consists of the Prime Minister of Great Britain and such persons as he may summon to attend it. Practically all the members of the cabinet from time to time attend its deliberations and usually the more important members of the cabinet are present. In addition naval and military experts and the technical officers of the various departments concerned are in attendance. A very large portion of the work of the committee is carried on by subcommittees which often are composed in part of persons who are not members of the general committee itself and who are selected for their special knowledge of the subjects to be considered and reported upon. The amount of work which thus has been performed during the past five or six years in particular is astonishing and I have no doubt that it has contributed largely to the safety of the whole Empire in time of peril.

The committee is not technically or constitutionally responsible to the House of Commons and thus it is not supposed to concern itself with policy. As so many important members of the cabinet are summoned to attend the committee its conclusions are usually accepted by the cabinet and thus command the support of the majority of the House of Commons. While the committee does not control policy in any way and could not be undertaken to do so as it is not responsible to parliament it is necessarily and constantly obliged to consider foreign policy and foreign relations for the obvious reason that defence and especially naval defence is inseparably connected with such considerations.

I am assured by his Majesty's Government that pending a final solution of the question of voice and influence they would welcome the presence in London of a Canadian Minister during the whole or a portion of each year. Such minister would be regularly summoned to all meetings of the Committee of Imperial Defence and be regarded as one of its permanent members. No important step in foreign policy would be undertaken without consultation with such representative of Canada. This means a very marked advance both from our standpoint and from that of the United Kingdom. It would give us the opportunity of consultation and therefore influence which hitherto we have not possessed.

In opposition to the Government proposals Sir Wilfrid Laurier on December 12th moved an amendment which while not negating the first clause of the Government resolution providing for a vote for increasing the effective Naval forces of the Empire would have substituted for the remaining clauses a resolution declaring it necessary that Canada without further delay should enter actively upon a permanent policy of naval defence and that any measure of aid to Imperial naval defence which did not embody a permanent policy of participation by ships owned, manned and maintained by Canada was not an adequate expression of the aspirations of the Canadian people. Mr. Borden said Sir Wilfrid had asserted that before she enacted a permanent policy Canada must have a voice in all questions affecting war or peace. But that was a large contract and the question before them was that of emergency and immediate defence. If Canada was represented in the councils of war and peace the other Dominions and dependencies must be also. That question might take years to solve. It must be discussed by itself, and in the meantime Canada should continue in her preparations for defence. Sir Wilfrid Laurier condemned the Government's policy of direct contribution as un-Canadian and un-British and as unsuited to the real needs of the Empire.

*Other Legislation 1910-12*—Among important acts passed during the session 1910-11 were the Opium and Drug Act which prohibits the importation, manufacture, sale or possession for other than scientific or medicinal purposes of opium, cocaine, morphine and eucaine, or any salts or compounds thereof; a new Seed Control Act; and an Act confirming and sanctioning the treaty signed at Washington on January 11, 1909 relating to the boundary waters and to the questions arising along the boundary between Canada and the United States. In the session 1911-12 an act was passed amending the Dry Docks Subsidies Act of 1910 and providing that any dry dock shall not be deemed for the purpose of subsidy

to be a dry dock of the first class unless there can be received and repaired therein the largest ships or vessels of the British navy existing at the time at which the contract is entered into. Another Act of this session provided for the constitution of a new Department under the First Minister to deal with all official communications in connection with the external affairs of Canada, the administration of all matters relating to the foreign consular service in Canada etc. A measure of great importance dealing generally with grain inspection was also passed. It provides for the appointment of Grain Commissioners, the establishment of inspection divisions and the appointment of a Grain Standards Board for the purpose of establishing commercial grades and defines the various established grades. Acts providing for the extension of the boundaries of Manitoba, Ontario and Quebec were also passed.

Under the Canadian Medical Act, chapter 137, Revised Statutes 1906 and the amending Act, chapter 16, 1911, provision was made for the formation of a Dominion Medical Council as soon as the Legislatures of the various provinces of Canada had enacted legislation accepting the provisions of the Acts. The object of the legislation is to provide for one central council consisting of representatives of the different provinces for the purpose of (a) the establishment of a qualification in medicine such that the holders thereof shall be acceptable and empowered to practise in all the provinces of Canada, (b) the establishment of a register for Canada of medical practitioners and the publication and revision from time to time of such register, (c) the determination and fixing of the qualification and conditions necessary for registration, the examinations to be undergone with respect to professional subjects only, and generally the requisites for registration, (d) the establishment and maintenance of a board of examiners for examination and granting of certificates of qualification, (e) the enactment with the consent and at the instance of the medical councils of the various provinces of Canada of such provincial legislation as is necessary to supplement the provisions of this Act and to effect the foregoing purposes. The Secretary of State summoned a meeting on November 17, 1912 for the purpose of organising the Council and a number of appointments were subsequently made.

*The Ne Temere Decree*—On January 23, 1912 the House of Commons decided to refer to the Supreme Court of Canada and later to the Judicial Committee of the Imperial Privy Council the question whether the Dominion parliament may constitutionally pass a marriage law applicable in all respects in every province in Canada. On July 29, 1912 the Lord Chancellor delivered judgment which speaking generally upheld the decision of the Supreme Court of Canada. It was ruled that the Dominion parliament is not entitled under the British North America Act to pass a uniform federal law legalising all marriages performed by authorised clergymen. The matter is in the jurisdiction of the provinces.

*Anglo American Peace Celebrations*—On June 4, 1912 at a representative meeting at Ottawa a Committee was appointed to act for Canada in preparing a programme of the celebration of the 100 years of peace between the branches of the English speaking people.

*Fur Seal Convention*—The International Fur Seal Conference which was held at Washington from May 11 to July 7, 1911 resulted in a Convention being signed by which Great Britain, the United States, Russia and Japan undertook that pelagic sealing should cease for a period of 15 years from December 15, 1911 and thereafter until terminated by one year's notice. Canada was represented by the under secretary for external affairs, Mr. Joseph Pope, who in 1912 was created a K.C.M.G. Provision was made for an apportionment of the annual proceeds from the seals killed on land, the share payable to Canada being 15 per cent of the gross takings of the United States and Russia, and 10 per cent of those of Japan.

*Provincial Governments*—On June 14, 1911 a general election was held in Nova Scotia the result being the return of the government which had been Liberal since 1884. The elections for the British Columbia Legislature took place on March 28, 1912 the result being the return of the government, 40 Conservatives and 2 Socialists being elected. The Hon. Richard McBride, K.C. (b. 1870) the Premier of British Columbia since 1903 was created a K.C.M.G. in 1912. The election in Ontario was held on December 11, 1911 when Sir James Whitney's government was returned by a majority of 60. In January 1912 the Prince Edward Island elections resulted in the return of 27 Conservatives and 3 Liberals. The Premier is Hon. J. A. Mathieson, K.C. who had formed a government in December 1911. The general election in New Brunswick took place on June 20, 1912 resulting in the return of 44 Conservatives, 2 Independents, and 2 Liberals. On May 15, 1912 the elections were held for the Quebec Legislature and resulted in the return of Sir Lomer Gouin's government with a slightly reduced majority. On July 11, 1912 the general election took place for the province of Saskatchewan. The chief issue was the Reciprocity agreement as in the Dominion elections and the overwhelming majority by which Mr. Scott's government was returned was looked upon as a striking victory for the Reciprocity party.

The appointment of members of provincial governments to the new federal cabinet in 1911 necessitated some re-arrangements in the provincial cabinets.

In Manitoba the vacancy caused by the Hon. Robert Rogers joining the Dominion cabinet was filled by the inclusion of Mr. George Lawrence as Minister of Agriculture. In 1912 the Hon. Rodmond Palen Roblin (b. 1853) Premier since 1900 was created K.C.M.G. and the retiring Chief Justice Joseph Dubuc (b. 1840) was knighted.

In Ontario, Mr. W. H. Hearst, K.C.M.P. became Minister of Lands, Forests and Mines.

in succession to the Hon Frank Cochrane the new Federal Minister of Railways and Canals in 1912 the lieutenant governor Col John Morison Gibson was created a K C M G

In New Brunswick owing to the appointment of the Hon J D Hazen Premier and Attorney General to be Federal Minister of Marine and Fisheries the Hon J K Flemming Provincial Secretary was called upon to form a government Mr Flemming took the office of Surveyor General and the Hon W C H Grimmer was appointed Attorney General Hon H F McLeod Provincial Secretary Hon John Morrissey Commissioner of Public Works Hon D V Landry Agricultural Commissioner and the Hon Robert Maxwell and Hon John A Murray without portfolios

*New Lieutenant Governors*—On August 1 1911 Mr D C Cameron was sworn in as Lieutenant Governor of Manitoba in succession to Sir D H MacMillan retired A native of Vankleek Ontario he was elected to the Ontario Legislature in 1902

Sir Francis Xavier Langeheir Acting Chief Justice of the Supreme Court of Quebec was appointed Lieutenant Governor of the Province of Quebec in succession to Sir C A Pelletier deceased Born in 1838 he has held several offices in Quebec Ministries and sat in the Dominion House of Commons from 1884 to 1898

In New Brunswick the term of office of the Hon I J Tweedie expired on March 1, 1912 and he was succeeded as Lieutenant Governor by Senator Josiah Wood who was born at Sackville New Brunswick in 1843

*Judiciary*—In succession to Sir Louis Jette resigned the Puisne Judge of the Court of King's Bench the Hon. Horace Archambault became Chief Justice of Quebec in 1912 Born at L Assumption Quebec in 1857 he was educated at Laval University In 1888 he was called to the Legislative Council Quebec and from 1897 to 1905 was Attorney General of the Province Appointed a Q C in 1889 he was raised to the bench in 1908

On the death of Sir Charles Moss Chief Justice of Ontario in 1912 he was succeeded by Sir Wm Meredith who was born at London Ontario in 1840 and was educated at Toronto University He was member for London in the Ontario Legislature from 1872 to 1896 He was appointed Chief Justice of the Common Pleas in 1904

The Hon F W G Haultain formerly Premier of the North West Territories was gazetted on November 2 1912 as Chief Justice of Saskatchewan He was born in 1857 at Woolwich England going to Ontario in 1860 He was called to the Bar of Ontario in 1882 and to the Bar of the North West Territories in 1884 being appointed a K C in 1902

The Hon Francis L Haszard K C Prime Minister of Prince Edward Island was appointed Judge of the Canadian Supreme Court on May 4 1911 being succeeded in the Premiership by the Hon H J Palmer The new Judge of the Supreme Court was born in Prince Edward Island in 1849 and was admitted to the Bar in 1872 From 1893 to 1900 he was Stipendiary Magistrate and Recorder of Charlottetown Elected a member of the Provincial Legislative Assembly in 1904, he became Prime Minister of the Province in 1908

In April 1912 four new Judgeships were authorised by parliament and were filled as follows—Mr Alexander Haggart ex M P for Winnipeg to the Manitoba Court of Appeal Mr W L Walsh K C of Calgary to the Supreme Court of Alberta Mr Hector Chauvin K C of Hull as Judge of the new judicial district of Labelle and Mr Haughton Lennox M P for South Simcoe to one of the extra judgeships of the High Commission of Ontario

As Chief Justice of the Superior Court of Quebec Mr Justice Davidson has succeeded Sir Melbourne Tait The new Chief Justice was born in Huntingdon Quebec in 1841 he was educated at McGill University and was made a Q C being raised to the bench in 1887 where he has been a Puisne Judge of the Superior Court

*Personalia*—On October 22 1912 Major G W Stephens resigned the position of Chairman of the Montreal Harbour Commission—On March 1 1912 Dr J G Rutherford resigned his position as Veterinary Director General and Live Stock Commissioner He was appointed Chief Veterinary Inspector in 1902 Veterinary Director in 1904 and Live Stock Commissioner in 1906—On March 31 1911 Dr William Saunders C M G retired after nearly 25 years service as Director of Experimental Farms in Canada during which time he showed a keen and enlightened sympathy with all that tended to assist in the development of the agricultural resources of the Dominion Born in Devonshire England in 1836 he went to Canada in 1848 He is succeeded by Mr J H Grisdale

*Obituary*—The Canadian obituary for 1911 included the following—THOMAS MAYNE DALY (b 1852) police magistrate at Winnipeg d June 24th. He was formerly a member of parliament and was Minister of the Interior from 1892 to 1896—DESIRE GIRAUD the judge and man of letters d at Ottawa on March 22nd He was born at St Timothée Quebec on July 7 1836 and was educated at Montreal College afterwards studying law He stood for the Canadian House of Commons for several constituencies from 1872 to 1878 and was finally elected for Jacques Cartier in that year He held the seat until 1895 when he became a judge of the Supreme Court At the time of his death he was Senior Judge He published a work on the Civil Laws of Marriage one on the law of insolvency and one on bills of exchange, also *Lake St Louis Old and New* and *Chevalier de la Salle* He was an editor of *La Revue Ontarienne*—SIR CHARLES ALPHONSE PANTALÉON PELLETIER K C M G the judge and statesman d at Quebec on May 1st He was born at Rivière Ouelle on January 22 1837 and educated at Laval University He was called to the Bar in 1860 and became Q C

in 1879. In 1892 he was Batonnier of the Quebec Bar. He commanded a battalion of volunteers during the Fenian rising of 1866. He sat in the Dominion House of Commons from 1869 to 1877 when he was called to the Senate. From 1896 to 1901 he was Speaker of the Senate. In 1902 he was appointed a Judge of the Supreme Court of Canada and in 1908 Lieut Governor of the province of Quebec.—SIR HENRI ELZEAR TASCHEREAU the judge d at Ottawa on April 19th. He was born at St Marv's Beauce Co. Quebec on October 7 1836 and educated at Quebec Seminary. He was called to the Quebec Bar in 1857 became Q.C. in 1867 Judge of the Superior Court Quebec in 1871 Judge of the Supreme Court of Canada in 1878 and Chief Justice in 1902. He was knighted in 1902 and made a Privy Counsellor in 1906 when he resigned his Chief Justiceship. From 1861 to 1867 he had represented Beauce Co. in the Canadian Legislative Assembly. He published *Criminal Law of Canada* and *Code Civil Procedure of Province of Quebec*.—SIR JOHN CARLING K.C. M.G. the agricultural administrator b at London Ontario 1878 d November 6 1911. Prior to Confederation he had held the positions of Receiver General 1862 and Minister of Works and Agriculture 1867-71 in the local government. From 1885 to 1892 he served as Minister of Agriculture in the Dominion Ministry of Sir John A. Macdonald and to him is due the credit of establishing a number of Experimental Farms throughout the country.

The following are the more memorable among those who died in 1912.—ADAM CARR BELL formerly Senator b 1847 d at Pictou Nova Scotia on October 31st. He entered the Nova Scotia legislature in 1878. In 1896 he was elected to the Dominion parliament but was defeated in 1904.—EDWARD BLAKE (b 1833) formerly prominent as a Canadian statesman whose later career in the Imperial Parliament was of less account d at Toronto on Mar 1st (for biography see *E.B.* iv 354).—SIR RICHARD CARTWRIGHT (see *E.B.* v 435) the statesman (b 1835) d at Kingston Ontario on September 23rd.—SIR EDWARD CLOUSTON Bart the financier general manager and vice president of the Bank of Montreal b 1849 d November 23rd. He had been connected with the bank for nearly 50 years.—GEORGE RALPH RICHARDSON COCKBURN the educationalist and politician d in London on January 24th. He was born in Edinburgh on February 15 1832 and educated at the Royal High School and University there afterwards going to France and Germany. He went to Upper Canada in 1858 and from 1861 was Principal of the Upper Canada College for over twenty years besides being Senator of Toronto University. From 1887 to 1896 he sat in the Dominion House of Commons as Conservative Member for Central Toronto. He was chief Canadian Commissioner at the Chicago World's Fair 1893.—CHARLES M. HAYS (b 1856 at Rock Island Ill U.S.A.) president of the Grand Trunk Railway lost in the Titanic in April. Formerly general manager of the Wabash Railway he was appointed to be manager of the Grand Trunk in 1896 and subsequently president. He was also president of the Grand Trunk Pacific.—GEORGE HOLMES missionary bishop in the North west d in London on February 3rd. He was born in England on November 23 1858 and educated at St. John's College Winnipeg. He was afterwards trained at the Church Missionary College Islington whence he returned to Canada in 1885. In 1887 he was ordained and worked as a missionary in the North West Territory till 1905. In 1901-05 he was Archdeacon of Athabasca in 1905-09 Bishop of Moosonee and from 1909 till his death Bishop of Athabasca.—SIR JAMES MACPHERSON LEMOINE the lawyer and author d at Quebec on February 5th. He was born at Quebec on January 24 1825 and educated there. He was called to the Bar in 1850 but devoted himself chiefly to the writing of his torical and ornithological works. In 1894 he was elected President of the Royal Society of Canada. His publications included *L'Ornithologie du Canada* (1861) *Les Pêcheries du Canada* (1862) *Maple Leaves* (6 vols 1863-94) *Quebec Past and Present* (1876) *Annals of the Port of Quebec* (1901) etc.—JAMES PITT MABEE the judge d at Toronto on May 7th. He was born at Port Rowan Ontario on November 5 1859 and educated at Toronto University. He was called to the Bar in 1882 made Queen's Counsel in 1899 and Judge of the Ontario High Court in 1905. He resigned his position as Judge in 1908 to become Chief Commissioner of the Board of Railway Commissioners for Canada.—JAMES MACDONALD the politician and judge d at Halifax N.S. on October 4th. Born in 1828 he entered the Dominion parliament and was Minister of Justice in Sir John Alexander Macdonald's cabinet in 1878. Latterly he had been Chief Justice of his province.—SIR CHARLES MOSS the judge d at Toronto on October 12th. He was born at Cobourg Ontario on March 8 1840 and educated at the Ontario Law School. He was called to the Bar in 1869 became K.C. in 1881 and Judge in 1897. In 1902 he became Chief Justice of the Province of Ontario. He was knighted in 1907. From 1900 to 1906 he was Vice Chancellor of Toronto University. He published together with Mr R. Sullivan a handbook of Commercial Law for Upper Canada.—JAMES O'BORNE a well known railway official d at Vancouver on April 30th. He was born at Montreal on September 19 1862 and was educated at the Montreal Public School. At thirteen years of age he began railway work and rose to be general superintendent of the British Columbia division of the Canadian Pacific Railway.—WILLIAM OGILVIE first governor of Yukon b at Ottawa 1846 d November 13th. Formerly a Dominion Lands Surveyor and astronomer in the service of the Canadian Department of the Interior he carried out important surveys in the Mackenzie and Yukon regions and also in connection with the Alaska boundary. As representative of the Dominion government in the Yukon during the exciting period of the Klondike gold rush Mr Ogilvie

performed excellent service for which he was justly esteemed — WILLIAM ROSS the Senator b 1825 d at Halifax on March 17th. He became a member of the Legislative Assembly of Nova Scotia in 1859 and of the Dominion House of Commons in 1867. In 1874 he left parliament and became collector of customs at Halifax. In 1889 he was returned again to the Dominion parliament and in 1906 was appointed to the Senate. He was Minister of Militia in the Mackenzie government in 1873. — FREDERICK WILLIAM THOMPSON manufacturer b 1862 d May 7th. At the age of fifteen he entered the Exchange Bank of Montreal. When twenty-one he joined the Ogilvie Milling Co. becoming general manager of their North Western business in 1899 and general manager of the whole business in 1900. In 1902 he re-organised it as the Ogilvie Flour Mills Co. Ltd. He had considerable political influence and worked hard against the reciprocity agreement with the United States.

(W. L. GRIFFITH)

### NEWFOUNDLAND<sup>1</sup>

*Population* — The provisional returns of the census of 1911 show a total population of 242 966 persons (124 485 males and 118 481 females) of whom 230 027 are domiciled in Newfoundland and 3 939 in Labrador. This constitutes an advance of 9.95% over the figures for 1901. The population of St. John's City has increased from 29 594 in 1901 to 32 202 in 1911. The religious classification includes Roman Catholics 81 014, Church of England 78 140, Methodists 68 127 and Salvation Army 10 127.

*Economic Conditions* — The marked progress of Newfoundland during the last few years is in the main to be attributed to three factors *viz.* improved means of communication, the development of mineral resources and the foundation of an important pulp and paper making industry. The immediate results of these undertakings have been to give employment to large numbers of people hitherto dependent solely upon the great fishing industries as a means of livelihood and to turn the attention of capitalists and administrators to the possibilities of the land as opposed to the sea.

Recent international and imperial events have brought Newfoundland much before public notice. Sir Edward Morris (b 1859) Prime Minister since 1909 accompanied by special delegates attended the Imperial Conference of 1911. The Colonial Government took a prominent part in the Festival of Empire held in London during the same year, the extensive collection of Newfoundland products there exhibited has been transferred to the Newfoundland Court at the Imperial Institute. The award of the Hague Tribunal in 1910 has been brought to a satisfactory conclusion by the Anglo-American Fisheries Treaty (1911) which settles outstanding difficulties between the Colony and the United States. The question of reciprocity between Newfoundland and the United States has been the subject of official discussion.

*Fisheries* — The fisheries must for long remain the primary interest of Newfoundland and measures have recently been taken to place the industries upon a thoroughly stable basis. Important work has been done by the newly-established Board of Trade in the official inspection, grading and branding of products. The Government has had under consideration the offers of the Booth Fisheries Company (U.S.A.) to undertake operations in Newfoundland, the proposal being to apply modern methods of cold storage to the cod catch and thus render available the extensive markets for fresh fish in the central and western states of America and elsewhere. Similar methods are proposed in connection with the lobster fishery. The award (1910) of the Hague Tribunal has been found to work satisfactorily and with the gratifying result of an increase of trade in fishery products with America. An agreement has recently been arrived at between the Governments of Newfoundland, the United States and Canada which settles among other difficulties the delimitation of bays on the Newfoundland coast. The total value of the fishery exports in 1911 was £1 807 226: cod £1 344 689, cod oil £61 833, cod liver oil £12 041, herrings £79 971, lobsters £74 069, salmon £14 535, other fish £45 523, seal skins (undressed) £56 562, seal oil £79 155, whale oil £29 790, whale fertilizer £6 124, whale bone £2 934.

*Forest Resources* — Exploitation of the forest wealth of the colony is developing rapidly in the pulp and lumber industries. It is stated that natural regeneration is sufficient to assure a permanent supply of raw material but steps are being taken by the Government with regard to reforestation. Advance has been made in the lumber industry chiefly owing to the operations of American companies. Profitable markets have been developed in South and North America, the exports in 1910-11 being valued at £25 683. The forest resources of Labrador remain practically untouched. In its extensive forests and abundant and readily available water power Newfoundland possesses remarkable facilities for the establishment of a pulp and paper making industry, and important advances have already

<sup>1</sup> See E. B. xix, 478

been made. The Anglo Newfoundland Development Company in which Lord Northcliffe is so largely interested commenced operations in 1909 and now controls over 3,000 square miles of forest land yielding a fine quality of pulpwood. The mills erected at Grand Falls on the Exploits River are the second largest of their kind in the world and possess the most modern equipment. The whole of the power required is obtained from the Falls. At Bishop Falls also on the Exploits River and eleven miles distant from Grand Falls Messrs Albert Reed & Co. of London have established a similar plant of only slightly smaller dimensions. Schemes are being framed for the erection of further mills by American and other companies in the Fortune Bay, Gander River and Grand Lake districts. The export of pulp and paper during 1910-11 was valued at £51,582 and \$193,898 respectively. The whole of the trade was with the United Kingdom.

**Agriculture**—The Government is prosecuting an active agricultural policy with a view to meeting the demand for farm produce which will arise from the industrial development of the country. The programme provides for the supply at Government expense of improved stock, seeds and implements and considerable inducements are offered to agriculturists. Attention is also being given to agricultural education. Farm colonies are to be established by the Salvation Army. Mixed farming offers the best inducements while the prospects for cattle, sheep and poultry are considered good. Special encouragement is being given to sheep farming with a view to the establishment of a local woollen manufacturing industry. The average annual output of farm produce valued at over £800,000, the principal crops being cabbages, turnips, hay and oats. Development of the fruit (berry) industry is anticipated. A successful Agricultural Show was held in St. John's in 1910.

**Mineral Resources**—During the last twenty years the annual value of minerals exported has averaged nearly £257,000, the chief ores being those of copper and iron. The Government has recently concluded agreements with certain companies in respect of the development of coal, iron and petroleum resources and has offered financial rewards to successful prospectors. The principal copper mine is that at Tilt Cove in Notre Dame Bay, but promising discoveries of ore have recently been made at points in White Bay and on the north-east coast. The iron mines at Bell Island, Conception Bay, have been successfully worked by two companies and it is estimated that 40,000,000 tons of haematite ores are in sight with an unknown quantity in the extension of the beds seawards. Haematite has been found at River Exploits and at various points on Notre Dame Bay. Rich bessemer ores occur at White Bay and extensive deposits of magnetic ore have been located along the west coast. Operation with iron pyrites have been commenced at Pilley's Island in Notre Dame Bay. Developments are expected with regard to the west coast chromite deposits, the silver-lead ores near Placentia and the slate beds at Bay of Islands, Smith Sound and elsewhere. Operations at Parson's Pond oil field have advanced sufficiently to permit of a regular supply of oil to the gas works of St. John's for illuminating purposes. Favourable agreements have been concluded with certain English companies for the exploitation of the coal resources of the Island. During the last few years the valuable seams near Grand Lake have received considerable attention from the Reid Company.

**Communications**—Progress has been made with the construction of the branch railways sanctioned by the Government in 1910. Steamship communication has been improved and the telegraph, telephone and wireless services augmented.

**Finance**—The trade and revenue returns (the highest ever recorded) for the year ending June 30, 1911, were: revenue £725,020, expenditure £689,587, imports £2,751,137 and exports £2,461,681. During 1910-11 the British Empire (chiefly Canada and the United Kingdom) supplied 60.8% of the imports and received 39.7% of the exports.

**Administration**—Sir Ralph Champney Williams, K.C.M.G., was to retire from the Governorship in February 1913 and to be succeeded by Mr. Walter Edward Davidson, C.M.G., Governor of the Seychelles.

The principal measures recently dealt with by the Legislature have reference to railway extension and steamship services, mining development, agriculture and the fishing industry, while others are concerned with education, the extension of telegraph, telephone and wireless facilities, road development, woollen manufactures, the provision of sanatoria for consumptives and old age pensions.

The death occurred at Ottawa on October 1, 1911, of Sir James Spearman Winter, formerly Premier (1897-1900). Born in Newfoundland in 1845, he became a barrister and in 1874 entered the Newfoundland legislature being its speaker in 1877-8 and subsequently holding other offices. In 1910 he was one of the British Counsel in the Fisheries Arbitration.

See *Year Book of Newfoundland* (1912), *Newfoundland Guide Book 1911* (ed. D. W. Prowse), *Newfoundland in 1911* (P. T. McGrath), *Mineral Resources of Newfoundland* (James P. Howley, St. John's, 1909), (S. E. CHANDLER).

## AUSTRALIA

AUSTRALIA<sup>1</sup>

Including as it does the adjacent island of Tasmania the area of the Australian Commonwealth is now computed at 2,974,581 square miles, 1,149,320 of which are within the tropical zone (about five thirteenths of the total). Since the Commonwealth was proclaimed in 1901 there have been three changes affecting the political boundaries of Australia. In 1905 Papua (the British portion of the island of New Guinea) was taken over from the British Government and constituted a Territory of the Commonwealth. In 1909 the Commonwealth took over an area in the south of New South Wales which was constituted a Federal Territory and on which will be built the Federal Capital. In 1910 the Northern Territory was taken over from South Australia and constituted a Federal Territory.

*Papua*—Soon after taking control of Papua the Australian Government appointed Colonel Murray as Lieutenant Governor with Mr Staniforth Smith as a special officer to encourage industrial development. The suitability of Papua for various forms of tropical agriculture is undoubted but there is a labour difficulty in the way of progress. The Papuan like most South Sea Islanders has an aversion to steady work. In Fiji a British Colony in the South Pacific a position similar to that existing in Papua has been met by the importing of industrious coolies from India to develop the sugar plantations. The Australian Government however is determined to keep Papua for the Papuans. It was proposed in 1908 that the Papuan should be forced to do a certain amount of work either for himself for private planters or for the Government the argument being advanced that since Nature was so bountiful as to keep him in reasonable comfort without work he would never be driven to labour by necessity and must therefore be brought under some other form of compulsion. The Australian Government vetoed the proposal. The officials responsible for the government of Papua state now that they have hopes that the natives will be tempted into the paths of industry by desire for the white man's cloth steel etc. ordinances have been framed to regulate the conditions of native labour and during 1911 nearly 8,000 natives were engaged under contract in some form of labour. But the labour position does not hold out much hope of the growth of a great sugar growing or cotton growing industry.

The white population of Papua is about 1,000 and the native population about 500,000. There are about 15,000 acres under cultivation mostly planted with coco nut trees. Rubber cotton sisal coffee are also grown and mining and pearl shelling are considerable industries. The system of land tenure is by leasehold freeholds are not granted the conditions of leasing are not onerous.

*The Federal Territory and Federal Capital Site*—The Constitution having provided that the capital of the Commonwealth should be within the State of New South Wales at least one hundred miles from Sydney the New South Wales Government in 1909 surrendered to the Commonwealth Government some 900 square miles of territory around Yass-Canberra and also an area of two square miles on the shores of Jervis Bay for the construction of a Federal port and with these areas went the right to construct a railway from this port to the Federal territory.

In 1910 the Federal Government took possession of the Territory. It established there in 1911 a military college and instituted a competition among the architects of the world for the best plans for building a new Federal city. Unfortunately because of a disagreement many British architects of the first standing did not take part in the competition. The design which found most favour was the work of a Chicago (U.S.A.) architect Mr Walter Burley Griffin. At the proposed Federal capital will be housed the Governor General the Parliament and as far as possible all the Federal government departments. The preliminary work of construction is in hand.

*The Northern Territory*—With an area of 523,620 square miles (more than one sixth of the continent) having some very fertile land and with a better river system than most other parts of Australia the Northern Territory is almost empty and undeveloped. The total population (other than aborigines) was 2,846 in 1910 of which the largest element was Chinese the total white population being 1,182. The backwardness of the Territory as compared with the rest of Australia is due chiefly to political causes. When the Australian colonies first set up separate households it was convenient to none of them to include the Territory and it was left in the hands of the Imperial Government. In 1863 South Australia took over the responsibility for the Territory having formed a plan to connect it with Adelaide by a north-to-south trans-continental railway. With such a railway it would have been brought within the ambit of South Australian development. Without that railway it was actually more remote from communication with South Australia than with any other of the States. The railway was begun. It reached Pine Creek from Port Darwin at the north end and Oodnadatta from Adelaide at the south end then hope of its completion was abandoned. As soon as the Commonwealth came into existence it sought a

<sup>1</sup> See E B 11 941 et seq

transfer of the Northern Territory from South Australia. But it was not until January 1 1911 that the final stage of the negotiations was reached and the Territory assumed by the Commonwealth. The terms of transfer were that all the past deficits incurred by South Australia in the administration of the Territory should be taken over by the Commonwealth and that the trans continental railway should be completed from Port Darwin in the north to Port Augusta (near Adelaide) in the south. The Commonwealth purchased the existing state railway from Port Augusta to Oodnadatta.

In 1912 the Commonwealth Government appointed an administrator for the Northern Territory and took preliminary steps for its development and colonisation. A scientific inquiry as to the possibilities of a white population flourishing in this tropical part of the continent is proceeding and so far, the evidence on that point is reassuring. There is very little malaria in the Northern Territory and other specific tropical diseases are absent. The land is generally considered to be suitable for cattle grazing (there are great herds of wild buffalo) and tropical farming on the coast for sheep farming and dairy farming on the tablelands. There are said to be possibilities of mineral wealth but mining results in the past have been usually disappointing. In its policy of development the Australian Government does not propose to allow any further complete alienation of Crown lands. (There have passed into private hands already 473 990 acres.) In future all titles will be leasehold but the leases will be in perpetuity with reappraisal every 14 years in the case of town lands every 21 years in the case of agricultural and pastoral lands. Political difficulties stand in the way of pushing on boldly with the north-to-south trans continental railway which is the chief need of the Territory. Some favour a direct route some a route deviating so as to cross Western Queensland and New South Wales.

#### THE COMMONWEALTH

The Federal Act of July 1900 (see *E B* ii 966) united in an indissoluble Australian Commonwealth six self governing colonies organised as British settlements between 1770 and 1859 which retain their individuality and for certain purposes their independence. The federating States, New South Wales (*E B* xix 57 *et seq*), Victoria (*E B* xxviii 37 *et seq*), Queensland (*E B* xxi 732 *et seq*), South Australia (*E B* xxv 492 *et seq*), Western Australia (*E B* xxviii 539 *et seq*) and Tasmania (*E B* xxvi 438 *et seq*), were left with certain self governing powers and preserved their own political institutions. Separate notes are added later as to certain details in the internal affairs of the individual states but in the following account Australia will be considered substantially as a whole in its aspect of a single national unit.

*Population*—Public opinion in Australia has at different times condemned as unsatisfactory the rate of growth of the population both by natural increase and by immigration. The feeling that the natural increase of the population was not sufficient led in New South Wales to the appointment of the Birth Rate Royal Commission (1903). An outgrowth of that Commission was a Federal Royal Commission on Secret Drugs and Cures which reported in 1907 and devoted much attention to the matter of artificial limitation of families. It was established fairly clearly by the first of these Commissions that there was no natural cause predisposing to sterility in Australia but that the desire for comfort conduced to a fairly general artificial limitation of families. As a consequence of this Commission some public opinion against the tendency to race suicide was aroused, and certain administrative measures were adopted by the Customs and Police Departments which sought to lessen the facilities for artificial limitation of families. It is a coincidence, if not a case of cause and effect, that since 1903 the natural increase of population in the Commonwealth has steadily improved. Possibly a healthier public opinion following on the report of the Birth Rate Commission was in part responsible. Other possible contributory causes were a great increase in material prosperity following upon Federation and an influx of immigrants from lands where artificial limitation of families was not so much practiced. The natural increase per 1,000 of mean population in 1906-10 was 15.93 which was higher than that of any European countries except the Netherlands and Bulgaria and compared with 11.58 for England and Wales. A natural increase which is almost the highest in the world must be accounted fairly satisfactory—even though the 'crude birth rate' (number of births per 1,000 of mean population) is rather low (26.7 as

## AUSTRALIA

compared with 48.1 in Russia, 25.6 in England and Wales and 19.6 in France) But with a somewhat low birth rate (for a new country) Australia has a very low death rate the lowest in the world except for New Zealand The Australian death rate of 10.4 compares with 14.5 for England and Wales, 30.0 for Russia and 19.3 for France

In regard to immigration Australian public opinion has undergone a marked change within the last few years a change due in the main to a fuller appreciation of the danger of leaving the lonely outpost of the Empire in the South Pacific so bare of population There was for many years a desire on the part of the exceedingly prosperous working people of Australia to keep out immigrants as much as possible lest a rush of population should cause a reduction in the wage rate or a hardening of the conditions of life That desire survives in some quarters and is still a force to be reckoned with in a country where the Labour voters have the controlling power in politics But it is being recognised by Labour leaders as well as by others that a great access of population is necessary to the safety of the country and need not affect the general prosperity of a continent which has a population of under 5,000,000, and which has room at a low estimate for 100,000,000 people In the beginning of Australian colonisation state aided immigration brought a great influx of people to Australia who otherwise would never have been able to afford the expenses of the long journey from Europe Since 1906 the policy of state aided immigration has been re established in Australia by several of the States

The effects of a better natural increase and a better increase from immigration are shown in the following figures since 1901

Year	Natural increase.	Migration	Total gain
1901-1905	284,431	dec 16,793	267,638
1906-1910	334,828	inc 57,278	386,106

On April 3, 1911 the decennial census was taken in Australia and the population ascertained to be 4,455,003, showing a rate of increase for the Federal decennium of 18.05%, as against a rate of increase of 18.88 for the previous decennium But whilst the annual rate of increase from 1901-1906 was only 1.39%, the annual rate of increase 1906-1911 was 2.03 The year 1911 showed a total increase of 143,624 to which natural increase contributed 74,324 and immigration 69,300 exceeding in one year by over 50% the total immigration gains of the previous ten years

It is clear that Australia has turned the corner in regard to immigration For 1912 it was officially computed that the total immigration would be 100,000 persons from the United Kingdom alone, as emigration from the Commonwealth has almost ceased, this will represent a clear gain The difficulty experienced in 1912 was not in persuading people in Great Britain that there were better chances of prosperity in Australia nor in overcoming any Australian objection to new comers but in securing accommodation on ships to take British emigrants to Australia

*Social Conditions* — The Australian people are almost wholly British in character a full 96% of the total are of British origin 2% come from foreign European countries and 2% from foreign non European countries The standard of average education is high and illiteracy almost unknown The wage rate is generally high and has shown lately a marked tendency to increase Thus the average wage of females in the clothing trade (taking the lowest paid class of labour) in Victoria was 10s 10d per week in 1897 but in 1910 the average wage was 21s 9d per week From a West Australian Labour return endorsed by the Trade Union officials the following current average rates of wages in that state are taken bakers £3 per week blacksmiths 10s to 12s 6d a day bricklayers 12s to 14s a day carpenters 10s 6d to 12s a day domestic servants 8s to 25s per week engine drivers £2 8 0 to £3 7 6 per week navvies 8s to 8s 6d per day, shoemakers £2 14 0 to £3 a week waitresses from 12s 6d to 25s per week These figures are fairly representative of Australia

The cost of living in Australia is affected favourably, on the one hand by the low price of food items which are local products unfavourably on the other hand by the high wage rate ruling in the building trade and the local manufacturing industries On the whole it compares well with the cost in most civilised countries In 1911 the statistician to the Commonwealth Government Mr G H Knibbs instituted an inquiry into the cost of living from which some valuable facts were gleaned Taking four sets of family budgets (a) of families with £200 a year and over divided into families of four members and under four

members (b) of families with less than £200 a year divided similarly he found that the average percentage of income spent on housing was 13.70 on food 29.30 on clothing 12.72 on fuel and light 3.46 on other items (including amusements thrift etc.) 40.82%. This last figure gives the best indication of a general prosperity i.e. of a substantial margin out of wages and salaries for non essential outgoings. The percentage of income expenditure on food in working class families in Australia is 36% as compared with 57% in the United Kingdom and a general average of over 50% in all other countries for which statistics are available. The indication this gives is of a good margin between wages and cost of subsistence and it is strengthened by the fact—which cannot be supported by official statistics but is apparent to every observant traveller in Australia—that the working classes indulge in more varied plentiful and luxurious food than the same classes in Great Britain. Thus of a total of 4s 10d spent in food the Australian apportioned 6d to bread 1s 1d to meat 7½d to vegetables and fruit 6½d to milk 7½d to butter cheese etc. 3½d to sugar 2½d to tea coffee etc. and 1s to other food.

The Australian birth rate was 27.21 in 1911. The percentage of illegitimate births to total births was 5.84 in 1910. There has been a very slight decrease in this rate during the last decennium. The Australian population is predominantly masculine the proportion being 108 males to every 100 females. The marriage rate (number of marriages per 1,000 of mean population) was 8.79 in 1911. The rate has improved steadily since 1908. (The rate for England and Wales calculated in the same way is 7.30). The most favoured age for marriages are between 18 and 30. The average age of bridegrooms is in the professional classes 31.26 years the mercantile classes 29.74 the industrial classes 28.76 and the agricultural classes 30.93. The average age of brides in 1910 was 25.77. The celebration of a marriage is more easily effected in Australia than in England. The facilities for divorce differ in the various states divorces being granted more readily in New South Wales and Victoria than in the other states. The total of Australian divorces in 1910 was 451 of which 254 were granted in New South Wales and 141 in Victoria.

A dominating feature of Australian social life is the preponderance of the urban over the rural population. In South Australia nearly one half of the total population of the State (380,000 square miles in extent) is concentrated in the city of Adelaide. In Victoria 44% in New South Wales 38% of the total population is in one city and in the whole Commonwealth 38% of the population is contained within six cities. The charm of the cities is great the conditions in the back country are often hard. By cheap railway rates for the farmers goods by pushing such of the conveniences of civilisation as are under state control as far forward as possible and by other means the states and the Commonwealth strive to counterbalance the call of the cities. But all effort seems to be in vain. The proportion of the urban to the total population is growing. In 1906 Sydney had 35% of the total population of New South Wales in 1911 it had 38% in 1906 Melbourne had 42% of the population of Victoria in 1911 44% and in the whole Commonwealth six cities held 35.49% of the population in 1906 and 38% of the population in 1911.

At the last census 4,274,414 of 4,455,005 people were returned as Christians (Church of England 1,710,443 Roman Catholic 921,425 Presbyterian 558,336 Methodist 547,806 being the chief denominations). Of Hebrews Pagans Mahomedans etc. there were 36,785 and some 25,000 were returned as agnostics atheists or freethinkers. There is no established church.

**Public Health**—Though part of Australia is within the tropics there is practically no tropical disease and there is an absence also of small pox hydrophobia and other diseases which are known in some parts of Europe. The death rate from all causes in 1911 was 10.66 (including the death rate for the tropical Northern Territory 19.58). It is the lowest death rate in the world except one. Lately there has been a betterment in regard to the infantile death rate which the hot summers ruling over the greater part of the Commonwealth make the chief cause of public health anxiety. In 1901 it stood at 103.61 per thousand and in 1910 at 74.81 per thousand. It is noticeable that an abnormally hot summer forces up the infantile death rate but this rate has been brought down to as low as 71.56 per thousand in 1909. To lessen infantile mortality and at the same time to encourage the birth rate there are two remarkable proposals (both likely to be carried through) before the Australian public to-day. One is that of the Commonwealth government to pay a bonus of £5 to the mother of every infant born in the Commonwealth whether legitimate or illegitimate. The other is that of the New South Wales State government to provide a free and compulsory medical service in childbirth. Apart from infantile mortality the chief foes to human life in Australia are tuberculosis cancer diseases of the heart and violence. The deaths from malaria (tropical) numbered forty in 1910.

**Education**—The Australian system of elementary education is free compulsory undenominational and usually secular. Secondary education is not free but a generous system of bursaries makes education to the stage of a University degree available to the poorest in most states. There is also a good system of agricultural and technical colleges. Slight differences as regards religious teaching exist in the various States. In Queensland undenominational teaching of the Bible is allowed, and clergymen may give religious teaching within school hours to children of their respective denominations. In New South Wales

and Western Australia ' general religious teaching is part of the course. In other states the system is more rigorously secular. In no state is denominational religion taught in the state schools but private denominational schools exist being maintained especially by the Roman Catholic Church. The compulsory age for school attendance is in the largest States from six years to fourteen years in no State less than six years.

*Production and Industry*—Australia down to the end of 1912 had enjoyed seven fairly good years. The early stage of the Federation was marked by a severe drought which checked for a time the development of prosperity. But since 1905 the growth of prosperity in the Commonwealth has been very great. A valuation of the total production of the Commonwealth shows in 1907 a value of £114 585 000 (average per head £30 2 6) in 1909 £174 503 000 (per head £40 16 6) and in 1910 £187 734 000 (per head £42 19 2).

In 1906 the total value of the pastoral products of the Commonwealth was £45 389 000 in 1907 £50 660 000 in 1908 £47 259 000 in 1909 £50 064 000 in 1910 £56 993 000. These returns from the chief Australian industry afford a safe index to the growth of prosperity in others. The area under crop in 1905-06 was 9 433 455 acres. It amounted in 1906-07 to 9 552 800 acres in 1907-08 to 9 358 902 acres in 1908-09 to 9 891 243 acres in 1909-10 to 10 972 299 acres and in 1911-12 to 12 105 125 acres. The production of wheat increased from 68 520 772 bushels in 1905-06 to 95 111 983 bushels in 1910-11 of a value of £16 458 187. The figures for 1911-12 are not so good the estimated yield being 71 664 971 bushels the falling off was due to a somewhat unfavourable season. The growth of sugar cane in spite of the great change made in its conditions by cutting off the supply of coloured labour has held its own. In all other crops—fruit vines oats hops potatoes—there was either progress or stability. Some promising indications were gleaned of future success in the cultivation of coffee tobacco cotton oil plants and fibres. In dairy farming there was great progress. The export of butter in 1906 was 75 802 856 lbs. in 1910 it was 87 928 151 lbs and the value of dairy farm exports increased from £3 352 803 in 1906 to £4 127 074 in 1910. The total yield from agriculture including dairy poultry and bee farming was £38 960 000 in 1906 and £57 139 000 in 1910. In mineral production Australia kept a high place in spite of the dwindling gold returns from Victoria and West Australia. The mineral production of the Commonwealth reached to its highest point (£28 301 346) in 1907. In 1908 it was £24 580 303 in 1909 (the year of a disastrous coal strike) £23 074 935 in 1910 it was £23 215 191. The chief items in this total were gold £11 553 840 coal £3 684 041 copper £2 389 412 silver lead bullion and ore (shipped abroad to be refined) £1 934 735 tin £950 768 and zinc £1 289 781. The great mineral resource of the future in Australia will doubtless be coal. A conservative estimate of the amount of coal available for easy working in the state of New South Wales alone is over a thousand million tons. Mineral oil shale exists also in Australia and the Commonwealth Government is now offering bounties to the extent of £20 000 a year to encourage the local production of kerosene and paraffin wax. Up to 1910 the value of the products of oil shale in New South Wales had reached £2 251 081 and the actual year's production was worth £33 896. Queensland and Tasmania have also deposits of oil shales.

There has been a steady progress in manufactures in Australia since the Federation. In 1907 the total of wages and salaries paid in factories was £18 323 977 with an average wage of £77 32. In 1910 the total of wages paid was £23 874 959 with an average wage of £87 11. The total value of the output of factories in 1909 was £107 409 733 in 1910 £120 770 674. The value added in process of manufacture was £42 216 493 in 1909 and £48 048 032 in 1910. The factory industries are not so far of a highly organised type. Great iron industries are yet to be created though the presence in many parts of Australia of deposits of iron ore and the cheapness of coal have invited their establishment for many years. In 1909 the Australian Government offered bounties to a total of £150 000 for pig iron puddled bar iron and steel made from Australian ore and further bounties to the extent of £30 000 for galvanised iron wire netting and iron pipes. So far however no very great results have followed. During 1912 there were reports that great iron smelting works were about to be established in New South Wales by a company which had been before chiefly interested in silver mining.

Forests and fisheries bring an amount of nearly £5 000 000 to the Australian purse. But in neither case is there creditable progress. The timber resources are usually prodigally wasted and until very recently there was no attempt at reforestation. The fisheries are not exploited in any systematic fashion there being little or no deep-sea fishing or fish curing. In both these matters however better things are promised in the future. Bounties were available during 1912 to the extent of £10 000 for Australian preserved fish and there are 13 fish-curing establishments. In 1909 the Federal Government launched the *Endeavour* a vessel specially built to investigate and chart deep-sea fishing grounds. The *Endeavour* has since been engaged in the collection of information regarding the migration feeding grounds etc of fish in the waters off the Australian coast and it is hoped that the ultimate result will be the foundation of a great fishing industry.

*Trade and Commerce*—Since Federation the overseas trade of the Commonwealth has increased rapidly. In 1901 the total was valued at £92 130 000 in 1911 at £146 456 000. The records since 1906 have been —

Year	Imports	Exports	Total	Value per inhabitant
1906	44 745 000	69 738 000	114 483 000	628 3 10
1907	51 809 000	72 624 000	124 633 000	30 4 5
1908	49 799 000	64 311 000	114 110 000	27 4 1
1909	51 172 000	65 319 000	116 491 000	27 5 0
1910	60 014 000	74 491 000	134 505 000	30 15 6
1911	66 973 000	79 483 000	146 436 000	32 12 5

The unfavourable figures for 1908 were due in a large measure to the financial crisis in the United States causing a lower range of world prices for wool and metals. The total public indebtedness of Australia is £267 127 283—most of it borrowed abroad—on which an average rate of interest of £3 14 4<sup>0</sup> per annum is paid. The payment of this interest affects the export figures. The import figures on the other hand are swollen by the continuance of public borrowing from abroad which averaged for the nine years to 1911 about £6 000 000 a year. Probably in a normal year one item nearly balances the other.

The bulk of Australia's trade is with Great Britain and with British possessions. Of the imports in 1910 totalling £60 014 351, £36 646 441 were from the United Kingdom, £7 865 649 from British possessions and £15 502 261 (not much more than one quarter) from foreign countries. Of the exports in 1910 totalling £74 491 150, £37 698 312 were to the United Kingdom, £8 323 486 to British possessions and £28 469 352 (more than one third) to foreign countries. British imports to Australia have preferential tariff treatment. A profitable future is promised for Australian trade in supplying Asiatic countries with food products, minerals and raw materials for textiles. Steps are being taken to foster this trade and it has grown in value from £2 298 000 in 1904 to £3 121 000 in 1910.

*Communications*—There were at the end of 1911 a total of 18 012 miles of railways open for traffic in Australia showing an increase of nearly 1 000 miles over the previous year. Practically all the railways are owned by the state governments. There are four different gauges in use broad standard narrow and very narrow. The Commonwealth has constitutional power with the states consent to take over the railway systems and unify the gauges but the power is not likely to be exercised for some time. At present Queensland and New South Wales are foremost in railway development. The Commonwealth Government has acquired from South Australia the railway line from Port Augusta to Oodnadatta and has taken over with the Northern Territory the short railway from Port Darwin to Pine Creek. It is intended to connect Pine Creek with Oodnadatta thus making a north to south trans continental railway. Other proposed Commonwealth lines will connect the new Federal Capital with the Sydney to Melbourne main line and with the Federal port of Jervis Bay. In a more advanced stage is the line which will complete railway communication between east and west. This trans-continental line from Port Augusta in South Australia to Kalgoorlie in West Australia will stretch over 1 100 miles and the estimated cost is £3 985 000. The work is being carried out by the Government without the intervention of contractors and was put in hand in September 1912.

The capital cost of the Government railways in Australia had reached to £152 855 000 in 1911. They are the chief asset standing against the public indebtedness of various states. The net revenue of these railways provides 4 44% for interest and sinking fund on the capital invested. After payment of all working expenses and interest there was calculated to be a profit of £1 424 000 in 1911 available for debt redemption.

Several great shipping companies have arisen in Australia to carry on the coastal trade the trans oceanic trade is mostly in the hands of British companies though Australian German French Italian Norwegian and American lines have some share. The policy of the Australian Government is to seek to secure as much as possible of the coastal trade for Australian vessels and to banish coloured labour from all ships trading to Australia. Since shipping legislation can only be carried out with the assent of the Imperial Government these ideals cannot be fully realised but the Commonwealth enforces white labour conditions to some extent by refusing postal subsidies to vessels employing coloured crews. A new Navigation Bill drafted after several consultations with the Imperial Government passed through its final stages in the Commonwealth Parliament in 1912. In this measure there are elaborate provisions for the safety of ships and the comfort of crews. The coastal trade is confined to Australian ships and to foreign ships licensed to engage in that trade licenses are subject to the payment whilst on the Australian coast of Australian wage rates to seamen and a further condition is that the ship receives no bonus or subsidy except from the Australian Government.

The proportion of British to foreign shipping entering and clearing Commonwealth ports is roughly 77 4 to 22 5.

*Finance (Public)*—The prosperity of Australia during the last quinquennium is reflected in the public revenues. The Commonwealth collects the revenue from Customs Excise Land Tax Posts Telegraphs and Telephones Coinage (including Bank note issue) and fees from various small services such as the Patents Office. It has to meet from this revenue the cost of naval and military defence of its services (such as postal and telegraph) and of

## AUSTRALIA

its administration and to pay a fixed annual subsidy to the state governments of 25s per head of the population resident in each state. In addition it has to meet the cost of the trans-continental railway from west to east already in process of construction, of the proposed trans-continental railway from north to south and also of the administration of the Northern Territory taken over from South Australia.

The early years of Federation were hampered by the want of revenue owing to the operation of the Braddon clause of the Constitution. But it was possible to make great changes in the financial position when Mr Fisher took office in 1910. The lapsing of the Braddon clause gave him a larger share of the Customs and Excise receipts. The Land Taxes he imposed brought in a revenue of £1 370 344 in the financial year 1910-11. The Australian Notes Act which he passed made the Commonwealth Government the issuing authority for bank notes up to the value of £7 000 000 against which a gold reserve of one fourth that amount was to be kept. The issue might go above £7 000 000 but for any sum above that limit a gold reserve equal to the full issue had to be kept. A subsequent Act abolished this qualification and left the amount of the issue unlimited provided that a gold reserve of 25 % of the total was maintained. Serious objection was taken to this amendment in financial quarters and Mr Fisher undertook not to put the amending Act in force until after the General Election of 1913. At the same time as the Australian Government note issue was authorised a tax of 10 % per annum was imposed on the amount of all notes issued by private banks and any note issues by state governments were prohibited. Also a Commonwealth Bank having all the ordinary functions of a bank with a Savings Bank Department superimposed was established and opened its doors in 1912. In 1912 the Commonwealth note issue had reached to £10 048 472 against which a gold reserve of £4 841 536 was held.

The growth of Commonwealth revenue since 1906 is shown below in thousands of pounds which disregards small items except in the computation of the grand totals —

	1906-7	1908-9	1910-11	1911-12	1912-13
	£000	£000	£000	£000	Estimate £000
Customs and Excise	9 631	10 844	12 980	14 710	14 511
Post and Telegraph	3 128	3 409	3 906	3 916	4 202
Land Tax			1 370	1 366	1 300
<b>Total</b>	<b>12,816</b>	<b>14,350</b>	<b>18 806</b>	<b>20 546</b>	<b>20 422</b>

The expenditure has also grown. Excluding the subsidy paid to the states the Australian Government spent £4 987 317 in 1906-07, £7 499 516 in 1909-10 and £13 158 529 in 1910-11 (the chief increase that year being in respect of the construction of the Australian Navy), £14,297 572 in 1911-12 and (estimated) £16 604 791 in 1912-13 of which however £2 261 541 did not come out of current revenue. Expenditure grows in all departments as new responsibilities call for outgoings. The deficit on Northern Territory administration for example was £166 856 in 1911 (a half year only). On the other hand the subsidy to the states which in 1906-07 was £7 845 574 and in 1909-10 £8 492 436 under the Braddon clause dropped in 1911-12 to £5 824 423 under the new system of a definite subsidy of 25s per capita.

The debts of the various states can best be referred to here because the Commonwealth Government sought in 1910 and was granted by Act of Parliament and Referendum the right to amend the Constitution so as to take over all the State debts and make them into one Federal debt. The total of the State debts outstanding in 1911 was £271 750 944 and they have largely increased during 1912. The total is represented in the main by such solid assets as railways. The transfer of these debts to the Commonwealth would involve presumably the transfer of the assets which stand against them and would also necessitate some arrangement for Federal control of future borrowing. The Prime Minister announced in September 1912 that he was devoting earnest attention to the matter.

**Finance (Private).**—There are twenty one private banks trading in Australia. Their paid up capital totals £20 181 758 and their reserved profits total £10 330 457. Their total deposits in 1911 were £143 446 910 and the total of the advances made by them £108 578 774. Their total liabilities were £148 835,219 and their total assets £159 565 443. The last dividends of the four greatest banks were 10 %, 10 %, 14 % and 12 % respectively.

The Savings Banks figures show a prosperous and thrifty working population. In 1911 there were 1 600 112 individual depositors in the Savings Banks of Australia a proportion of 362 to every thousand of the population. The total of deposits was £59 393 682 giving an average deposit of £37 2s 4d per depositor or of £13 8s 5d per head of the whole population. The life assurance figures impress the same lesson. There were nearly a million life assurance policies in force in Australia for 1910. More than half of these were for small amounts, but the total sum assured exclusive of bonus additions was about £110,000 000. Further the Friendly Societies have a total membership of 400 000 and a yearly revenue of £1,538,532.

*Government and Politics*—Under the Federal Constitution the Commonwealth is governed by a Governor General appointed by the British Crown and acting on the advice of a Cabinet which is responsible to an Australian Parliament of two Houses. The Senate represents the states and is composed of six members from each state elected for six years by the adults of the state voting *en masse* every three years to return three Senators. The House of Representatives is about double the Senate in numbers (75) represents the people numerically and is elected every three years by the adults of Australia voting in single member electorates which are approximately equal in population. The number from each state varies with the growth of population. The Australian Parliament can only act within the powers set forth in the Constitution. The High Court is the final interpreter of that Constitution and may veto any legislation either of the states or of the Commonwealth which is *ultra vires*.

It was not until the election of the fourth Parliament in 1910 that the political system of the Commonwealth of Australia began to have an aspect of permanency and it is necessary to refer back to 1901 to understand fully the position of 1912. At the outset there had been some promise that the early years of the Union would have been marked by a truce among all political parties during which the machinery of the new Government would be established firmly. This promise had been illustrated in the choice of the first Ministry. The first Governor General of the Commonwealth (the late Marquis of Louthgow) in a situation which offered him the guidance of no precedent had followed a sound constitutional course by sending for the Premier of the senior of the Federating states Sir Wm Lyne. But public opinion did not endorse the choice. Sir William Lyne (born in Tasmania in 1843) was a type of the politician who had served well in the days of the states. He had been the first champion of a Protective tariff in New South Wales, had risen to be her Premier, and had marked his term of office by a programme of social reform which had endeared him to the powerful Labour Party. But he had not been enthusiastic for Federation rather otherwise. Public opinion demanded that the first government of the Union should be formed by its champion Sir Edmund (then Mr) Barton (born in New South Wales in 1849). Mr Barton had never been at home in state politics though he had early devoted himself to a Parliamentary career entering the New South Wales Assembly as member for the University of Sydney in 1879. His enthusiasm waited for the cause of the Federation of Australia. After the death of Sir Henry Parkes he assumed the leadership of the Federal movement having for his chief lieutenants Mr Alfred Deakin in Victoria, Sir Samuel Griffith in Queensland, Mr B. R. Wise in New South Wales and the late Mr Kingston in South Australia. The Convention which framed the Federal Constitution had recognised Mr Barton's services by electing him as its leader. Now there was such an unmistakable demand that he should be Federal Prime Minister that Sir William Lyne was unable to form a Government and advised that Mr Barton should be sent for. The latter called to his side all the Premiers of all the Federating states with one exception they responded, and this Ministry of 'all the talents' appealed to the people for support on a non party platform.

But this fair promise at the outset was not fulfilled. Party warfare broke out at the first elections with great violence. Sir George (then Mr) Reid led one opposition party. He had been the chief opponent of Federation. Born in Scotland in 1845 he went to Australia as a boy with his father a Presbyterian clergyman entered the Civil Service, ventured on a political career somewhat late in life and entered the New South Wales Parliament as a champion of Free Trade which was just then being attacked in its last Australian stronghold. Federation was to him anathema for he saw that it would be fatal to Free Trade in New South Wales. But he finally recognised that the movement for Union was too strong and as Premier of New South Wales he had convened the Federal Convention of 1899 which framed the Commonwealth Constitution. Now that Federation was achieved he went to the polls in a Free Trade attack upon the Barton administration.

First  
Parliament  
1901-03

Another attack came from another quarter. In the various states there were labour parties of varying strength very influential in New South Wales, Queensland and South Australia, weaker elsewhere. These combined in a Federal organisation and as a third independent party went to the polls under the leadership of one of the remarkable men of Australian public life, Mr J. C. Watson. Born of poor Scottish parents in 1867 whilst on the voyage to Australia, Mr Watson was in boyhood deprived of nearly all the advantages of education, but taught himself enough to become a printer. Sagacious, tactful, resolute, he came to the front in the Australian Labour movement and was elected first leader of the Federal Labour party. The success of the Labour party under his leadership at the polls was extraordinary. The first Parliament of the Commonwealth was divided as between the Government followers and Mr Reid's Opposition party almost equally, but with the Labour party (16 strong in the Representatives, 8 strong in the Senate) holding the balance of power.

This made a position of grave difficulty for the Government. The common sense and moderation of Mr Watson saved the situation to some extent. He gave a general support to the Government and assisted them in their most pressing tasks. Nevertheless the first Parliament was hampered by party fighting, the opposition seeking to win the Labour party over to their side and the Government being forced to postpone a good deal to modify a good deal in order to keep in office. Sir Edmund Barton was deeply disappointed. He had looked to a first patriotic Parliament completing without any 'scuffling on the steps of the temple'—to use his own phrase—the measures necessary for the stability of the Federation. He experienced a first Parliament in which party rancour had been extraordinarily rife. He retired to accept a Federal judgeship and Mr Deakin took his place (September 1903).

Mr Alfred Deakin (born in Victoria in 1856) had cherished an enthusiasm for Federation not inferior to that of Sir Edmund Barton. But he had resolutely put away from him the idea of competing for the Federal leadership, recognising that it was best in the hands of a citizen of New South Wales, the chief citadel of anti-Federalism. He now took over the government at a time of great difficulty. Mr Watson had led his Labour forces with moderation and with a sense of patriotism as distinguished from 'partyism'. Nevertheless the Labour member and even more exigently the Labour voter had to be placated with some 'Labour legislation'. One of these Labour measures, the Industrial Arbitration Bill, had almost wrecked the Barton Government. The opposition fostered a point of division between the Government and its Labour allies, and on this point there arose a crisis, which was interrupted by the General Election of 1903.

Mr Deakin met the Second Parliament of the Commonwealth in 1904 with his own following reduced; the following of the Labour party increased (23 in the Representatives, 14 in the Senate) and with party feeling embittered by the recriminations incidental to a contest at the hustings. Business was impossible, though Mr Deakin proved to be an able and tactful leader. In April 1904 Mr Deakin went out of office and was succeeded by Mr Watson. In August of the same year Mr Deakin gave his support temporarily to Mr George Reid and a Reid-McLean coalition administration supplanted Mr Watson's. This lasted through a long recess and a few days of Parliamentary life and in July 1905 Mr Deakin came back to office with the support of Mr Watson. Mr Watson was even at that time determined on resignation. But he was strongly convinced that a measure of tariff reform was necessary, and determined to remain in Parliament until it was effected. The first Federal tariff had had to make concessions to Free Trade sentiment. The second tariff was completely protectionist and introduced a new principle into Australian politics by granting a "preference" to British imports. At the third General Election in 1907 the Labour party again improved its position, mostly at the expense of its allies.

Mr Watson kept the leadership of the Labour party, and kept that party solidly behind Mr Deakin, until the tariff was settled. Then he retired and Mr Andrew

*Second  
Parliament,  
1903-07*

fisher took his place Born in Scotland in 1862, Mr Fisher was brought up as a coal-miner He went to Queensland in 1885 entered the state Parliament and later the Federal Parliament He had been included in Mr Watson's Cabinet

**Third Parliament 1907-10** Now assuming the leadership he very quickly gave Mr Deakin notice to quit and in 1908 formed his own administration It lasted however little more than six months Mr Deakin then formed a coalition with the remnants of the Free Trade opposition no longer now led by Mr George Reid but by Mr Joseph Cook his lieutenant, and the Deakin-Cook administration came into office one of its first acts was to send Sir George Reid to London as High Commissioner for the Commonwealth Mr Cook like Mr Fisher had been a miner He entered New South Wales Parliament as a Labour member drifted away from his party and entered the Federal Parliament as a Free Trader, was the chief supporter of Mr Reid in an Anti socialist party and now joined with Mr Deakin to oust the Labour party from office one ground of attack being their lack of proper sympathy with the cause of Imperial defence

This was at the time of the European crisis over Austria's annexation of Bosnia Herzegovina when public interest throughout the British Empire was being stirred over the question of maintaining British supremacy at sea and strengthening the hands of the Imperial Government in view of increasing international complications New Zealand had promptly offered to provide a "Dreadnought" for the British navy It was objected that Mr Fisher had not done likewise He claimed that his Imperial patriotism was not wanting but that in his judgment more useful action could be taken by hurrying on with the creation of an Australian navy This navy he stated in a despatch to the British Government would be organised and controlled by Australia in times of peace but on the outbreak of war would pass automatically to the control of the British Admiralty Mr Fisher's direct following though he was helped by Sir William Lyne, who now left Mr Deakin's party could not maintain him in office and in June 1909 the Deakin-Cook administration came into power Amid bitter party wrangles the third Australian Parliament closed its life expiring by effluxion of time in January 1910

The General Election of 1910 resulted in a sensational victory for the Labour party under Mr Fisher The party captured a working majority in both the Senate and the House of Representatives The position of parties was Deakin Cook followers—Representatives 31 Senators 13 Labour party—Representatives 42 Senators 23 In the House of Representatives there were two independents On April 9 1910 Mr Fisher formed his second administration under circumstances unique in Australian Federal history In the Senate and the House of Representatives the opposition was powerless the more completely so because the Labour party majority was bound solemnly to party fidelity No opposition criticism on any issue could hope to detach a single Labour member from his allegiance to the Government which in regard to all its measures consulted a caucus of its supporters beforehand as to both principles and details

The decision which gave Australia's destinies completely into the hands of the Labour party (and that not the Labour party of Mr Watson but of Mr Fisher—much more of a 'party' man) was influenced very largely by negative considerations The people disliked deeply the coalition of Mr Deakin with Mr Cook who had before seemed to represent absolutely irreconcilable ideas in politics and a vote for the Labour party was in many cases a vote of no confidence in the coalition rather than actually an endorsement of Labour policy An indication of this fact was given a little later, when the Labour Government (May 1911) submitted to a direct poll of the people amendments to the Federal Constitution, without which it could not carry out its Labour policy These amendments sought (a) to give the Commonwealth Parliament full power to legislate with respect to trade and commerce instead of the limited power it had under the Constitution (the limitation stood in the way of Federal legislation dealing with the conditions of labour), (b) to give the Commonwealth

Parliament full power over all trading corporations (c) to give the Commonwealth Parliament specific power to deal with the wages and conditions of labour and labour disputes (d) to give the Commonwealth Parliament power to deal with all combinations and monopolies. A further proposed amendment of the Constitution gave the Commonwealth Parliament power to declare that any business was a "monopoly," and following such declaration to acquire it paying on just terms for any property used in connection with it. By a majority of about a quarter of a million votes in a total poll of about 1,155,000 votes the people declared against these amendments of the Constitution. Thus a Labour Government was left in office without power to carry out its Labour policy. It was announced that these amendments would be submitted again at the General Election of 1913.

Thwarted by the safeguards of the Constitution and the refusal of the people to allow amendments removing those safeguards in an effort to move further towards the ideal of a socialistic state the Fisher Government was yet able to carry out much advanced legislation. Its first task however had been to clear itself very completely of any suspicion of a lack of earnestness regarding the defence of Australia and the Empire. In 1909 whilst Mr Deakin was Prime Minister, an Act of Parliament had been passed enforcing military training on all able bodied male citizens. This enactment of universal service had not been opposed by the Labour party. Indeed their criticism was that the system proposed to be enforced was not thorough enough and the Government of the day promised that an expert from Great Britain should be asked to report on the system. Field Marshal Viscount Kitchener accepted an invitation to visit Australia and his report was before the Parliament of 1910 with a Labour Government in power. That Government not only accepted all his recommendations but in some cases crossed his *t's* and dotted his *i's*. There was established a system of universal training for military defence which Lord Kitchener guarantees as adequate and which the Fisher Government has enforced against various protests with a resolute courage. In the matter of naval defence the Fisher Government was equally firm in dissociating itself from any faltering policy.

Mr Fisher in carrying on and extending the defence policy of his predecessors gave the opposition no reason for hostility. But his Land Tax was hotly contested. During his brief administration Mr J. C. Watson had foreshadowed a Land Tax, the purpose of which was to be economic rather than fiscal that is to say it was to be designed chiefly to make the holding up of big estates against closer settlement unprofitable and the collection of revenue was to be but an incidental matter. Mr Fisher's Land Tax kept this "bursting up" of big estates in the foreground but owned to a material interest in securing additional revenue to finance the great defence schemes which had been entered upon. Estates of under £5,000 in unimproved value were exempted if their proprietors were resident in Australia (absentee landlords had no exemption) upon estates of over £5,000 in unimproved value the tax was at the rate of one penny in the £ rising rapidly with the value of estates until at £75,000 unimproved value the rate was 6d in the £, beyond which it did not go. In case of absentees the rate is higher culminating in a tax of 7d per £ of unimproved value.

Another highly important financial measure carried through by the Fisher Government was a re-arrangement of the financial basis between the Commonwealth and the states. The original financial basis of the Commonwealth Government was absurd, but it had been forced upon the makers of the Federation by circumstances. It was found during the various sessions of the Convention which sat to frame a Constitution that Federal enthusiasm was apt to evaporate, and to be replaced by a hard bargaining spirit as soon as the allocation of revenues came to be discussed. There were six states to be united two of them (New South Wales and Victoria) rich and powerful two others (Tasmania and West Australia) poor in revenue and in population, two others (Queensland and South Australia) occupying middle places. As soon as the issue came up as to how the Commonwealth revenues were to be collected and distributed, the representatives of the large states began to fear that the small states

would "live upon them" the small states began to fear that their revenues would be destroyed in the interests of the big states. Tasmania and West Australia won a large proportion of their income from the Customs taxation of goods from the other states and that source would disappear with inter state Free Trade. The difficulty was finally solved by a clause called the "Braddon clause" (or in party polemics the Braddon Blot) after its author the late Sir Edward Braddon, Premier of Tasmania.

The Braddon clause provided that the Commonwealth Government, after collecting the Customs and Excise duties should pay back at least  $\frac{2}{3}$  of them to the revenues of the various states. The idea was ingenious. The Commonwealth Government in order to get 5s for itself would have to collect 15s for the states and thus the smaller states could rely on no starveling policy of Customs and Excise taxation. Almost everybody said that the clause was absurd without being able to suggest an alternative. It was put in the Constitution with a proviso that it should last but ten years. During the first three Parliaments several efforts were made to secure by agreement with the states a less crippling arrangement. But party strife prevented resolute action on the part of any Federal treasurer. On their part the states were firm to maintain a system which in some cases they thought to be the only safeguard against bankruptcy while in other cases they recognised it to be a source of most abounding revenues which they had the pleasure of spending but not the odium of collecting. The Deakin Cook administration on the eve of going to the country in 1909 made an arrangement with the state Premiers to amend the constitution so that in place of the provisions of the Braddon clause the Commonwealth should pay to the states 25s per head of population per annum out of the Customs and Excise collections. This amendment was sanctioned by Parliament. To come into force however it required the endorsement of the people at a referendum. That endorsement was refused. The position then when Mr Fisher took office for the second time was that the Braddon clause of the Federal Constitution was on the point of expiry and that the whole of the Customs and Excise revenues would then be at the unfettered disposal of the Commonwealth. He could have destroyed the financial independence of the states absolutely. He took a moderate course and by an Act of Parliament of 1910 the states are allowed subsidies of 25s per head of population per annum out of the Customs and Excise revenue for ten years. At the end of that time the Federal Parliament can make any other disposition that it thinks fit since there is now no Constitutional provision on the subject.

Mr Fisher with two of his colleagues attended the Imperial Conference of 1911. He was apparently impressed by the degree of confidence with which the British Government consulted the representatives of the overseas dominions. A first indication of the intention of Australia to take an active part in the foreign policy of the Empire was furnished in August 1912 by a protest against the United States policy in regard to the Panama Canal.

Australia at the end of 1912 was on the eve of her fifth General Election. The Labour party intended to ask for a renewal of confidence and for such amendments of the Constitution as would enable them to carry further their socialistic policy. The Opposition under Mr Cook — Mr Deakin announcing in December his withdrawal from the leadership — raised a warning against this policy and condemned the administration of the Government as tinged with favouritism and inefficiency. The Opposition party was not as well organised as the Government party and it showed some signs of internal dissension. Many of its friends feared that it would succeed only in weakening and not in defeating the Labour Government. It was impossible for it under any circumstances to secure a majority in the Senate, even if it won all the 18 seats to be contested for all the 18 Senators who were not retiring at the election of 1913 were Labour members. A by election in 1912 at Werriwa (N S W) at which the Labour party held the seat by a greatly decreased majority seemed to foreshadow this result.

## AUSTRALIA

The Governor General of the Commonwealth in 1912 was Lord Denman The following were the names of the Cabinet still in office at the end of the year

Prime Minister and Treasurer

Attorney General

Minister for External Affairs

Minister for Home Affairs

Postmaster General

Minister for Defence

Minister for Trade and Customs

Vice President of Executive Council

Honorary Ministers

Andrew Fisher

W M Hughes

J Thomas

K O Malley

C E Frazer

G F Pearce

F G Tudor

G McGregor

E Findley and E A Roberts

*The Constitution and the High Court*—The Federal Constitution in safeguarding the Federal power from trespass by the states and the power of the states from trespass by the Federation, necessarily set up a system of conservative check But the full extent of that check was only understood when a High Court began to interpret the statutes in the light of the Constitution Already a considerable amount of the legislation of the Australian Parliament has been declared *ultra vires* by the High Court Some of the decisions affected political issues so deeply that it was sought to amend the Constitution so as to facilitate "Labour legislation but this effort failed The power to amend the Constitution is in itself subject to many safeguards A proposed amendment must first have the approval of an absolute majority of both Houses of Parliament it is then submitted to a poll of the people and to pass it must secure (a) a majority of the total votes cast (b) a majority of the votes cast in a majority of the states If the three largest states voted 'Yes' and the three smallest states voted "No" though the total Australian vote was "yes," the proposed amendment would still fail

In 1906 the Australian Parliament had passed an "Excise Act" which was intended to enforce what was called "the New Protection" A high protective Customs Duty had been placed on agricultural machinery and at the same time an Excise Duty on the same machinery manufactured locally with the provision that the Excise Duty should be remitted if the manufacturers paid "fair wages" On June 26 1908 the High Court declared this Act invalid on the ground that it was not what it purported to be—a taxing Act but rather an Act to regulate wages within a state a thing which the Federal power was not competent to undertake under the Constitution

The first two Australian Parliaments devoted much time to discussing a Federal Industrial Arbitration Act, which included in its control state railway servants This inclusion was nullified by a High Court decision that it was an unconstitutional interference by the Federal power with the affairs of the states In the Trade Marks Act the Australian Parliament gave Trade Unions the right to register what is known in the United States as the "Union label" a mark showing that certain goods were manufactured by Trade Union labour only The Australian High Court (August 1908) set this part of the statute aside on the ground that such a "Union label" was not a genuine trade mark and the proposal to register it as a trade mark was really a subterfuge to assume control of labour conditions which were outside the province of the Commonwealth

Not only Federal legislation but state legislation has been vetoed An Arbitration Act in New South Wales had sought to give the widest powers of regulating industrial disputes In a series of five appeals the High Court gave such a strict interpretation to the provisions of that Act that it was more than half destroyed (The High Court is the only Court of Appeal in cases affecting the Constitution, and is with the Privy Council an alternative Court of Appeal in all other cases)

In 1913 an effort was to be made to secure from the people a reversal of their verdict in 1911, when they refused to give endorsement to amendments of the Federal Constitution which would legalise for the future the Federal and Labour legislation which the High Court had vetoed Meanwhile the Australian Constitution as interpreted by the High Court is a barrier against any great development of socialistic enterprise on the part of the Commonwealth Government

Since the beginning of the Federation there have been two alterations of the Constitution sanctioned one unimportant, was designed to improve the electoral machinery the other gave the Commonwealth power to take over all the states debts Three proposed alterations have been rejected one which proposed to make constitutional provision for a subsidy to the states one which proposed to give the Commonwealth Parliament control of labour legislation and one which proposed to give the Commonwealth Parliament power to take over monopolies and conduct them under state control

The Australian High Court was originally constituted (1903) of three Judges Sir Samuel Griffith (chief) Sir Edmund Barton and Mr R E O Connor In 1906 two other Judges were added Mr Henry Bournes Higgins and Mr Isaac Isaacs In 1912 it was proposed to strengthen further the Court to seven Judges Sir Samuel Griffith (born in Queensland in 1845) had a distinguished career as a politician in his native state He took an early interest in the Federal movement was President of the Federal Council (which preceded Federation) from 1888 to 1893 and was chiefly responsible for the framing of the first Federal Constitution on which the more popular Constitution subsequently adopted was modelled Sir Edmund Barton's services to Federation have been already noted Mr Richard E O Connor (born in New South Wales in 1851) was also one of the first advocates of Federation he died on November 18 1912 It was a curious circumstance that all three members of the first High Court were graduates of Sydney University Mr Higgins (born in Ireland) was leader of the Equity Bar in Victoria and accepted office as Attorney General in Mr J C Watson's first Labour Ministry (1904) Mr Isaacs (born in Victoria in 1853) had a distinguished career in state politics and was Attorney General in Mr Deakin's second administration

*Industrial Disputes*—In spite of much advanced "Labour" legislation the industrial situation in Australia has not been altogether peaceful recently The strike on the Victorian State Railways in 1903 was followed in 1908 by a strike on the Sydney State Tramways Both of these strikes against state employment failed New South Wales in 1908 altered its Industrial Arbitration system and this alteration being resented by the Trade Unions various small strikes followed The next year (1909) more serious strikes broke out on the Broken Hill (N S W) silver mining and the Newcastle (N S W) coal mining fields Stern measures were taken by the New South Wales Government to repress these strikes and the leaders in the strike movement were arrested and some of them punished with imprisonment In 1910 there were strikes of tramway employees at Perth (W A) and of transport workers at Adelaide (S A) In 1912 the tramway employees of Brisbane came out on strike because of a slight grievance against their employers (a private company) The leaders formed a sympathetic strike on 'Syndicalist' lines calling out the workers in every industry with the avowed object of preventing all business Serious riots accompanied the strike The state Government acted however with decision and the strike disorders were crushed and the Syndicalist movement defeated This strike had not the general sympathy of Labour leaders in Australia Shortly after the Queensland Premier Mr Denham, went to the country to ask for sanction for a policy of dealing sternly with labour disorder The General Election gave him a substantial majority, and he passed legislation (1912) making strikes illegal without due notice and without a secret ballot of the Trade Union affected

The Labour Government of the Commonwealth has amended the Federal Industrial Arbitration Act (introduced by the Deakin Government and passed by the Reid McLean Government) It originally forbade the employment of Trade Union funds for political purposes That restriction has been removed

*The Tariff*—The first Australian Tariff Act of 1901 was introduced by the late Mr Charles Kingston then Minister for Customs in a form very like that of the later Tariff Act of 1908 In 1901 Free Trade opposition and Labour party criticism cut down Mr Kingston's proposals materially and his Tariff did not satisfy the Protectionists But party divisions prevented reform for seven years During 1906 however several small Tariff Acts were passed the chief of which provided for a measure of Preferential Trade with South Africa The 1908 Tariff Act raised the tariff generally and provided for a preferential rate on certain goods imported from Great Britain

## AUSTRALIA

In 1910 the system of Customs book keeping between the states was abolished in consequence of the substitution for the Braddon clause of a fixed subsidy from the Commonwealth to the states. Since then there have been no material changes in the Tariff and the Customs Minister Mr Tudor has expressed the view recently that the Government would not be willing to raise the Tariff further unless there were a certainty that labour conditions would be thereby bettered a certainty which could not be provided by the Commonwealth legislature under the present constitutional limitations.

The preferential tariff treatment of British imports does not show any very marked effect on the trade figures as yet. The proportion of imports from the United Kingdom has remained fairly steady. It was 51.52% in 1908, 51.50 in 1909, 51.21 in 1910. Previous to 1908 the proportion of British imports was dwindling. British goods admitted at a preferential rate in 1910 paid £2,485,497 in duty whereas if they had come under the general tariff they would have paid £3,457,671 in duty. The rebate was thus £972,174. In regard to £6,425,260 of British imports the Commonwealth admitted them free, foreign goods of the same classes and value would have paid an average tariff duty of 5.18%.

*Defence*—When the Commonwealth Government took over the defence of Australia from the states in 1901 there existed for land defence in the various states very small forces of regular troops used as instructional cadres and as garrisons for the forts, small forces of militia enlisted under a voluntary system and paid for about 16 days of drill and camp training a year, further small forces of volunteers not paid at all and giving usually but scanty time to training. The total of these forces was 25,573 of whom a proportion could be counted as efficient. Naval defence apart from the existence of various small craft was entrusted to the British Navy and a yearly subsidy (up to £126,000) was paid to the British Admiralty on condition that a fleet of a certain strength was maintained in Australian waters and certain facilities given to Australians wishing to enter the naval service.

At first the Federation did little to disturb these arrangements. The fleet subsidy was continued and extended. The military forces were taken over as they were. But the Defence Act of 1903 gave an indication of a new spirit. It made provision for the enlistment of all able bodied males for defence service in case of war. An amendment proposed by Mr W. M. Hughes, one of the leading members of the Labour party, that this universal obligation to military service should be accompanied by a universal obligation to training for service was rejected. But it was inevitable that in time the one should follow the other. Mr Hughes (born in Wales in 1864), a very advanced Socialist at the outset of his political life, constituted himself the Parliamentary champion of compulsory training for service, and—assisted outside the House by the National Defence League of which Colonel Gerald Campbell, a volunteer officer of distinction, was the moving spirit—eventually secured the acceptance of the principle. A series of Acts in 1900, 1910 and 1911 gave Australia a military system under which with few exceptions the whole manhood of the country will be trained to the use of arms. Under this system at the age of twelve a boy must begin training (chiefly physical culture) as a junior cadet. Training as a senior cadet begins at 14 and lasts until 18. It comprises drills equivalent to 16 full days a year. At the age of 18 the obligation to undergo adult training begins and lasts until the age of 25 through seven years. This adult training consists of the equivalent of 16 full days drilling a year of which not less than eight shall be in a camp of continuous training. In the case of the artillery and the engineers the training extends to 25 days a year of which not less than 17 must be in camp. There are certain exceptions including one making provision for those who have conscientious scruples against bearing arms, these however are trained for the hospital and ambulance services. The thinness of the population in some districts forces another class of exemption, the residents of far out back cannot be economically mobilised for training and for the present are left out of the scheme. A Staff College in the Federal Territory is provided for the training of officers and its organisation is on severely practical lines. Cadets are accepted after examination. The whole cost of their college training is borne by the Army Estimates and parents are forbidden to supplement the messing allowance by private pocket.

money Even railway fares to and from the College when cadets go on holiday leave are paid by the Government, as are also all costs of uniform and equipment. A severe but not unwholesome discipline is exacted, the drinking of alcoholic liquors and cigarette smoking are both forbidden in the College.

It was not to be expected that a compulsory military system should be carried through altogether without protest. It had some opponents influenced by religious objections or by those pacific ideals which would seek to abolish the possibility of war by abolishing all organisation for national defence. But the first stage and the second stage of the scheme dealing with the cadets have now (1912) been successfully surmounted, and the training has been put in hand of the first draft of 20 000 of adult citizen soldiers. An official statement published in September 1912 showed that 81 % of those affected had complied with the provisions of the Act, and that there were in New South Wales only 643 offenders "in the other states a considerably less number," who were so recalcitrant that it was necessary to prosecute them. In October 1912 the Defence Minister stated that the Opposition to the Act was no greater than to the Compulsory Education Act. Penalties of fines and imprisonment are provided for disobedience.

The numbers under training when the system is in full operation are estimated at 100 000 senior cadets and 120 000 citizen soldiers. But as after training the citizen soldier will pass into a reserve the potential military resources of the Commonwealth in the future are only to be calculated by the total number of males of "military age" minus those who had been exempted from training. On the basis of the present population there would be 366 000 males between the ages of 18 and 26, 330 000 between 26 and 35 and a further 614 000 between 35 and 60. Exemptions, at a broad guess might be 3 %. The organisation of the establishment proposes at present 28 regiments of Light Horse, 56 batteries of Field Artillery, and 92 battalions of Infantry and a due proportion of Engineers and Army Services Corps.

In regard to naval defence there was strong criticism of the subsidy policy at the very outset of the Federation. But that policy was warmly supported by the British Admiralty and the Imperial Defence Committee and the impression was given that the only alternative to an Australian cash subsidy towards the British Navy was no co-operation at all in the naval defence of the Empire. Indeed the early advocates of an Australian Navy were met in their own country with charges of disloyalty to the mother country. But Australian public opinion steadily hardened on the subject. The British Admiralty was ultimately converted in part at least. On December 19, 1907, Mr Deakin as Prime Minister of Australia outlined a scheme by which Australia would devote the amount of the naval subsidy then £200 000 a year to the building of an Australian fleet under the control of the Commonwealth Government but trained to co-operate with the British Navy. He proposed in short that in naval defence Australia should set up an independent but loyal system corresponding to the one she had adopted in military defence. Mr Deakin announced that the British Admiralty did not altogether endorse his views especially in regard to the control of the Australian Navy in time of war which was kept with the Commonwealth Government unless it chose to pass that control over to the British Admiralty.

No great advance was made in regard to naval defence until the general anxiety as to the European situation in 1909 made the subject of Imperial Defence of the first importance. Australia was represented at an Imperial Defence Conference in 1909 which showed a remarkable change of opinion on the subject of "local navies" on the part of the British Admiralty. They brought down to the Conference, as a substitute for an Australian subsidy to the British Navy a proposal for the building of an independent Australian fleet unit with the help of a British Treasury subsidy of £250 000. The Australian Government adopted the scheme in its entirety, except that it refused to accept the subsidy and decided to put the whole cost on the Australian taxpayer. Under this scheme Australia was to provide a fleet unit with a 'Dreadnought' cruiser as its chief vessel. There was no provision for the automatic transfer

## AUSTRALIA

of the fleet to British control in the outbreak of war that point having been allowed to drop out of sight. It is argued in Australia that a special provision of the sort is not needed as full co-operation may be safely assumed.

In March 1911 at the request of the Australian Government, and at the close of a visit to Australia Admiral Sir Reginald Henderson reported on the naval needs of the Commonwealth. His report was accepted and it represents the present aim of Australian Naval Defence, though according to a statement made by one member of the Australian Ministry (Mr Roberts) the acceptance of Admiral Henderson's proposals was subject to ratification by the electors in 1913. But there seems to have been no division of opinion in the Cabinet as to its acceptance. "We have called in a doctor we must take his prescription," was the statement made by one member of the Cabinet discussing the expenditure that Admiral Henderson demanded. His proposed Australian navy would consist in 22 years of 52 vessels manned by 15 000 men. The highest annual vote would be £4 794 000, and the ultimate cost would be £88 500 000. The strength of the fleet would be 23 ships in 1918, 42 ships in 1923, 48 ships in 1928, and 52 ships in 1933.

At present the Australian building programme is confined to the fleet unit decided upon in 1909: a battle cruiser of the Indomitable class, three unarmoured cruisers of the Bristol class, six destroyers of an improved River class and three submarines of C class and the necessary auxiliaries. In 1912 there were in actual commission the Parramatta, Yarra Warrego (destroyers) and in the water the Australia (a battle cruiser completed in 1912) and Melbourne and Sydney (cruisers one of which was due for completion in 1912). Construction of the fleet is proceeding simultaneously in Great Britain and in Australia. The personnel for the fleet will be largely drawn from the British Navy at the outset. But Australian officers and crews will be recruited and trained as quickly as possible. A site has been chosen for a naval college for the training of officers at Jervis Bay (N S W) and a temporary college established at Geelong (Vic). New Zealand is co-operating with Australia in the maintenance of the college for training naval officers. The provisions of the Act compelling universal training for service affect the naval manning for young citizens may elect to train as naval cadets. The official report on the training of the first batch of naval cadets issued September 1912 was satisfactory.

The cost of this great naval and military preparation is shown in the growth of the Australian Defence votes. In 1905-6 the Commonwealth devoted £970 345 to defence. In 1906-7 £1 035 795, in 1907-8 £1 334 744, in 1908-9 £1 050 590, in 1909-10 £1 534 881, in 1910-11 £3 008 705. The estimates for 1911-12 provide for an expenditure of £4 775 136.

Administration of both the military and naval systems is by Boards.

**OBITUARY** The Australian obituary for 1911 included the following names —

**SIR RICHARD CHAFFEY BAKER** President of the First Senate of the Commonwealth, d at Adelaide, Australia, on the 18th March. He was born in North Adelaide in 1842, educated at Eton and Trinity College, Cambridge, and called to the Bar in 1864. He was president of the Legislative Council of South Australia from 1893 to 1901, and special envoy to London from the Australian Governments for the mail contract negotiations in 1885.

**SIR JENKIN COLES** speaker of the South Australian Assembly since 1890, b 1842, d at Adelaide on the 7th of December.

**SIR GEORGE HENRY JENKINS** Clerk of Parliaments in Victoria since 1891, d at Colombo, Ceylon, on the 17th July. He was born in 1843 at Abergavenny in Monmouthshire and becoming connected with the government department of Victoria made a special study of parliamentary procedure and became an authority in Australia on constitutional questions. He was Clerk of the Legislative Assembly of Victoria from 1882 till 1891 and was knighted in 1904.

**Cardinal PATRICK FRANCIS MORAN** third Archbishop of Sydney, New South Wales, and the first Australian Cardinal (see *E B* xix 343c), d at Sydney on the 16th August. He was born in County Carlow, Ireland, on the 16th September 1830 and educated at the Irish College at Rome where he became Vice President and Professor of Hebrew. In 1873 he was consecrated Bishop of Ossory, and thence went in 1884 to Sydney as Roman Catholic primate of Australia. The cathedral of St Mary, Sydney, was built under his direction.

**WILLIAM LLOYD MURDOCH** the cricketer, d suddenly during a cricket match at Melbourne, on the 16th February. Born in 1855 at Sandhurst, Victoria, he went to England as

## AUSTRALIA

697

captain of the Australian eleven in 1880 and in the historic test match of that year made 153 not out (see *E B* vii, 444b). He was captain of the Australian eleven in 1882 and 1884. From 1893 to 1899 he lived in England and played for Sussex and returning to Australia he played for New South Wales.

In 1912 the following well known Australians died —

GEORGE JOHN BONNOR the cricketer d at Sydney on the 28th June. Born in 1855 in Victoria he first went to England as a cricketer in 1880 attracting special attention by his unusual height and strength. He played for Australia again in England in 1882 1884 1886 and 1888 (see *E B* vii 444b).

JAMES FRANCIS CORBETT Roman Catholic Bishop of Sale Victoria d in Melbourne on the 29th May. He was born at Limerick in 1840 and educated in France. After a few years spent in Ireland as a priest he went to Melbourne as secretary to Archbishop Goold. He acted as Assistant Secretary to the Primary Australian Synod of his church in 1885 and in 1887 was consecrated first Bishop of Sale.

SIR MATTHEW HENRY DAVIES Speaker of the Legislative Assembly of Victoria from 1887 to 1892 b 1850 d November 26th.

JOHN HUGHES member of the Legislative Council of New South Wales was born at Sydney in 1857 and died 18th December. He was Vice President of the Executive Council in 1898-99 and again from 1904 to 1910. In 1899 he was for a few months Minister of Justice.

MARTIN HOWY IRVING a prominent educationist d at Albury in Surrey England on the 23rd July. The son of Edward Irving (see *E B* xiv 854b) the founder of the Catholic Apostolic Church he was born in 1831. After leaving Balliol College Oxford he was for a year a master at the City of London School but went to Australia and was appointed to the Chair of Classics and English at Melbourne University. In 1876 he became head master of the Hawthorn Grammar School and in 1884 commissioner of the new constituted Public Service Board. He was also for some years chairman of the Melbourne board of the Australian Mutual Provident Society and a promoter of the volunteer movement.

SAMUEL EDWARD MARSDEN former Bishop of New South Wales d at Clifton England on the 15th October. He was born at Sydney N S W in 1832 and educated privately and at Trinity College Cambridge. He was ordained in 1855 and in 1861 was appointed diocesan inspector of schools for Worcester. In 1869 he was consecrated Bishop of New South Wales and held the see till 1885. After his retirement he returned to England and became assistant bishop in the diocese of Gloucester and Bristol.

RICHARD O'CONNOR Judge of the High Court d at Sydney on the 18th of November. Born at Sydney in 1851 he gradually made a position at the N S W Bar and entered the state legislature and he was an enthusiastic supporter of the movement for Federation. When this was accomplished in 1901 he became vice president of the Council and leader of the Federal Senate and in 1903 he was made a judge of the new High Court. From 1905 to 1908 he was president of the new Court of Conciliation and Arbitration.

SIR WILLIAM OWEN formerly Judge of the Supreme Court of New South Wales b 1834 d November 22.

### NEW SOUTH WALES

The area of New South Wales is now computed at 309,472 square miles. The state has progressed rapidly since Federation. The population in 1900 was 1,364,590 and in 1911 1,646,734. During the same period the area under cultivation grew from 2,445,564 to 4,611,672 acres. In 1908 N S W re-established a system of state aided immigration. Its net gain from immigration was however only 438 in 1911. But since then the increase has been greater. The city of Sydney has shown a remarkable growth since Federation and in 1912 a Million Club was formed to foster the growth of the city to 1,000,000 inhabitants. The estimated population in 1911 was 629,500.

At the General Election of 1910 the Labour party carried the day and Mr J. S. T. McGowen formed a ministry which still held office at the end of 1912. Parties are very evenly divided and the years 1911 and 1912 were marked by perpetual political fighting and very little legislative work. By securing from a member of the Opposition acceptance of the office of Speaker the Government was able to make its position more secure (his vote of course was lost to the Opposition) and this incident led to many remarkable scenes of disorder and violence in the House. An incident of the political situation has been a growth of unfriendly feeling between the state Government and the Federal Government. The state Government in 1912 decided that the Government House building could no longer be reserved for the use of the Federal Governor General. In consequence the Governor General will not live in Sydney in future during the Parliamentary recess.

Lord Chelmsford appointed in 1909 was still Governor in 1912, but Sir Gerald Strickland was nominated in October to succeed him in 1913.

### VICTORIA

Since Federation the population has increased from 1,197,206 to 1,337,678. State aided immigration was re-established in 1908 and a vigorous policy of closer settlement has been adopted. Victoria is now the most forward of all the states in encouraging immigrants.

## AUSTRALIA

Alone of all the Australian states Victoria has never yet been governed by the Labour party. At the end of 1912 the Premier was Mr W. A. Watt. His ministry is the successor of Mr W. H. Irvine's (1902) which was very strongly opposed to the Labour party. After Mr Irvine Mr Bent then Mr Murray then (1911) Mr Watt led this Government. As temporary seat of the Commonwealth Government Melbourne the capital of Victoria has been also the political capital of Australia and the housing of the chief of the Federal departments there has given some impetus to the city's growth. Since the inauguration of the Federation it has been improved greatly in appearance by a scheme of tree decoration applied to the river banks and the chief streets.

The Governor in 1912 was Sir John Michael Fleetwood Fuller.

## SOUTH AUSTRALIA

South Australia has now an area of 380,070 square miles and a population of 408,558 having been relieved of the care of the Northern Territory. The state is facing the development of its dry belt where wheat growing has been found to be possible with a very low average rainfall. In 1901 the area under wheat was 1,743,452 in 1910-11 2,104,719 acres in 1911-12 (estimated) 2,190,782 acres with an average yield of 9.29 bushels to the acre. A great access of prosperity is expected in South Australia as a result of the new transcontinental railway to Perth (W.A.).

In politics South Australia has always been very progressive in spirit. It was the first state to enfranchise women and most of the social reform legislation of Australia originated here. The Labour party has often formed the Government. But since a strike of transport workers in 1910 there has been a reaction against that party in the state.

At the end of 1912 the Governor was Admiral Sir Day H. Bosanquet and the Premier the Hon. A. H. Peake.

## QUEENSLAND

The population of Queensland is now 505,813, the state has progressed greatly since Federation, the population having increased in the last decade by 21.62%. The state is committed to a vigorous policy of railway development and immigration. Alone among the Australian states it develops its railways from several maritime centres instead of from the one capital city. The sugar industry is a great source of Queensland wealth and some anxiety was formerly felt as to whether the white labour policy of the Commonwealth would not ruin this industry. That anxiety no longer exists. In 1910-11 there were 168,535 acres under sugar in Queensland, in 1910-11 141,779 acres and the estimates for 1911-12 were extremely favourable. The sugar produced in 1910 was 1,840,447 tons. Agricultural farm applications in 1901 were 661 in 1910 1,733 showing the rapid progress of land settlement. Under all forms of settlement there were applications for 364,766 acres in 1901 and for 1,951,170 acres in 1910. The figures in each case represent new settlement.

Politically the state was for long one of the strongholds of the Labour party which shared the Government under a coalition system. Since 1907 (when woman suffrage was adopted) there has been a drift in the other direction. The Philip ministry (1907-8) was hostile to the Labour party. The Kidston ministry (1908) was as regards its head strongly pro-Labour at one time but became more Conservative as a tortuous and troubled political situation developed. The Denham ministry (1911) was quite opposed to the Labour party. It had to face in 1912 a fierce Syndicalist labour strike and following the defeat of the strike appealed to the country for a renewal of confidence. The General Election resulted in the decisive defeat of the Labour party. An Industrial Peace Bill was then brought forward to limit the right to strike and was passed by the Legislative Assembly in September 1912. At the end of that year the Governor was Sir William MacGregor and the Premier the Hon. Digby Frank Denham.

## WEST AUSTRALIA

The population (282,114) shows an increase since Federation of 53%. The state has kept for many years a system of state aided immigration and in 1910 the number of immigrants was 6,655.

The backwardness in development of this the largest of the states is now being met by a vigorous land settlement policy and the pushing on of the transcontinental railway to connect the state by land with the eastern states. The wheat growing industry has developed very greatly of recent years. In 1901 there were 94,710 acres under wheat in 1910-11 581,862 acres and the estimated area for 1911-12 is 559,195 acres. The gold yield is decreasing. In 1911 it was 1,370,868 oz.

West Australia with its large population has a strong Labour party which was in power at the end of 1912 with the Hon. F. Scaddan as Premier. The Governor in 1912 was Sir Gerald Strickland whose successor in 1913 was designated in November in Sir H. Barron.

## TASMANIA

With a very mild climate in which drought is unknown Tasmania (pop. 191,211) is destined to be the garden orchard and small-culture farm of the mainland. But it has not

## NEW ZEALAND

699

vet shared in the tide of the Commonwealth's prosperity and during the last decade increased its population by only 10.50 though its natural increase was almost the highest in the Commonwealth. It lost more by emigration than it gained by immigration.

In 1912 the Governor was Major General Sir Harry Barron (transferred 1913 to West Australia) and the Premier Sir Elliott Lewis. Mr W. G. Ellison Macartney, deputy master of the Royal Mint, was nominated on Dec. 11 to succeed Sir H. Barron as governor (FRANK FOX.)

### NEW ZEALAND<sup>1</sup>

*Population*—The population according to the quinquennial census of April 2, 1911 was (exclusive of Maoris) 1,008,468 of whom 531,910 were males and 476,558 females. This shows an increase of 119,800 in five years—the largest in any quinquennial period in New Zealand's history. The density to sq. m. is 9.690 number of persons to an in. habited dwelling 4.68. The populations of the principal cities (including suburbs) were Auckland 102,676, Wellington (the political capital) 70,729, Christchurch 80,193, Dunedin 64,257. Excluding suburbs the city populations were Wellington 64,372, Christchurch 53,116, Dunedin 41,529, Auckland 40,536. The number of Maoris (including half castes living as Maoris) was 54,055. Of the total population 996,418 were British subjects (born and naturalised) and only 1,050 were of foreign nationality. The birth places of the British subjects were as follows: New Zealand 702,779, United Kingdom 128,684, Australia 50,693, other British possessions 4,510.

*Births and Deaths*—The birth rate in 1886 was 35.40 per 1,000 of population but it declined steadily from year to year until in 1899 it was 25.12—the lowest percentage reached in the history of New Zealand. The rate increased yearly until 1907 when 27.50 was recorded. In 1911 the rate fell to 25.07. The number of children to a marriage for the twenty year period 1892–1911 shows a decline from 4.54 to 3.07. Of every 1,000 children born in 1911, 41 were born out of wedlock as against 45 in 1910.

The death rate per 1,000 of population has been as high as 10.95 (in 1907) but fell to 9.39 in 1911 which is slightly below the New Zealand average of the previous ten years slightly below that of Australia and much below that of all European countries. The principal causes of death in 1911 were: cancer 7.97 per 10,000 of mean population, phthisis 5.58, pneumonia 5.14, gastritis and enteritis 3.69.

Although the birth rate in New Zealand is low as compared with that of some European countries the death rate (particularly among infants) is the lowest recorded by any country in the world. As a result the natural increase of population—by excess of births over deaths—is exceptionally high. The natural increase per 1,000 of mean population for the decennial period ended 1911 was 17.00 as compared with 11.71 for England and Wales during the same period.

*Migration*—The migration returns show considerable fluctuations. For instance the net increase by migration in the years 1907–11 was—(1907) 5,730 (1908) 14,261 (1909) 4,719 (1910) 3,408 (1911) 4,200. In the same period the natural increase remained consistently steady: (1907) 15,028 (1908) 16,897 (1909) 17,565 (1910) 16,345 (1911) 16,820. During the same years arrivals from the United Kingdom were (1907) 7,449 (1908) 11,348 (1909) 11,184 (1910) 9,567 (1911) 11,379. Departures for the United Kingdom were (1907) 2,446 (1908) 2,645 (1909) 2,676 (1910) 2,509 (1911) 2,755.

*Religion*—The New Zealand census includes the religions of the people. An analysis of the 1911 return gives the following percentages—Church of England and Protestants not otherwise defined 41.14, Presbyterian 23.32, Roman Catholics and Catholics undefined 13.97, Methodist 9.43, Baptist 1.99, Hebrew 0.21. The number who objected to state their religion represented 3.5 per cent.

*Agriculture*—The census for 1911 showed the total area of land under occupation to be 40,238,126 acres of which 16,265,890 acres were under cultivation. The principal crops were: wheat 8,290,221 bushels, oats 10,118,917 bushels, barley 927,112 bushels, potatoes 141,510 tons. Of the total production of wheat 7,000 bushels were required for home consumption and seed in 1911. There is no regular export of wheat. Butter and cheese were exported in 1911 to the value of £1,216,137—an increase of about 200 per cent in ten years. Frozen meat exports doubled in value in ten years. The exports in 1911 were valued at £4,173,014.

*Trade*—The value of imports has been—(1909) £15,674,719 (from United Kingdom £9,287,786) (1910) £17,051,583 (from United Kingdom £10,498,771) (1911) £19,584,789 (from United Kingdom £11,787,300). Exports—(1909) £19,661,996 (to United Kingdom £16,193,188) (1910) £22,180,209 (to United Kingdom £18,663,118) (1911) £19,528,490 (to United Kingdom £15,134,743). The total trade per head of population was—(1909)

<sup>1</sup> See L. B. xix 624 et seq.

## SOUTH AFRICA

a Moderate Liberal from an English point of view. He surrounded himself with colleagues who collectively made up the strongest cabinet New Zealand had possessed for a generation. More than half the members of the cabinet were university graduates—a distinction unique in the history of New Zealand Ministries. The Ministry which had a good working majority was constituted as follows: W F Massey Prime Minister, Minister of Lands, Agriculture and Labour; J Allen, Minister of Finance, Defence and Education; W H Herries, Minister of Railways and Native Affairs; W Fraser, Minister of Public Works and Mines; A L Herdman, Attorney General and Minister of Justice; F M B Fisher, Minister of Customs and Marine; F H D Bell, Minister of Internal Affairs and Leader of the Legislative Council; R H Rhodes, Postmaster General and Minister of Public Health; Dr Pomare, Member of the Executive Council representing the Native Race.

The Massey government announced their determination to bring about closer settlement of the land and to make this the most important plank in their policy. They proposed to lessen the graduated tax on estates of £5 000 unimproved value and to provide that the graduation should be regular and increasing with every £1 increase in unimproved value while increasing the tax payable on estates of over £30 000 unimproved value. The new law was to provide that the 25 per cent additional tax now imposed on estates of £40 000, or more in unimproved value should apply to estates of more than £30 000.

One of the first executive acts of the Massey Ministry was the appointment of Mr Thomas MacKenzie to the position of High Commissioner in London in succession to Mr C Wray Palliser, who on Mr MacKenzie's appointment resumed his office of secretary to the High Commissioner's Department which he had held during Mr W Pember Reeves and Sir William Hall Jones' tenures of office as High Commissioners.

*Obituary*—SIR JOHN LOGAN CAMPBELL, known as 'The Father of New Zealand', died at Auckland on the 21st of June 1912. He was born in Edinburgh on the 8th of November 1817 and educated at Edinburgh University. After taking a medical degree he entered the service of the East India Company, but in 1839 he left it and emigrated to Sydney. A year later he went to New Zealand and there founded at Auckland the firm of Brown & Campbell. In 1856 he joined the Stafford government as a member of the Executive Council. From 1861 to 1871 he was in England, but he returned to New Zealand and there held many important posts, including the chairmanship of the Board of Education in Auckland and of the Board of the Bank of New Zealand. He was the author of *Poemona*, a book on early life in Auckland. He was knighted in 1902.

SIR WILLIAM STEWARD, ex-Speaker of New Zealand House of Representatives, died at Wellington, N.Z., on the 1st of November 1912. He was born at Reading, Berks, on the 20th of January 1841 and went to New Zealand in 1862, where for 30 years he was a journalist and newspaper proprietor. He was elected to the House of Representatives in 1870 and was its oldest member. From 1893 to 1901 he was Speaker of the House and in 1901 he was knighted. He published *Carmine Varia* (1867) and *The Vision of Iorangi and Other Poems* (1906). (L. J. BRIENT)

SOUTH AFRICA<sup>1</sup>

The area of British South Africa, according to 1911 official figures, is 1,204,358 sq. m. In the same year the census returns gave the total population as 8,106,224 of whom 1,305,531 were Europeans or whites. Administratively British South Africa consists of: (1) The Union of South Africa, a self-governing dominion comprising the Cape, Natal, Transvaal and Orange Free State provinces; (2) The Territory of Rhodesia, administered by the chartered company of British South Africa; (3) The Native Protectorates—Basutoland, Bechuanaland and Swaziland, administered as crown colonies. South Africa, however, forms one Customs Union and the interests of Rhodesia and the Native Protectorates are so intimately connected with those of the Union that it is best to treat the whole area as a unit. This plan has been adopted below, but certain particulars regarding Rhodesia and the Protectorates are given in separate sections.

*Vital Statistics*—Table I, compiled from the 1911 census return, gives details of the area and population. Compared with the census of 1904, the increase in the white population was 172,390. Of this increase 123,285 was in the Transvaal alone, the in-

crease in the white population in the other provinces of the Union being slight. In Rhodesia the white population had nearly doubled in the seven years. The increase in the native and coloured population was 88,660. With respect to the coloured population two important factors must be remembered: (1) The Cape province total of native and coloured includes 591,000 persons with a marked strain of white blood, officially classed as mixed; the total mixed population being 455,000. (2) The Natal province total of native and coloured includes 135,000 Indians. There were also 10,048 Indians in the Transvaal; the total Asiatic population being 152,000.

The increase in the total population in the Union between 1904 and 1911 was 15.12% in the white population 14.44% in the native population 16% in the Asiatic and other coloured races 9.84%. Among the whites there were 86.18 females to 100 males in 1911 compared with 75.85% in 1904. For all races there were 94.11 females to 100 males in 1911 compared with 92.91 in 1904. Increase by immigration is slight. In 1911 55,000 passengers landed at S. African ports and 46,000 embarked.

The population of the chief towns at the 1911 census was: *Cape Province* — Cape Town, with suburbs 161,579 (85,442 whites), Port Elizabeth and suburbs 37,063 (20,007 whites), East London 24,600 (14,909 whites), Kimberley (including Beaconsfield the municipalities were amalgamated in 1912), 44,413 (1,507 whites), Graham's Town 13,830 (7,323 whites), King William's Town 9,023 (5,510 whites). *Natal Province* — Durban and suburbs 89,998 (34,880 whites), Pietermaritzburg 30,555 (14,737 whites), Ladysmith 5,595 (2,87 whites). *Transvaal Province* — Pretoria and suburbs 57,674 (35,947 whites), Johannesburg 237,104 (119,953 whites), Germiston 54,315 (15,519 whites), Boksburg 43,628 (11,529 whites), Benoni, 32,560 (8,639 whites), Roodepoort, Maraisburg 52,518 (1,657 whites) — these four last named are all towns on the Rand as is also Krugersdorp 55,144 (13,132 whites). *Orange Free State Province* — Bloemfontein 26,925 (14,770 whites), Jagersfontein 9,019 (2,067 whites), Harrismith, 6,799 (3,447 whites). *Rhodesia* — Bulawayo, whites 5,199, Salisbury, whites 3,479.

*Commerce and Agriculture* — While gold and diamonds are still the chief sources of wealth there was during 1910-12 a marked development in other mining industries (coal, copper, tin, &c.) and in agriculture. The value of external trade for the whole of British South Africa (excluding specie and government stores) is shown as follows: —

## SOUTH AFRICA

	1910	1911	1912 (1st nine months only)
Exports	£54 509 000	£57 734 000	£46 512 000
Imports	35 123 000	36 423 000	27 460 000

Compared with 1907 the export figures for 1911 showed an increase of over £10 000 000 or 21 % the imports for the same period increased £10 500 000 or over 40 %. Of the imports in 1911 it was officially estimated that £6 351 000 or 17 % were taken by native or coloured consumers a significant indication of their economic importance to the country. In 1911 the United Kingdom supplied 58 % of the imports those of the British empire as a whole being 64 %. Germany and the United States came next as importers. By reason of the preference tariff granted them British goods benefited in 1911 in the Union alone by £538 000. Australian goods by £46 000 and Canadian goods by £16 000. Nearly all the exports (92 % in 1911) go to the United Kingdom. The following were in 1911 the chief exports gold £37 608 000 diamonds £8 282 000 wool £3 900 000 ostrich feathers<sup>1</sup> £2 253 000 angora and mohair £917 000 hides and skins £1 216 000 coal £1 079 000 copper £615 000. These figures do not however represent fully the agricultural development. The export of maize bark (for tanning) and of fruit has greatly developed while much of the increased production in 1911 was consumed locally. The imports of agricultural machinery £148 000 in 1910 rose to £196 000 in 1911. But the development of industries besides gold and diamond mining is best shown by the value of other goods exported valued at £9 500 000 in 1908 they were worth £13 300 000 in 1910 and £13 700 000 in 1911.

The gold output from the Transvaal mines for 1911 was £35 941 000 for the first ten months of 1912 it was £32 242 633. The issued capital at the end of 1911 was £62 325 000 and £8 066 000 represented dividends. The diamond output was from the Cape Province (including £346 000 from river diggings) £5 506 000 an increase of £298 000 over 1910 the Transvaal diamond output in 1911 (mostly from the Premier mine) was £1 628 000. In May 1911 alluvial diamonds were discovered at Moosfontein on the Transvaal side of the Vaal in the Bloemhof district and 17 m NW of the river bank in a great gravel covered area. Alluvial diamonds had never previously been found so far from the river. A mining town of 10 000 inhabitants (half whites) has sprung up and there is every likelihood of the diggings having a life of several years. By the middle of 1912 diamonds worth over £300 000 had been found. Of more importance was the proof afforded in 1912 that there were rich copper fields in the Messina district northern Transvaal.

**Finance**—The following are the figures for the revenue and expenditure of the Union (Rhodesia and the protectorates being dealt with separately below). The financial year ends March 31 and as the Union was established on May 31 1910 the first financial year contained ten months only. It should also be pointed out that the account of the Railways and Harbours Board is not shown in the budget statements only the contribution from the board to the consolidated fund. *Revenue* (1910-11) £14 392 000 (1911-12) £17 336 000 (1912-13 est.) £16 288 000. *Expenditure* (1910-11) £13 598 000 (1911-12) £16 638 000 (1912-13 est.) £17 129 000. The actual revenue for April-September 1912 was £8,473 000 the expenditure for the same period £7 629 000. The public debt on March 31 1911 was £114 236 000 the yearly interest £3 876 000. The Union government to the end of 1912 had contracted no permanent loan the indebtedness being that incurred previously to Union.

The following figures for 1911-12 show the main sources of revenue. Customs £4 508 000 mines (part proprietary profits part 10 % tax on profits imposed 1911) £2 305 000 licences stamp duties transfers &c £1 653 000 taxes on natives £1 181 000 contribution from Railways and Harbours fund £1 159 000. In 1910-11 the Board's contribution had been £1 520 000 it was reduced in 1912-13 to £500 000 and is intended to cease altogether profits from railways and harbours being allocated to developing industries by reduction in rates and fares and in improving means of communication. Expenditure is practically wholly on the civil service. In 1911-12 the sum of £418 000 was spent on defence. The provincial administrations cost the Union £3 315,000. (No permanent arrangement as to provincial finance had been reached by the close of 1912.) Up to March 1912 the sum of £5 889 000 was spent by the Railways and Harbours Board on capital and betterment account of this £2 400 000 was allocated to building new railways. Reductions in railway rates to the end of 1912 represented a loss in revenue of £1 335 000. In 1911 the Railways Board showed a revenue of £12 163,000 and expenditure £12 056 000 the Harbours Board a revenue of £852 000 and expenditure £729 000. The state owned harbours are Cape Town Port Elizabeth East London Durban and Mossel Bay.

**Communications**—The contract for carrying ocean mails by the Union Castle boats expired in September 1912. Meantime the company's fleet had been purchased by the Elder Dempster Shipping Company which on September 9 1912 concluded a new agreement (to last ten years) with the government framed to meet the requirements of an act passed in April 1911 by the Union Parliament forbidding the entry into any contract with any person or company which granted rebates to shippers. This act was aimed at the shipping ring.

<sup>1</sup> South Africa supplies the world's markets with about 85 % of their requirements of ostrich feathers.

which controlled freight rates to and from South Africa. The contract with Elder Dempster (who in October placed orders for two new liners for the S. African service, each of over 15,000 tons) left the time for the mail boat service unaltered, namely 16 days 15 hours between Southampton and Cape Town. Over 80% of the shipping is British. The net tonnage of vessels entering and clearing Union ports rose from 11,494,000 in 1910 to over 12,550,000 in 1911. Another 2,000,000 tonnage represents the trade of Lourenço Marques and Beira with British South Africa.

Wireless telegraphic stations have been established at Cape Town and Durban. The inland telegraphic service was in 1911 connected with German S. W. Africa.

In October 1912 the total mileage of the railways open was in the Union 8,400 (of this mileage 7,646 was state owned) belonging to the Rhodesian Railway Systems 2,357. The Rhodesian system includes the railway running through the Bechuanaland protectorate (it is part of the trunk line north from Cape Town) and the Beira railway. There was in 1912 through communication from Cape Town to Katanga (Belgian Congo) a distance of 2,316 miles, all save 167 miles being in British territory. With the following exceptions the railways built since 1910 were mainly short lines to serve rural districts. The railway from Ermelo to Piet Relief (70 m.) opened in July 1911, was in 1912 being extended to Vryheid (69 m.) to give a direct route from Durban to the Eastern Transvaal. In October 1912 the Johannesburg Zeerust line was completed to Mafeking, thus reducing the railway distance from the Rand to Bulawayo by 240 miles and making Durban the Union port nearest to Rhodesia. In the northern Transvaal the Pretoria Pietersburg line was continued to Bandoer Kop (70 m.) and after lying derelict many years, the old Selati railway was continued to Messina on the Transvaal side of the Limpopo.

*Public Buildings and Monuments.*—During 1910-12 over £1,300,000 was spent on public buildings. The most notable are the Union government offices at Pretoria expected to be completed in 1914. The new General Post Office at Pretoria (opened Oct. 1911) is a handsome and commodious Renaissance building. The museum, government library and University College at Pretoria have also been completed. The Houses of Parliament at Cape Town have been enlarged, as have also the Law Courts in that city. New Law Courts have been built at Johannesburg and Durban. A University College has been built at Pietermaritzburg. Over £500,000 was spent on harbour improvements, notably at Durban where a permanent quay wall was built at the harbour entrance while the harbour at Congella was opened up.

A memorial to Cecil Rhodes has been placed in the Groot Schuur estate on the slopes of Table Mountain. It is a granite temple in the Doric style approached by a flight of steps on either side of which are four lions sculptured by J. M. Swan. At the foot of the steps is G. F. Watts's statue of Physical Energy (of which the cast is in Kensington Gardens, London) and in the centre of the temple is a gigantic bust of Rhodes.

Progress has been made with the new Anglican cathedral in Cape Town. In it was placed in 1912 a magnificently illuminated MS. vellum volume bearing the names of the British slain in the war of 1899-1902.

In November 1912 it was announced that Mr. Max Michaelas, formerly a partner in the firm of Wernher, Beit & Co., had purchased from Sir Hugh Lane a collection of 46 pictures by old Dutch masters, including paintings by Rembrandt, Frans Hal, Jan Steen and Vanduyck. These he presented to the Union government to form the nucleus of a national gallery. Sir Hugh Lane had previously formed a collection of modern masters at the Johannesburg Municipal Gallery, of which he was the first honorary director. The Michaelas collection is to be housed at Cape Town.

*Rhodesia.*—In July 1911 N.E. and N.W. Rhodesia were amalgamated under the title of Northern Rhodesia, a change indicative of the recognition that N.E. Rhodesia would follow the fortunes of South Africa rather than those of Nyasaland. The census of April 1911 showed that the white population of Rhodesia had nearly doubled since 1904, but was still very sparse—25,000 persons to 438,000 sq. m. In the 18 months following the taking of the census there were fully 2,000 new European settlers. Over 90% of the white inhabitants are natural born British subjects—a higher percentage than in any other part of South Africa. The administration remained in the hands of the British South African Company, whose charter does not expire till 1914. Rhodesians were divided in their views of the future form of government between three policies: (1) a renewal of the charter; (2) entry into the Union of South Africa; (3) a modified form of crown colony government. The party advocating the third alternative was most vocal. It was represented by the Southern Rhodesian League, which formulated its views in November 1912. In December 1912 the Chartered Company announced that the elected members of the Southern Rhodesia Legislative Council would be increased from seven to twelve, and the nominated members from five to eight.

The revenue figures in Southern Rhodesia are (1910-11) £784,000 (1911-12) £864,000,

## SOUTH AFRICA

(1912-13 est.) £853 000 and the expenditure (1910-11) £684 000 (1911-12) £838 000 (1912-13 est.) £894 000.

The imports of ordinary merchandise (i.e. excluding railway material, government stores and specie) were valued at £2 222 000 in 1910 and at £2 569 000 in 1911. The exports (excluding goods in transit) were £3 018 000 in 1910 and £3 098 000 in 1911. For the first eight months of 1912 the figures were imports £1 745 000 exports £2 081 000. In 1910 British imports were 69% of the whole; in 1911 they were 68%. One fifth of the imports came from the Union of S. Africa. Germany and the United States each had about 5% of the import trade. Northern Rhodesia in 1911—apart from transit trade—sent exports worth £150 000 into Belgian Congo. This was consequent on the opening of railway communication with Katanga. Gold is the chief export. The output in 1910 was valued at £2 568 000 in 1911 at £2 647 000 for Jan.-Oct. 1912 at £2 262 000. The export of chrome ore in 1910 was £100 000 in 1911 £118 000. The output of coal from the Wankie mines was 180 000 tons in 1910 and 212 000 tons in 1911.

Rhodesia is, however, pre-eminently a stock raising and agricultural country and most of the new settlers are farmers. Maize is largely grown for export, but the chief export other than minerals was tobacco valued at £51 000 in 1910 and £54 000 in 1911. Scarcity of native labour led to the establishment in October 1911 of an official Native Labour Recruiting Bureau which secured uniformity of recruiting conditions for all classes of employers and better conditions for the natives. A uniform tax of one shilling per native was imposed on all employers by an ordinance passed in December 1911. This tax the farmers refused to pay and to save the situation the ordinance was revoked by the Secretary of State for the Colonies, June 1912, at the request of the Chartered Company. The Legislative Council in lieu of the tax granted a subsidy to the Labour Bureau.

Complaints of the high cost of living and of excessive railway rates were rife during the last half of 1912 and led to vigorous protests against the increased duties on foodstuffs and clothing proposed by the Union commission on trade and industries. Suggestions to make Dutch an official language in Rhodesia were strongly resented. Owing to large gifts from Cecil Rhodes and Alfred Beit there are as good facilities in the country for elementary and secondary education of Europeans as in England. High schools for girls and for boys have been opened at Bulawayo and Salisbury.

*The Native Protectorates*—The Bechuanaland Protectorate, Basutoland and Swaziland remain under the control of the Imperial Government, represented by the High Commissioner for South Africa, and are administered by Resident Commissioners. They form in whole or in greater part native reserves. The history of all three protectorates in 1910-11 was one of peaceful development; the fear of the Basuto and Bechuana that they would be immediately handed over to the Union having been allayed.

Basutoland in 1912 changed its financial year to end at March 31 (instead of June 30) to bring it in line with the rest of British South Africa. Its prosperity is shown by the fact that for the nine months which constituted the financial year 1911-12 the revenue was £136 000 compared with £145 000 for the full twelve months on the preceding financial year. Expenditure in 1910-11 was £134 000 in 1911-12 £111 000. At the time of the census of 1911 over 21 000 male Basutos were absent from the territory, 11 800 being engaged on the Rand mines. Agriculture and stock raising are the occupations of those who stay at home. strenuous efforts were made by the administrator to improve agricultural methods and in 1912 there was a marked increase in the quality and quantity of wool and mohair produced. Education is fairly general, 17 400 scholars, the majority girls, were in attendance at the mission schools of the Paris Evangelical Society and other bodies. In 1911 the hut tax was abolished and a tax of £1 per annum on adult males substituted, or if a native has more than one wife he pays £1 p. a. for each wife up to a maximum of £3 a year for himself and his wives. This tax yielded £92 000 in 1912. The Basutoland national council met at the capital Maseru in March 1912. This council consists of 99 members (all natives) and the paramount chief (Letsie) 94 members are nominated by the Basuto themselves, 5 by the government. This council is an advisory body and keenly critical. The Resident Commissioner (appointed 1901) Mr H. C. Sioley was made a K.C.M.G. in 1911.

Bechuanaland is a much poorer country than Basutoland and the Bechuana a much less virile race than the Basuto. They suffered in 1911 and again in 1912 from prolonged drought. Financially Bechuanaland approached an equilibrium in 1911-12 when the revenue was £59 000 and the expenditure £65 000, the deficit made good by the Imperial Government being the smallest on record. This was due to the fact that the staple product of the protectorate—cattle (which between 1904 and 1911 increased from 139 000 to 323 000)—had for the first time access to a good market. Johannesburg and Kimberley restrictions previously enforced owing to fear of cattle disease being removed. A sum of £70 000 was realised by the natives through the sale of surplus cattle. Bathoen, paramount chief of the Bangwaketse, died in July 1910 and Sebele, paramount chief of the Bakwena, died in January 1911. Montsiva, chief of the Barolong, died in April 1911. All these chiefs were noted men in the early struggles between the Boers and British for the possession of Bechuanaland, Sebele being

son of the chief Sechele the friend of David Livingstone Khama survives and rules his tribe—the Bamangwato—with undisputed authority.

Swaziland is steadily recovering from the state of chaos into which it had fallen (see *E. B.* xxvi 186). The white inhabitants are engaged in agriculture and in gold and tin mining. In 1911-12 the gold output was £62 000 that of tin £32 000. The staple agricultural product is maize. During 1911-12 there was a considerable development in fruit growing especially citrus fruits. The Swazis raise maize and other crops and own large stocks of cattle. From 7 000 to 10 000 Swazis obtain work on the Rand mines. The partition of rights between the European concessionaires and the Swazis was completed in 1911. Altogether £182 000 was expended on the settlement of this question. In 1911-12 the total revenue was £57 000 the expenditure £61 000. In 1911 a National Fund was established to be used for purposes beneficial to the Swazis. To this fund every adult male Swazi pays a direct tax of 2s a year. Naba Tsibeni the queen regent continued to act as chief of the Swazis. Sobhuza her grandson and nominally paramount chief was in 1912 about fourteen years old.

*Political History.*—The most salient feature in the history of South Africa since the establishment of the Union has been the endeavour made to develop the material resources of the country especially its agricultural and general trade. The results achieved have been indicated in preceding sections of this article.

The parliament of South Africa legislating for the whole Union the provincial councils took a purely secondary position. Racial questions as between the British and Boer sections of the community tended to occupy a less conspicuous position though the indiscreet actions and utterances of General Hertzog the minister of Justice and an ardent champion of Boer nationality caused much embarrassment to his colleagues and disquiet among the people.

General Botha the Prime Minister in the first session of the Union Parliament (opened November 1910) had the support not only of his own party the Nationalist or "South African" party (predominantly Boer) but that of the four Labour members from the Rand and of several of the Natal member elected as Independents. The opposition known as the Unionist party (and mainly British) was led by Dr Jameson (see *E. B.* xi 141) who was created a baronet in January 1911. Owing to ill health Sir Starr Jameson resigned the leadership in April 1912 and was succeeded by Sir Thomas Smitt an ex Cape minister and like Jameson a medical man. In October 1912 Sir Starr Jameson retired from parliament altogether resigning his seat for Albany (Graham's Town).

General Botha made one important change in the cabinet during the first session, Sir F. R. Moor ex Premier of Natal being succeeded on February 2nd as minister of Commerce and Industries by Col. George Leuchars also a Natal representative. This first session was devoted mainly to putting the Union machinery into working order. The most controversial issue considered arose out of the Education Acts of the former Orange River Colony (see *E. B.* xx 160) which enforced bilingualism. Elementary education was by the act establishing the Union left in the control of the provincial councils. The Union parliament could therefore only advise. A select committee on which both parties were equally represented considered the subject and on the 17th of April 1911 presented a majority report recommending that up to standard IV instruction in schools be given in and through the 'home language' with the optional use on the demand of parents of the other language and that above standard IV freedom of choice be left to the parents also that teachers should be free to qualify in either language. On April 24th the Union parliament approved this compromise though General Hertzog (formerly minister of education in the Orange River Colony) was not in full agreement. The success of an action for slander brought against Hertzog (August 1911) by Mr Wm. Fraser an ex-rector of schools—whom that minister had dismissed in May 1909—caused considerable scandal which was intensified by the success of another slander action (November 1911) against Hertzog the plaintiff in the second case being Dr Ward president of the O.F.S. medical council. The situation was rendered piquant by the fact that Hertzog was minister of Justice. Hertzog's resignation was

<sup>1</sup> General Botha was on August 16 1912 appointed an honorary general in the British army.

The session of 1911-12 revealed acute differences in the cabinet and in the ministerial ranks. Mr J. V. Merriman, ex Cape Premier, the most accomplished parliamentarian and ablest financier in the House of Assembly, was a very candid friend of the ministry as when in June 1912 he denounced their financial proposals as predatory and extravagant. The ministry itself was divided on personal and provincial and also progressive and retrogressive lines. Chief among Botha's colleagues were Mr H. C. Hull and Mr Jacobus Wilhelmus Sauer. Mr Hull (b. 1860) after being in the Cape civil service had practised at the bar, served in the war of 1899-1902 and was afterwards treasurer of the Transvaal and he entered the Union cabinet as minister of finance. Mr Sauer (b. 1850) had been 30 years a member of the Cape House of Assembly and had frequently held office. On the establishment of the Union he became Minister of Railways and Harbours and Chairman of the Railways and Harbours Board created by the Union Act, the largest revenue producing department of state. Mr Sauer became head of one section of the cabinet, General Botha or rather Mr Hull head of another. As early as July 1911 cabinet dissensions occurred but there was no open breach until May 18, 1912 when Mr Hull resigned. The ministerial differences were aired in two set debates in the House of Assembly. Mr Hull alleged that railway expenditure was not previously sanctioned by the Treasury and that there had been a tendency to regard railway administration as something for which the government had no collective responsibility. General Botha (May 24) admitted that the cabinet had not been sufficiently considered in railway matters.

As a result of this episode within the ministry itself General Botha's authority was weakened. The reconstruction of the cabinet was postponed until after the close of the parliamentary session on June 24th. After two days negotiations Mr Sauer and his friends threatening to resign if their demands were not granted a compromise was reached. Mr Henry Burton, K.C., another ex Cape Colony minister took over the Railways and Harbours. General Smuts (Transvaal) was transferred from the Ministry of the Interior to that of Finance, Mr Sauer became Minister of Agriculture (an office General Botha had held in conjunction with the premiership). Mr Fischer (Orange Free State) became minister of the Interior while retaining his portfolio as minister of Lands while General Hertzog in addition to his duties as Minister of Justice undertook those concerning Native Affairs which Mr Burton had previously administered. The cabinet—whose other members were Col Leuchars, Mr I. S. Malan (Cape) and Sir David de Villiers Graaff (Cape)—was thus reduced to nine members, 4 of them being representatives from the Cape, 2 from the Transvaal, 2 from the Orange Free State and one from Natal.

The question of defence came prominently before the country in connection with the Imperial conference held in London in 1911 which General Botha attended as representing the Union. It was decided that South Africa should provide for its own internal defence and a Defence Act was passed in the Union parliament in June 1912 creating a citizen force at a cost of about £500,000 a year, this is in addition to a permanent force of five regiments. The act provided for the military training of 50% of the young men between 18 and 21, the other 50% being compelled to join rifle clubs and similar associations. The 50% for training are obtained in the first place by voluntary enlistment but if sufficient numbers are not forthcoming by this method then by ballot. Members of the Citizen Force with the colours are paid. Provision was made for artillery, cavalry, infantry, engineer and transport units, uniformity with the units of the other overseas Dominions being aimed at. General C. F. Beyers, one of the Transvaal commandants in the Anglo-Boer War, was appointed Commandant-General while the Council of Defence created by the act consisted of General Schalk Burger (Transvaal), Col Crewe (Cape), General de Wet (Orange Free State) and Col Sir Duncan Mackenzie (Natal).

Objections to the act came chiefly from the backveld Boers who entertained strong dislike to compulsory service. The force being established the reduction of the strength of the British Imperial forces in South Africa from 11,500 to about 7,000

was announced in November 1912. The Union government had also under consideration proposals for a naval defence policy. General Botha educating his followers on this matter in several speeches made during 1912.

A notable event in the history of the country was the inauguration of the Rhodes memorial at Groot Schuur on July 5, 1912 by Earl Grey, a former director of the Chartered Company and ex-governor general of Canada. The ceremony was attended by Lord de Villiers, Chief Justice of South Africa, Mr Merriman and Mr Burton, minister of Railways. General Botha was absent but he subsequently wrote a foreword to the pamphlet containing Earl Grey's speech in which he (Botha) paid a warm tribute to Rhodes' lofty conceptions and achievements.

Lord Gladstone, who filled the dual offices of Governor General of the Union and High Commissioner of South Africa, was subjected to much criticism over his action with regard to natives charged with assaults on white women, but he met his critics fairly and won their respect. In February 1911 he was made an LL.D. of Cape Town University.<sup>1</sup> In May of that year he visited Basutoland. In September he went to Rhodesia (where he received Lewanika, the paramount chief of the Barotse), extending his journey into Katanga (Belgian Congo). In the summer of 1912 Lord Gladstone paid a long visit to England, returning to South Africa in October.

The promotion of trade and agriculture occupied much attention, especially as the country suffered from prolonged drought, the severest experienced since 1862. Beginning in October 1911 it affected chiefly Natal, the Transvaal and Transkei, where thousands of natives were reduced to the verge of starvation. The severe losses sustained turned attention to the need of more scientific farming and to large irrigation works, upon which the government expended £500,000 in 1911. In October 1911 a government Land and Agricultural Bank began operations in the Union, and a similar institution was established by the Chartered Company in Rhodesia. Great relief was experienced in Natal and in the Rand by the break up of the drought in November 1911. Meantime the export of cereals from South Africa had fallen off considerably, while a new and formidable competitor for the European maize market was being found in Argentina.

Early in 1911 a commission of which Sir T. M. Cullinan was chairman appointed to enquire into the conditions of trade and industries reported in favour of increased duties on wheat, flour, sugar, tea, clothing and furniture, declaring that it was not only necessary that a policy of protection should be adopted, but that there should be continuity of policy.<sup>2</sup> Two influential members presented minority reports in favour of the open door. Rhodesian feeling was in favour of a lower tariff, and with reference to the increased duties proposed by the Union commission the Bulawayo Chamber of Commerce declared (August 1911) that it was to the interest of Rhodesia to withdraw from the Customs Union rather than bear greater fiscal burdens. The other Rhodesian Chambers of Commerce passed similar resolutions. At Johannesburg on November 19, 1912 Sir Thomas Smartt declared that a plank in the Unionist party's platform was a tariff primarily for revenue purposes, combined with a policy for the encouragement of industries for the general benefit and the extension of the existing imperial preference.

In December 1912 a political crisis involving the reconstruction of the ministry occurred. It was precipitated by the by-election in the Albany division to fill the vacancy caused by Sir Starr Jameson's resignation. (The election on Dec. 10 resulted in the return of the Unionist candidate Mr Van der Riet by a large majority over the Ministerialist Mr E. pin.) General Hertzog had already (Oct. 1912) created anew a feeling of political antagonism by describing in a speech at Nylstroom Sir Thomas Smartt and other Opposition leaders as "undesirable political foreign adventurers," and during the Albany election he made a speech—at Rustenburg on December 8—pointedly against the Imperial policy advocated by General Botha, declaring that

<sup>1</sup> George V. after his accession resigned his position as Chancellor of the Cape University, being succeeded in 1912 by the Duke of Connaught.

## SOUTH AFRICA

Imperialism appealed to him (Hertzog) only when it was useful to South Africa. He had a short time previously also pronounced in favour of the Dutch and British remaining two nationalities flowing each in a separate channel. On December 13, Col Leuchars Minister of Public Works, resigned as a protest against General Hertzog's 'Anti Imperial and Anti British sentiments'. As Hertzog was not prepared to resign General Botha tendered his resignation on December 15, and was at once asked by the Governor General to form a new ministry. This was accomplished on December 20. Mr Fischer a minister who had usually acted with General Hertzog deciding after much hesitation to join the new ministry. The cabinet was reconstituted as follows—General Botha Premier and Minister of Agriculture. Mr Sauer Minister of Justice and Native Affairs. General Smuts Minister of Finance and Defence. Mr Fischer Minister of the Interior and of Lands. Mr Malan Minister of Mines and Education. Mr Burton Minister of Railways and Harbours. Sir Thomas Watt Minister of Posts, Telegraphs and Public Works, Sir D. de Villiers Graaff minister without portfolio. The only new member was Sir T. Watt who as a Natal member of the House of Assembly replaced Col Leuchars. General Botha described the new ministry as aiming first at building up a new country on non racial lines.

OBITUARY—The deaths of some prominent South Africans may here be noted—

Sir THOMAS EKINS FULLER formerly agent general for Cape Colony, died at Tunbridge Wells on the 5th of September 1910. Born at West Drayton, Middlesex in 1831, he was for some time a Baptist minister leaving England to edit the *Cape Argus* in 1864. He was subsequently general manager of the Union Steamship Company, Chairman of the Cape Town Harbour Board, a director of the De Beers Mining Company, and member of the House of Assembly (see *E B v 248*). In 1902 he was appointed agent general for Cape Colony in London and knighted in 1904. Tommy Fuller was one of the most esteemed and respected men in South African circles.

PILT ARNOLDUS CROONJE the Boer general (see *E B vii 501c*) died at Klerksdorp, Transvaal on the 4th of February 1911, aged 75. Since the war ended he had sunk into comparative obscurity.

Sir JACOBUS ALBERTUS DE WET Member of the Legislative Council of Cape Colony, died at his home in Cape Colony on the 26th of March 1911, aged 71. He came of an old South African family. He was appointed British Agent at Pretoria in 1890 during the critical period (see *E B xxvii 200 et seq*) which ended with the closing of the Vaal River Drifts and his name was familiar in connection with the proceedings after the Jameson raid in 1896.

Sir HENRY GEORGE ELLIOT born in 1826 died at Cape Town 29th of November 1912. He entered the Royal Marines in 1847 and served through the Crimean War. In 1870 he became chief magistrate of Tembuland and for 26 years he took a great share in the government and development of Kaffraria (see *E B xv 630a*).

Sir THOMAS CHARLES SCANLEN the Cape Colony politician died at Cape Town on the 15th of May 1912, aged 77. He was admitted Attorney of the Supreme Court of Cape Colony in 1866, sat in the House of Assembly from 1870-96 and was Prime Minister of the Colony from 1881-84 (see *E B v 248b* and *242c*). In 1894 he was appointed Legal Adviser to the British South Africa Company, and held the position of Acting Administrator of Rhodesia at intervals from 1898-1907. He was knighted in 1884.

ARTHUR JESSF SHEPSTONE the Natal politician died at Pietermaritzburg on the 30th of September 1912, aged 59. He was born in 1852 the son of Sir Theophilus Shepstone (see *E B xxiv 640*) and was educated in Natal. He was a digger at the Kimberley Diamond Fields in 1871 and served as a trooper in the Natal Carbineers during the Langahalele rebellion in 1873. In 1876 he was appointed Labour Agent for the Natal railways. In 1887 he became a resident magistrate and served in various districts. In 1909 he became Secretary for Native Affairs in Natal.

Africa* (London 1912) mainly a summary of speeches. Basil Worsfold *Union of South Africa* (London 1912). Sir William Butler *An Autobiography* (London 1911) contains S. African chapters. (F. R. CARY.)

## SECTION II THE UNITED STATES OF AMERICA

THE UNITED STATES<sup>1</sup>

**POPULATION.**—In 1910 the population of the United States and possessions (the latter estimated) was 101 100 000 the actual enumeration (including Alaska Hawaii and Porto Rico) was 93 402,151, and the inhabitants of 'continental United States' (including Alaska) 91 9,2 266 the figure used as a basis of comparison here. Of this total three fifths (60 6%) was contained in the three tenths of the country's area in the 'Northern states' <sup>2</sup> i.e. New England (one fourteenth of the total population) the Middle Atlantic group (more than one fifth) the East North Central group (nearly one fifth) and the West North Central (more than one eighth). In this group the proportion of population was twice the proportion of area. In the Southern states the proportion of population (nearly one third) was about the same as the proportion of area, not quite three tenths, in the South Atlantic group it was two fifteenths (13 3%) in the East South Central one eleventh (9 1%), and in the West South Central nearly a tenth (9 6%) of the total. The Western states with nearly two fifths (39 6%) of the area had less than two twenty fifths (7 4%) of the population—relative population being to relative area as one to five, in the Mountain states there was about 2 9% and in the Pacific states about 4 6% of the total population. Roughly three tenths of the area and seven tenths of the population was east of the Mississippi river and seven tenths of the area and three tenths of the population west of it.

Of the separate states eleven had each more than two and a half million inhabitants and together they contained a larger population than the other 37 states (and the District of Columbia) in order these were New York Pennsylvania Illinois Ohio Texas Massachusetts Missouri Michigan Indiana Georgia and New Jersey. Only two of these states are west of the Mississippi—Texas, the largest state of the Union in area and Missouri an important manufacturing state. The only one in the 'Old South' is Georgia the great producer of coal and iron in the South.

The relative increase for the entire country in the decade was 21%—a little more than in 1890-1900 but less than in any other decade even 1860-70 when the rate was 2 6% (or a little more). The actual increase in 1900-10 was 15 977 691, a much greater one than ever before and equal to the entire population about 1835.

The decade's growth was largest in the West 66%, as compared with 19 8% for the South and 17 7% for the North. In the groups the greatest increase was 73 5% (only 28 in 1800-1900) in the three Pacific states, and least in the East South Central group (Kentucky Tennessee Alabama and Mississippi, 11 4% (in 1800-1900 17 4%). In the most populous group the three Middle Atlantic states the rate was 25%. Three states Washington Oklahoma (both comparatively new states) and Idaho doubled in population and Nevada came near doubling the growth in the last two states was partly due to changes in mining. Iowa alone decreased (0 5%) in the decade. The lowest rates of increase were in rural New England (Vermont 3 6%, New Hampshire 4 6%) where economic conditions resemble those in the East South Central group.

In 1910 the Middle Atlantic states ranked first and the East North Central states second changing positions since 1900. In the same way the West South Central fifth, and the East South Central, sixth in 1910, exchanged rankings in the decade.

<sup>1</sup> See *E. B. xxvii 612 et seq.*

<sup>2</sup> The classification of states is as follows. Northern including New England Group (Maine New Hampshire Vermont Massachusetts Rhode Island and Connecticut) Middle Atlantic (New York New Jersey and Pennsylvania) East North Central (Ohio Indiana Illinois Michigan and Wisconsin) West North Central (Minnesota Iowa Missouri North Dakota South Dakota Nebraska and Kansas) Southern including the South Atlantic Group (Delaware Maryland District of Columbia Virginia West Virginia North Carolina South Carolina Georgia and Florida) East South Central (Kentucky Tennessee Alabama and Mississippi) West South Central (Arkansas Louisiana Oklahoma Texas) and Western including the Mountain Group (Montana Idaho Wyoming Colorado New Mexico Arizona Utah and Nevada) and Pacific Group (Washington Oregon and California).

The other groups did not change in rank—South Atlantic third, West North Central fourth, New England, seventh, Pacific, eighth, and Mountain, ninth.

The average density of population in 1910 was 30.9 persons to the square mile—nearly thrice that (10.6) in 1860. The variations in different parts of the country are great—from 3.1 persons to the square mile in the Mountain Group (0.7 in Nevada)—a much smaller density in 1910 than that (4.5) for the original thirteen states in 1790—to 193.2 in the Middle Atlantic states (337.7 in New Jersey), 418.8 in Massachusetts and 506.5 in Rhode Island. The greatest density is in the District of Columbia (i.e. Washington) 5,517.8.

The centre of population in 1910 was in Bloomington, Indiana (39° 10' 12" N lat. 86° 32' 20" W long.) or rather over 39 miles north of where it was in 1900. In 1790 it was 23 m. E. of Baltimore, only 6.18 further north but about 557 m. to the east. The median point of area of Continental United States is 657 m. further west and about 50 m. to the north in Smith county, northern Kansas.

The number of males to 100 females was 106 in 1910 (104.4 in 1900, increase due to immigration) and the variation in different parts of the country was marked—99.3 in New England but 127.9 in the Mountain states and 129.5 in the Pacific states. More illuminating is the ratio of males to 100 females in different nationalities and colours of the population: 98.9 among negroes, 99.5 among native whites of foreign parentage, 104 among native whites of native parentage, 129.2 among foreign whites, and 185 among all others—mostly Asiatics and temporary immigrants. These ratios differ little from those in 1900. In the West the ratios in each state were much higher than this average. Five states comparatively the older communities—Massachusetts, Rhode Island, Maryland, and North and South Carolina—and the District of Columbia had in 1910 more females than males. New Hampshire, New York, New Jersey, Virginia, and Georgia—also of the earlier settled territory—were in this group in 1900 but not in 1910. In 1910 the males of voting age numbered 26,999,151 or 29.4% of the total population (in 1900 21,134,299 or 27.8%).

In the decade 1900–10 the rate of increase of the white population was 22.3% and that of the negro population 11.3%—the former a little more and the latter a great deal less than the rate (21%) for the entire population. So that the white population increased relatively from 87.9% to 88.9% of the total population and the negroes decreased from 11.6% to 10.7% (8,833,994 in 1900, 9,828,294 in 1910). In 1910 the Indian population was 265,683 (237,196 in 1900), the Chinese 70,944 (89,863 in 1900) and the Japanese 71,722, nearly thrice the number (24,326) in 1900. The percentage of whites was highest in New England (98.9% in New Hampshire, 99.8%) and lowest in the South Atlantic group (66.2%) where however it was higher than in 1900 (64.2%) and for any one state lowest in Mississippi (43.7% in 1900, 41.3% in 1910). The relative decrease in the negro population is not due merely to the more rapid increase of population in the North, for there was such a decrease throughout the South Atlantic states, where they were 35.7% in 1900 and only 33.7% in 1910, and in Mississippi (58.5 and 56.2) and Alabama (45.2 and 42.5). In the South Atlantic states the highest percentage of negroes was in South Carolina, 58.4% in 1900 and 55.2% in 1910. In the New England and Middle Atlantic groups manufacturing States fed by constant immigration the whites of foreign birth and of foreign parentage made up more than one half the total (59% New England, 53.9% Middle Atlantic). The Pacific states with their strong appeal to the immigrant come next with 45.7% (48.5% in California). The New England and Middle Atlantic states rank highest in both foreign parentage and foreign birth, i.e. in the immigration of the last and present generations. The East and West North Central states (28% and 27.6% of foreign parentage) rank next highest in the immigration of the last generation, and the Pacific states (20.6% of foreign born whites) next in more recent immigration. In the South the foreign element is small—6% (3.6% foreign parentage and 2.4% foreign born) in the South Atlantic states (only 1.1% in South Carolina), 3.6% (2.6% and 1%) in East South Central (only 1.6% in Mississippi and 2.4% in Alabama) and to 9% (6.9 and 4%) in West South Central (3.4% in Arkansas).

**Immigration.**—Immigration is more and more from southern and eastern Europe. Austria, Hungary, Italy, and Russia supplied one sixteenth of the immigrants in 1871–80, one sixth in the next decade, one-half in the next and nearly two-thirds in 1901–10. In 1910 the percentage to the total population of foreign birth from Russia and Finland was 12.8% (6.3 in 1900), from Austria-Hungary 12.4% (6.2 in 1900) and from Italy 10.1% (4.7 in 1900). In 1900 there were 8,513 Greeks, in 1910 101,100. Although there were large percentages in 1910 of foreign born whites from Germany (18.7%) from Ireland (10.1%) from the Scandinavian countries (9.4%) from Great Britain (9.2%) and from Canada and Newfoundland (9%) this is much less important than the fact that these percentages were smaller than in 1900 when they were 27.5%, 15.8%, 10.4%, 11.4% and 11.5% respectively. In mill work Slavs and Armenians are employed where a generation ago there were Irish and French Canadians, and in small shops especially in the East, Greeks are rapidly displacing the Italians, who were themselves new comers in the sale of fruit and in the ownership of boot blacking and small barber shops fifteen years ago.

<sup>1</sup> This proportion is not typically American, but is nearer the ratio in Europe.

**Urban Growth**—In 1910 the urban population (in 2 405 incorporated places each of 2 500 inhabitants or more) was 42 623 383 about six thirteenths of the total population and in this territory the increase in the preceding decade was 34 8 in rural territory 11 2, and in the whole country, 21°. The increase in urban population (nearly 12 000 000) made up about seven tenths of the total increase in the decade. More than two thirds of this urban population in 1910 was in the three groups (New England 12 8%, Middle Atlantic 32 2° and East North Central 22 6°) which were comparatively early settled and are pre-eminent ly manufacturing. In New England (where the census includes townships or towns among urban territory) the urban population was five sixths of the total it was more than nine tenths of the whole in Rhode Island (96 7°) and Massachusetts (92 8) and was less than half only in Vermont (48 6). In the Middle Atlantic states seven tenths (71°) of the total population was urban in New York 78 8°, in New Jersey 75 2° and in Pennsylvania 60 4°. In the East North Central the urban population made up more than half (52 7°) of the total the ratios were highest in Illinois (61 7°) and Ohio (55 9°). Other states in which the urban population was greater than the rural were California (61 8°, urban) Washington (53°) Maryland (50 8°) and Colorado (50 7°). The percentage in the Pacific Group where city growth has been very rapid was 56 8 in 1910 but only 46 4 in 1900 and 36 2 in 1880 the urban population from 1900 to 1910 more than doubled and the percent age of increase in Washington was 166 in Oregon 115° and in California 81 4°.

Nearly one ninth of the country's urban population was in New York City (4 766 883) and about one fifth (8 501 174) in New York City, Chicago (2 185 283) and Philadelphia (1 549 008)<sup>1</sup> taken together. In 1910 there was 5 (in 1900 3) cities between 500 000 and 1 000 000, 11 (in 1900 9) between 250 000 and 500 000 and 31 (in 1900 23) between 100 000 and 250 000. The 50 cities each with more than 100 000 inhabitants included 14 which had less than 100 000 in 1900 (when Spokane had only 36 848) their total in 1910 was 20 302 158—nearly one half the urban population.

**Illiteracy**—In spite of the great increase in 1900–10 of population especially in large cities the growth of immigration and especially of immigration from southern and eastern Europe and from Asia the number of illiterates (10 years old and over) decreased from 6 180 069 to 5 516 693. The percentage of illiterates was 10 7 in 1900 and 7 7 in 1910. In the latter year the rate was highest in the South 17 4 in the East South Central 16 in the South Atlantic and 13 2 in the West South Central. But these percentages showed immense progress over 1900 (when the corresponding figures were 24 9, 23 9 and 20 5). In each of the other groups of states the rate was lower than the average for the entire country—ranging from 6 8 (9 6 in 1900) in the Mountain states to 3 (4 2 in 1900) in the Pacific and 2 9 (4 1 in 1900) in the West North Central groups. In New York and Connecticut the actual number of illiterates increased in the decade and the percentage remained 5 5 in New York as it was in 1900 and increased in Connecticut from 5 9 to 6 this was due to large immigration of a non Teuton class. The presence of a large proportion and in a few states of a majority of negroes in the South makes the rate of illiteracy high there but the improvement in the decade is more marked in the negro than in the white population—the actual decrease during the decade in the number of all illiterates in the country was 663 376 of negro illiterates 625 107. The highest rates for the entire population over 10 years in 1910 were 29 in Louisiana (38 5 in 1900) and 25 7 in South Carolina (35 9 in 1900). In the former the rate for whites was 14 2 (18 4 in 1900) and for negroes 48 4 (61 1 in 1900) and in South Carolina the rate for whites was 10 3 (13 5 in 1900) and for negroes 38 7 (52 8 in 1900). In the South the number of white illiterates increased only in Texas and Louisiana the number of negro illiterates increased only in Oklahoma.

**AGRICULTURE**<sup>2</sup>—In 1910 the number of farms was 6 361 502 being 10 9 more than in 1900 but the area in farms 878 798 325 acres (46 2° of the land area of the country) was only 4 8° more than in 1900. Considerably more than half of this area (478 451 750 acres) was improved and it is a true index of the progress of agriculture that this improved area was 15 4 greater than ten years before. The average farm acreage decreased from 146 2 to 138 1 acres and both this fact and the increase in the average value of farm land per acre from \$15 57 to \$32 40 (108 1°—due in part no doubt to the increased cost of living and general rise in prices) and in the average value of farm property per farm from \$3 563 to \$6 444 (80 9° increase—for a farm 5 5 smaller) show gradually intensified farming. The rapid increase in all prices can explain only a part of the increase 100 5° in the total value of farm property \$40 991 449 090 of this total the items were land \$28 475 674 169 (118 1° increase).

<sup>1</sup> A more exact idea of this centralisation of the urban population in these cities may be gained by taking the population of the three metropolitan districts that is of the territory within 10 miles of the charter boundaries of each. The total for these three cities and their immediately adjacent districts was 10 913 831. New York (including Newark and Jersey City) 6 474 568. Chicago 2 466 921 and Philadelphia 1 972 342. On the same basis the population of the Boston district was 1 520 470 of the Pittsburgh district 1 042 855 and of St. Louis and its immediate vicinity 828 733. Twenty five such metropolitan districts each containing a city with more than 200 000 contained 22 088 331 inhabitants.

<sup>2</sup> See *E. B.* 1 414 et seq.

buildings, \$6 325 451 528 (77.8%) implements and machinery \$1 265 149 783 (68.7%) and domestic animals poultry and bees \$4 925 173 610 (60.1%).

In 1910 east of the Mississippi were 41.7% of all farm land and 45.6% of improved farm land in 1900 43.8% and 51.1%. The land in farms was divided in 1910 between North South and West in proportion of 47.1 40.3 and 12.6% the corresponding figures for 1900 being 45.6 43.2 and 11.2%. Of the improved area 60.6% was in the North 31.5% in the South and 7.9% in the West in 1910 the percentages in 1900 were 63.3 30.4 and 6.6%.

*Acres of Farms*—Of the total increase in farm acreage in the decade more than three-fourths was in the West North Central states where the percentage of increase was 15.7%. An even larger percentage but a much smaller total increase was in the Mountain group (28.3%). There was scarcely any increase in the East South Central group (0.3%) and actual decreases in the West South Central (4.2%) in New England (4.1%) and in the Middle Atlantic group (3.7%). Only in the two groups last named were there decreases in the improved acreage 10.8% in New England and 4.8% in the Middle Atlantic group. In each state of these two groups there was a falling off both in total area and in improved area. In Vermont there was 23.2% less improved farm land in 1910 than in 1900. The greatest decreases in farm land for the separate states were Arizona 35.6% (but 37.6% increase in improved area) Utah 17.5% (but 32.6% increase in improved area) Texas 10.6% (but 39.8% increase in improved acreage) West Virginia 5.9% (but a slight increase 0.4% in improved acreage). The greatest increases in area of all farms were in New Mexico 119.7% (and 348.9% increase in improved land) North Dakota 82.9% (and 112.1% increase improved land) Idaho 64.9% (and 96.6% in improved land) Colorado 42.8% (and 89.2% in improved land) Washington 37.8% (and 83.9% improved) South Dakota 36.4% (and 40.2% improved) Nebraska 29.1% (and 32.3% improved) and Oklahoma 25.5% (and 104.7% improved). The great increase in improved land is shown by the fact that in 1900 it was 49.4% but in 1910 54.4% of all farm land and by the fact that although the percentage of the total farm land improved decreased slightly in the decade in New England (from 39.6 to 36.8%) and in the Middle Atlantic states (from 68.6 to 67.9%) this decrease was in two distinctly non-agricultural (but manufacturing) groups. In every other group there was increase. East North Central from 74.5% to 75.4% (in 1910 56.6% of all land was improved farm land) West North Central from 67.5% to 70.6% (in 1910 50.3% of all land was improved) South Atlantic from 44.2% to 46.7% East South Central from 49.5% to 53.9% (38.2% of all land improved) West South Central 22.5% to 34.4% Mountain 18.1% to 26.7% (only 2.9% of all land) and Pacific from 39.6% to 42.9%. In 1910 59.5% of all farm land and 39.8% of all land was improved east of the Mississippi and 50.8% of farm land and 19.2% of the entire land area west of the Mississippi. In the North 70.1% of farm land and 49.3% of all land was improved in the South 42.5% and 26.8% and in the West 34.2% and 5%.

The average farm is larger in the newer than in the older part of the country in the West 296.9 A. (386.1 in 1900) in the North 143.4 (133.2 in 1900) and in the South 114.4 A. (138.2 in 1900) but the figures for the South are somewhat misleading as the census classifies as separate farms the several tenant holdings of a large plantation. East of the Mississippi the average acres of land per farm was 93 (99.8 in 1900) and west 211.3 (229 in 1900).

*Farm Values*—In 1910 67% of the value of all farm property was in the North (33% in the West North Central and 24.7% in the East North Central group) 21.9% in the South (9.4% West South Central 7.2% South Atlantic 5.3% East South Central) and 11.1% in the West (6.8% Pacific and 4.3% Mountain). East of the Mississippi was 46.5% of the whole value west 53.5%. But east the value of land was only 43.1% and the value of live stock only 43.8% the value of buildings 62.8% and the value of implements 52.2% of the total of each of these items the first two being less and the second two more than the percentage of the value of all property in the West. The percentage of increase in the value of all farm property was 69.1% east and 139.3% west of the Mississippi or by the three fold division 90.1% in the North 110.1% in the South and 164.7% in the West. The average value of all farm property per acre was \$16.64 in 1910 and \$24.37 in 1900 for the entire country in the North it was \$66.46 (76% more than in 1900) in the South \$25.31 (114.7% increase) and in the West \$40.93 (123.9% increase).

The average value of farm property per farm east of the Mississippi increased in the decade from \$3 067 to \$4 849 and west of the Mississippi from \$4 448 to \$9 030. In 1910 the average in the North was \$9 507 in the South \$2 897 and in the West \$12 155 (Pacific group \$14 643 California \$18 308 Nevada \$22 462). But comparisons are misleading because the average acreage differs so much in the different parts of the country and the number of live stock is so much greater in the West (and to a less degree in the North) than in the South. The average value of buildings per farm it is to be noted was higher in the North (\$1 564) than in the West (\$1 009) and much higher than in the South (\$461) but in land machinery and live stock the rank of the three regions was first the West second the North and third the South.

*Production*—The crops of 1911 were unusually small and those of 1912 remarkably large.

<sup>1</sup> Statistics for 1911 are from the *Year Book* of the U.S. department of agriculture those for 1912 are preliminary estimates made by that department.

## UNITED STATES STATISTICS

717

In May and June 1911 the country east of the Rocky Mountains suffered severely from a series of hot waves in May and June 1911 and from January to June 1911 from a sub normal rainfall. The Weather Bureau reported that in a half century there had not been such a continuous high temperature as in these two months. The rainfall was 27.8% less than usual in New England, 21.6% less in the West South Central states, 21.2% below normal in the Pacific Northwest, 25.4% in the Dakotas, Nebraska and Kansas, 19.7% in Minnesota, Iowa and Missouri, 12.4% in the Middle Atlantic group and 10.3% in the East South Central states. The result was that the total value of the crops of 1911 estimated at \$5,504,000,000 was only \$44,000,000 greater than in 1910 in spite of higher farm prices for all crops—except cotton, cotton seed and flaxseed. The total value of all farm products in 1911 was \$8,417,000,000 being \$277,000,000 less than in 1910. The loss of \$321,000,000 (\$2,770,000,000 net loss plus \$4,400,000 increase in value of crops) was in animal products—eggs, wool, butter and poultry being less and only dairy cows more valuable than in 1910. In 1911 the value of animal products was \$2,913,000,000 (\$3,234,000,000 in 1910).

In 1912 there was no such damage from inclement weather. The value of animals slaughtered was less than in the preceding year (or in 1909 but more than in any other year since 1900) but the crop value was much greater and the total value of farm products was \$9,532,000,000. Taking 100 as the value of farm products in 1899, the United States department of agriculture estimates the products of 1905 at 133, of 1910 at 184.3, of 1911 at 178.4 (being less than in 1909 or the preceding year) and of 1912 at 202.1.

In 1911 nearly all crops were less than the average for the preceding five years but in 1912 nearly every crop was greater than ever before. Wheat and tobacco had twice been greater and cotton and rice once.

**Indian Corn**—The crop of Indian corn in 1911 was estimated to be 2,531,500,000 bushels with a farm price per bushel higher than in any year except 1883 in the records of the United States department of agriculture and the total value was greater than in the previous year, was twice the value of the cotton crop and was hardly exceeded by the value of cotton, wheat and oats combined. In 1912 the crop was 25.2% greater than in 1911.

**Cotton**—The cotton crop of 1911 about 15,700,000 bales (only 11,610,000 in 1910) grown on 36,045,000 acres (only 32,403,000 in 1910) was probably the largest ever grown in the country, but its value though above the average for the five preceding years was less than that of 1910, lint being nearly 5 cents a pound cheaper and cotton seed being correspondingly lower in price. In 1912 the crop was smaller than in 1911 or in 1904 and was exceeded in value by the crop of 1910.

**Hay**—Third in value in 1911 was the hay crop, 47,444,000 tons. The average crop for the five years preceding was one third greater and the crop since 1888 was each year larger. The crop was so small that there was an increase in farm value of \$.50 a ton and the total value \$694,570,000 was exceeded only in 1910 and 1907 and was a little more than the five years average. In 1912 the hay crop was greater in value than the cotton crop or the great hay yield of 1910, being \$861,000,000—nearly as much as wheat, tobacco and potatoes together.

**Wheat**—The 1911 wheat crop about 621,340,000 bushels was less than the five year average in the preceding decade the crop of 1904 only was smaller. The value of the wheat crop about \$543,000,000 also was far below the average, it exceeded the value of the crop of 1906 when the average price a bushel was nearly one third less. In 1912 about 730,267,000 bu. (\$555,280,000 farm price) was grown (less than in 1901 or 1906) the spring crop being much better than the winter yield and the total being one ninth more than the average for the preceding five years.

**Oats**—In oats as in hay, the crop was so small in 1911 that the price was unusually high and the total farm value above the five year average. It was 922,000,000 bu. valued at \$414,000,000 (about \$408,000,000 in 1909 and in 1910). But in 1912 the crop was 46% greater than the previous maximum crop of 1909, 51% more than the five year average. The large crop, 1,418,337,000 bushels, forced the price down and the value was \$452,469,000 only 22% more than the preceding five year average.

**Potatoes**—The 1911 crop of potatoes was about 290,000,000 bu. (349,000,000 in 1910, 376,500,000 in 1909) but the farm price was nearly one half greater than in 1910 and the farm value \$233,800,000 was far greater than the five year average or than in any preceding year of record. In 1912 the production was much larger, 420,647,000 bu.—29% above the five year average, the farm value was \$212,550,000.

**Barley**—The barley crop of 1911, 160,000,000 bu. was much less than for any one of the years 1908, 1909, 1910 but the price was high and the total farm value about \$139,000,000 was a third greater than that of the 1910 crop. The 1912 crop was the largest on record, 223,820,000 bu., 35.7% more than the five year average but the price declined and the total value was \$112,957,000, much less than that of the small crop of 1911.

**Tobacco**—The tobacco crop of 1911 not merely was short but commanded a price only a little higher a pound than in 1910 and considerably less than in any year between 1906 and 1909 inclusive. The crop grown on 1,013,000 acres (in 1910, 1,366,000) was 905,109,000 lbs. (1,103,415,000 lbs. in 1910) valued at \$85,210,000—nearly one sixth less than in 1910. In 1912 the crop was 962,855,000 lbs.—7.1% more than the five year average, the average price per pound also increased so that the gain in value will be greater.

**Flax**—The most valuable of the smaller crops was flaxseed with an acreage in 1911 of 2 757 000 (about two thirds in the Dakotas most of the remainder in Montana and Iowa) —which is more than in any preceding year except 1902 1903 and 1907 —a production of 19 370 000 bu —which was more than in 1910 but less than in any other year in the preceding decade The value \$35 272 000 was exceeded only by that of the record crop of 1909 and the average farm price was greater than in any year except 1910 when the short crop made it phenomenally high In 1912 the crop was much larger 28 073 000 bu (or 44 1% above the five-year average) valued at \$32 202 000 (about 32 4% above)

**Rye**—The rye crop of 1911 was 33 119 000 bu (34 897 000 in 1910) from 2 127 000 acres being smaller than in 1902 1906 or 1910 but the farm price per bushel 83 2 cents was greater than in any year except 1867 1868 and 1881 and the total farm value \$27 357 000 was the highest known The 1912 crop was 35 664 000 bushels the largest on record being 10% above the five year average Prices fell and the total value was only \$23 636 000

**Sugar**—The sugar beet crop of 1911 was 599 500 tons worth more than \$24 000 000 both in quantity and value it was nearly one fourth greater than the five year average In 1912 the crop was nearly 700 000 tons Of cane sugar the crop in 1912 was small because of floods in the Mississippi Valley

**Hops**—The crop of hops in 1911 was small only 40 000 000 lbs compared with 49 634 000 in 1910 and 57 510 000 in 1907 but the average price a pound was nearly twice the average of preceding years and the crop value \$15 500 000 was much more than twice as great as the average for the preceding five years In 1912 the crop increased to 44 500 000 lbs but prices fell and the total value was only about \$11 000 000

**Rice**—Rice was grown in 1911 on 696 000 acres (770 000 in 1909 and 723 000 in 1910) and the crop 22 934 000 bu though less than that of 1910 or 1909 was considerably above the five year average The farm value of the crop \$18 274 000 was more than in any other year except 1909 when the price per bushel was higher In 1912 the crop suffered from floods but was probably larger than in any year except 1909 its value was \$23 423 000

**Buckwheat**—The buckwheat crop of 1911 17 549 000 bu was a little less than that for 1910 17 598 000 bu (grown on 460 000 A 1911 acreage 833 000) but much larger than for any other year in the last decade The average farm price a bushel was 72 6 c exceeded only in 1908 (75 6 c) and the farm value of the crop much above the five year average In 1912 the crop was even larger —about 19 124 000 bu value about \$12 000 000

**Animals**—The total value of animal products in 1912 was about \$3 395 000 000 being more than in 1911 but less than in 1910 The number of horses on January 1 1912 20 509 000 was larger than in 1911 or in any other year except 1909 and 1910 and the average value and the total value (\$ 172 694 000) larger than in any year except 1910 and 1911 The number of mules 4 362 000 was greater than in any preceding year and average value (\$120 51) and aggregate farm value (\$525 657 000) were exceeded in 1911 only The number of milch cows 20 699 000 was the smallest since 1906 the average value (\$39 39) and the total (\$815 414 000) were exceeded only in 1911 Other neat cattle numbered 37 260 000 —much less than for any year in the decade but the average value \$21 20 was higher the total value was less than for any year since 1906 The number 52 362 000 and total value \$181 170 000 of sheep also were less than since 1906 and the average value \$3 46 was far below the five year average —that for 1909 alone was lower Swine numbered 65 410 000 a little less than in 1910 but far more than in any other year the average farm price was exceeded in 1910 and in 1911 and the aggregate value only in 1911

**Plant Industry**—The U S department of agriculture established about twelve years ago its bureau of plant industry whose work has consisted largely of searching the world for grain fruits grasses etc and ascertaining by experiments which of them might be useful in the United States Recently a force of 25 trained explorers have been busy in this work and some 34 000 varieties of plants have been imported and experimented with their seeds and progeny being sent out to private breeders and experimenters Mr F H Wilson of the Arnold Arboretum Boston Mass who has distinguished himself in similar work and is said to have introduced into America more new plants than any other man in 1912 received from the Royal Horticultural Society of Great Britain the Victoria Medal of Honour —never before conferred on any one outside of the British Isles

The other activities of the Federal department of agriculture are manifold the forest service and the weather bureau are subdivisions meat inspection and the enforcement of the Federal food and drugs act are quasi police functions of the department carried on by a bureau of animal industry which besides investigates and eradicates diseases of animals experiments in breeding and feeding and works for the improvement of the dairy industry and the department has experiment stations and co operates with state agricultural experiment stations and through its bureau of soils makes soil surveys—sometimes with the aid of state organisations Other bureaus in the department are those of chemistry entomology and biological survey About 2 000 publications of the department appear each year in these different fields and the total number distributed in the year 1910-11 was 27 595 000

**MINERAL PRODUCTS**—Total value 1911 \$1 918 326 753 This was 3 65 less than in 1910 and 7 4% less than in 1907 the only year when mineral products were valued at more than \$2 000 000 000 But the value in 1911 was greater than in 1908 (following the panic

of 1907) or 1909. The decrease as compared with 1910 was \$72 584 882 and this was more than covered by the decrease in pig iron,<sup>1</sup> which was \$84 827 862. The same item explains the decrease (\$75 611 118) in the value of all metals from \$747 790 718 in 1910 to \$671 960 600. In other words apart from pig iron there was an actual increase from 1910 to 1911 of \$12 278 980 in the value of all other mineral products and of \$9 216 744 in the value of all other metals. The difference between these two increases about \$3 050 000 is the increase in the value of non metals in the year and it is to be noted that this increase was in spite of a decrease of \$18 104 235 in the value of bituminous coal so that apart from bituminous coal, there was in the year an increase of \$21 155 000 approximately.

**Metals**—Of pig iron the output in 1911 was 23 257 288 tons (one eighth less than in 1910) valued at \$3 734 624 (one fifth less). The average price per ton was \$14 07 in 1911 \$15 57 in 1910 \$16 25 in 1909 \$20 56 in 1907. Even greater was the decrease in iron ore marketed in 1911 40 989 808 tons (nearly one fourth less than in 1910) valued at \$86 419 850 (more than three eighths less)—the decrease in average price per ton being marked.

Second in value of the metals was copper 1 097 231 749 lbs. valued at \$137 154 092 (quantity 1 58 more value 0 02% less than in 1910 about one seventh more in quantity and one eleventh less in value than the average for the five years 1905-09). In copper and in iron the United States outranked any other country.

The output of gold was 4 687 055 oz. valued at \$96 890 000 (1 more than in 1910). The value of silver \$3 615 700 was 5 71 more than in 1910 but was nearly 2 less than the average for the five years 1905-09.

Ranking immediately above and below silver in value among the metals were lead and zinc respectively with 406 148 tons (\$56 555 320—one ninth more than in 1910) and 271 621 tons (\$30 964 794—nearly one seventh increase). This is exclusive of antimonial lead 14 078 tons valued at \$1 380 556 (3% increase).

The only other metals of importance were aluminium (consumed) 46 155 000 lbs. (one thirtieth less than in 1910) valued at \$8 084 000 (nearly one-tenth less), quicksilver valued at \$977 989 (2 increase) tin \$50 635 (two and a half times as much as in 1910) and platinum \$40 890 (three fifths increase).

**Fuels**—Of the non metals—and of all the minerals—by far the most valuable was coal with an output of 496 211 166 tons (501 590 378 tons in 1910) valued at \$626 366 816 (\$6 955 021 in 1910). The U. S. Geological Survey divides this total between Pennsylvania anthracite and bituminous coal (including brown coal lignite and anthracite mined in other States than Pennsylvania). Using bituminous coal to include all this the value was \$451 177 484 (3 56 less than in 1910 see above) and the output 405 737 101 tons (2 72 less). There was an increase of 7 08 in quantity and 9 31 in value in the output of Pennsylvania anthracite 50 711 488 tons \$175 139 392. Not so large was the increase (5 2 in quantity and 4 8 in value) in petroleum the output was 220 449 391 bbls. valued at \$154 044 73. Other fuels were coke 35 551 489 tons valued at \$84 130 849 (nearly one sixth less than in 1910) natural gas \$14 127 534 (4 76 increase) and peat \$272 114.

**Structural Materials**—Third in value—to coal and iron—were clay products \$162 236 181 (4 63 less than in 1910 but considerably more than the average for 1905-09). The more valuable building materials were stone \$77 108 567 (0 77 more than in 1910 but about one seventh more than the five year average) and cement 79 547 958 bbl. (2 more than in 1910) valued at \$66 705 136 (nearly 3 less than in 1910). Almost all of this (78 58 657 bbl. value \$66 248 817) was Portland cement. Natural cement was valued at \$378 533 and puzzolan at \$77 786. Minor building material were sand and gravel \$10 614 850 lime 3 394 487 tons valued at \$13 688 910 (2 83 less than in 1910 but nearly one eighth more than the five year average) gypsum \$6 462 035 (a very little less than in 1910) slate \$5 728 019 (one twelfth less than in 1910) glass sand \$1 543 733 (1 78 more than in 1910) and sand lime brick \$897 664 (nearly one quarter less than in 1910).

**Chemical Materials**—The output of phosphate rock was 3 053 279 tons (15 more than in 1910) valued at \$11 900 693 (9 increase). The value of salt was \$8 345 692 (5 64% increase over 1910) of sulphur \$4 787 049 (4 increase) of sulphuric acid \$2 733 696—first reported in 1911 from fumes of copper and zinc smelters of pyrite \$1 164 871 (nearly one fifth increase) of borax \$1 569 151 (three tenths increase) of fluorspar \$611 447 (two-fifths increase) of calcium chloride \$91 215 (two ninths increase) of bromine \$110 902 (more than three times that of 1910) and of arsenious oxide \$75 408 (two fifths more than in 1910 value more than twice as great). The Geological Survey is making an elaborate search for potash salts drilling for saline residues at great depths and examining brines aluminates and igneous rocks. The Soils Bureau of the department of agriculture is studying the helps of the Pacific Coast for the same purpose and is making a field survey of arid lands.

**Pigments**—Mineral paints were valued at \$7 842 583 (5 52 times as much as in 1910).

<sup>1</sup> Pig iron and not iron ore is the basis of valuation adopted by the United States Geological Survey and the value of iron ore is not included in the total value of minerals given here.

<sup>2</sup> Exact figures are not given because the Geological Survey does not make metals and non metals the only classes but adds unspecified products mostly rare metals.

## UNITED STATES STATISTICS

This excludes zinc oxide not separately reported in 1911 but valued at \$5 238 945 in 1910 and \$6,156 735 in 1909. Crude barytes was valued at \$122 792 a little more than in 1910.

*Abrasives*—Artificial abrasives were valued at \$1,493 040 about one fourteenth less than in 1910. Grindstones were worth \$907 316 about one seventh less than in 1910. Oilstones and whetstones, \$214 991 less than in 1910 or than the average for the five year period and abrasive garnet \$121 748.

*Miscellaneous*—The output of asphalt (including bitumens and hydrocarbons not classified as petroleum) was 360 004 tons (almost two-fifths more than in 1910) valued at \$3,828 751 (one fourth more than in 1910 and over double the annual average in 1905-09). Other products valued at \$500 000 or more were mineral waters \$6 837 888 (7% increase) talc and soapstone \$1 032 732 (one fifth increase) and fibrous talc \$613 286 (about 16% decrease) bauxite, \$750,649 (4 8% increase), and felspar \$579 008 (15% increase).

**MANUFACTURES**—In "continental" United States (excluding Alaska) there were in 1909 268 491 manufacturing establishments (29 4% more than in 1899) which employed 7 678 578 persons, of whom 6 615 046 were wage earners (40 4% increase) had a capital of \$18,428 270,000 (105 3% increase), and manufactured products with a gross value of \$20,672,052 000 (81 2% increase) and a net value (gross less cost of materials) of \$8 530 261 000 (76 6% increase). The increase in value gross or net must be interpreted with the increase of prices in view, or its meaning will be exaggerated.

The ten leading manufacturing states ranked according to the gross value of products and with the percentage of the total contributed by each were New York 16 3, Pennsylvania 12 7, Illinois, 9 3, Massachusetts, 7 2, Ohio, 7, New Jersey 5 5, Michigan 3 3, Wisconsin 2 9, Indiana 2 8 and Missouri, 2 8. (See the separate state articles.) The three Middle Atlantic states reported more than one third (34 5%) the East North Central states about one fourth (25 2%) and the New England states more than one eighth (12 9%) a total of nearly three fourths (72 6%) of the total gross value of the country. Ranked on the same basis the ten leading cities in 1909 were New York, Chicago, Philadelphia, St. Louis, Cleveland, Detroit, Pittsburg, Boston, Buffalo and Milwaukee. The total gross value of manufactures from these ten cities was more than \$3,800,000,000,—nearly three tenths of the total for the nation. In 50 cities which had 100 000 or more inhabitants the value of manufactures was more than two fifths (42 3%) of the total and the 603 cities over 10,000 contributed nearly seven tenths of the total product value. Employed nearly two-thirds of the wage-earners in manufactures and contained more than half the establishments, although their combined population was only three-eighths that of the entire country.

*Chief Industries*—The largest single industry according to the census classification and judged by gross product was slaughtering and meat packing with one fifteenth of the total product value and more than one half increase in the decade. Second of the single industries is that of foundries and machine shops with nearly 6% of the total product value in 1909 with this industry should be mentioned iron and steel from steel works and rolling mills (4 8% of the total) and iron and steel from blast furnaces (1 9%). Third in value was lumber and timber (5 6% of the total) with a product more than one half greater than in 1899. Flour and grist mill products were valued at one twenty fourth of the total product value. The more important textile products were cotton goods (3% of the total) woollen worsted and felt goods (2 1%) hosiery and knit goods (1%) and silk goods (1%). The value of men's clothing was 2 7% and of women's clothing 1 9% of the total of all industries that of boots and shoes 2 5% that of tobacco 2% that of cars and shop construction by steam railway companies 2% and by other manufacturers 0 6%. A metallurgical group of industries includes copper smelting and refining (1 8%) lead smelting and refining (0 8%) copper tin and sheet iron products (1%) and brass and bronze products (0 7%). Malt liquors are reported as 1 8% and distilled liquors as 1% of the total but a Federal revenue tax included in the reported value makes it misleading. Other items all valued at more than \$100 000 000 with the per cent of the total for each were leather (1 6%) and leather goods (0 5%) sugar and molasses not including beet sugar (1 4%) butter cheese and condensed milk (1 3%) paper and wood pulp (1 3%) automobiles (1 2%) and wagons and carriages (0 8%) furniture (1 2%) refined petroleum (1 1%) electrical machinery (1 1%) illuminating and heating gas (0 8%) canning and preserving (0 7%) cottonseed oil and cake (0 7%) and agricultural implements (0 7%).

Of the manufactures specifically named in the preceding paragraph only one, smelting and refining of lead, showed a decrease (9 9%) in the gross value between 1904 and 1909 and only two others sugar and molasses and wagons and carriages a decrease in the value added.

by manufacture in the same five years—and these decreases were small 2.7% and much less than the increase 77.5% and 9.6% in the years 1899-1904. The gross value of automobiles increased 532.6% from 1899 to 1904 and 729.7% in 1904-09. Other high percentages of increase in gross value during the years 1904-09 were 68.8%, iron and steel from blast furnaces; 66.6% copper tin and sheet iron products; 63.2% butter cheese and condensed milk; 57.3%, copper smelting and refining; 57.2% electrical machinery and apparatus; 55.9% distilled liquors; 55.4%, women's clothing; 53.4% cottonseed oil and cake.

**Ownership**—In 1909 of 268,491 manufacturing establishments 69,501 (25.9% in 1904, 23.6%) were operated by corporations and these establishments reported nearly four-fifths (in 1904 not three-fourths) of the total product value. In the Mountain Group of states 90.2% of the product value was from establishments owned by corporations, largely smelters, in the East North Central group the percentage was 85.1% in the West North Central 83.9% in the Pacific states 82.4% in New England and in the West South Central group 81.4% for each in the East South Central 78.5% in the South Atlantic 76.7% and in the Middle Atlantic 71.9%. The highest per cent in any state was 96.1% in Arizona. More than twice as many establishments were operated by individuals as by corporations but their product value was less than one-eighth as large. Establishments operated by firms numbered about four-fifths as many as by corporations and had a product value a little more than one-eighth as large. In 1904 establishments operated by individuals reported 11.5% of the total value in 1909 9.9%. In 1904 establishments operated by firms reported 14.4% in 1909 10.6%. The advance of corporation control is marked.

**Establishments**—Establishments with an output of more than \$1,000,000 each numbered 1900 (0.9%) in 1904 and 3,061 (1.1%) in 1909 in the former year their product value was 38% in the latter 43.8% of the total for all establishments. In 1904 they employed 25.6% in 1909 30.5% of all wage-earners in manufacturing. In 1909 67.2% of all establishments had each an output less than \$20,000 in value but these establishments produced only 5.5% of the total product value and employed only 9.3% of the wage-earners.

It will be surmised that the increase of large establishments is accompanied by greater efficiency because the ratio of wage-earners to product is smaller in the large establishments but it is more probable that this difference is due to the presence of more labour-saving machinery (and machinery that saves more labour) in the large establishments. And it should be noted that the million-dollar establishments producing 43.8% of the gross value produced only 35.7% of the net value (gross less value of raw material) but that the establishments producing less than \$1,000,000 each and contributing 5.5% of the gross product produced 7.7% of the value added by manufacture. Even from this however no generalisation may safely be drawn since many establishments with large gross outputs are in industries which from the nature of the raw material add comparatively little by manufacture. This is shown in a striking way by the slaughtering and meat packing industry which ranks first in the country in gross products (\$1,370,568,000) but twelfth in value added by manufacture (\$168,740,000) or by flouring and grist mills with a gross value of \$883,584,000 (5th of all industries) and a net value of \$116,008,000 (18th). Both these industries have a large proportion of large establishments in the former 166 out of 1,641 had each an output of more than \$1,000,000. There were even larger percentages of million-dollar establishments in copper smelting and refining (84.2% with 99% of product value) steel works and rolling mills (41.7% with 91%) blast furnaces (41.3% with 85.8%) refining petroleum (23.8% with 88%) and steam railway car construction and repairs (22.7% with 80.7%).

In Rhode Island 3.5% of all establishments produced each more than a million dollars worth a year with a total value nearly half the entire product value for the state. In Arizona 84.1% of the entire product value was from such establishments in Montana 68.1% and in Utah 53.4%—almost all these being smelters in Nebraska 68.9% and in Kansas, 62.9% mostly slaughter houses and meat packing establishments in Illinois 56.2% meat packing and iron and steel in Pennsylvania 50.7% largely iron and steel and in New Jersey 56.7% from copper smelters and petroleum refineries. New York, the first manufacturing state in the Union reported only 3.7% of all product values from million-dollar factories this is partly due to the diverse character of manufacturing industries in that state and partly to the large number of clothing establishments mostly very small.

Of the total population of continental United States 7,678,578 about 1 in 12 were engaged in manufacturing 487,173 being proprietors and officials, 576,359 clerks, and 6,615 wage-earners. Of wage-earners about 1 out of 5 were females, and about 1 out of 40 (162,246 in all) were under 16—by official reports the actual number was probably greater.

In dairy industries flour milling and baking the percentage of proprietors and officials was unusually high (33.3, 28.4 and 20.2 respectively) the dairy establishments being largely co-operative and in flour milling much labour-saving machinery is used which requires comparatively few wage-earners. Absolutely the largest number of wage-earners in any one industry was 695,019 (more than one-tenth of the total) in the manufacture of lumber and timber. Other industries employing more than 200,000 wage-earners were foundries and machine shops 531,011 cotton factories 378,880 steam railway companies car construction 282,174 printing and publishing 258,434 steel works and rolling mills, 240,076 and men's clothing 239,696. The percentage of children under 16 to all wage-earners is largest

# UNITED STATES FINANCE

725

*Value of Imports and Exports by States and Districts for the Year ending June 1912—continued*

STATE	DISTRICT	PORTS OF ENTRY	IMPORTS	EXPORTS
Virginia	Richmond	Richmond	926 516	7 800
Washington (See Oregon and Washington)				
Wisconsin	Milwaukee	Milwaukee	4 646,399	120 174
Porto Rico	Porto Rico	San Juan	4 501 928	6 832 012

FINANCE.—The balance in the general fund on June 30, 1911 was \$140 176 926 and on June 30 1912 \$167,152 479 (and on Nov 11, 1912, \$147 982,307) For the fiscal year the receipts were ordinary \$691 778 465 (preceding year \$701,372 375) Panama Canal bonds sold, \$33 189,104 (in 1911 \$18,102 1,0) and public debt, \$20 537 645 (in 1911, \$40,232,555) The disbursements were—ordinary, \$654 553 963 (1911, \$634 137 998), Panama Canal, \$35 327 371 (1911 \$37,063,515) and public debt \$28 648 327 (1911, \$35 273 336) The principal items in ordinary receipts were—customs \$311,321 672, ordinary internal revenue, \$293 028,896, corporation tax, \$28,583 303, and of ordinary disbursements pensions, \$153,590,456 war \$148, 795 422 navy \$135 591,956 interest on public debt, \$22,616,300, Indians, \$20,134,840, civil and miscellaneous, \$1,3,624,989

The appropriations by annual acts (exclusive of postal payable from postal revenues) were \$634 549 561 for 1912 and \$617 382 178 for 1913 (permanent appropriations for 1912 \$68 575 924, and for 1913 \$72 556 424) The Democratic Congress cut down the appropriations for public defence army from \$93 374 756 for 1912 to \$90 958 713 navy from \$126 405 509 for 1912 to \$123 151 539 for 1913 fortifications from \$5 473 707 to \$4 036 235 and Military Academy from \$1 163 424 to \$1 064 668 It is true that the total of annual appropriations for 1913 compared with that for 1912 showed retrenchment and an apparent effort for economy, but the decrease in the items just named and the cut of 25 in the Sundry Civil act (from \$135 241 935 to \$102 538 934) even if they were entirely laudable economies do not hide although they overbalance the enormous increases in the Rivers and Harbors acts (almost one third from \$30 883 419 to \$40 559 620) and in the Pension Act (nearly one twelfth from \$153 682 000 to \$165 146 146)—both items notoriously for political purposes

On June 30 1912 the outstanding debt was \$2 849 373 874 (June 30 1911 \$2 765 600 607) but more than half of this (\$1 524 535 369) was in certificates and treasury notes off set by an equal amount of cash in the Treasury so that the difference \$1 343 838 505 is a less misleading figure This sum is made up of the following items interest bearing debt \$963 776 770 (including \$646 250 150 in 2 consols of 1930 \$134 631 980 in Panama Canal loans of 1906 and 1908—both —and of 1911 \$50 000 000 at 3 \$118 489 900 of the 4<sup>th</sup> loan of 1925 863 945 460 of the 3 % loan of 1908-18 and two issues of postal savings bonds at 2 1/4 % the first 1911-31 for \$41 900 and the second 1912-32 for \$417 380) debt on which interest has ceased since maturity \$1 760 450 and debt bearing no interest \$378 301 285—not including the certificates and treasury notes mentioned above

A system of postal savings banks was put in operation January 3 1911 and at the beginning of November 1912 there were banks in 12 773 post offices (out of a total of 58 133 in the country) including 644 branch offices and sub stations in every state of the Union the number of depositors was 290 000 and the total deposits were \$28 000 000

On June 27 1912 President Taft sent to Congress a report of the president's commission on economy and efficiency<sup>1</sup> entitled *The Need for a National Budget* (submitted June 19 printed as 62nd Congress 2nd Session House Document No 854) with a message approving the commission's recommendation that a budget be submitted to Congress by the President and that appropriations not based on this budget be acted upon in a separate bill On July 10 heads of departments and establishments were instructed by the President to prepare for the year 1914 estimates and summaries not only in the form previously used but in the uniform manner suggested by his commission A letter from the President to the Secretary of the Treasury (Sept 19) supplemented this order Congress seemed prone to consider that the President was encroaching on its powers and in this letter the President said that he questioned not the constitutional right to Congress to prescribe the manner in which reports be submitted but the practical wisdom of continuing to operate the Government under 90 different statutes passed at 90 different times which prescribe 200 different forms

<sup>1</sup> This commission was organized March 8 1911 and took over work begun under Charles D Norton secretary to the President Its chairman was Frederick A Cleveland formerly director of the New York City bureau of municipal research See his paper in Vol 3 No 2 (1912) of *Proceedings of the Academy of Political Science* and for other activities of the commission *Hearings before the House Sub-committee in charge of the Sundry Civil Appropriation Bill for 1913* (Washington 1912) The distribution of all departmental documents by the Superintendent of Documents instead of by the separate departments is an accomplished reform proposed by the Committee and improved and uniform filing is another

Not only did Congress object to the work of the committee but in the legislative executive and judicial bill (which President Taft twice vetoed) it required estimates to be submitted in the same way as before and in another way. Hence the President's letter of September 19.

The problem of rural credit has attracted much attention and in October 1912 the Federal government published a *Preliminary Report on Land and Agricultural Credit in Europe* with a letter to governors of the states by President Taft recommending the introduction of co-operative credit on the lines of the Raiffeisen banks of Germany.<sup>1</sup>

The National Monetary Commission (which terminated March 31, 1912) presented in October 1911 and on January 8, 1912, its recommendations<sup>2</sup> notably for a National Reserve Association, formed of 15 district reserve associations each made up of local associations of 10 banks or more, each local association with a combined capitalisation of \$5,000,000. To secure membership banks must subscribe for 20% of their capital in stock of the National Reserve Association and must fulfill certain requirements regarding capital surplus, reserves and examination which put state banks and trust companies under supervision similar to that now in force for national banks. Earnings of the association are to be divided between the stockholders and the United States; a certain part however going to a surplus reserve for the association. No more national bank notes would be issued, their place being taken by notes of the association based on bonds, and by additional circulating notes based on bankable commercial paper etc. The association would be required to make weekly public reports to the comptroller of the currency and full reports five times a year. Its advocates think that the plan would be of particular value in financing crops and argue that as fiscal agent for the treasury the association would effect a more satisfactory relation between the treasury and the banks. In general opposition to the plan was partisan arising partly from the unpopularity of the reactionary or stand-pat wing of the Republican party with which Senator Nelson W. Aldrich, the chairman of the commission, was affiliated—a party group which was inextricably connected in the popular mind with tariff iniquities and favouritism to “Wall Street” the “interests” and the “Trusts” or based on economic or political theory which distrusted the management of a central institution and Federal interference in banking. The popular aversion to Wall Street immediately urged that the association could not fail to be under the control of this interest in spite of the large size of the board of directors (41) and of the probable effect of the association to minimise the influence of the stock exchange on business conditions. The plan has practically the undivided opposition of the Democratic party and the incoming administration will almost certainly not adopt it or any part of it.

The attitude of the Democratic party towards financial questions is hinted at by the ‘Money Trust’ investigation carried on by the Pujo committee<sup>3</sup> on banking and currency of the Federal House of Representatives (resolutions of February 24 and April 25, 1912), although it was charged that this was prompted not merely by hostility to organised finance but largely by a desire to make political capital to be used in the presidential campaign. Besides prominent bankers including J. P. Morgan, the committee called before it Mr. Roosevelt who testified on the action he had taken in the panic of 1907 (see *E. B.* xxvii, 734d), much of the testimony before the committee was of great interest and importance.

In 1912 Professor Irving Fisher of Yale<sup>4</sup> suggested a gold seigniorage adjusted by reference to price index numbers as a means of reducing the cost of living through restoration to the gold dollar of its purchasing value. Woodrow Wilson had previously

<sup>1</sup> See O. R. Hobson *Agricultural Credit Banks* (Washington 1912).

<sup>2</sup> See Ludwig Bendix *The Aldrich Plan in the Light of Modern Banking* (New York 1912 and in German) J. L. Laughlin, *Banking Reform* (Chicago 1912) a defence of the plan of the monetary commission and the unfavourable criticism of Albert A. Bowles in *North American Review* March 1912 vol. 195, pp. 310–318 on the ground that the system is too complicated and tries to secure the maximum of profit. Victor Morawetz, *The Banking and Currency Problem and its Solution* (New York, 1911) opposes the note issue plan.

<sup>3</sup> Chairman Arsène Pujo (b. 1861) representative from Louisiana since 1903.

<sup>4</sup> In a paper before the International Chambers of Commerce at Boston printed in the *Independent* (New York) of September 26, 1912.

suggested an actual increase in the bulk of the coined dollar. Professor Fisher's plan would increase the bulk of the uncoined dollar without changing the coin dollar once or repeatedly and would substitute for the present uncoined dollar of fixed weight an uncoined dollar of variable weight but would make the coined dollar of fixed instead of variable value.

**ARMY**—At the close of 1912 the regular army limited by law to a maximum enlisted strength of 100,000 included 4,781 active commissioned officers (including 244 detached line officers, 127 first lieutenants of the Medical Reserve Corps and 60 dental surgeons) and 81,547 enlisted men excluding provisional force and hospital corps. The branches of the force were: cavalry 15 regiments with 765 officers and 13,823 men; field artillery 6 regiments with 252 officers and 5,417 men; coast artillery corps, 170 companies with 715 officers and 18,471 men; infantry 30 regiments, 1,530 officers and 30,340 men; Porto Rico infantry 1 regiment, 32 officers and 591 men; Indian scouts recruits, etc., 7 officers and 812 men; native Filipino scouts 52 companies, 180 officers and 5,732 men; and engineers 3 battalions, 1,942 men. The estimated strength of the organized state militia for the same year was 9,437 commissioned officers and 112,940 men.

The army is organized in four divisions: Eastern including departments of the East and of the Gulf; Central including departments of the Lakes of the Missouri and of Texas; Western including departments of California of the Columbia (with Alaska) and of Hawaii and Philippines including departments of Luzon and Mindanao. There were 154 garrisoned posts and sub posts including two military prisons (Ft. Leavenworth, Kansas and Alcatraz, California) and the Walter Reed General Hospital at Washington, D. C.

By Act of Congress of August 24, 1912, the term of enlistment after November 1, 1912 was increased from three years to seven of which the active service is four years and the other three years are in the Army Reserve (thus established) on furlough without pay. After four years service an enlisted man may re-enlist for seven years with higher pay and after three years service he may upon request be furloughed and put on the Reserve. After two years service enlisted men, unmarried and under 30 years of age, may take examinations for promotion to second lieutenant. Enlisted men retired after 30 years service receive three-fourths pay and \$15.75 a month. The Army Appropriation Bill, carrying a clause aimed at Major General Leonard Wood, Chief of Staff and making him ineligible for this office, was vetoed by the President on June 17, 1912, and an appropriation measure without this clause was finally passed. There was a strong effort in the House which did not succeed to reduce the number of cavalry regiments from 15 to 10. On February 15, 1912, Adjutant General Fred C. Ainsworth was removed from office by the President's order pending trial for insubordination; on the 16th he was placed upon the retired list on his own application. Gen. Ainsworth opposed the reorganization scheme suggested by Major General Leonard Wood, Chief of Staff. The opponents of the chief of staff in Congress and the friends of the adjutant general demanded an investigation and the committee on military affairs of the House of Representatives (House resolution 415, Feb. 23, 1912) asked the Secretary of War for all records in the case. In sending these records to the House the Secretary said that he had been directed by the President that their transmittal was not to be construed as a recognition of the authority or jurisdiction of the House to require of the Chief Executive a statement of the reasons of his official action in such matters or of a disclosure of the evidence upon which such official action is based. The majority report of the Committee (Report No. 508, 62nd Congress, 2nd Session) objected to the attitude of the Executive and declared that the Secretary of War had flagrantly abused his official authority; a minority report (Part 2 of same document) defended the President, the Secretary of War and the Chief of Staff and criticized the adjutant general.

The movement, especially strong in 1911 and 1912, to pay state militia from Federal funds is blocked by a technicality—the constitutional provision that militia shall not be required to serve beyond the limits of the United States. A bill has been prepared authorizing the president to transfer to the army state militias in time of war or when war threatens and providing for their payment.

In 1912 the principal administrative officers of the army were: Henry Lewis Stimson, secretary of war; Robert Shaw Oliver, assistant secretary of war; Major General Leonard Wood, chief of the general staff; Brigadier General George Andrews, adjutant general; successor to F. C. Ainsworth in 1912; Brigadier General E. A. Garlington, inspector general; Brigadier General E. H. Crowder, judge advocate general; Brigadier General J. B. Aleshire, quartermaster general; Brigadier General H. G. Sharpe, commissary general; Brigadier General G. H. Torney, surgeon general; Brigadier General George R. Smith, pay master general, succeeding C. H. Whipple in 1912; Brigadier General William H. Bixby, chief of engineers; Brigadier General William Crozier, chief of ordnance; Brigadier General James Allen, chief signal officer; Brigadier General Frank McIntire, chief of bureau of insular affairs, succeeding C. R. Edwards in 1912.

**NAVY**—The principal vessels of the American navy in service under construction and authorized may be classified as follows: first class battleships 38, armored cruisers 12,

## UNITED STATES EDUCATION

protected cruisers, 22 unprotected cruisers 3 scout cruisers 3 single turret harbour defence monitors 4 double-turret monitors 6 gunboats 13 light draught gunboats 3 composite gunboats 8, torpedo boat destroyers 56 steel torpedo boats 28 submarine torpedo boats 49 (8 authorised) tugs 45 auxiliary cruisers 5 converted yachts 17 colliers 25 transports and supply ships 15 For technical details see under SHIPS AND SHIPPING and THE WORLD'S NAVIES There are three fleets Atlantic with four divisions, Asiatic with four divisions and Pacific In 1912 there was a naval militia in each of 22 states and in the District of Columbia with a total of 558 commissioned officers 29 warrant officers 1 361 petty officers and 5 372 men Thirty two vessels of the U S Navy are assigned to state naval militias The navy active list of officers includes 2 796 commissioned 273 warrant officers and 768 at the Naval Academy The maximum number of enlisted men by law is 51 500

In Congress there was a long struggle over an appropriation for battleships on May 28 1912 the House passed an appropriation bill with no provision for battleships the Senate voted for two on July 5 and the conference report for one battleship was adopted by the Senate August 19 1912

The secretary of the navy since March 6 1909 was George von Lengerke Meyer (b 1858) of Massachusetts In 1912 Admiral George Dewey was president of the general board and the administrative bureaus with their heads were navigation Rear Admiral Philip Andrews yards and docks Civil Engineer Homer R Stanford ordnance Rear Admiral Nathan C Twining construction and repair Chief Constructor Richard M Watt steam engineering Engineer in Chief Hutchinson I Cone supplies and accounts Paymaster General Thomas J Cowie medicine and surgery Surgeon General Charles F Stokes marine corps Major General William Phillip Biddle

## EDUCATION

At the close of the first decade of the 20th century there were in the United States about 25 000 000 children of school age and about 20 000 000 enrolled in public and private schools, with an average daily attendance of about 14 000 000 The average school year was about 8 months of 20 days each In the decade 1900-10 the school population increased at a much smaller rate than the entire population, as the birth rate has continually decreased But this decrease has been much larger in the North than in the South or West, and, in general in the older parts of the country than in the newer It is equally true that all averages for the entire country are misleading because there is so great a variation between different states and even between different parts of the same state Less than two-thirds of the school population was enrolled in 1910 in ten states, and in the same year less than two thirds of the enrolled number was in average daily attendance in 17 states With an average of 160 days for the country's school term, 26 states fell below the average and several had only about 100 days of school a year The average attendance of the total school population was less than 100 days in 42 states, less than 75 days in 19 of these less than 50 in 5 states and not more than 114 in any state of the total enrollment it was less than 100 days in 19 states and less than 75 in 5 states

For similar comparisons in regard to illiteracy see *Population* above But it must be borne in mind that even if such averages are misleading in many respects they are approximately correct for purposes of comparison with previous years The percentage of enrollment to total school population was 68.6 % in 1900 and 72.5 % in 1909 The length of the average school term increased from 144.3 to 155.3 days in the same period and the average attendance of each pupil from 99 to 112.6 days In spite of a steady tendency during the last part of the decade to consolidate small country districts the number of public school houses increased from 248 279 to 257 851 and the value of public school property increased from \$550 531,217 to \$667 775 587 The cost of public schools increased from \$214 964 618 to \$401 397 747 or 86 % and the cost per pupil increased from \$20.21 to \$31.65 The percentage of the total cost expended for teachers' salaries was 64 % at the beginning and only 59.2 % at the end of the decade The average monthly salary of men teachers increased about 35 % and of women teachers about 25 % Because the school year is longer the average yearly salary shows an even greater increase Even thus the increase is probably less than the average increase in cost of living and scale of prices during the decade This is no doubt one reason for the decreased proportion of men teachers in 1900 they were about 30 % and in 1909 about 21 % of the total What effect the growing tendency to pay women teachers as much as men will have upon the proportion of men to women is a question on which experts disagree and which the next decade may decide

The public school system has been growing up and down In the decade the number of children in public kindergartens increased 40 % (from 131 637 to 185 471) in cities with

4 000 inhabitants or more and not merely have the large cities extended their kindergarten work but smaller cities and country districts have adopted the methods of the kindergarten. In the same period the number of public high schools increased from 6,005 to 10 213 (70 %) the number of pupils from 519 251 to 915,061 (76 %) and that of high-school teachers from 20 372 to 41 667. Private secondary schools decreased in number and the number of teachers increased only 10%.<sup>1</sup> Besides there can be no doubt that the public high schools have gained in efficiency absolutely and relatively to the private schools. Indeed it is a common place among university and college teachers that a majority of the best students come from the public schools and not as a generation ago from the private secondary schools.

During the decade the universities have done increasingly much for the secondary schools. The increasing growth and importance of the state universities and normal schools in almost every instance under the same control (state board of education) as the public high schools the dependence in a greater degree of higher institutions of learning upon the public secondary schools for the best part qualitatively and quantitatively of their clientele, and above all the new and wider study of education as a science and of the interesting special psychology of adolescence—have been notable factors in this change. The unsettled problem of college entrance examinations is not the only one that is being carefully studied by the faculties of the higher schools—it is rather a part of the great question of curriculum.

Even more striking is the independent attitude toward the college of the secondary school which considers itself more and more as a school preparatory for business and the trades rather than for college. Although the number of pupils in secondary schools increased 200 between 1890 and 1910 (when the total population increased 50 %) only one fifteenth of the pupils in secondary schools now go to college. First the commercial high-school or the commercial course in a general high school and manual training high schools and now agricultural high schools mark the progress of this movement toward satisfying the practical needs of the present American population. To a large degree this has been effected by the work of the Morrill land grant agricultural and mechanical arts colleges to a *rapprochement* between state departments of agriculture and education, which was promoted by the mere existence of these agricultural colleges and to such movements in the schools as the Boys Corn Clubs and Girls Tomato Clubs and the Farmers Cooperative Demonstration Work which began in the early part of the decade under Dr Seaman Asahel Knapp and which at the close of the decade was symbolised in the establishment in connection with Peabody College for Teachers at Nashville of the Seaman A Knapp School of Country Life (see *TENNESSEE Education*). The spread during the last two years of agricultural and vocational education in primary and secondary public schools and the provisions for courses in agriculture and domestic science in public normal schools is shown in the articles on the different states.<sup>2</sup> It may be noted here that the General Education Board (Rockefeller Fund) in October 1912 appropriated money for agricultural schools in northern New York and in Maine and that in 1911 and 1912 Senator Carroll S. Page of Vermont introduced a bill in Congress for Federal aid to secondary schools teaching agriculture home economics trades and industries and for training teachers in state normal schools for these vocational subjects. Similar measures were introduced by C. R. Davis Representative from Minnesota William B. Wilson Representative from Pennsylvania and Senator L. S. Overman of North Carolina. In 1911 12 states required instruction in agriculture in the common schools 4 in rural schools and 3 in rural high schools 16 gave aid to special agricultural schools and 12 to departments of agriculture in high schools and 31 had agricultural colleges maintaining secondary courses (or schools) in agriculture. New York Ohio Massachusetts Connecticut New Jersey and Wisconsin had definite systems of vocational education—all but the first two the direct result of reports by state commissions on the subject. In Indiana and in Illinois the legislature of 1913 will be called to act upon reports from similar commissions.

Especially during the latter half of the decade state laws have been stricter in regard to compulsory schooling and to such limitations of child labour as literacy requirements for children's certificates to work. Closely related to the movement for agricultural education is the greater attention paid to rural schools\* state aid granted to weak school districts to assure full school terms and a fair teacher's wage and the consolidation of small rural districts often accompanied by free transportation of remoter pupils.

Urban schools are being more efficiently organised school boards being reduced in size and removed from political control and the appropriations and expenditures are more nearly adequate. Especially in the city public schools have experiments in testing efficiency of the educational plant been made and provisions made for sub normal or defective children.<sup>4</sup>

<sup>1</sup> The increase of teachers proportionally to pupils or rather the decrease of numbers in classes in all branches of education—even in the face in large cities of enormous increases in population and lack of class room—is a significant and promising phenomenon.

<sup>3</sup> See E. Benjamin Andrews *The Crusade for the Country School* *Educational Review*, Nov. 1912 C. B. Fishpaw *The Training of Rural Teachers* *Education* Oct. 1912.

<sup>4</sup> The National Association for the Study of Exceptional Children (Plainfield New Jersey),

and for the physical welfare of all children—notably in physical training and examination abolition of common drinking cups and towels better cleaning and ventilating apparatus and more hygienic school furniture A movement for holding city schools the year round seems to be gradually gaining favour In 1911-12 investigations of the school systems of Baltimore and New York City were made by experts outside the municipal system

Upon the colleges the utilitarian tendencies of secondary schools—and of other agencies—have had their effect which may be seen negatively in the rapid minimisation in the college (as in the secondary schools) of the humanities particularly Greek and positively in the establishment of schools of finance and of journalism in addition to the previous professional schools The improvement of the professional schools especially of law and medicine though hampered by the licensing of lawyers and physicians under different requirements in different states has still advanced The requirements are being raised (and thus approximately standardised) by the legislatures of the different states The wretched conditions in some medical schools and the wasteful multiplication of these institutions was pointed out in 1910 by Abraham Flexner in a report to the Carnegie Foundation for the Advancement of Teaching This report and the standards of efficiency required by the Carnegie Foundation in institutions to whose teachers it grants pensions have promoted the cause of higher education both special and general by putting a premium on the best<sup>1</sup>

The principal change in recent years in the matter of college entrance requirements was a scheme adapted at Harvard in 1911 to be tested with the former scheme it requires the satisfactory completion of an approved (but not a university ruled or supervised) course of secondary studies and examination in four subjects English Latin (arts course) or French or German (science course) mathematics or science (physics or chemistry) and one of Greek French German history mathematics physics or chemistry not chosen from the preceding three classes This method had been proposed in 1910 at a meeting of the Association of New England Colleges when it was summed up as a certificate for quantity and an examination in a limited number of substantial subjects for the quality of school work Vocational subjects may be offered for entrance to the University of Wisconsin and the University of Chicago but both universities (and the University of California) limit a student taking entrance examinations in such subjects and require him to combine them with more abstract and disciplinary subjects and the University of Chicago announced as an offset to this increased freedom that students would no longer be admitted with conditions

The growth of the large colleges and universities has made the problem of the small college<sup>2</sup> and especially of the rural college a difficult one Amherst College definitely decided to adhere to a liberal arts curriculum Hamilton College Clinton New York in much the same difficulty seriously considered the opposite course dropping Greek from the requirements for the degree of Bachelor of Arts and building up a literary scientific curriculum but in 1912 no very radical action was taken In February and April 1911 representatives of several denominational boards of education decided to co operate in the founding of colleges

The most interesting and important new institutions opened during the years 1911-12 were Rice Institute (see TEXAS) and Reed College (see OREGON)

## CHURCHES AND DENOMINATIONAL STATISTICS

The most marked contemporary tendency among the religious bodies in the United States particularly those ranking as Evangelical Christian, is that toward co-operation, federation and unity. Churches of similar faith are drawing closer to one another, and while they do not surrender that which is peculiar to each in doctrine polity discipline and method, they do emphasise their points of agreement and insist above all that they are engaged in a common task that this common task is immense in extent and importance and that it cannot be accomplished except by most strenuous and united effort. The field of this effort is not only the United States and its colonies, but the entire world to the leaders it is one and all embracing. But for convenience we may distinguish between the work at home or home missions and the work in the rest of the world, or foreign missions.

The conditions in the foreign field present a problem so stupendous that the effort of individual denominations appears utterly inadequate and inefficient and the logic of the situation drives the missionary societies to co-operation and combination. The work has gradually broadened in scope so that while evangelistic effort has increased educational publication hospital and industrial institutions have multiplied in number and importance. The demands from Asia for a western system of education and other adjuncts of Christian civilisation bear heavily and persistently upon the minds and hearts alike of the missionaries and of the directors at home the hundreds of millions of non-Christian peoples appear to be drifting from the moorings of their ancient religions and immediate urgency everywhere faces society and worker. Therefore universities and colleges publishing houses hospitals etc. have become union organisations with from two to half a dozen different denominations supporting and conducting each. Moreover by common agreement the native Church when it shall become autonomous and independent of the societies is not to reproduce all the denominational divisions of America and Europe but is to have for its ideal complete Christian unity. So following the example in Japan half a dozen Presbyterian and Reformed bodies have united their mission churches into one organisation in India and China and the three branches of the Anglican Communion operating in China have done likewise. In West China bodies as diverse as Baptists Friends and Methodists have come to an agreement to create an undivided comprehensive native Christian Church. The World Missionary Conference at Edinburgh in 1910 representing all Protestant bodies became the mount of vision so to speak for an exhaustive survey of conditions in the non-Christian world for the purpose of sounding an advance for the missionary forces of all Protestantism. A Continuation Commission serving for all is studying the problem with the view of securing a more perfect comity co-operation and unity and a more adequate occupancy of the whole field and of strategic centres. A considerable saving in means and effort has resulted and combination has increased efficiency and power many fold. This economy in expenditure has not reacted in smaller contributions by the American home churches for foreign missions but the aggregate becomes constantly larger reaching in 1912 nearly \$15,000,000 for the United States and Canada alone about a half of the entire income from all countries.

The missionary problem in the United States appears from the evangelical point of view to be quite as important and urgent as that in the rest of the countries of the world. The coming to America of a vast stream of immigration approximating a million souls a year of whom probably a minority only may be regarded as professing any form of the Christian faith makes a moving demand upon all the denominations—the Jewish to care for those of their own religion the Roman Catholic and Eastern Orthodox to meet the needs of the multitudes of the Latin and Greek rites and the Lutheran and Reformed to provide for those adhering to the Augsburg and Heidelberg Confessions. Great numbers of immigrants have practically no religion and Protestant missionaries are endeavouring to reach these in particular. While most of the newcomers are drawn to the cities vast numbers of Italians Poles Hungarians Slavs and Greeks find their way into the smaller cities and towns and even into villages. The service to be given therefore is extensive as to territory and numbers and comprehensive as to language. Add to this foreign speaking conglomerate the pioneers in newly settled sections the negroes and the Indians and the inhabitants of those older rural parishes which are weakened by the migration to cities and the Churches feel that an extraordinary task confronts them. Combination of Protestant home missionary societies in a Council for conference co-operation and united action as far as possible is the

## UNITED STATES CHURCHES

outcome. The principle of comity the prevention of waste by doing away with rivalry overlapping over-churching small communities and the joint study of difficult problems' are some of the achievements aimed at

The missionary spirit thus dominates all Protestantism as well as the relations of one denomination to another. It has made possible the Federal Council of the Churches of Christ, the second quadrennial session of which was held in Chicago early in December 1912. The Council is a consulting and advisory body composed of official delegates appointed by the chief judicatories of the various evangelical churches including Baptist Congregational Disciples of Christ Friends Lutheran Mennonite Methodist Presbyterian Protestant Episcopal and Reformed bodies. The purpose of the Council is to express the common consciousness of the united churches upon matters of mutual and public interest and to render such service in their behalf as may be possible to co-ordinate and correlate the work of the churches so as to secure a more perfect distribution of effort and prevent duplication, to bring about the formation of state city town or other local federations of Churches and to co-ordinate their work.

The affairs of the Council are directed in the interval of its quadrennial sessions by a large Executive Committee. Important commissions and committees deal with such subjects as evangelism social service peace and arbitration temperance Sabbath observance family life and divorce and theological and primary education. The Social Service Commission covers a wide field of activity and has a broad policy for the moral and spiritual uplifting of the working people of the vicious criminal unfortunate and depressed classes for the improvement of industrial conditions for men and women and for the abatement of poverty better housing etc. In other words by careful investigations and surveys and the thorough study of unsatisfactory conditions the commission seeks to find effective measures for the alleviation of unnecessary human suffering and human misery and to apply the Gospel of Christ in the Spirit of Christ for salvation in the largest sense. Social service has also been done by the Men and Religion Forward Movement the aim of which is to interest men in the Church and the Church in men. It has endeavoured by a series of conventions to arouse the churches particularly in the cities to the necessity of organised effort to secure social justice and civic reforms to make Bible study interesting and profitable to surround boys with good influences etc. The Federal Council meeting at Chicago was very successful and showed no signs of denominational cleavage. The new president is Prof Shailer Matthews a Baptist succeeding Bishop Eugene R Hendrix a Methodist. The general feeling was that this Council which represents 16 000 000 communicants or more is no longer an experiment and that its province is to secure a wider and more complete practical unity.

Another movement aiming to bring about as far as possible the corporate union of Evangelical and Orthodox Christian Churches has been started under the auspices of the General Convention (1910) of the Protestant Episcopal Church. A large commission of which Bishop Charles P Anderson of Chicago is president was appointed to invite all Christian Churches which confess our Lord Jesus Christ as God and Saviour to unite in arranging for and conducting a Conference for the consideration of questions of faith and order with the reunion of Christendom as the ultimate object. Most of the Protestant bodies have responded cordially to the invitation and have appointed commissions to confer with the Episcopalian Commission the Church of England and the Episcopal Churches of Scotland Ireland and Canada have agreed to co-operate. It is expected that individuals of the Roman Catholic and Oriental Orthodox Churches will assist in the arrangements for the conference and some of these bodies may participate officially in the conference itself. A circular issued late in 1912 in the name of the commission says that important preliminary questions such as the basis of representation the time and place of meeting the method of procedure may require years of discussion.

Reunion of bodies of similar faith order and history has not made much progress in recent years. The Northern and Cumberland Presbyterian bodies voted in 1906 to consolidate but only a minority of the ministers churches and communicants of the latter entered the United Church. Much property litigation and consequent bitterness of feeling have resulted. Some important projects of union are pending. (1) Between the Methodist Episcopal Methodist Episcopal South and Methodist Protestant Churches. A plan in outline has been prepared proposing that the three churches unite in one body with three or four territorial divisions each to have a quadrennial conference for jurisdiction over its local affairs and all to have a general conference with jurisdiction over the general affairs of the United Church. The plan contemplates the possibility of the union of the negro constituents of the Methodist Episcopal and Methodist Protestant bodies with the Colored Methodist Episcopal Church and other colored Methodists under a quadrennial Conference. The new Church would have from 5 000 000 to 5 500 000 communicants. The plan has received little general discussion so far. (2) Between the Church of the United Brethren in Christ and the Methodist Protestant Church bodies similar in doctrine discipline polity and usage. (3) Between the Free Methodist and American Wesleyan Churches small bodies not far apart. (4) Between the Evangelical Association and the United Evangelical Church Methodist bodies which separated about twenty years ago. (5) The Presbyterian (Northern) and the Reformed Church in the United States (German). (6) The Presbyterian (Southern) and the

United Presbyterian Church (7) Between the Northern Baptists and the Free Baptists, long separated by their Calvinistic and Arminian Confessions the two bodies have consolidated their denominational missionary publication and educational boards but the merging of churches conferences associations etc. will it is expected be a gradual process

The Roman Catholic Church is steadily growing in America having a population of over 15 000 000 not including Porto Rico the Philippines and the Panama Canal Zone. The population embracing representatives of many of the peoples races and languages of the world stands for a communicant membership of about 12 750 000 (end of 1911) eliminating unconfirmed baptised children this indicates a net gain of about 675 000 communicants in the last five years The Pope, appreciating the freedom loyalty and prosperity of the Church in the United States gave it in 1908 a complete ecclesiastical status Before that year it had been treated as a missionary organisation under the general supervision of the Congregation *de Propaganda Fide* in Rome Now it has the same measure of autonomy as is enjoyed by the Roman Catholic Church in England or Germany The pope has appointed three new cardinals for the Church in the United States—Archbishop Farley of New York Archbishop O Connell of Boston and Monsignor Falconio Apostolic Delegate at Washington The Papal decree of September 1910 prescribing rigorous measures to prevent

Modernism from getting a footing in the Church evoked no protest in the United States and the oath required of the clergy was loyally given

The group of Eastern Orthodox Churches having congregations in the United States has increased in number by immigration In addition to the Russian Greek Armenian Servian and Syrian bodies the Bulgarian and Rumanian Churches have organisations the seven reporting an aggregate of about 434 000 communicants

The Church of Christ Scientist or Christian Science appears to be gaining in number of branches or churches in readers and in practitioners For some years no returns have been given of members The death of the founder and director of the movement Mrs Mary Baker Eddy in 1910 left the Board of five directors which had been appointed by her as the governing body of the denomination Her fortune amounting to \$2 500 000 was left for the benefit of the organisation The withdrawal of a few branches and the organisation of a Reformed Christian Science Church is one of the events of 1912

The fourth decennial Ecumenical Methodist Conference for the discussion of problems common to Methodism was held in October 1911 in Toronto There were present about 500 delegates 200 from the Methodist Churches of Great Britain Ireland France South Africa and Australasia and 300 from the many branches of Methodism in the United States and Canada The questions treated in papers and discussions took a wide range the newer phases of Church life and Church work including missionary endeavour social service training and care of the young evangelism international peace receiving much attention Higher biblical criticism evoked expressions of acquiescence in ascertained results although there was an undercurrent of dissent Delegates from Great Britain and Australasia had enthusiastic reports to make of the results of the consolidation of a number of branches An Ecumenical Methodist Commission to act for the Methodism of the world in the interval of the decennial Conferences and especially to cultivate a more intimate fellowship between the various branches was created Reports from the Eastern and Western Sections showed that Methodism in America has entered a period in which the rate of increase is lessening while the British branches are encountering net losses The larger bodies of the United States have all gained in communicants since 1906 the Methodist Episcopal reporting 3 293 526 in 1912 the Methodist Episcopal Church South 1 919 873 in 1912 the Methodist Protestants 183 318 the African Methodist Episcopal 620 234 the African M E Zion 547 216 and the Colored M E 234 721 In all the 17 bodies have a total of about 6 905 000

The Baptist World Alliance held its second Congress in Philadelphia in June 1911 Delegates of the Northern Southern Colored and Free Baptist bodies of the United States and from the Baptist Churches of Canada Great Britain Russia and other countries of Europe and from Africa Australia and countries of Asia were present The sessions were crowded and great enthusiasm was evoked by the Russian delegation who told of persecution and progress and great opportunities The Congress raised over \$60 000 for a theological seminary in St Petersburg and the American Baptists agreed to increase the fund to \$125 000 The Rev R S MacArthur D D of New York was elected President and he subsequently visited Russia dedicated a Baptist Tabernacle in St Petersburg and bought ground for the Seminary The larger Baptist bodies of the United States are growing steadily The Northern Baptists number about 1 176 000 the Southern 2 475 600 and the Colored over 1 912 000 A dozen other Baptist bodies bring the total up to about 5 894 000

The Congregational Churches have under consideration a plan for the co-ordination of their benevolent societies and for changes in their national triennial Council which would give it administrative functions with a permanent Secretary The denomination is growing moderately having at the close of 1912 742 000 communicants

The Disciples of Christ notwithstanding the division of some years ago into two bodies show a healthy growth In this denomination at the close of 1912 there were about 1 340 000 communicants besides the 157 000 or more belonging to the conservative branch known as the Churches of Christ

The Evangelical Association and the United Evangelical Church have 184,866 members, the Friends (4 bodies) 124 216 the German Evangelical Synod 258 921, the United Brethren in Christ (2 bodies) 320,960 the Reformed (4 bodies) 459 106.

The Protestant Episcopal Church which as a new feature for large city dioceses has suffragan bishops grows steadily. At the end of 1912 it had 970,451 communicants.

The Presbyterian bodies show a steady growth in numbers and in finances. The Northern Church has 1,368 150 communicants the Southern 292 845 the United 139 617 and the Cumberland 120 000. The twelve bodies returned in 1912 1 982 000 communicants.

Jewish immigration adds about 70,000 to 75 000 annually to the Jewish population in the United States, now about 2 000 000. Great activity in the organisation of societies and in the prosecution of various lines of work characterises the denomination.

The Lutheran Communion has an encouraging annual growth. Independently of the kindred Swedish Evangelical bodies (68 500) it has an aggregate of 2 353 702 communicants. It is developing steadily its missionary and other interests. Of the general bodies the Synodical Conference has 807 693 communicants the General Council 473,295 the General Synod 309 702 and the United Synod South 50 669.

The grand total for all denominations in the United States chiefly on the basis of the returns for 1912 rises above 36 675 000 members including Christians non Christians and Jews.

(HENRY K. CARROLL)

#### POLITICAL HISTORY 1909-12

During the administration of President Taft which began in the spring of 1909 the tariff assumed a place of first importance in the work of Congress and in public discussion. Called into special session for the purpose of revising the tariff Congress passed in August the Payne Aldrich act. It was by no means a radical measure. There were some reductions in duties as in the case of iron and steel wood pulp and printing paper and manufactures of leather hides were placed on the free list. But there were also increases notably in the finer grades of cotton and silk goods and the woollen and sugar schedules which had been the subjects of general criticism remained virtually unchanged. Aside from such readjustments of the duties the act had several notable features. It provided for free trade between the United States and the Philippines (*q.v.*) with the exception that certain imports from the islands were to be limited in quantity. It erected a customs court of appeals to review the findings of the Board of General Appraisers. It established a minimum and maximum system under which the President was empowered to impose an additional 25% *ad valorem* upon imports from countries which should discriminate against American imports, and it levied an excise tax of one per cent upon the net income of corporations. The constitutionality of this tax was upheld by the Supreme Court in 1911. Its imposition marks an advance in Federal control of corporations entailing as it does supervision over annual accounts and business transactions. Congress also initiated an amendment to the Constitution which would permit the government to levy an income tax without apportioning it among the states according to population. Thirty seven states had ratified the amendment<sup>1</sup> up to February 1913. It was officially proclaimed on February 25th.

The tariff act also empowered the President to "employ such persons as may be required" in securing the information necessary to the execution of the maximum and minimum provisions. Under this vague authority he appointed a tariff board for the purpose among other things of investigating the difference in the cost of production in the United States and abroad, since the Republican platform of 1908 had promised tariff revision on the basis of equalising this cost (see *E. B.* xxvii 735a). He urged Congress to make the board permanent and to adopt the policy of revising the tariff schedule by schedule in accordance with the findings of the board. He did manage to secure annual appropriations for the board until 1912, but though the board made exhaustive reports upon the paper, wool, and cotton schedules, Congress gave little heed to them in framing its tariff measures.

<sup>1</sup> The amendment becomes Article XVI of the Amendments to the Constitution and reads: The Congress shall have power to lay and collect taxes on incomes, from whatever source derived without apportionment among the several States, and without regard to any census or enumeration.

The passage of the Payne Aldrich act marked a turning point in the fortunes of the Republican party. Nineteen Republicans had opposed this party measure in the House seven in the Senate, and it was soon evident that their course was widely approved by the people especially in the Middle West. It did not appear that any real attempt had been made to revise the tariff in accordance with the pledges of the party platform. The President failed to understand the temper of the country. He declared on signing the bill, that it was a sincere effort to make a downward revision, and again somewhat later that it was "the best customs law that has ever been passed". His attitude separated him from the progressive wing of the party, creating the impression that he had become dominated by reactionary influences. The breach became still wider when he laid before Congress on January 26 1911 a Reciprocity Agreement with Canada which required legislative adoption by both countries. The agreement provided for the free exchange of all primary food products and a reduction of duties upon secondary food products and certain manufactured articles. The progressives denounced it as a discrimination against the farmer; he would receive no real relief from the extortions of American trusts while having to meet the competition of Canadian food stuffs. Opposed by the progressives for one reason and by the high tariff Republicans for another the Tariff bill failed in the Senate and though the President carried it through the Sixty second Congress in the spring of 1911 he had to rely mainly on the Democrats. His measure for reciprocity with Canada with which he had expected to recover the prestige lost in 1909 still further irritated the Northern farmers. As a climax to this bitter disappointment the Canadian Parliament withheld its consent as a result of the election of 1911 (see CANADA) the ever present fear of absorption by a powerful neighbour weighing heavily in the decision.

When the Sixty second Congress convened in 1911 popular disapproval of the Taft administration was written large in the altered composition of the houses. The Democrats had a majority of sixty seven in the House of Representatives and were only eleven votes below the majority in the Senate. For the first time in fourteen years they had broken Republican control of Congress. They had also wrested seven states from the Republicans electing the governor in Maine for the first time in thirty years and in New York for the first time in eighteen. Since their campaign had been conducted on the tariff issue they clearly had received a mandate to proceed with the work of revision. Led by Oscar W. Underwood<sup>1</sup> chairman of the committee of Ways and Means and combining with the progressive Republicans in the Senate they carried through Congress in the special session of 1911 a 'farmers free list bill' (August 1) which removed the duties from certain manufactures and food products a bill which made considerable reductions in the duties on wool and woollens and a bill cutting in half the duties on cotton goods. All three the President vetoed condemning them as empirical and haphazard and holding that Congress should not touch the wool schedule until it received the report of the tariff board. In 1912 he followed the same course vetoing reductions in the wool cotton and metal schedules, and the Democrats could not command the necessary majority of two thirds in the Senate to override the veto. The Senate, in fact, rejected House bills revising the chemical schedule and placing sugar on the free list. Though protesting indignantly the Democrats were not sorry to have so definite an issue to present to the electorate in the presidential campaign.

All through his administration President Taft vigorously enforced the Sherman anti trust act which was passed in 1890 to protect interstate commerce from restraint

<sup>1</sup> Underwood (b 1862) a native of Kentucky and educated at the University of Virginia had represented the 9th Alabama district in Congress since 1895. He was chairman of the state Democratic campaign committee which drafted the constitution of Alabama adopted in 1901. In 1911 W. J. Bryan in his weekly *The Commoner* charged that Underwood prevented the revision of the steel and iron tariff schedules because he was interested in the iron industry in Alabama. Underwood denied this, and in spite of the public break with Bryan retained the party leadership in the House which he had assumed that year.

and monopoly (see *E B* xiv, 713a) On May 15, 1911, the Supreme Court gave a new interpretation to this act, distinguishing for the first time in a majority opinion between reasonable and unreasonable restraint Chief Justice Edward D. White<sup>1</sup> asserted the doctrine that combinations were illegal only when exercising an unreasonable restraint upon trade or when their direct and necessary effect ' was to stifle competition. Although Justice John M. Harlan sharply dissented from the opinion, pointing out that the court had expressly rejected the ' rule of reason ' fifteen years before, yet he joined his eight colleagues in decreeing the dissolution within 6 months of the Standard Oil Company (May 15) and the American Tobacco Company (May 29) Shortly afterwards these great corporations dissolved into their component parts But the belief widely prevailed that their obedience to the court decree was only colourable Justification of this view appeared in the suit which the government brought against the Standard Oil Companies of New Jersey and New York, August 29, 1912, charging conspiracy to ruin the business of the Pierce Fordyce Oil Association of Texas and in the proof adduced by proceedings in the state of Missouri, that control over the Waters Pierce Company still rested with John D. Rockefeller and his associates of the Standard Oil Among Republicans there now began to appear a definite cleavage of opinion as to the best methods of dealing with the trusts President Taft wished to secure competition without monopoly He expressed satisfaction with the Sherman act suggesting that amendments be adopted defining improper acts of restraint or monopoly as criminal offences Mr Roosevelt on the other hand, regarded as chimerical the attempt to regulate trusts by means of a succession of lawsuits He wished to have an administrative commission which would supervise other interstate corporations very much as was already being done in the case of railroads This would preserve the advantages of large-scale production and give certainty to business In the presidential campaign this question though overshadowed by the tariff issue was much discussed The Democrats with their *laissez-faire* notions, differed radically from Mr Roosevelt denouncing his scheme for a commission as state regulation of monopolies and emphasizing the function of the states in dealing with the problem They also differed from Mr Taft in wishing to reverse the interpretation which the court had placed upon the Sherman act

During 1910-12 important questions came to the front with respect to the control of railroads. In 1911 the conflict between national and local authority became acute

**Control of railroads.** By court decisions severe restrictions were placed upon the states The Supreme Court held that the equipment of a railroad which conducts an interstate business comes exclusively under the jurisdiction of the Inter

state Commerce Commission, even in the case of cars moving entirely within the boundaries of a single state The circuit court at St. Paul held invalid (April 21, 1911) a Minnesota law fixing the passenger rate at two cents a mile, the ground being that, while the law applied only within the state it nevertheless discriminated against interstate passengers who had to pay a higher rate Against this decision, as an encroachment upon state rights the state governors protested on the occasion of their annual conference at Spring Lake, New Jersey, on September 12, 1911 In April, 1912, when the case came before the Supreme Court on appeal, three of the governors presented briefs The decision, which will have far reaching effects, had not been handed down in February 1913 In 1910 Congress adopted an amendment to the Interstate Commerce act This extended the jurisdiction of the Interstate Commerce Commission to telegraph and telephone companies increased its powers in fixing rates created a commerce court to review its orders and authorised the President to create a board to investigate railroad capitalisation The new Commerce Court proceeded in a series of decisions, to override the Commission, only to have several of the decisions reversed in 1912 by the Supreme Court which criticised it for exceeding its powers Public

<sup>1</sup>Edward Douglass White (b. 1845) a native of Louisiana, a Democrat and a former Confederate soldier, had become a justice of the Supreme Court in 1894 and in Dec. 1910 was appointed Chief-Justice. He had served in the U. S. Senate in 1891-94.

suspicion of the court was reflected in the refusal of Congress to authorise any grant for its maintenance until the President had twice returned the general appropriation bill for 1913 without his signature. Against one of the judges, Robert W. Archbald who was charged with having used his position to secure favours from litigants, impeachment proceedings were brought (see below). The Railroad Securities Commission reported in December 1911 that it would be impracticable to place the issue of railroad securities under Federal control, it recommended full publicity under the supervision of the Interstate Commerce Commission, with power to make physical valuations.

Almost from the beginning of the Taft administration its attitude toward the conservation of natural resources was bitterly assailed. This was one of the chief circumstances which alienated the progressive wing of the Republican party from the President. In 1909 the Chief Forester Gifford Pinchot<sup>1</sup> attacked the good faith of Mr. Ballinger,<sup>2</sup> Secretary of the Interior, accusing him of being opposed to conservation and of supporting fraudulent claims to Alaskan coal lands. The charges were investigated by a Congressional committee. The majority report, laid before Congress in December 1910, completely exonerated Mr. Ballinger as "a faithful and efficient public officer" but being dictated apparently by partisan motives the report had no substantial effect upon public opinion. On March 6, 1911, Mr. Ballinger resigned the victim the President said of "one of the most unscrupulous conspiracies for the defamation of character that history can show." He was succeeded by Walter L. Fisher,<sup>3</sup> a pronounced conservationist. Nevertheless criticism of the land policy of the administration continued in one case taking the form of unjustified imputations against the President and his brother in connection with the sale of land on Controller Bay, Alaska, to a coal mining syndicate. See ALASKA.

The principle of conservation may apply not only to natural resources but also to the people themselves and to the processes of government. The phenomenal increase of labour legislation shows that men have come to realise the social peril of the old *laissez faire* attitude. Down to 1911 only three states had enacted workmen's insurance or compensation laws and in two of these cases (Montana and New York) the courts, adhering to an ancient doctrine, held the acts unconstitutional as taking property without due process of law. In the past two years on the other hand fourteen states have taken action. Similarly with reference to child labour, laws were passed in 1911 by thirty of the forty-one legislatures then in session and the next year by eleven out of twenty. Among the other subjects covered in 1912<sup>4</sup> were the reporting of industrial accidents and diseases, woman's labour, wages, and hours of labour. In Massachusetts a commission was established with power to establish wage boards in any industry in which it may appear that the wages received by women are insufficient to supply them with necessities and maintain them in health but the boards may simply recommend a minimum wage and publish the names of

<sup>1</sup> Pinchot (b. 1865) graduated at Yale in 1889 and after studying forestry in Europe devoted himself to this subject, doing the first systematic forestry work in the United States at Biltmore, North Carolina, in 1892. He was Chief of the bureau of forestry, U.S. Department of Agriculture, in 1898-1910 and then became president of the National Conservation Association. In 1903 he became professor of forestry at Yale. He and his brother Amos were deeply interested in radical reform movements and in the 1912 presidential campaign supported La Follette and then Roosevelt. He wrote much on forestry including the article "Forests and Forestry" in the 11th edition of the *E. B.*

<sup>2</sup> Richard Achilles Ballinger (b. 1858) a native of Iowa graduated at Williams College in 1884, practised law in Kankakee, Illinois, New Decatur, Alabama, and Port Townsend and (after 1897) Seattle, Washington, was mayor of Seattle 1904-06, and Commissioner of the Federal General Land Office 1907-09 and became Secretary of the Interior in President Taft's cabinet March 4, 1909. He wrote on *Community Property* (1895) and edited and annotated the Codes and Statutes of Washington (1897).

<sup>3</sup> Fisher was born in Wheeling, West Virginia, in 1862, studied at Marietta College, Ohio, and Hanover College, Indiana, was admitted to the bar in 1888, practised law in Chicago where he was special traction counsel in 1906-11 and was an officer of the Conservation League of America, of the National Conservation Association, etc.

<sup>4</sup> See separate state articles under *Legislation and Government*.

employers who refuse to adopt it. Federal legislation is notably increasing in volume. In 1912 the manufacture of poisonous phosphorus matches was prohibited (April 9) by an exercise of the taxing power, a commission established to examine into the relations between capital and labour, and the scope of the eight hour and accident compensation laws applying to government employees enlarged. The welfare of wage earners received unusual attention in the presidential campaign on account of the position accorded it in the platform of the Progressive party.

The sentiment against intemperance has been growing rapidly in the United States. A systematic agitation has given wide publicity to the economic waste and the social evils which it entails. At this time, by state or local action, the sale of liquor is prohibited in two thirds of the whole country and among nearly half of the population. That the prohibition movement made no great progress and suffered no reverses in 1912 may be set down to the fact that it was a presidential year and that the people were occupied with other questions as may be seen from the losses of the Prohibition party in the 1912 campaign partly to the Progressives. In New York the members of the legislature fearing to compromise themselves, made no concessions either to the liquor interests or to their opponents. In the November elections however, the state of West Virginia went 'dry' by a large majority (92 342). It is also worthy of mention that several railroads in Pennsylvania urged by the anti saloon league of that state discontinued serving drinks on their dining cars that in Illinois (q v) certain railways did the same thing because of local prohibition and that the Southern Pacific Railroad began the construction of recreation houses along its lines with the idea of keeping its employees away from the saloons. The new movement in politics which looks to the elimination of the boss and his corrupt affiliations will help the prohibition cause. Hitherto the control which the bosses have exercised over the government, and the liquor men over the bosses has resulted in a general defiance of the law and a popular saying that 'prohibition does not prohibit'. It is also true that under Federal law liquor may be shipped from wet states into 'dry' states and that the state authority may assume jurisdiction over it only when the original package (see *E B* xx, 273) has been broken or its contents have left the hands of the consignee. In February 1913 a bill to do away with this immunity was vetoed by President Taft but was immediately passed over his veto.

Health laws are another phase of conservation. Not only have the states been seriously backward in legislation but enforcement has been still more lax. Unfortunately the great hope which was placed in the Federal Pure Food and Drugs act of 1906 has not been altogether realised. By a decision of the Supreme Court May 29 1911 (*U S v Johnson*), it was held that extravagant claims might be made for worthless patent medicines without any contravention of the act. Apparently the Secretary of Agriculture was not in sympathy with its strict enforcement. The intrigues against Dr H W Wiley<sup>1</sup> chief of the bureau of chemistry, attracted public attention in 1911. When he resigned (March 15 1912), he announced that conditions in the department made it impossible for him to remain. There was a general feeling that the President should have intervened to eliminate the influences which drove Dr Wiley out.

<sup>1</sup> Harvey Washington Wiley was born in Kent Indiana in 1844 graduated at Hanover College in 1867 Indiana Medical College in 1871 and Harvard in 1873. He taught Latin and Greek in Butler College Indianapolis in 1868-70 from 1874 to 1883 was state chemist of Indiana and professor of chemistry in Purdue University and from 1883 to 1912 was chief chemist of the U S Department of Agriculture. His opposition to the use of benzoate of soda as a food preservative aroused the hostility of certain food packers and a chemistry board (of experts) was appointed which disagreed with him in regard to the injurious effects of this preservative. On July 13 1911 the Attorney General recommended Wiley's dismissal on the ground that he had employed at a rate higher than the legal *per diem* a consulting expert H H Rusby. President Taft sustained Dr Wiley in a letter of Sept 15 1911. An impression prevailed that the incident was the outgrowth of a personal quarrel between Dr Wiley and G P McCabe, solicitor and member of the personnel board of the Dept. Dr Wiley was succeeded in December 1912 by Dr Carl L. Alsberg.

The public conscience has also been much exercised over the prevalence of prostitution. In a number of cities careful investigations have been made, notably in Chicago where a commission has reported that there are more than a thousand houses of ill fame with an income of \$16 000 000. Congress, in 1910, passed a law which makes the transportation of women for immoral purposes a felony. Half the states have passed laws to combat the "White Slave" traffic.

Conservation in government is efficiency. This has been notoriously lacking in the United States. For example, it was stated by Senator Aldrich that the loose methods of the Federal government wasted \$300 000 000 every year. To remedy this President Taft appointed in December 1910 an Economy and Efficiency Commission which investigated the organisation and accounting systems of the departments. One of their recommendations that the President should submit an annual budget to Congress met with anything but a kindly reception among those numerous Congressmen who profit politically by the wasteful diversion of public moneys. Accordingly, in 1912 they reduced the salaries of the commissioners and provided in another bill that only the usual departmental estimates should be submitted. President Taft, however, took a different view of his powers and he made known his intention of sending his budget to Congress at the opening of the regular session. (See *Finance* above.) He showed the same commendable zeal in the improvement of the civil service. In several messages he urged that practically the entire Federal service with the exception of the cabinet officers and their assistants, should be placed in the competitive classified list and in October 1912 he classified all unclassified fourth class post masters and in December many skilled labourers in navy yards. By courageous use of the veto he prevented Congress from limiting the civil service tenure to seven years. Throughout the country there were marked advances in civil service reform during 1912 not only in the adoption of the merit system but in the recognition of the importance of taking higher administrative officers out of politics. Not less worthy of notice is the founding of numerous legislative reference bureaus and bureaus of municipal research. In New York, Philadelphia, Cincinnati and other large cities the methods of public accounting have been transformed and the most modern business practices have been introduced into the departments.

The increased efficiency of the Federal government is illustrated by the fact that the chronic deficit in the post office department<sup>1</sup> has been stopped and that Congress has been willing to entrust new functions to it. In 1910 a system of postal savings banks was established (see *E B* xxii 196), such post-offices as a board of trustees may indicate paying two per cent on deposits of from \$1 to \$500 or giving in exchange for the deposits government bonds which bear two and a half per cent interest. The trustees may place moneys in state and national banks under guarantee of certain prescribed securities. Put gradually into operation the system has worked splendidly. In May 1911 a limited parcel post for rural and city delivery routes was established effective January 1 1913. The maximum weight is eleven pounds and the charges beginning with five cents for the first and one cent for each additional pound vary with the distance. A large discretion in modifying the original regulations is left with the Postmaster-General acting under the control of the Interstate Commerce Commission. Agitation for the parcel post has been largely due to the excessive charges made by the express companies. In July 1912 however the Interstate Commerce Commission ordered a reduction of about fifteen per cent particularly affecting parcels under twelve pounds.

A few phases of American foreign relations deserve attention. In August 1911, as

<sup>1</sup> Many improvements in this department were due to the postmaster general Frank Harris Hitchcock (b 1867) who graduated at Harvard in 1891 was admitted to the bar in 1894, and was 1st assistant postmaster general in 1905-08. He managed Taft's presidential campaign in 1908 and was chairman of the Republican National Committee in 1908-09. Hitchcock's efforts to increase postal rates on periodicals brought on him and on the administration the sharp criticism of many popular and influential periodicals. The introduction of the parcel post system was opposed by the powerful express companies.

*Changes in  
the Post  
Office  
Department*

the result of suggestions made by President Taft, general arbitration treaties between the United States on the one side and Great Britain and France on the other were signed at Washington. Questions of national honour were brought within the scope of the treaties, all justiciable disputes which could not be settled by diplomacy were to be submitted to the Hague Tribunal or some other body. In some quarters the treaties were regarded as heralding the dawn of universal peace, in others as a dangerous step in advance of public opinion, likely to breed friction and misunderstandings. Mr. Roosevelt opposed them. The Senate committee on Foreign Relations asserted that they would rouse into malign and dangerous activity a series of disputes now happily set at rest. Amendments were adopted in 1912 which left the Senate free in each case to determine whether the matter were justiciable or not and which altogether excluded from arbitration under the treaty the alleged indebtedness of the states and other questions. Thus devitalised, the treaties remained unratified.

In the autumn of 1912 a controversy arose with England which remained unsettled at the end of the year but seemed likely to raise the question of arbitration in a concrete form. The matter at issue depended upon the interpretation of the Hay-Pauncefote treaty. Congress passed on August 16, 1912, a bill providing for the government and regulating the use of the Panama Canal. The bill empowered the President to fix and alter tolls admitted free of tolls American ships engaged in the coastwise trade gave the Interstate Commerce Commission authority to exclude ship lines financially affiliated with railroads, and admitted to free registry under the American flag foreign built ships owned exclusively by Americans. The English government protested while the bill was before Congress, urging that a subsidy calculated especially with reference to the use of the canal would not be in accordance with treaty obligations and that it would be impossible to frame regulations for the exemption of ships in the coastwise trade which would not constitute a preference to American shipping and therefore an infraction of the Hay-Pauncefote treaty. President Taft however signed the bill. Opinion in the United States was sharply divided both on the question itself and on the procedure adopted but without doubt a large part of the American people held either that, as the President believed, the terms of the treaty were being observed or that the circumstances attending the construction of the canal were so different from those contemplated in the treaty that the treaty itself should be regarded as having practically lapsed.

American relations with the Latin American Republics have been complicated by revolutionary movements in Mexico, Nicaragua, Cuba, and elsewhere. So serious did the disturbances become in Mexico during the early part of 1911 that an army of 20,000 was for a time mobilised on the frontier to prevent violation of neutrality and protect American interests should occasion arise. Again a year later, several regiments had to be despatched to patrol the border and in September 1912, when armed bands of revolutionists came into conflict with the troops on American soil, the situation became exceedingly critical. Only the forbearance of President Taft saved the country from the perils of intervention. In May 1912 several hundred marines were hurried to Cuba, where a negro insurrection had assumed serious proportions. But again intervention proved unnecessary, President Gomez showing himself able to suppress the rebels. In October marines were landed in Santo Domingo to protect the customs houses, some of which had been seized by revolutionists. The collection of the customs revenue on that island has been supervised by agents of the United States Government for the past five years. In order to restore the finances of Honduras and Nicaragua in the same way President Taft negotiated treaties with them in 1911, under which the United States would make arrangements for a loan, supervise the customs service, and apply a certain part of the receipts to the payment of the foreign debt. Although the Senate refused to ratify the treaties, some of their provisions were carried out informally, an American being placed in charge of the Nicaraguan customs and a considerable loan being made by American bankers.

During the summer of 1912, 2 500 marines were sent to Nicaragua to protect the lives and property of Americans, they took part in several engagements.

In December 1911 the treaty of 1832 with Russia was abrogated because of the refusal to give proper recognition to the passports of American Jews in Russia.

The high cost of living has naturally led to demands for increased wages and to labour disturbances throughout the country. Acts of violence attended many of the

strikes. Early in 1912 some 25 000 operatives employed in the mills of Lawrence Massachusetts left work on account of a reduction in wages following the passage of a state law which limited the hours of labour.

The strike ended with the concession of higher wages but not before the militia had been ordered out and some bloodshed had occurred. In this struggle the operatives were led by a new organisation known as the Industrial Workers of the World. This organisation though it has been in the public eye little except in 1911-12, dates further back. Its prototypes were the Knights of Labor, the Western Federation of Miners which struck in Idaho in 1899, the American Railway Union, which carried through the great railway strike of 1894 and, in form the United Mine Workers. Each of these attempted to unite all the workmen skilled and unskilled in an industry. As a result of a conference of six active labour leaders in the autumn of 1904 the Industrial Workers of the World with Debs of the American Railway Union and Haywood of the Western Federation of Miners attempted to organise the workers of all industries and in January 1905 published an Industrial Union Manifesto. There was a serious split in the Industrial Workers of the World in 1906, when the radicals broke with the officials whom they accused of too great conservatism but who kept control of the organisation. The Goldfield strike of 1907-08 (see *E B* xii 210) centered about the I W W. In 1909 there was another schism. Daniel De Leon (b 1852), a member of the Knights of Labor in 1888-95 and a leader in the Socialist Trade and Labor Alliance from 1895 to its fusion (1903) with the I W W founded an indirect (or political)

action branch with headquarters at Detroit which is very different from the direct action policy of the Chicago School. There is the bitterest feeling between the two branches,—almost as strong as their enmity to the trades unions. The Detroit branch nearly coincides with the Socialist

Labor party of which also De Leon is the leader. The Chicago branch would probably have amounted to little had not William D Haywood been disowned early in 1908 (after his acquittal on the charge of murdering Governor Steunenberg) by the Western Federation of Miners. He thereupon devoted himself to the I W W. In 1909 the organisation engineered the McKees Rocks (Penn.) strike of the workers of the Pressed Steel Car Company including 16 nationalities where success was largely due as in 1912 in Lawrence Massachusetts (*qv*) to the arousal of public sympathy partly because of gross errors of the authorities in dealing with the trouble. In 1911-12 the workers campaigned for 'free speech' in Oregon and California (*qv*).

There are two national unions the Textile and the Lumber affiliated with the I W W and its appeal has been to the lower paid and more unskilled workman the newer immigrant and—in its free speech propaganda on the Pacific Coast—to the tramp. The basic principles of the I W W are that 'the working class and the employing class have nothing in common' and that between them a struggle must go on through the organisation of all 'the members of all industries if necessary until capitalism is overthrown and the wage system abolished. It considers a strike a mere incident in a prolonged warfare to be followed when strikers return to work by sabotage 'ie idling at work the British 'ca' canny' and various ingenious methods of spoiling the machinery business market, etc. of the capitalist employer. The question of right and wrong is not to be considered. No agreements with an employer are sought and none are final.

The dynamiting work of the McNamaras and their associates (see CALIFORNIA and INDIANA) was done not by members of the I W W, but by officials of unions affiliated with the American Federation of Labor which the I W W has always opposed.

In the American Socialist party, the leaders Debs and Haywood were founders of the I W W. Besides Haywood, two other members of the Executive Committee were in sympathy with the I W W, but the other four Victor Berger (former Congressman from Wisconsin), John Spargo, the author, Morris Hillquit, the historian of Socialism, and Job Harriman late candidate for mayor of Los Angeles, were opposed to it.

In the 1912 convention of the American Federation of Labor at Toledo Ohio, on November 20, delegates from the United Mine Workers introduced, and those from the Western Federation of Miners supported, a resolution approving industrial organisation, the scheme of the I W W. The resolution was defeated two to one, but it is important to note that there is a movement of some strength in this craft organisation for a general industrial organisation of the I W W type, which the Federation has always opposed. The I W W has six publications at the present time. It has "National administrations" in Hawaii Australia New Zealand and South Africa.

Dissatisfaction with the economic conditions in the country and with the failure of the great political parties to face them seriously has greatly strengthened the Socialists.

*Socialism  
and labor  
unions.*

In 1910 they cast 605 000 votes, a gain of nearly 200 000 over 1908 and in 1912 the Socialist vote for president was large (about 896 000), although the new Progressive party made its appeal on a somewhat socialist programme. In 1911 they had 392 elected officials including the first socialist Congressman Victor Berger (defeated in 1912) 18 legislators in five states 32 mayors (including Emil Seidel of Milwaukee and G. B. Lunn of Schenectady) and 341 minor officials. On the other hand the Socialist Labor party with much more radical principles has steadily diminished in popular strength.<sup>1</sup> The trade unions have been increasing in number and in membership. The American Federation of Labor had at the end of 1912 an enrollment of 1 841 268 and, during the year 260 certificates of affiliation had been issued to unions. Injury was done to the labour cause in 1911 however, by the discovery that numerous dynamiting outrages had been planned and executed by men connected with the International Association of Bridge and Structural Ironworkers (see CALIFORNIA INDIANA).

These outrages, extending over two years culminated in the loss of 21 lives by the destruction of the Los Angeles Times building in October 1910. Their purpose was

*The  
McNamara  
case.*

to discourage the use of non union materials and the employment of non-union labour. Ortie McManigal, who turned state's evidence James B. McNamara, and J. J. McNamara secretary of the Association were indicted. The American Federation of Labor warmly espousing their cause collected a large sum of money for the defence and placed a committee in charge. In December 1911 before the tedious process of selecting the jury had been completed the McNamaras confessed. They were sentenced to imprisonment for life and for fifteen years respectively. Their attorney Clarence Darrow was afterwards brought to trial for attempting to bribe a prospective juror but acquitted. At the end of 1912 he was awaiting trial on another similar charge. As a sequel to the McNamara case forty five officials or former officials of the Association were brought to trial at Indianapolis in October 1912, upon the charge of conspiracy to transport explosives from state to state upon passenger trains. One of the defendants pleaded guilty. As the trial advanced there was unfolded a remarkable story of criminal machinations and eventually a verdict was returned for the prosecution.

During the past two or three years the growing alertness of public opinion has been illustrated by the exposure of political corruption in all parts of the country and in the electorate as well as in the government service. One of the most disturbing revelations occurred in Adams county, Ohio, where, largely on the testimony of political workers who turned state's evidence, more than a quarter of the electorate were convicted of selling their votes. They were sentenced to a fine and disfranchisement for five years. Judge Blair who conducted

<sup>1</sup>The vote for Reimer Socialist Labor candidate for president in 1912 was less than 40,000.

the inquiry declared that similar conditions prevailed in other parts of Ohio and in neighbouring states. In the same year 1911, detectives employed by a citizens committee found evidence which led to the indictment of nineteen members of the Ohio legislature on charges of accepting bribes and up to the end of 1912 the sergeant at arms and one senator had been convicted. In Illinois (qv) the confession of several members of the legislature indicated that William Lorimer had been elected to the United States Senate in 1900 by the use of bribery and for over two years progressives of both the leading parties made a determined effort to have the election invalidated. The Senate first decided in March 1911 that there was no evidence to connect Lorimer with the bribery and that even without the votes known to be tainted he had been elected by the proper majority. This decision was generally regarded as a set back for the cause of clean government. In deference to public protests and in view of the disclosure of new evidence the case was reopened. In May 1912 the investigating committee reported once more in favour of Lorimer but two months later the Senate voted to unseat him. Senator Stephenson of Wisconsin (qv) who admitted spending more than \$100 000 in his primary campaign was allowed to keep his place. Instances of municipal corruption have been revealed in Detroit Pittsburg New York and other cities. In New York (see NEW YORK) the murder of a gambler who was about to expose the system of police graft led to the indictment of four gunmen for the actual shooting and of a police lieutenant named Charles Becker as the instigator of the crime. In trials which were remarkable for the absence of the usual delays and technical rulings Becker was convicted in October 1911 and the four gunmen in November. An investigation of the police administration conducted by the board of aldermen disclosed some facts of a disquieting nature and the mayor by way of a counterblast charged members of the board with corruption in the granting of licences.

While the probity of judges is not often impugned in the American press it is well enough known that they sometimes pay large sums for their nomination and that their decisions sometimes show a tender regard for corporations. *Corruption and obscurantism in the courts* Recently the courts have been criticised with unusual freedom. Mr Roosevelt has been chiefly instrumental in directing public sentiment against the corrupt or merely obscurantist action of certain courts in erecting constitutional barriers to the enactment of necessary social legislation. Surely it is pertinent to ask why the court of appeals in New York should be allowed to prevent the legislature from enacting an employers liability law such as the Supreme Court of the United States has declared valid under the due process of law clause of the Federal Constitution. In 1912 two Federal judges were involved in scandals. The House of Representatives presented to the Senate in July articles of impeachment against Judge Robert W. Archbald (b. 1848) of the commerce court the charges relating generally to business transactions with railroad companies at times when the companies were litigants before his court or the Interstate Commerce Commission. The trial before the Senate began in December 1912 and he was found guilty early in 1913. The House also investigated the conduct of Cornelius Hanford a district judge in the state of Washington who was charged with a long series of corrupt and unlawful decisions and with being guilty of intemperance. Threatened with impeachment he resigned. The public are also showing increasing impatience with the delays of justice and the technicalities of procedure. The widespread recognition of this evil will undoubtedly bring substantial reforms within the next few years. Congress however, has as yet made no response to the demands which the President has frequently made for legislation upon this subject. Late in 1912 the Federal Supreme Court made important changes in its rules of procedure.

The existence of corruption is coming to be recognised as one of the chief obstacles to social and political advancement. The men who have felt this most strongly believing that the sinister alliance between business and politics must be terminated and that the people must resume control of the government have been styled 'progressives'. There have been progressives within both the Republican and Democratic parties,

but the movement within the Republican party is more interesting because it led to a definite political schism in 1912 and the formation, under Mr Roosevelt's leadership of a new National Progressive party. The creed of the insurgent or progressive Republicans was not well understood at first, even by themselves. *Rise of the Progressives* But early in 1911, Senator Jonathan Bourne Jr., of Oregon (see OREGON) with Senator Robert M. LaFollette (b. 1855) of Wisconsin (see WISCONSIN) and various radical members of both Houses of Congress, formed the National Progressive Republican League. It formulated a definite programme and gave coherence to the aims of the progressives. The essential feature of that programme was popular control of the government and thus it designed to establish by various methods

It advocated the direct primary. Either by mandatory or by optional laws or else by party rule the system has, in some form, made its way into all but half a dozen of the states sweeping away the old nominating conventions and substituting an election within each party. *The direct primary* The object is to eliminate the boss to bring the plain citizen into participation and to let the voice of the majority govern in the choice of candidates. Names are placed upon the primary ballots by petition although in some states (as New York) the party committees may make designations and have them appear under the party emblem. It cannot be said that experience has demonstrated the superiority of this plan over the simpler arrangements which prevail in Canada and England. The number of signatures required for the petition and the limited time allowed for circulating it sometimes handicap poorer men or men who are not backed by an active organisation. It is also true that where a man must make a declaration of party affiliation in order to enter the primary the secrecy of the ballot is impaired, and where no test is exacted, the primaries may be flooded by voters from other parties. But whatever the defects it has at least met with popular approval, and it has enabled the people in striking instances to drive out the disreputable element and assume control.

The selection of the presidential candidate of the party has come within the scope of the direct primary. In 1910 Oregon took the lead in prescribing the choice of delegates to the national convention by that method. A considerable number of the other states followed suit and in their platform of 1912 the Democrats arranged for the holding of primaries for the choice of delegates and national committeemen even where there were no state laws providing for them. It was in Oregon also that voters were first permitted to express their choice for President directly. So keen was the interest in the primary campaign of 1912 within the Republican party that thirteen other states—all but one of them in the North—provided for the presidential preference vote legislation which had a decisive effect upon the future of the Republican party. There are objections to this plan. The delegates would be morally bound to vote as a unit in accordance with the expressed will of the majority in the state, and the unit rule in national conventions promotes deadlocks and boss control. Senator Albert Baird Cummins of Iowa (see IOWA) therefore introduced into Congress a bill establishing a national presidential preference primary, but it met with scanty support. As the new practice spreads national conventions will do little more than register the popular verdict.

The Progressives also advocated the direct election of United States senators against the present system of choice by the state legislatures. This would improve the personnel of the Senate and save the legislatures from prolonged deadlocks. *Direct election of U. S. senators.* But it would also have the disadvantage of strengthening the Senate and thus accentuating the dispersion of power in the American system of government. The reluctance of Congress to initiate the necessary amendment to the Constitution has led to the adoption under state law of practices which actually violate the spirit of the Constitution. By the rules of the Democratic party throughout the South, and by statute in eight Northern states, a moral obligation rests upon the members of each party in the legislature to vote for the party candidate success

ful in the primaries. Ten Northern states have adopted the 'Oregon plan,' under which each candidate for the state legislature must stipulate whether he will follow implicitly the popular choice for senator expressed in the general election. Thus in 1909 the Republican legislature in Oregon felt constrained to choose a Democrat. In response to the general demand a resolution providing for the popular election of Senators was brought into the Senate in July 1911. Apparently in the hope that the measure thus amended would be beaten by Democratic votes an amendment was adopted giving the national government supervision over such elections. The Southerners took alarm, fearing the enfranchisement of the negro. But though they managed to defeat the resolution twice in 1911, they accepted it in 1912 believing that the Federal government would not assert its right to control the elections. This proposed 17th amendment was ratified by Massachusetts May 22, Arizona, June 3, and Minnesota June 12 1912 and by several states early in 1913.

A determined effort is also being made to prevent the lavish use of money in the elections, especially the money of corporations which not infrequently subsidise both

*Corrupt  
Practices  
acts.*

the leading parties in order to make doubly sure of favourable consideration afterwards. The legislation on the subject is for the most part very recent. The Federal law of 1907 prohibits all corporations from assisting candidates for national office and all corporations chartered by the United States from making any campaign contribution whatever, the law of 1910 requires publicity in the case of expenditures made by individuals and organisations which take part in the Federal election campaign in two or more states and the law of 1911 requires publication of the accounts of candidates for Federal office before and after the primaries and elections and limits to \$10 000 and \$5 000 respectively the amounts which candidates for the Senate and the House may spend personally. More than three quarters of the states have passed campaign publicity laws. Of these 21 prohibit corporations from contributing and require the publication of accounts after the primaries as well as after the election. About the same number of states limit the amount of expenditures, either by fixing a definite maximum for each office or a percentage of the first year's salary or a sum varying with the number of votes cast for the office in the last election. The Wisconsin law of 1911 is considered very complete. In conformity with the most approved tendency it enumerates the purposes for which expenses may be incurred instead of merely forbidding as state laws used to do certain specified acts such as intimidation and bribery. Candidates and their agents must both file itemised statements. An interesting feature is the publicity pamphlet published by the state and sent to all voters in which candidates may print their biographies and indicate the policies for which they stand.

None of the reform ideas promise more for the improvement of American politics than the Short Ballot principle. The multiplication of elective offices which took place

*The short  
ballot.*

toward the middle of the nineteenth century has overburdened and confused the voter, making him accept the straight party ticket without considering the merits of the candidates. Some of the primary ballots in New York in 1912 were fourteen feet long. It is now proposed to strike at the power of the political boss and the political machine by placing in the hands of the voter a ballot which he can mark more simply and intelligently. In state government the tendency is to bring the administrative officers directly under the control of the governor thus centring executive responsibility and power. California has eliminated two officers from the elective list. Illinois, Ohio and New York are expected to follow suit. A beginning has also been made toward the reform of county government along the same lines. The short ballot idea was endorsed by the three leading candidates for president in 1912. The idea has won its chief success however in the adoption of what is known as commission government. Up to the end of 1912 more than 200 cities in thirty four states had substituted for the mayor and council a small board elected on a general ticket and wielding both executive and legislative power. Recently two large cities, New Orleans and St. Paul, have adopted this form of government.

Whether or not the small board will be permanently retained, respect for two cherished American theories has been seriously impaired—the election of both political and administrative officers and the separation of executive from legislative power.

In view of the attitude taken toward the question in the campaign of 1912, woman suffrage may be regarded as another of the Progressive principles. Presumably it has a bearing upon the movement for the uplifting of politics. Down to 1912 women enjoyed a limited suffrage, chiefly in relation to the schools, in twenty three states, and full suffrage in Colorado, Idaho, California, Utah, Washington, and Wyoming. In that year proposed constitutional amendments conferring the privilege were defeated in Ohio, Michigan and Wisconsin but ratified in Arizona, Kansas and Oregon. The nine suffrage states cover about a quarter of the entire Union and contain nearly three million women of voting age. During the presidential campaign the National Progressive party incorporated a woman suffrage plank in its platform, in five states all the parties did so.

The direct primary, the corrupt practices acts and other reforms are calculated to improve the quality of public officers. A process of rehabilitation is going forward.

But meanwhile state legislatures and even executive officers far from enjoying prestige, are viewed popularly with a profound distrust. This is shown not only in the marked tendency to restrict their powers but also in the assumption by the people of a more immediate share in government. No political phenomenon of the time is more significant than the spread of the Initiative, Referendum and Recall. Under the Initiative measures may be submitted to popular vote on the petition of a varying proportion of the voters (usually eight or ten per cent) under the Referendum statutes passed by the legislature may be subjected to a popular vote upon the petition of a smaller proportion of the voters, under the Recall, the plebiscite may be invoked to determine if the people wish to remove a particular official and to effect such removal. In 1912 the Initiative and Referendum were adopted in Ohio, Mississippi, Nebraska and Washington thus making a total of fifteen states which employ this method of direct legislation. Three other states have partial systems, Wisconsin and North Dakota will vote upon the question in 1914. The Recall has not spread so widely. Oregon adopted it in 1908, California in 1911, Arizona and Washington in 1912. North Dakota and Wisconsin will decide in 1914 whether or not to adopt it. In Oregon, California, and Arizona the recall extends even to judges. Conservative men have denounced this as a fatal impairment of judicial independence. When, in 1911, Arizona (*q.v.*) applied for admission to statehood the veto of President Taft forced the provision for the recall of judges out of the constitution but, on acquiring statehood, Arizona took the first opportunity to restore it. In view of the reactionary decisions which the courts have so often given and of the political power which they wield in interpreting general clauses of the constitution the demand for a popular check upon them has increased. Mr. Roosevelt suggested in 1912 the recall of judicial decisions<sup>1</sup> instead of the recall of judges, the people being allowed by plebiscite to determine whether a statute, pronounced invalid, should nevertheless become law under the state police power. This proposal appears to many to preserve judicial independence and open the way for social legislation.

The rapid progress in the adoption of the Initiative, Referendum, and Recall illustrates the growing impatience with constitutional restrictions and with "the check and balance system." There is no country in the world of Western civilization where so many obstacles are raised as in the United States to the enactment of social legislation. Not only must executive and legislature agree, but the courts must consent to an interpretation of the supreme law which will recognise the validity of an Act. Now, although the votaries of popular government will not admit it, their proposals are destined to work a fundamental change in American institutions. Not that the legislature will be supplanted, experience in

<sup>1</sup> In 1912 Colorado adopted a constitutional amendment for a popular recall of decisions by the state supreme court that laws were unconstitutional.

referendum  
and recall.*

*The decay  
of constitu-  
tionalism*

Oregon has shown that the radicals are really bent on rehabilitating the legislature.<sup>1</sup> But the distinction between constitutional and statutory law, which is a unique feature of the American system, is bound to break down. Already state constitutions have lost in substance, in many states, the character of constitutional law: they have become little more than bundles of statutes distinguished from other statutes only in name. The distinction in method of adoption is also breaking down, under the Initiative and Referendum in several states precisely the same method may be followed in amending the constitution or in passing ordinary laws. Will the judges care to say, especially with the Recall looming ahead, that a statute adopted directly by the people yesterday must give way to some vague provisions of the so-called fundamental law adopted a generation ago?

The effect of the popular propaganda was abundantly seen in the primary campaign for the presidential nomination. As delegates to the convention were to be chosen by direct vote in a considerable number of states and as a presidential preference primary had been established in twelve of them, the various aspirants of both parties showed a deference to public opinion quite unusual at such an early stage in the campaign. To an unprecedented extent they travelled about the country making speeches: enormous quantities of literature were circulated; money was spent with as much profusion as in the regular election campaigns. This was mainly due to the contest for control of the parties by conservatives and progressives. Senator LaFollette had come forward in December 1911 as the progressive candidate against President Taft, but following his temporary collapse in February the governors of seven states united successfully in urging Mr. Roosevelt to accept the progressive leadership. It was felt that he alone could have good prospect of defeating the President for the nomination and of saving the party from disaster in the election. By the Democrats and by the conservative Republicans he was assailed for ignoring the tradition that the presidency should not be held by any man for more than two terms and he was charged with ignoring a specific pledge (differently interpreted by Mr. Roosevelt and his opponents) made by Mr. Roosevelt in 1904, upon being elected to the presidency, that he would under no circumstances accept a renomination—meaning, according to his followers, that he would not accept a nomination in 1908. That these attacks carried little weight with the people was evident from the fact that Roosevelt secured the great majority of those delegates who were elected directly, and completely outdistanced Taft in the preference vote. The latter denounced the progressives as emotionalists and neurotics who would hurry us into a condition which would find no parallel except in the French Revolution.<sup>2</sup> With Mr. Roosevelt he had a bitter exchange of personalities and some thought that his participation in the campaign had impaired the dignity of the presidential office. Within the Democratic party the prominent candidates were Oscar W. Underwood, leader of his party in the House of Representatives; Speaker Champ Clark, a man of great popularity rather than of intellectual distinction; Governor Judson Harmon of Ohio; and Governor

<sup>1</sup> But see OREGON for the proposed (but defeated) constitutional amendment for a one chamber legislature.

<sup>2</sup> Champ Clark was born in Anderson county, Kentucky, March 7, 1850, studied at Kentucky University, Bethany College, and Cincinnati Law School, was president of Marshall College, West Virginia, in 1873-74, and was admitted to the bar in 1875, practising after 1880 in Bowling Green, Missouri. He was a Democratic representative in Congress in 1889-91, 1893-95, and since 1897, being minority leader in 1907-11 and becoming speaker in 1911. In 1904 he was permanent chairman of the Democratic National Convention.

<sup>3</sup> Harmon was born near Cincinnati on February 3, 1846, the son of a Baptist minister of New England descent. He graduated at Denison University, Granville, in 1866, and at the Cincinnati Law School in 1869. He was judge of the superior court of Cincinnati in 1878-88, attorney-general in Cleveland's cabinet from June 8, 1895, to March 5, 1897, and governor of Ohio since 1909. In October 1896 he argued the first great anti-trust case, the *Trans-Missouri freight case* (see *E. B.* xiv, 713d), and secured a reversal by the U. S. Supreme Court of a decision for the railway in the lower courts. Attorney General Moody retained him as special counsel in the *Santa Fe case*.

Woodrow Wilson <sup>1</sup> of New Jersey, formerly president of Princeton University whose political administration had been characterised by great vigour and independence, and whose reputation as a publicist stood very high Mr Bryan (see *E B* iv, 697) announced that he would not offer himself as a candidate, but his attitude toward the various aspirants was felt to be important. In a series of speeches he denounced Governor Harmon as "a reactionary and the choice of the predatory interests" saying that either Speaker Clark or Governor Wilson would meet with his approval.

As the primary campaign proceeded the public utterances of President Taft and Mr Roosevelt were marked by increasing bitterness and the irreconcilable differences between these leaders spread to the rank and file of the party. When the Republican convention met at Chicago on June 18 1912, it was evident that everything depended upon the decision of more than two hundred and fifty contests. Mr Roosevelt denounced as theft the action of the national committee in placing only 19 of his contestants upon the temporary roll.

But an appeal to the convention was lost by more than fifty votes and it was by about the same margin that the selection of Senator Elihu Root (see *E B* xxiii 711) as temporary chairman was made. When the committee on credentials decided against the seating of his contesting delegates Mr Roosevelt denounced their conduct as fraudulent and advised his followers to take no active part in the proceedings. Accordingly most of them sat in silent protest while the platform was adopted and the nominations made. President Taft received 561 votes on the first ballot or twenty-one more than the necessary majority. Vice President Sherman (see *Obituary* below) who was also renominated died a few days before the general election <sup>2</sup>.

The disruption of the Republican convention led to the birth of a new party which took the name of National Progressive and appealed for the support of Democrats and Progressives alike. Its convention was held in Chicago early in August. There Mr Roosevelt made a declaration of his political views which were received with enthusiasm and embodied in the platform. He was nominated for president, and Governor Hiram Johnson of California (see CALIFORNIA) for vice president. The convention was remarkable for several things: the absence of professional politicians; the prominent part taken by women and social workers, and the quasi religious fervor which pervaded it.

<sup>1</sup> Woodrow Wilson was born in Staunton Virginia on December 28 1856 the son of Joseph R. Wilson a Presbyterian clergyman and professor of theology. He graduated at Princeton in 1879 studied law at the University of Virginia and practised in Atlanta Georgia in 1882-83 and in 1886 received the degree of doctor of philosophy at Johns Hopkins University. He was associate professor of history and political economy in 1885-88 at Bryn Mawr and in 1889-90 at Wesleyan University where he acted for a time as foot ball coach. From 1890 to 1902 he was professor of jurisprudence and politics at Princeton of which he became president on August 1 1902. This position he resigned on October 20 1910 and in November he was elected governor of New Jersey (by 233 682 to 184 626 votes for Lewis Republican). As president of Princeton he attempted to democratise the University and aroused the opposition of many wealthy alumni by his criticism of the upper class clubs. In a controversy over the site and plan of a graduate school he argued for buildings on the present campus and the faculty and alumni were divided between him and Andrew Fleming West (b 1853) dean of the graduate school, who wished a separate campus for the elaborate graduate school he planned. At the age of twenty three Wilson had published in the *Inter national Review* (August 1879) the outline of his *Congressional Government* which appeared in 1885. His *The State* (1889) has become a standard work. He wrote besides *Division and Reunion 1829-1889* (1893) a short volume in a series on US history, two volumes of essays *An Old Master* and *Mere Literature* (1893) a life of Washington (1896) and a popular *History of the American People* (1902). As governor of New Jersey (qv) his administration was marked by legislative reforms and by the defeat of the machine element in the Democratic party. In 1912 he favoured the Initiative and Referendum which he had formerly opposed. See the biography (1912) by W B Hale; H E Hosford's *Woodrow Wilson and New Jersey Made Over* (1912) A L P Dennis in *Contemporary Review* Dec 1912 and W G McAdoo and Bliss Perry in *The Century* Mar 1913.

<sup>2</sup> The electoral votes of Utah and Vermont were formally cast for Taft for president and for Nicholas Murray Butler of New York (president of Columbia University) for vice president.

The cleavage between the conservative and radical wings of the Democratic party was clearly exposed when the national convention met at Baltimore on June 15. Although a conservative Alton Brooks Parker (b 1852, chief justice of the New York court of appeals in 1898-1904, Democratic candidate for the presidency in 1904) was chosen temporary chairman over Mr Bryan the latter's influence proved decisive in the choice of the permanent chairman and in the passage of a resolution attacking members of the party connected with Wall Street. Moreover the unit rule under which state delegations deliver a solid vote was modified so as not to apply to delegates elected by districts under state primary laws. The permanent chairman was Ollie M. James of Kentucky (senator elect representative in Congress since 1903), who was a lieutenant of Mr Bryan. It required forty-six ballots to select the presidential candidate. On the first, Clark had 440½, Wilson 324, Harmon 148, Underwood 117½, Marshall 31, Bryan 1. When on the tenth ballot the Tammany controlled New York delegation transferred its ninety votes from Harmon to Clark, Bryan declared that as long as that situation lasted he would withhold his vote from Clark. That declaration had much to do with the final success (on the 46th ballot) of Governor Woodrow Wilson. Governor Marshall of Indiana was nominated for the Vice Presidency. Among the minor parties, neither the Independence League nor the Populists put a national ticket in the field. The Prohibition party nominated Eugene W. Chafin (b 1852) of Arizona, its candidate in 1908 and Aaron S. Watkins (b 1863) of Ohio, candidate for governor in 1905 and for vice president in 1908. The Socialist Labor party, Arthur E. Reimer of Massachusetts and August Gilhaus of New York, the party's candidate for president in 1908. The Socialist party, Eugene V. Debs (b 1855) of Indiana, candidate of the Social Democrats in 1900 and of the Socialists in 1904 and 1908 and Emil Seidel (b 1864) of Wisconsin, Socialist candidate for governor in 1902 and mayor of Milwaukee in 1910-12.

The platforms of the three leading parties held similar views upon a number of points such as the reform of legal procedure, the establishment of a parcel post and the maintenance of an adequate navy. But they had, of course, distinctive features. The Republican platform, both by what it omitted and by what it contained, exhibited a conservative spirit. Silent upon the subject of social legislation and the methods of bringing government nearer to the people, it laid emphasis upon the necessity of preserving the integrity and authority of the courts as the protectors of individual and property rights. It reaffirmed belief in a protective tariff high enough to furnish a revenue and give protection to American industries; readjustments to be made in accordance with the findings of an expert commission. With respect to the anti-trust law, supplementary legislation should define as criminal offences those specific acts which uniformly mark attempts to monopolise trade. In his speech of acceptance, President Taft made it appear that there were two issues in the campaign: the preservation of representative government supported by an independent judiciary, and the encouragement of business expansion through the free use of capital.

The Democrats and Progressives agreed on a number of points: the physical valuation of railroads, a regular Territorial government for Alaska, trial by jury for indirect

<sup>1</sup> Thomas Riley Marshall was born at North Manchester, Indiana, on March 14, 1854, a grandnephew of John Marshall, chief justice of the United States, and on his mother's side a descendant of Charles Carroll of Maryland, signer of the Declaration of Independence. He graduated at Wabash College, Crawfordsville, in 1873, was admitted to the bar in 1874, was prominent in local politics but ran for office only once, in 1880, when he was defeated for prosecuting attorney before his nomination in 1908 for governor of Indiana. He was elected by 14,800 plurality over James E. Watson, Republican. As governor his principal work was the proposed state constitution which the Indiana supreme court decided could not be submitted to the voters of the state in 1912. See *INDIANA*. He enforced local laws against race-track gambling. He favoured the direct election of U.S. Senators and opposed ship subsidies, protective tariff and a federal inheritance tax. For his views of reform by legislation and of the curse of over-legislation see his *Automatic Citizen*, *Atlantic Monthly*, Sept. 1912.

contempt of court limitation upon the use of injunctions, the spread of the direct primary and other instruments of popular rule etc But the Democratic programme was much less comprehensive and, except for the tariff, much less radical It insisted upon the old doctrine of state rights, a single term for the President the abolition of protective duties (but by legislation which "will not injure or destroy legitimate business"), and supplementary legislation to give the anti-trust act more definiteness and override the court's interpretation

The most characteristic feature of the Progressive platform was the attention which it gave to the subject of social welfare and industrial justice As a means to this end it advocated a more expeditious method of amending the Federal Constitution the recall of judicial decisions the right of appeal to the Supreme Court in cases where the highest state court should hold laws invalid under the Federal Constitution, and the bringing under effective national jurisdiction of those problems which have expanded beyond the reach of the states The proposals with respect to the labouring class included minimum safety and health standards, prohibition of child labour and night work for women minimum wage standards for women and much else On the tariff the Progressives differed from the Republicans only in demanding the immediate downward revision of excessive duties They did however take a very different position with respect to the trusts, wishing to place their regulation under an administrative commission They advocated woman suffrage

The campaign presented peculiar features from the fact that it was a three cornered contest Each party had to fight the other two The Republican cause for which there seemed little hope was badly managed, its appeal was addressed to the conservative class who were told that Mr Roosevelt and his party menaced the time-honoured institutions of the country The Democrats emphasised the evils of the protective tariff holding it responsible for the high cost of living and the corrupt alliance between business and politics On this issue the other two parties opposed them while with respect to the trusts Democrats and Republicans held to fairly similar positions as against the Progressives The latter directed attention to the need of a constructive social policy Their desire to break the "Solid South" and to attract Democratic voters was shown by Mr Roosevelt's attitude towards the negro He announced that the new party could not be built up in the South "by relying on and appealing to the negroes" and in the settlement of contests between Southern delegates the national convention acted upon this principle Although Mr Roosevelt was received with enthusiasm during a speaking tour through the South, he managed to divert very few Democratic votes in the election The concern expressed through the country when he was shot by a fanatic at Milwaukee on October 24 evidenced his great personal popularity He addressed a mass meeting for an hour and a half after being wounded Democratic success in the elections though foreshadowed by the disruption of the Republican party was more complete than had been generally expected Taft won only two states, Utah and Vermont with 8 electoral votes Roosevelt won California (11 of 13 votes), Michigan, Minnesota Pennsylvania South Dakota, and Washington with 88 electoral votes All the other states went for Wilson, who received 435 electoral votes Sweeping though the victory was it seems to have been mainly due to the split in the Republican party Wilson had a plurality of more than two millions over Roosevelt, but he did not have a majority of the popular vote The new Congress is Democratic in both branches In the House almost exactly two-thirds of the members are Democrats, and the capture of state legislatures which had previously been Republican insured a small Democratic majority in the Senate Out of 28 governors elected all but ten were Democrats Mr Wilson was formally inaugurated March 4, 1913 His cabinet is: W J Bryan, State, W G McAdoo, Treasury, Lindley M Garrison, War, J C McReynolds, Attorney General, A S Burleson, Postmaster-General, Josephus Daniels, Navy, F K Lane Interior, D F Houston, Agriculture, W C Redfield, Commerce, W B Wilson, Labor

## AMERICAN OBITUARY

The following persons, separately noticed in the *Encyclopædia Britannica*, died between the publication of that work and the end of 1912

- Thomas Ball** (b 1819 see *E B* iii 263) sculptor on December 11, 1911  
**Clara Barton** (b 1821 see *E B* iii 452) philanthropist on April 12 1912  
**John Bigelow** (b 1817 see *E B* iii 922) diplomat and journalist in New York City, on December 19 1911  
**Cornelius Newton Bliss** (b 1833 see *E B* iv 72) merchant and politician on October 9 1911  
**Robert Collyer** (b 1823 see *E B* vi 694) Unitarian preacher and author in New York City on November 30 1912  
**Mary Baker (Glover) Eddy** (b 1822 see *E B* vi 291a and 830c) founder of Christian Science at Boston on December 4 1910  
**George Cary Eggleston** (b 1839 see *E B* ix 16b) writer on April 14 1911  
**Horace Howard Furness** (b 1834 see *E B* xi 36-) Shakespearean scholar at Wallingford Pa on August 13 1912 He edited *Anthony and Cleopatra* in the *Variorum Shakspeare* in 1907  
**William Watson Goodwin** (b 1831 see *E B* xii 240) Greek grammarian at Cambridge Massachusetts on June 15 1912  
**Frederick Dent Grant** (b 1850 see *E B* xii 358c) army officer commanding Eastern Division in New York City on April 11 1912  
**John Marshall Harlan** (b 1833 see *E B* xii 934) justice of U S Supreme Court on October 14 1911  
**Edward Harrigan** (b 1845 see *E B* xii 17) actor and playwright on June 6 1911  
**Jonathan Scott Hartley** (b 1845 see *E B* xiii 35) sculptor on December 6 1912  
**Thomas Wentworth Higginson** (b 1813 see *E B* xiii 455) author on May 9 1911  
**Henry Christopher McCook** (b 1837 see *E B* xvii 205d) naturalist on October 31 1911  
**John James McCook** (b 1845 see *E B* xvii 205c) soldier and lawyer on September 17 1911  
**Francis Davis Millet** (b 1846 see *E B* xviii 466) painter and author in the Titanic disaster April 15 1912 He had been recently appointed head of the American Academy at Rome  
**Roger Quarles Mills** (b 1832 see *E B* xviii 475) legislator on September 2 1911  
**Sara Agnes Pryor** (b 1830 see *E B* xviii 533b) author on February 15 1912  
**Howard Pyle** (b 1833 see *E B* xviii 679) artist and author near Florence Italy on November 9 1911  
**Whitelaw Reid** (b 1837 see *E B* xviii 52) diplomat in London on December 15 1912  
**Winfield Scott Schley** (b 1839 see *E B* xxiv 340) naval officer in New York City on October 2 1911  
**Frederick Porter Vinton** (b 1846 see *E B* xxviii 101) portrait painter on May 20 1911  
**Elizabeth Stuart Phelps Ward** (b 1844 see *E B* xxviii 319) author on January 28 1911 Among her later books were *The Oath of Allegiance* (1909) and *Comrade* (1911)  
**James Baird Weaver** (b 1833 see *E B* xxviii 439) politician on February 6 1912 In 1904-06 he was mayor of Colfax Iowa

The following is a series of brief sketches of some of the more important Americans<sup>1</sup> not separately treated in the 11th edition of the *Encyclopædia Britannica*, who have died since its publication

**John Arbuckle** business man died in New York City on March 27 1912 He was born in Scotland in 1838 and in 1871 established in New York the house of Arbuckle Bros which sold sugar and imported and roasted coffee for retail sale in packages and in the sale of sugar and of coffee competed successfully with the Sugar Trust A terminal warehouse and a large towing and salvage business grew out of the coffee importation and the house was very successful in raising wrecked vessels Arbuckle established a farm colony for the unemployed at New Paltz N Y He was interested in horse breeding and owned a large ranch in Wyoming He left a large bequest for a memorial building under the care of Plymouth Church Brooklyn to be a home for young men and women

<sup>1</sup> Other obituary notices are included in articles on separate states of the Union

**E B u 793**) founder of the family. He graduated at Harvard in 1888. He was colonel on the staff of Governor Levi P. Morton of New York and in the Spanish American War was lieutenant-colonel of volunteers serving in Cuba, with a battery of field guns equipped and organised by him. The Waldorf Astoria, St. Regis, Knickerbocker and Astor hotels in New York City were built by him. He invented a turbine engine, a bicycle brake, etc. and wrote *A Journey in Other Worlds* (1890). His wife, née Madeleine Force, whom he married in September 1911 after being divorced in 1909 by his first wife Ava Willing, whom he had married in 1891, was rescued from the *Titanic* and bore him a posthumous son. Almost all his enormous estate, probably \$80,000,000 at the least, was left to his son by the former marriage, Vincent Astor, who came of age November 15, 1912.

**Francis Bacon**, physician, died April 26, 1912. He was born in 1831, graduated at Yale Medical School in 1853 and after service as a surgeon in the Civil War in 1861-64, was professor of surgery at Yale in 1864-77 and lecturer on medical jurisprudence from 1899 to his death. He was known as an alienist and an authority on yellow fever.

**Henry Carey Baird**, publisher and author, died in Wayne, Pennsylvania, December 31, 1912. He was born in Philadelphia, September 10, 1825, a grandson of Henry Carey (see *E B v 329*) and was an exponent of Carey's protectionist views. On this subject and on the currency, he wrote several tracts and his Philadelphia publishing house, Henry Carey Baird & Co., specialised in technical and industrial books.

**Wilkes Judson Beecher**, Old Testament scholar, died in Auburn, N. Y., on May 10, 1912. He was born at Hampden, O., April 29, 1838, and was ordained in the Presbyterian ministry in 1864, after graduation from Hamilton College in 1858 and from Auburn Theological Seminary in 1861. With the exception of two charges of short duration, his life was spent in teaching. He was professor of moral science and belles-lettres at Knox College, 1865-69, and of Hebrew language and literature at Auburn Seminary, 1871-1908. He was president of the Society of Biblical Literature and Exegesis in 1904. He wrote *Father Tompkins and His Bibles* (1874), *The Prophets and the Promise* (1905), *The Teaching of Jesus Concerning the Future Life* (1906), *The Dated Events of the Old Testament* (1907) and *Reasonable Biblical Criticism* (1911).

**Joel Benton**, author, died September 15, 1911. He was born at Amenia, N. Y., May 29, 1832. He taught for a few years and then became a journalist and popular lecturer. He wrote *Emerson as a Poet* (1882), *The Truth about Protection* (1892), *Greeley on Lincoln* (1893), *In the Poe Circle* (1899) and many popular poems.

**Emil Leopold Boss**, American resident director and general manager (since 1892) of the Hamburg America Steamship Company, died at Greenwich, Conn., on May 3, 1912. He was born at Görlitz, Germany, on November 15, 1854, and was educated in Breslau and Berlin. He came to the United States in 1873 and was a prominent member of important clubs and organisations of a public character.

**Lewis Boss**, astronomer, director of Dudley Observatory (Union University), Albany, since 1876, died on October 5, 1912. He was born in Providence, R. I., October 26, 1846, and graduated at Dartmouth College in 1870. He was assistant astronomer to the U. S. Northern Boundary Commission (1872) and a member of the American expedition to observe in Colorado the total eclipse of 1878 and chief of that to observe the transit of Venus in Santiago, Chile, in 1882. He edited the *Astronomical Journal* (1909) and received the gold medal of the Royal Astronomical Society in 1905 and the Lalande prize of the French Academy of Sciences in 1911. His most important publications were star catalogues and essays on *The Physical Nature of Comets* (1881) and *Solar Motion* (1901).

**Amory Howe Bradford**, Congregational clergyman, died February 18, 1911. He was born in Granby, N. Y., April 14, 1846, graduated at Andover Theological Seminary in 1870 and studied at Oxford. He became pastor of the First Congregational Church at Montclair, N. J., in 1870 and was associate editor of *The Outlook* from 1892 to 1899. He was a prominent member of Congregational councils and missionary bodies in the United States and in Europe. He published more than fifteen books on religious subjects, including *Spirit and Life* (1888), *Hereditary and Christian Problems* (1895), *The Return to Christ* (1900), *The Age of Faith* (1900), *The Ascent of the Soul* (1902), and *The Inward Light*.

**Gamaliel Bradford**, financier and publicist, died August 21, 1911. He was born in Boston, Mass., January 15, 1831, and after graduating from Harvard in 1849 entered the banking business. In 1868 he retired and devoted the remainder of his life to the study of American institutions and government, especially the state and the municipality. He was an independent in politics and an ardent opponent of the colonial extension of the United States. He wrote *The Lesson of Popular Government* (1898) and many articles and monographs.

**Edward Stuyvesant Bragg**, soldier and legislator, died June 20, 1912. He was born at Unadilla, N. Y., February 20, 1827, studied at Hobart College in 1844-47 and was admitted to the New York bar in 1848. He removed to Wisconsin in 1850. In the Civil War he was commissioned brigadier-general of volunteers, June 25, 1864. He became a prominent member of the Democratic party and was a representative in four Congresses (1877-83). When seconding the presidential nomination of Grover Cleveland in 1884, he used the famous phrase: "We love him for the enemies he has made." He was American minister to Mexico

in 1888-89. He supported the candidacy of McKinley (1900) and was consul general at Havana (1902) and at Hong Kong (1902-06).

**George Jarvis Brush**, American mineralogist died February 6 1912. He was born in Brooklyn N. Y. December 15, 1831. He studied chemistry and mineralogy in New Haven and in Europe and after teaching at the University of Louisville and the University of Virginia became professor of metallurgy (1855) and of mineralogy (1864) at the Sheffield Scientific School of Yale University. From 1872 to 1898 when he became professor emeritus he was director of that institution.

**Charles Stedman Bull**, physician died April 17 1911. He was born in New York City graduated at the medical school of Columbia in 1868 and completed his studies at several European universities. His specialty was ophthalmology which he taught at the Cornell University Medical College and practised in St. Luke's and other hospitals in New York City. He was president of the American Ophthalmological Society in 1903-07.

**Daniel Hudson Burnham**, architect died in Heidelberg Germany June 1 1912. He was born in Henderson N. Y. September 4 1846. He studied architecture in Chicago and established himself there. Many famous buildings in American cities including the Rookery and Temple Chicago and the Flatiron New York as well as Selridge's London were designed by him. He was chief architect of the Columbian Exposition Chicago 1893. He was chairman of the national commission for beautifying Washington D. C. and of the committee for remodelling Cleveland Ohio. He also planned extensive alterations for Manila San Francisco and Chicago.

**Silas Wright Burt**, civil service reformer died in New York City November 30 1912. He was born in Albany N. Y. April 25 1830 graduated from Union College in 1849 and practised as a civil engineer for some years. About 1867 he began to take deep interest in civil service reform and when two years later he was appointed special deputy naval officer of the port of New York he had the opportunity of studying the evils of the spoils system. He induced the naval officer to permit a competitive examination for promotion which was however limited to persons whose applications for promotion were on file and thus was practically the beginning of the merit system. He was chairman of the supervisory examining board in New York 1872-75 and was twice naval officer (1878-83 1885-89) of the port of New York chief examiner of the state civil service (1883-85) and a member of the state civil service commission from 1895 to 1900 and president in 1900. One of the founders (1880) of the Civil Service Reform Association of New York he was its president in 1907.

**Arthur Tracy Cabot**, surgeon died in Boston November 4 1912. He was born there on January 5 1852 graduated from Harvard College in 1872 and from Harvard medical school in 1876 and studied in Vienna and Berlin. He was a fellow of Harvard University chairman of the state commission on hospital for consumptives consulting surgeon of many hospitals and a member of the American Association of Genito Urinary Surgeons etc.

**Will Carleton** verse writer died in Brooklyn New York on December 18 1912. He was born in Hudson Michigan October 21 1845 graduated at Hillsdale College in 1869 was in newspaper work in Chicago and Detroit in 1870 and 1871 and in the latter year published in the *Toledo Blade* a poem *Betsy and I are out* which won such great popularity by its colloquial style and simple homely character that he left the *Detroit Tribune* to write verse and to be a lecturer and public reader of his writings. His published volumes which had a large sale include *Farm Ballads* *Farm Legends* *Farm Festivals* *City Ballads* *Rhymes of Our Planet* *In Old School Days*.

**John Mervyn Carrere**, architect died in New York City from injuries received in a cab accident March 1 1911. He was born in Rio de Janeiro Brazil November 9 1858. He was one of the first Americans to study at the *École des Beaux Arts* Paris. In New York he became associated with McKim Mead & White and in 1885 formed a partnership with Thomas Hastings. Their first important work, the Ponce de Leon Hotel at St. Augustine Fla. placed them in the front rank of their profession. Among their other noted buildings are the New York Public Library and the Senate and House of Representatives Office Building in Washington.

**Henry Beebe Carrington**, soldier died in Boston Mass. October 26 1912. He was born in Wallingford Conn. March 2 1824 and graduated from the Yale law school in 1847. From 1848 to 1861 he practised law in Columbus Ohio and then took a prominent part in the Civil War being appointed brigadier general of volunteers in 1862. After the close of the war he entered the regular army as colonel. He was in command at Fort Phil Kearny at the time of the Fetterman massacre (December 1866) by the Sioux Indians. Wounded in a subsequent skirmish he was retired from active service in 1870 and was appointed professor of military science at Wabash College. In 1875 he began to map the battlefields of the American War for Independence the basis of his valuable *Battles of the American Revolution* (1876) and *Battle Maps and Charts of the American Revolution*. From 1889 to 1891 he was employed by the American Government to treat with the Indians. In 1904 he received the rank of brigadier-general U. S. A. He also wrote *Washington the Soldier* (1899) and other works on American history especially military.

**William Campbell Clark**, manufacturer president of the Clark Thread Works of Newark New Jersey died on November 14 1912. He was born in Paisley Scotland in 1863 of a

## AMERICAN OBITUARY

family of thread makers and in 1879 went to the United States where he succeeded his uncle as president of the Clark Company which introduced British methods of manufacture in the United States and became one of the largest concerns of the kind in the country.

**Charles Finney Cox**, railway officer died at Yonkers N Y January 24 1912. Born in Richmond Co New York January 16 1846 he graduated at Oberlin College in 1869. He was for many years treasurer of the New York Central lines west of Buffalo.

**William Demos Crum**, negro physician minister resident and consul general to Liberia since June 1910 died in Charleston S C of African fever on December 7 1912. He was born in Charleston on February 9 1839 graduated at the Avery Institute there in 1875 and at the medical school of Howard University in 1881 and practised medicine in Charleston. President Roosevelt appointed him port collector of that city in 1903 and in spite of local opposition and of the Senate not confirming his nomination Crum administered the office from 1904 to 1910 when he resigned. He was managing commissioner of the negro exhibit at the South Carolina Interstate and West Indian Exposition of 1901-02 at Charleston.

**William Bayard Cutting**, lawyer and philanthropist died March 1 1912. He was born in New York City, January 12 1850 graduated at Columbia College in 1869 and at the Columbia law school in 1871 and practised law in New York City. With his brother Robert Fulton Cutting (b 1852) he was interested in the work of the Association for Improving the Condition of the Poor in building model tenements and in many movements notably the Citizens Union for the improvement of municipal politics. He was an active member of the Protestant Episcopal Church.

**Homer Calvin Davenport**, cartoonist died May 2 1912. He was born in Silverton Oregon March 8 1867 and was reared on a farm. He was a jockey a railroad fireman and a circus clown before his talent for caricature found him employment on a San Francisco newspaper in 1892. Three years later he went to New York where he drew cartoons for the *American and Journal* notably in the presidential campaign of 1900 when he originated the dollar mark suit of clothes in his cartoons of Mark Hanna and a gigantic figure of the trusts which became well known. He was interested in the breeding of Arabian horses in the United States and imported a number of them from Arabia. His cartoons have been published in book form and he wrote *The Bell of Silverton and Other Short Oregon Stories*.

**George Davidson**, geographer died in San Francisco December 2 1911. He was born in Nottingham May 9 1825 removed to the United States in 1832 and was educated at the Central High School of Philadelphia. He became honorary professor of geodesy at the University of California in 1870 and professor of geography there in 1898 and took a leading part in the study of the geography of western America serving on government coast surveys on the Pacific Coast (in charge 1868-95) transit of Venus expeditions of U S government in 1874 (Japan) and 1882 (New Mexico) and as president of the Pacific Geographical Society. In 1908 he received the Daly gold medal of the American Geographical Society.

**Sarah S Platt Decker** a national leader in the women's suffrage movement died at San Francisco Cal July 7 1912. She was born at McIndoe Falls Va October 1 1852. She worked successfully in Colorado for women's suffrage (adopted 1893) was president of the Women's Club of Denver and served four years as president of the General Federation of Women's Clubs. In Colorado she was the first woman member of the state board of pardons and later was appointed to the Colorado board of charities and corrections. She was also a member of the National Child Labor Committee and the state civil service committee. She was an earnest advocate of a sweeping anti child labour law and urged the appointment of women to offices in institutions for juvenile delinquency. She had been twice a widow when she married Judge Decker of Colorado in 1901.

**John Fairfield Dryden**, insurance official died November 24 1911. He was born at Farmington Me August 7 1839 and spent his youth at Worcester Mass. He studied for two years at Yale University but was prevented from graduation on account of ill health. Entering the insurance business as an agent he made an exhaustive study of industrial insurance as practised in England and in 1873 founded the present Prudential Insurance Co of America which beginning as the Widows and Orphans Friendly Society was the first successful industrial insurance institution in the United States. After 1881 he was president of the company. In 1880 by special act of legislature the right of policy holders to vote was withdrawn and the financial control came largely into his hands. He was U S senator from New Jersey in 1902-07.

**Daniel Cady Eaton**, art-critic professor of the history and criticism of art in Yale University in 1869-76 and 1902-09 died on May 11 1912. He was born in Johnstown N Y June 16 1837 graduated at Yale in 1860 and at the Albany Law School in 1861 practised law until 1866 and then studied art in Berlin and Paris. He wrote handbooks of Greek and Roman sculpture (1884) and of modern French painting (1909).

**Alice Morse Earle**, author died February 16 1911. She was born at Worcester Mass April 27 1853 and was married to Henry Earle in 1874. She wrote *Customs and Fashions in Old New England*, *Home Life in Colonial Days*, *Two Centuries of Costume in America* and many other works on similar subjects.

**Samuel Franklin Emmons**, economic geologist died in Washington D C March 28 1911. He was born in Boston March 29 1841 graduated at Harvard in 1861 and studied

## AMERICAN OBITUARY

755

in the schools of mining in Paris and Freiberg. He took part in the Fortieth Parallel Survey and worked with Arnold Hague on the *Descriptive Geology* of that survey. In 1879 he was put in charge of economic geology in the Rocky Mountain Division of the U S Geological Survey and worked at Leadville preparing statistics on precious metals for the 10th Census. The scene of his last labours was Leadville again but final results of his investigations had not been published at his death.

**Robley Dunglison Evans**, naval officer, died January 3 1912. He was born in Floyd county Va. August 18 1846. He was commissioned ensign in the American Navy in 1863 after graduation from the Naval Academy. He served with the North Atlantic Blockading Squadron and was permanently crippled by a wound in the right leg in the land attack by sailors on Fort Fisher (December 25, 1864). In 1891-92 commanding the *Yorktown* at Valparaiso Chile he displayed great ability and firmness in settling the trouble arising from the killing of several American sailors in that city. At this time he received the sobriquet "Fighting Bob". In the Spanish American War he was captain of the battle-ship *Iowa* which took a prominent part in the destruction of Cervera's fleet off Santiago Cuba. He was appointed rear admiral in 1901. He commanded the Asiatic station in 1902-04 and the Atlantic fleet in 1905-08. On August 18, 1908 he was retired and on account of ill health gave up command of the Atlantic Fleet then on tour of the world. He wrote *A Sailor's Log* (1901) and *An Admiral's Log* (1910).

**Arthur Henry Ewing**, missionary, died at Allahabad India on September 13 1912. He was born at Saltsburg Pa. on October 18 1864. He graduated at Washington and Jefferson College (1887) at Western Theological Seminary (1890) and at Johns Hopkins University (1891) and was ordained to the Presbyterian ministry in 1890 and became a missionary in India where he was principal of a boys' boarding school at Ludhiana in 1891-08 and established the Christian College at Allahabad in 1901. He was chairman of the united council on work among young people in India from 1907 until his death.

**Rose Eyttinge**, actress, died December 30 1911. She was born in Philadelphia November 21 1838 and acquired great popularity in emotional roles in the United States and England playing with Edwin Booth (1862) in Lester Wallack's company (1868) and with Augustin Daly but seldom appearing after 1864. For several years after 1870 she lived in Egypt where her husband (George H. Butler) was American consul general. She dramatised several of Dickens' works *Browning's Colombe's Birthday* etc. and wrote a few novels and recollections of her life in Egypt.

**Harry Fenn**, artist, died April 24 1911. He was born in Richmond Surrey September 14 1838 but went to the United States in 1857. He was best known as a book illustrator especially of gift books (poetry travels etc.), but he also acquired considerable reputation as an aquarelle painter and was a founder of the American Water Color Society.

**Isaac Nelson Ford**, journalist, died in London on August 7, 1912. He was born at Buffalo N Y June 11 1848 graduated at Brown University in 1870 and in the same year became a reporter for the *New York Tribune* which he served as leader writer and from 1895 as London correspondent. He was the founder of the London Pilgrims Club. He wrote *Tropical America* (1893).

**Sam Walter Foss**, poet, died February 26 1911. He was born at Candia N H June 19 1858 graduated at Brown University in 1882 and was an editor and later a lecturer and public reader of his own verse. He was librarian of the Somerville Mass. Public Library from 1898 until his death. He published five volumes of verse (*Songs of the Average Man* *Dreams in Homespun* etc.) of a popular nature.

**Paul Caspar Freer**, chemist, died April 17 1912. He was born in Chicago Ill. March 27 1862 graduated from Rush Medical College in 1882 and subsequently studied chemistry in Germany (Ph D. Munich 1887) and in Owens College Manchester England. He taught at Tufts College in 1887-89 and then became professor of chemistry at the University of Michigan. In 1901 the American government sent Dr. Freer to Manila as superintendent of government laboratories. This organisation became in 1905 the Bureau of Science of the Government of the Philippines and he was made director. He was the pioneer in general scientific work in the islands and built up a great research institution that is now classed with the best in the world. He was founder and editor in chief of the *Philippine Journal of Science*. The Philippine Medical School founded in 1906 and now part of the University of the Philippines was largely his own creation. He was dean of the College of Medicine and Surgery and professor of chemistry in the University. He wrote several text books of chemistry and many articles on the structure of ring compounds etc.

**William Pierce Frye**, politician, died at Lewiston, Me. August 8 1911. He was born there September 2 1831. He practised law after his graduation from Bowdoin College (1850) and after studying under W. P. Fessenden. Affiliated always with the Republican party, he was a member of the state legislature (1861 1862 1867) mayor of Lewiston (1866-67) attorney general of Maine (1867-69) representative in Congress in 1871-81 and successor to James G. Blaine in the U S Senate where he served from 1881 until his death and was chairman of the commerce committee after 1889. He was president *pro tem* of the Senate in 1906 and after 1901 and was a member of the Paris Peace Commission (1898) to negotiate terms of peace between Spain and the United States.

**Isaac Kauffman Funk**, publisher and author, died April 4, 1912. He was born in Clifton O., September 10, 1839, studied at Wittenberg College and entered the Lutheran ministry in 1861. He edited (1872-1899) several ecclesiastical weeklies, notably *The Homiletic Review*. In 1877 he, with A. W. Wagnalls, formed the publishing house of Funk & Wagnalls Company. The firm produced such noteworthy works as *A Standard Dictionary* and the *Jewish Encyclopaedia* of which Dr Funk was editor-in-chief or chairman of an editorial board and published the *Literary Digest*. He was a Prohibitionist and in 1880 established *The Voice* as a party organ and he was much interested in the problems of psychic phenomena and wrote, *The Next Step in Evolution* (1902) *The Widow's Mite and Other Psychic Phenomena* (1904) and *The Psychic Riddle* (1907).

**Jacques Futrelle**, author was lost with the Titanic April 15, 1912. His wife was saved. He was born in Pike county Georgia April 9, 1875 and engaged in journalism (1890-1902) and theatrical management (1902-04). He wrote fiction of a popular nature and his best known books are *The Chase of the Golden Plate* (1906) *The Thinking Machine* (1907) and published after his death *My Lady's Garter*.

**George Augustus Gates**, educator president of Fisk University (Nashville Tenn.) from 1909 died at Wintershaven Florida, on November 20, 1912. He was born in Topsham Vermont January 24, 1831 graduated at Dartmouth College in 1873 and at Andover Theological Seminary in 1880 and in the same year was ordained a Congregationalist minister. After a pastorate of seven years in Upper Montclair New Jersey he served as president of Iowa College in 1887-1901 and of Pomona College (California) in 1902-09.

**John Warne Gates**, American capitalist died in Paris August 8, 1911. He was born near Chicago Ill., in 1855 and first displayed his great business ability as a travelling salesman introducing barbed wire into Texas. He established himself in this business and organised the Southern Wire Co. and later the Braddock Wire Co., which absorbed other companies. This was sold to the Federal Steel Co. in 1898 and Gates organised the American Steel and Wire Co. now a part of the U. S. Steel Corporation. His activities were also extended to deals in railway and industrial stocks. He had undoubted talent although his methods were often severely criticised and he died possessed of a large fortune.

**William Washington Gordon**, soldier and merchant died at White Sulphur Springs Va. on September 12, 1912. He was born at Savannah Ga. on October 14, 1834 and graduated at Yale in 1854. At the beginning of the Civil War he became 2nd lieutenant in J. E. B. Stuart's cavalry (the Georgia Hussars) and was afterwards captain and inspector of Mercer's brigade and then captain and adjutant of Anderson's brigade in Joseph Wheeler's cavalry. He was senior partner in the cotton firm of W. W. Gordon & Co. and from 1876 to 1879 was president of the Savannah Cotton Exchange. From 1884 to 1890 he was a member of the Georgia House of Representatives. He served in the Spanish American War as brigadier-general of volunteers and was a member of the Porto Rican evacuation commission.

**Charles Chapman Grafton**, Protestant Episcopal bishop since 1889 of Fond du Lac died August 30, 1912. He was born in Boston April 12, 1830 graduated at the Harvard Law School in 1853, studied divinity with Bishop Whittingham of Maryland and was ordained deacon in 1855 and priest in 1858. He spent 1865-72 in England where he founded in 1865 with R. M. Benson the Society of the St. John the Evangelist better known as the Cowley Fathers described in Hall Caine's *The Christian*. In 1872-88 he was rector of the Church of the Advent Boston. He established the St. Margaret's Sisterhood in Boston the Sisters of the Holy Nativity in Providence R. I. and Grafton Hall a school for girls at Fond du Lac. He was a leader of the High Church party in America and wrote *Fond du Lac Tracts Christian and Catholic* (1905) and *The Lineage of the American Catholic Church* (1911).

**Benjamin Henry Grierson**, military officer died September 1, 1911. He was born at Pittsburg Pa. July 8, 1826, and entered the Union cavalry at the opening of the Civil War. He captured Baton Rouge in May 1862 with forces from Tennessee as a part of Grant's operations on Vicksburg and the raids of his troops in Mississippi and Alabama in 1863-64 among the most brilliant minor performances of the great conflict won him the brevets of brigadier and major-general respectively. He became a colonel in the regular army in 1866 and was retired in 1890 after reaching the rank of brigadier-general.

**Clement Acton Griscom**, financier died November 10, 1912. He was born in Philadelphia Pa. November 15, 1841 and in 1857 entered the shipping business in which he rose to be general manager (1894) of the International Mercantile Marine Co. (originally International Navigation Co.). This office he resigned in 1904, assuming the chairmanship of the board of directors. He was a director in many financial and industrial corporations.

**Benjamin Guggenheim**, capitalist perished in the wreck of the Titanic on April 15, 1912 aged 47. He was a member of the firm of M. Guggenheim & Sons and of the American Smelting & Refining Co. with great interests in Colorado and Alaska.

**Benjamin Morgan Harrod**, civil engineer died September 7, 1912. He was born in New Orleans, February 19, 1837, graduated at Harvard in 1856 served in the Confederate army becoming captain of engineers, and was state engineer in 1877-80 member of the Mississippi River Commission 1879-1904 and of the Panama Canal Commission in 1904-07 city engineer of New Orleans in 1888-92, and in charge of that city's drainage construction in 1895-1902. In 1897-98 he was president of the American Society of Civil Engineers.

**Frank Davis Hill**, consular official died at Frankfurt am Main Germany on May 23 1912. He was born in Minnesota May 28 1862 and was educated at the University of Minnesota and at the Columbian and National Law Schools Washington. He was admitted to the bar in 1884 and became consul at Asunción Paraguay in 1887 in Montevideo (1890) La Guayra (1893) Santos (1896) and Amsterdam (1899). In 1907 he became consul general at St. Petersburg in 1908 at Barcelona and in 1910 at Frankfurt.

**Edward Hitchcock**, physician and teacher of physical culture died February 11 1911. He was born at Amherst Mass. May 23 1828 a son of Edward Hitchcock (see *E B* xiii 533) geologist and president of Amherst College. He graduated at Amherst College 1849 and later at the Harvard Medical School. From 1861 he was professor of hygienic and physical education at Amherst being the first physician in the United States to take up this work. He was acting president of Amherst in 1898-99. He wrote *Anatomy Physiology and Anthropometry* (1860) and *A Manual of Gymnastic Exercises* (1884).

**Herman S. Hoffman**, bishop of the Reformed Episcopal Church since June 1903 died in Philadelphia on November 23 1912. He was born near Salem N. C. on June 9 1841 studied in the Moravian theological seminary at Bethlehem Pa. was ordained to the Moravian ministry in 1864 and founded five churches of that denomination in Philadelphia before 1881 when he became a member of the Reformed Episcopal Church. In 1905 he became assistant bishop in charge of the New York and Philadelphia synods. He wrote *Life Beyond the Grave* (1898).

**Edwin Eugene Howell**, geologist and cartographer died in Washington D. C. April 16 1911. He was born in Genesee county N. Y. March 12 1845 and studied at the University of Rochester under the geologist Henry A. Ward was geologist of the United States Geological surveys west of the Rocky Mountains in 1872-73 and was with the government survey of the Rocky Mountain region under Powell in 1874. In 1870 he made a relief map of the island of San Domingo and in 1875 produced his famous relief map of the Grand Cañon of the Colorado for the government. In his later years he devoted his time to the manufacture of geological models and maps first in the Rochester Museum and then in an establishment at Washington which he called the Microcosm. He wrote on meteorites and was a founder of the Geological Society of America.

**John Wesley Hoyt**, administrator and author died on May 23 1912. He was born near Worthington Ohio on October 13 1831 graduated at Ohio Wesleyan University in 1849 studied law and then medicine at the Eclectic Medical Institute (Cincinnati) where he taught chemistry in 1853-57 and was editor and publisher of an agricultural paper at Madison Wisconsin in 1857-67. He was an early member of the Republican party and in 1878-82 was governor of the Territory of Wyoming. His interests and activities were varied he was president of the international jury of awards on education and science at the Vienna Exposition of 1873 at the Philadelphia Centennial Exposition of 1876 and at the New Orleans Exposition of 1884, and special representative for foreign affairs at the World's Columbian Exposition of 1893, worked for the founding of a National University and wrote besides reports of the Wisconsin Agricultural Society (1860-72) of the same state's railway commission (1874-75) and Federal reports on education in Europe and America (1870) *Studies in Civil Service* (1878) and histories (1893-95) of the universities of Bologna Paris Oxford and Cambridge in the Middle Ages.

**Thomas Augustus Jaggard**, Protestant Episcopal bishop since May 1908 in charge of American churches in Europe died December 13 1912. He was born in New York City on June 2 1839 was a bank clerk before entering the ministry in 1863 and held among other charges one at Yonkers N. Y. where he established St. John's Riverside Hospital. From 1875 to 1905 he was bishop of Southern Ohio. In 1900 he delivered the Bohlen lectures (Church of Holy Trinity Philadelphia) on the personality of truth.

**Edward Gamaliel Janeway**, physician died February 10 1911. He was born in New Jersey August 31 1841. He left his medical studies at Columbia University to act as medical cadet at the army hospital at Newark New Jersey during the Civil War but took his degree in 1864. His long connection with the University and Bellevue Hospital Medical College (from 1868) as curator and professor ended in 1905 with his retirement as professor of medicine and dean. He was a noted specialist on nervous diseases and in 1875-82 was health commissioner of New York City. He was the author of *Clinical Points in the Diagnosis of Hepatic Affections*.

**Tom Loftin Johnson**, capitalist and administrator died in Cleveland O. April 10 1911. He was born at Blue Spring Ky. July 18 1854. He was a street railway owner and promoter in several large cities including Detroit and Brooklyn. He became an ardent believer in the single tax doctrines of Henry George and did much towards spreading them. He served as a Democratic representative in Congress in 1891-95 and was mayor of Cleveland Ohio in 1907-1909 in which office he was partially successful in establishing a three-cent street railway fare (see *E B* vi 504d). See his autobiography, *My Story* (New York 1911) and Carl Lorenz *Tom L. Johnson* (ibid. 1911).

**Adrian Hoffman Joline**, American lawyer died October 15 1912. He was born in Sing Sing (now Ossining) N. Y. June 30 1850 and graduated at Princeton in 1870 and at the Columbia Law School in 1872. He was admitted to the bar in 1872 and became one of the best

known corporation lawyers in the country. He was especially active in the management of railroad properties and was receiver for the Metropolitan Street Railway Co. of New York after 1907. For some time he was a trustee of Princeton University. He was an ardent collector of autographs and wrote *Meditations of an Autograph Collector* (1902) *Diversions of a Book Lover* (1903) *At the Library Table* (1909) and *Edgehill Essays* (1910).

**James Otis Kaler**, writer of juveniles under the pen name James Otis, died in Portland, Maine, December 11, 1912. He was born in Winterport, Maine, March 19, 1848, and after 1865 was in newspaper work, first on the *Boston Journal* and then on the *New York Sun* until he was employed (1870) on *Ladies' Boys and Girls*. In 1877 he wrote *Toby Tyler* as a serial in *Harper's Young People* and then devoted himself to books for children, notably the Minute Boy Series, writing nearly 150 volumes including serials for *St. Nicholas*.

**John Steinfert Kedney**, professor of divinity in Seabury Divinity School, 1871-1908, died at Salem, New Jersey, March 8, 1911. He was senior priest of the American Episcopal Church. He was born in Essex county, New Jersey, February 12, 1819, graduated at Union College in 1838 and at the Union Theological Seminary in 1841 and was ordained priest in 1843. He was rector of several churches and lectured in the Concord School of Philosophy and in the Cambridge Episcopal Theological School. He wrote *The Beautiful and the Sublime* (1884) *Hegel's Aesthetics* (1886) and *Problems in Ethics* (1899).

**John Mills Kendrick**, Protestant Episcopal bishop (since January 1889) of Arizona and New Mexico, died in 1912. He was born in Gambier, Ohio, graduated at Marietta College in 1856, was admitted to the New York bar in 1858, served two years in the Civil War and in 1865 was ordained to the priesthood. He was rector of churches in Fort Scott and Leavenworth, Kansas, and in Columbus, Ohio, and in 1878-89 was general missionary of the diocese of Southern Ohio.

**Frederick Keppel**, art dealer, died in New York City, on March 5, 1912. He was born at Tullow, Co. Carlow, Ireland, on March 22, 1845, and was educated at Wesley College, Dublin, and in England. In New York City he became a bookseller and then a print dealer and importer of pictures. He was an art critic of ability and lectured on art at the Metropolitan Museum of Fine Arts and in Yale, Columbia and Harvard universities. He published *The Golden Age of Engraving: A Day with Whistler* and many articles in periodicals, especially in *The Print Collector's Quarterly*.

**Vaughan Kester**, novelist, died July 4, 1911. He was born in New Brunswick, N. J., September 12, 1869, and was reared in Ohio. He portrayed types characteristic of the South and Middle West. Among his books are *The Manager of the B and A* (1901) *John o' Jamestown* (1907) *The Prodigal Judge* (1911) and *The Just and the Unjust* (1912).

**Herman Knapp**, physician, died May 1, 1911. He was born at Dauborn, Prussia, May 17, 1832, and practised as an eye-and-ear specialist in New York after 1868. He taught in the medical school of New York and Columbia universities and founded the New York Ophthalmic and Aural Institute. He wrote a book on intraocular tumours, many papers on eye-and-ear surgery, and excellent text books, and founded the valuable *Archiv's of Ophthalmology and Otolaryngology*.

**James Proctor Knott**, lawyer and legislator, died June 18, 1911. He was born in Kentucky, August 29, 1830, and was educated at home. He practised law in Missouri and after 1863 in Kentucky, was a member of the Missouri state legislature in 1858 and state attorney general in 1858-61. He was a Democratic representative in Congress from Kentucky in 1867-71 and 1875-83, and governor in 1883-87. Between 1892 and 1901 he taught economics and law at Centre College (now part of Central University), Danville, Kentucky.

**George William Knox**, theologian, Union Seminary lecturer on Christianity in the Far East, died at Seoul, Korea, April 26, 1912. He was born at Rome, N. Y., August 11, 1853, graduated at Auburn Theological Seminary in 1877 and was ordained in the Presbyterian ministry in the same year. The first years of his professional life were spent in missionary work and teaching in Japan, where he was, for a time, professor of philosophy and ethics in the Imperial University, Tokio, and where he received the Order of the Rising Sun. In 1897 he became a lecturer on apologetics in Union Theological Seminary, New York, and after 1899 was professor of the philosophy and history of religion there. He wrote many books, mostly on religious subjects, both in Japanese and English—including *The Direct and Fundamental Proofs of the Christian Religion* (1903, N. W. Taylor Lectures at Yale), *The Spirit of the Orient* (1906), *The Development of Religion in Japan* (1907) and *The Religion of Jesus* (1909)—and contributed the article "Christianity" to the 11th ed. of the *Encyclopædia Britannica*.

**William Mereshon Lanning**, judge of the U. S. District Court for New Jersey, since June 1904, died February 16, 1912. He was born in Ewing township, Mercer county, New Jersey, January 1, 1849, studied at Lawrenceville and was admitted to the bar in 1880. He was city solicitor of Trenton, 1883-87, judge of city district court, 1887-91, and (Republican) representative in Congress, 1903-04. He was a trustee of the General Assembly of the Presbyterian Church (North) and of Lawrenceville School, and a director of Princeton Theological Seminary.

**Homer Lea**, author, died at Los Angeles, November 1, 1912. He was born in Denver, November 17, 1876, and was educated in California at Occidental College, the University of the Pacific and Leland Stanford Jr. University. Stories of his holding high rank in the

Chinese reform army seem to have no basis of fact except his unsuccessful mission to China in 1900 and his militaristic ideals. He wrote *The Vermilion Pencil* (1908) *The Valor of Ignorance* (1909) urging the necessity of military training in the United States in case of Japanese invasion and *The Day of the Saxon* predicting the fall of the British Empire.

**Ida Lewis**, American lighthouse keeper, died October 24, 1911. She was born in Newport R. I. in 1841. In 1857 when her father was incapacitated she took up his work as keeper of the Lime Rock Light, Newport Harbor. Her official appointment by act of Congress (the first given to a woman) was dated 1889. An expert rower and swimmer she saved 18 lives from drowning, receiving many medals and a pension from the Carnegie Fund. In 1870 she married W. H. Wilson.

**Morris Loeb**, chemist, died in New York, October 8, 1912. He was born in Cincinnati on May 23, 1863, graduated in 1883 at Harvard where he studied under Wolcott Gibbs whose assistant he was in 1889-89 after his return from Germany where he worked under Hoffman in Berlin and Ostwald in Leipzig. He taught at Clark University in 1889-91 and then until his death was professor of chemistry in New York University. His principal chemical investigations were on the kinetics of substances in solution, osmotic pressure and crystallization of sodium iodide from alcohols. He was a member of a wealthy family and was prominent in Hebrew charities, to some of which he made large bequests as well as to the American Chemical Society, the Smithsonian Institution, Cooper Institute, the American Museum of Natural History, the Metropolitan Museum of Art and Harvard University.

**Charles Battell Loomis**, author, died September 23, 1911. He was born in Brooklyn, N. Y., November 12, 1861 and was a writer of humorous fiction and verse; his best known volumes being *Yankee Enchantments* (1900) and *Cheerful Americans* (1903).

**Eben Jenks Loomis**, astronomer, died at Amherst, Mass., December 2, 1912. He was born at Oppenheim, N. Y., November 11, 1838 and was educated at the scientific school of Harvard University. He spent 50 years in work on the American *Ephemeris and Nautical Almanac*. He was also a naturalist, a Shakespearean scholar, and a poet.

**Patrick Anthony Ludden**, Roman Catholic bishop of Syracuse since May 1887, died in that city, August 6, 1912. He was born near Castlebar, Ireland, in 1836, studied at St. Jarlath's College, Tuam, and at the Grande Séminaire, Montreal, and was ordained priest in 1864. He was rector of the Albany cathedral and vicar general, 1877-80, and after seven years at St. Peter's, Troy, New York, was consecrated first bishop of Syracuse. In 1911 he urged the election of William F. Sheehan as U. S. senator from New York and declared that the opposition to Sheehan was due to his being a Catholic and of Irish descent.

**Arthur MacArthur**, army officer, died in Milwaukee, Wis., September 5, 1912. He was born in Springfield, Mass., June 2, 1845, but was educated in Milwaukee. He served in the volunteers in the Civil War, distinguished himself at Stone River, received a Congressional medal for bravery at Missionary Ridge, and became major at 19 and colonel before he was 20. He continued in the regular army and reached the high rank of lieutenant general in 1906. As brigadier general of volunteers he went to the Philippines during the Spanish-American War of 1898 and was made major general of volunteers for his service at the capture of Manila. He was military governor of the islands in 1900-01, the most critical period of American occupation. On his return he commanded different military departments in the United States before he was retired in 1909.

**Robert Lee MacCameron**, portrait painter, died December 29, 1912. He was born in Chicago, January 14, 1866, and was brought up in Necedah, Wis., where he worked as a lumber jack when he was 14 years old. He became a newspaper illustrator in Chicago and later in New York and in London on *The Boys Own* and in 1889 went to Paris where he studied under Gerome. He was made a chevalier of the Legion of Honor in July, 1912. Besides portraits of celebrities, English and American, his best known pictures were *Abstinence Drinkers*, *The Dancers* (honourable mention, Paris Salon), *The Daughter's Return* (in the New York Metropolitan Museum) and in general scenes from the slums.

**Alexander Mackay Smith**, Protestant Episcopal bishop, died November 16, 1911. He was born in New Haven, Conn., June 2, 1850 and was ordained priest in 1877 after studying at the General Theological Seminary and in England and Germany. In 1902 after service as rector in South Boston, New York (where he was first arch deacon in 1887) and Washington, he was made coadjutor-bishop of Philadelphia and bishop in 1910.

**Willard Francis Mallalieu**, Methodist Episcopal bishop, died at Auburndale, Mass., August 1, 1911. He was born at Sutton, Mass., December 11, 1828 and entered the ministry after graduation from Wesleyan University in 1857. He held several charges in Massachusetts and in 1882 was made presiding elder of the Boston district. In 1884 he was elected bishop. He was a prominent member of many church boards and commissions and advocated total abstinence and Sabbath observance. He wrote *The Why, When, and How of Renewals*, *The Fullness of the Blessing of the Gospel of Christ*, etc.

**John William Mallet**, chemist, died November 6, 1912. He was born in Dublin, Ireland, October 10, 1832 and studied at Trinity College, Dublin, and at Göttingen. He came to the United States in 1853 and taught chemistry at Amherst, at the universities of Alabama, Louisiana, Virginia, and Texas, and at Jefferson Medical College in Philadelphia. During the Civil War he had charge of the ordnance laboratories of the Confederate States.

**W J McGee** (his full name) anthropologist and geologist died September 4 1912. He was born at Dubuque Ia April 17 1853 and was self-educated. After studying mathematics astronomy law and other subjects he turned his attention about 1875 to archaeology and geology. Without public aid he made a geological and topographic survey of north western Iowa and later became attached to the U S Geological Survey. He was in charge of the Bureau of American Ethnology in 1893-1903 resigning in order to undertake the work of assembling a collection of races for the St Louis Exposition 1904. His later years were devoted to the inland water ways commission and he was an expert in the U S department of agriculture. He wrote on anthropology geology and hydrology.

**George Wallace Melville**, naval officer died March 17 1912. He was born in New York City January 10 1841 was educated at the Brooklyn Polytechnic Institute entered the navy as assistant engineer in 1861 and served through the Civil War. In 1879 he sailed with the De Long Arctic expedition and commanded the boat's crew that escaped from the Lena delta. He later headed the parties which recovered the records of the expedition and De Long's remains. After 1887 he was engineer in chief U S Navy and became rear admiral 1899 (retired 1903). He invented many mechanical appliances and wrote *In the Lena Delta* a narrative of the De Long expedition after the loss of the Jeannette.

**Richard Wilde Micon**, theologian died at Oxford on June 4 1912. He was born on June 12 1848 at New Orleans and after studying at the universities of Georgia and Alabama he went to Erlangen to Edinburgh and to the General Theological Seminary in New York City. He was ordained in 1870. In 1892 he became professor of systematic divinity in the Philadelphia Divinity School and in 1898 professor at the Virginia Theological Seminary.

**Philip Verrill Mighels**, author died October 13 1911. He was born in Carson City Nevada April 19 1869 was admitted to the Nevada bar in 1890 was a journalist in San Francisco and New York and in 1895 began writing fiction. He published about a dozen books of which the best known is *Bruwer Jim's Baby*.

**Darius Ogden Mills**, American financier died at Millbrae California on January 4 1910 aged 84. Born at Salem N Y on September 25 1825 he was a clerk in New York went to California during the gold rush of 1849 became a storekeeper at Sacramento and founded the Gold Bank of Sacramento. After doing much for the development of the Comstock lode region he was president of the Bank of California from 1864 (when he founded it) until 1873 and in 1875 when the bank was wrecked under other management he returned and placed it on a sound basis. In California he had endowed a chair of philosophy in the state university and had been a trustee of the Lick estate and Observatory. He sent an astronomical expedition to Chile to observe stars not visible in the northern hemisphere. In New York (after 1880) he was a trustee of the Metropolitan Museum and of the Museum of Natural History and president of the New York Botanical Society and he built the Mills Hotels lodging-houses for working men. His daughter married Whitelaw Reid.

**Paul Morton**, administrator died in New York City January 19 1911. He was born in Detroit Mich May 22 1837. At the age of fifteen he began his business career as a clerk in the land office of the Burlington and Missouri R R. He showed great executive ability as a railroad man and rose to be second vice president of the Santa Fe system in 1898. He was secretary of the navy in Mr Roosevelt's cabinet in 1904-05. In 1906 he was made president of the Equitable Life Assurance Society and by his able administration helped to restore the impaired fortunes of that company. He became vice president of the Pan American R R in 1910.

**Francis Philip Nash**, professor of Latin at Hobart College in 1871-76 and 1882-1907 died on February 5 1911. He was born in Florence Italy December 5 1836 graduated at Harvard in 1856 and at Harvard Law School in 1859 and practised law in New York City before becoming a teacher. He edited *Two Satires of Juvenal* translated the American *Prayer Book* into Italian and contributed to the *Nation* (New York).

**John Willock Noble**, Secretary of Interior in President Benjamin Harrison's cabinet 1889-93 died March 22 1912. He was born in Lancaster Ohio October 26 1831 graduated at Yale in 1851 and at the Cincinnati Law School in 1852 and was admitted to the bar in 1853. He practised in St Louis (1855) and then in Keokuk Iowa until the outbreak of the Civil War during which he became colonel and brevet brigadier general. He was U S district attorney in St Louis in 1867-70 and prosecuted whisky and tobacco frauds.

**Edward Payson North**, civil engineer died on July 20 1911. He was born in Hartford Conn July 16 1835 studied engineering at Union College, became assistant engineer of the Saratoga & Hudson River railway in 1864 and in 1866 chief engineer of the Stamford & New Canaan Railroad on which he used probably before any one else in the United States nitro-glycerine in rock excavation. In 1868 he became connected with the Union Pacific and in 1873-75 with U S Army engineering work on the upper Mississippi. He was superintendent of roads and streets in New York City in 1876 and after being chief engineer of the Sinaloa & Durango railway in Mexico (1881) was engineering expert on many municipal projects including the electric subways in New York, where he was head of the work on paving and repairing streets in 1895 and consulting engineer of the department of public works in 1897. He was a prominent member of the American Society of Civil Engineers and contributed many papers to its *Transactions* and to technical and other journals.

**John Alsop Paine**, archaeologist died July 24 1912. He was born in Newark N. J. January 14 1840 and studied at Andover for the Congregational ministry (ordained 1867). He also studied science at several universities of the United States and Germany. He was engaged in research work on the flora of New York state 1862-67 and afterwards taught natural science at Robert College Constantinople Lake Forest University Ill. and the College of Physicians and Surgeons New York City. In 1871-72 he was associate editor of *The Independent* (New York). He was archaeologist of the first expedition of the Palestine Exploration Society in 1872-74. edited and conducted the *Journal of Christian Philosophy* (1882-84) was curator of the Metropolitan Museum New York 1889-1906 and was also on the staff of the *Century Dictionary*.

**William Paret**, Protestant Episcopal bishop of Maryland since 1884 died on January 18 1911. He was born in New York City September 23 1826 graduated at Hobart College in 1849 was ordained in 1852 upon leaving the Hobart Divinity School was rector successively in Clyde and Pierrepont Manor N. Y. East Saginaw Michigan Elmira N. Y. Williamsport Penna. and Washington D. C. and wrote *St. Peter and the Primacy of the Roman See* and *Our Freedom and our Catholic Heritage*.

**Daniel Kimball Pearsons**, philanthropist died April 27 1912. He was born in Bradford Vt. April 14 1820. He practised medicine in Massachusetts from 1842 to 1857 was a farmer in Illinois until 1860 and then engaged in the real estate business in Chicago from which he retired in 1887. He was childless and gave away his entire fortune—he lived on an annuity during his last years—to 30 colleges in 20 different states (especially Chicago Theological Seminary Beloit College Whitman College Berea College) and to a public library and museum for Hinsdale Ill. the village in which he made his home. A larger sum had to be raised from other sources before his donations were available and he gave only to smaller institutions. He was an alderman in Chicago from 1873 to 1876.

**William Alfred Pepper**, politician died at Grenola Kansas October 7 1912. He was born in Cumberland county Pennsylvania September 10 1831. He served as a private in an Illinois regiment during the Civil War and in 1870 removed to Kansas where he practised law and edited newspapers in Fredonia and Coffeyville. He became a member of the state senate in 1874. In 1891-97 he was United States senator from Kansas being the only member of the Populist party in the Senate. He had been a Republican before the establishment of the Populist party which was largely due to him. In 1898 he was the Prohibitionist candidate for governor. He wrote *Myriorama a National Poem* several novels *The Farmer's Side* (1891) and *Amercanism and the Philippines* (1900).

**David Graham Phillips**, novelist died January 24 1911. He was born in Madison Ind. October 31 1867 and graduated at Princeton in 1887. After a short career as a journalist he devoted his time to the writing of fiction. He wrote *The Great God Success* (1901) *The Golden Fleece* (1903) *The Cost* (1904) *The Plum Tree* (1905) *Light Fingered Gentry* (1907) *The Second Generation* (1907) *Old Wines for New* (1908) and posthumously published *The Grain of Dust* (1911) and *The Price She Paid*. He presented rather crudely the social and economic problems of modern American life especially in high society. He was murdered by a deranged man who imagined that his family had been satirised in Phillips's novel *The Fashionable Adventures of Joshua Craig*.

**Arthur Tappan Pierson**, Presbyterian clergyman and editor died June 3 1911. He was born in New York City March 6 1837 and was ordained in the ministry upon graduation from the Union Theological Seminary in 1860. He filled pulpits in Detroit Indianapolis Philadelphia and elsewhere and in 1888 became editor of the *Missionary Review of the World*. His knowledge of the missionary field was very extensive and he was prominent in religious conferences at Northfield Mass. of which he was a leader after the death of D. L. Moody. A trip around the world in the interest of foreign missions was interrupted by ill health in Korea. Dr. Pierson published about 30 books on missions and other religious subjects. See the biography (New York 1912) by Delavan Leonard Pierson.

**Louis McClellan Potter**, sculptor died in Seattle Washington August 29 1912 possibly as a result of treatment by a Chinese physician. He was born in Troy New York, November 14 1873 graduated at Trinity College (Hartford) in 1896 and studied in Paris under Luc Olivier Merson and Jean Dampt. In Tunis and Alaska he studied native types. His work first realistic and then imaginative includes a memorial in Hartford (1909) to Horace Wells and *Earthbound* a symbolic piece for the New York Child's Welfare Exhibit.

**Joseph Pulitzer**, editor and journalist died October 29 1911. He was born at Budapest Hungary April 10 1847. He emigrated to America practically penniless in 1864 served in the Union army through the Civil War and became a reporter on the St. Louis *Westliche Post* in 1868 rising to be editor and part owner. This paper he combined with the St. Louis *Dispatch* which he bought in 1878. He served in the Missouri House of Representatives in 1869 and was connected with the Liberal Republican movement in Missouri in 1872. In 1876-77 he reported for the New York *Sun* the proceedings of the Electoral Commission. In 1883 he bought from Jay Gould the New York *World* (see E. B. xix 569c) which although sensational through a fearless editorial policy of combatting political evils became one of the most influential journals of the United States. In 1885 he was elected a Democratic member of Congress but resigned after a few months service. His later years owing to failing eye

sight and a high state of nervous irritability were spent in long cruises in his private yacht on which he died in the harbour of Charleston S C But up to the end he was most active in directing the *World* He founded the School of Journalism at Columbia University New York City and made bequests of \$500 000 each to the New York Philharmonic Society and the Metropolitan Museum

**Myrtle Reed**, author died August 17 1911 She was born in Chicago Ill September 27 1874 and married J S McCullough in 1906 She wrote popular fiction essays and verse including *Love Letters of a Musician* (1899) *Later Love Letters of a Musician* (1900) *The Spinster Book* (1901) *Lavender and Old Lace* (1902) *Packaback Songs* (1903) *The Shadow of Victory* (1903) *The Master's Violin* (1904) *The Book of Clever Beasts* (1904) *At the Sign of the Jack o' Lantern* (1905) *A Spring in the Sun* (1906) *Love Affairs of Literary Men* (1907) *Flower of the Dusk* (1908) and the *Weavers of Dreams* (1911)

**Eugene Lamb Richards**, professor of mathematics at Yale in 1891-1906 and a director of the Yale gymnasium in 1892-1902 died at Beach Haven N J August 5 1912 He was born in Brooklyn December 27 1838 graduated at Yale in 1860 and became tutor in mathematics there in 1868 He wrote on college athletics and published text books of *Trigonometry* (1879) and *Elementary Navigation* (1902)

**Maurice Howe Richardson**, surgeon died on July 31 1912 He was born in Athol Mass on December 31 1851 graduated at Harvard College in 1873 and at the Harvard Medical School in 1877 practised in Boston and taught anatomy and surgery at Harvard after 1879 becoming Moseley professor of surgery in 1907 In 1911 the post of surgeon in chief to the Massachusetts General Hospital was created for him

**Theophilus Francis Rodenbaugh**, soldier and author died December 19 1912 He was born in Easton Pa November 5 1838 served as a volunteer in the Civil War losing an arm and being made brigadier (March 13 1865) for gallantry at Cold Harbor entered the regular army in 1866 and retired in 1870 with rank of colonel and in 1904 was made brigadier general retired He wrote *From Everglade to Cañon with the Second Dragoons* (1875) *Afghanistan and the Anglo Russian Dispute* (1885) and *Sabre and Bayonet* (1897) and edited in 1899 the *Journal of the Military Service Institution*

**Abbott Lawrence Rotch**, meteorologist died at Boston Mass April 7 1912 where he was born January 6 1861 He graduated from the Massachusetts Institute of Technology in 1884 and became professor of meteorology at Harvard in 1906 After 1885 he maintained from his private fortune the Blue Hill Meteorological Observatory near Boston Here he first introduced the use of kites in exploring the upper air He also obtained valuable data with registration balloons five to ten miles above the earth He collaborated with Teis serenc de Bort (1905-06) in sending a steam yacht to explore the tropical atmosphere and took part in scientific expeditions to South America Europe and Africa He wrote *Sound ing the Ocean of the Air* (1901) and *The Conquest of the Air* (1909) Upon his death the Blue Hill Observatory became the property of Harvard

**Patrick John Ryan**, Catholic prelate died February 11 1911 He was born in Thurles County Tipperary Ireland February 20 1831 and removed to the United States after graduation from Carlow College and ordination as a sub deacon in 1852 He taught English Literature at Carondelet Seminary in St Louis was ordained a priest in 1853 and became rector of St John's Cathedral there He was made coadjutor bishop of St Louis in 1872 was promoted to an archbishopric eleven years later and in 1884 was transferred to the see of Philadelphia where he remained for the rest of his life President Roosevelt appointed him to the board of Indian Commissioners in 1902 He wrote *What Catholics Do Not Believe* and *Causes of Modern Religious Skepticism*

**Charles Robert Sanger**, chemist director of the Harvard laboratory after September 1903 died on February 25 1912 He was born in Boston August 31 1860 graduated in 1881 at Harvard where he was assistant in chemistry in 1882 and 1884-86 and (after teaching the same subject at the U S Naval Academy in 1886-92 and at Washington University St Louis in 1892-99) assistant professor in 1899-1903 and then professor

**Margaret Elizabeth (Munson) Sangster**, editor and author died at Glen Ridge N J June 4 1912 She was born at New Rochelle N Y February 22 1838 and was married to George Sangster in 1858 At an early age she began contributing to current periodicals and became one of the best known writers in the United States on topics of special interest to women and girls She was staff editor on many women's and children's periodicals She wrote *Winsome Womanhood* *Fairest Girlhood* *The Queenly Mother in the Realm of Home* etc

**William Lindsay Scruggs**, diplomat and authority on South America died in Atlanta Georgia, on July 18 1912 He was born near Knoxville Tennessee September 14 1836 was admitted to the bar in 1858 edited the *Columbus (Georgia) Sun* in 1862-66 and the *Atlanta New Era* in 1870-72 and was minister to Colombia in 1872-77 and (after being consul general in China) in 1882-87 and to Venezuela in 1889-93 In 1894-98 he was legal adviser of Venezuela and agent for the settlement of the boundary dispute with Great Britain arbitrated in 1897 He wrote *The Colombian and Venezuelan Republics* (3 ed 1905) *Origin and Meaning of the Monroe Doctrine* (1902) and several books on the boundary dispute

**William Hall Sherwood**, pianist and composer died in Chicago January 7 1911 He was born at Lyons N Y January 31 1854 the son of a music teacher and studied music

under William Mason Kullak and Liszt. He was an organist in Stuttgart and Berlin and became well known as a piano soloist in Europe and America, being perhaps the first American who could be ranked as a first class pianist. His merits as a composer for the piano were recognised in professional circles and he wrote *Music Study and the Mutual Relation of Interpretation and Technique*. For many years he directed the Sherwood Music School in Chicago where he settled in 1889 as head piano teacher in the Conservatory and his University Extension Course of Music Study and Piano Playing was in many respects a new departure. He gave summer normal courses at Chautauqua.

**James Schoolcraft Sherman**, vice president of the United States after 1909, died at Utica, N. Y. October 30, 1912. He was born on his father's farm near Utica, October 24, 1855, and graduated from Hamilton College in 1878. Admitted to the bar in 1880, he established a law firm in Utica which continued until 1907. His savings were first invested in a canning factory founded by his father and the enterprise prospered greatly under his guidance. Although at first he followed his family in its allegiance to the Democratic party, he soon became a Republican. He was mayor of Utica in 1884-85. In the winter of 1887, when only thirty-two years of age, he began a career in the House of Representatives which was uninterrupted until 1908 except during the term of the 52nd Congress (1891-93) to which he failed by a small number of votes to be elected. In the political campaigns of 1893, 1900, and 1908, he was chairman of the New York Republican State Convention and in 1906 was chairman of the Republican National Congressional Committee. It was in the latter capacity that he appealed to Republicans throughout the country for one-dollar subscriptions and obtained a large sum of money. For many years he was chairman of the Congressional committee on Indian affairs—he was related to Henry Schoolcraft, the well known writer on American Indians—and it was on this committee that his most important legislative work was done; he also was a member of the committee on interstate and foreign commerce. In 1908 he was elected Vice President of the United States on the ticket with Mr. Taft, and he was re-nominated at the Republican National Convention of 1912. He was one of the most expert parliamentarians in Congress in his time. His sympathies were with the conservative or standpat wing of the Republican party.

**Albert Keith Smiley**, philanthropist, died at Redlands, Cal. December 2, 1912. He was born of Quaker parentage at Vassalboro, Me., March 17, 1828, and graduated at Harvard College in 1849. Until 1879 he was a teacher but then began to develop a large tract of land in Ulster Co., N. Y., including the beautiful Lake Mohonk, which he had purchased ten years previously. It became a popular summer resort and Smiley, who was now a member of the board of U. S. Indian Commissioners, arranged at his own expense for a conference each autumn for the discussion of the problems of the Indians and later of other dependent peoples, the Filipinos, Hawaiians, and Porto Ricans. The first of these was held in 1882. Likewise after 1894 he called an annual spring conference in the interest of international arbitration. In 1889 he and his brother Alfred H. (d. 1903) purchased a large property at Redlands, Cal. In 1898 he presented a public library to Redlands and he served as trustee for Brown University and Bryn Mawr College.

**Gerrit Smith**, composer, professor of music in Union Theological Seminary, New York City, died July 21, 1912, in Danen, Connecticut. He was a grand nephew of the abolitionist of the same name, was born in Hagerstown, Maryland, December 11, 1859, was educated at Hobart College where he was chapel organist, studied music in Stuttgart and under Haupt and Rohde in Berlin and was successively organist of St. Paul's Cathedral, Buffalo; St. Peter's, Albany; and (1885) Old South Church, New York City, where he gave many organ recitals. He composed songs notably, *The Night Has a Thousand Eyes* and a cycle *Thistle-down* and ecclesiastical music including a cantata *King David*.

**John Bernhardt Smith**, entomologist, died on March 12, 1912. He was born in New York City, November 21, 1858, had a common school education and was admitted to the bar in 1879. In 1884 he became a special agent of the Entomological Division of the U. S. Department of Agriculture and in 1889 professor of entomology in Rutgers College and entomologist of the New Jersey Agricultural College experiment station. As state entomologist after 1898 he was in charge of the extermination of mosquitoes in New Jersey. He wrote *Economic Entomology* (1896) and *Our Insect Friends and Enemies* (1909).

**Paul Smith**, guide and hunter, died in Montreal, December 15, 1912. He was born in Milton, Vermont, August 20, 1825, and in 1852 built a *Hunters Home* at Loon Lake in the Adirondacks of New York, whence about 1858 he removed to St. Regis Lake, where he built a hotel and where the whole region came to be known by his name. The development of the Adirondack country was largely due to him.

**John Russell Soley**, lawyer and naval historian, died September 10, 1911. He was born in Boston, Mass., October 1, 1850, and graduated at Harvard in 1870. He made a specialty of international law, taught at the Naval Academy, was assistant secretary of the navy in 1890-93, and wrote a number of books on naval and maritime subjects. Among them are *The Blockade of the Cruisers* (1883), in a series on the American Civil War, *Foreign Systems of Naval Education* (1879) and *Life of Admiral Porter* (1903).

**Julius Stahel**, American soldier, died in New York City, December 4, 1912. He was born November 5, 1825, in Hungary, and was educated in Budapest. After fighting for Hunga-

man independence under Kossuth in 1848 he came to the United States (1856) and engaged in journalism until the Civil War broke out. In this he participated first as lieutenant colonel of a New York regiment and rose to be major general of volunteers in March 1863. He was prominent at the first battle of Bull Run in Fremont's operations in the Shenandoah Valley in Pope's Army of Virginia and for a short time had command of the 11th Army Corps. In March 1863 he held a command in the defence of Washington. He was American consul at Yokohama and consul general at Shanghai in 1884-85.

Isidor Straus, merchant and philanthropist, was a victim of the Titanic disaster April 15 1912. He was born in Rhenish Bavaria February 6 1845, went to the United States when nine years of age and was educated in Georgia. In 1863 he went to Europe to assist in purchasing steamers and supplies for the Confederate Government and three years later joined his father in New York City in the business of importing pottery and glassware. He was also a partner in several large department stores in New York City. He was a strong supporter of tariff reform and sound money, took a prominent part in the Democratic presidential campaign of 1892 and in 1894-95 served in the Federal House of Representatives where he assisted in drafting the Wilson Tariff. He was connected with many charitable and philanthropic institutions notably the Educational Alliance of New York City.

Ralph Stockman Tarr, geographer, died March 21 1912. He was born at Gloucester Mass. January 15, 1864 and graduated at the Lawrence Scientific School of Harvard University in 1891. He was assistant professor of geology at Cornell University in 1892-97, professor of dynamic geology and physical geography in 1897-1906 and thereafter professor of physical geography. He had an international reputation through his work in geology and geography especially in the field of glaciology in the study of which he made several expeditions to Greenland and Alaska—one to Alaska under the auspices of the National Geographic Society shortly before his death. He was president in 1911-12 of the Association of American Geographers, and was an associate editor of the *Bulletin of the American Geographical Society* and the *Journal of Geography*. He wrote a number of valuable papers and monographs and was the author of a widely used series of geographical text books of a *New Physical Geography* (1904) etc.

Denman Thompson, actor, died April 14 1911. He was born at Girard Pa. in 1833 but was reared in New Hampshire. He began his professional career with a travelling circus in New England about 1850. His work on the stage was inconspicuous until in 1875 he wrote a short play *Joshua Whitcomb* portraying characteristic types of rural New England which was immediately successful and was expanded by its author to larger proportions and renamed *The Old Homestead*. This medium peculiarly fitted to his abilities was his sole dramatic resource until he abandoned the stage in 1910 and it brought him a large fortune.

Bradford Torrey, naturalist, died at Santa Barbara California on October 7 1912. He was born in Weymouth Mass. on October 9 1843 and had a common school education. He was an editor in 1886-1901 of the *Youth's Companion* (Boston) and among his books were *Birds in the Bush* (1885), *A Rambler's Lease* (1889), *A Florida Sketch Book* (1894), *Every Day Birds* (1900), *The Clerk of the Woods* (1903) and *Nature's Invitation* (1904).

Eugene F. Ware, lawyer and poet, widely known as Ironquill, died at Cascade Colo. July 1 1911. He was born at Hartford Conn. May 29 1841 and was reared in Iowa. He served in the Union cavalry in the Civil War and was admitted to the Kansas bar in 1871. He held public office as (Republican) state senator in 1879-84 and was U.S. pension commissioner in 1902-05. His newspaper verse was afterwards collected in the *Rhymes of Ironquill* which has run through many editions. Among his other works are *The Rise and Fall of the Saloon* (1900), *The Lyon Campaign and History of the First Iowa Infantry* (1907), *Ithuriel* (1909), *From Court to Court* (1909). He also made translations of French and Latin works including Justman's *Roman Water Law*.

Henry White Warren, bishop of the Methodist Episcopal Church, died in Denver Colorado on July 23 1912. He was born in Williamsburg Massachusetts on January 4 1831 and was a brother of William Fairfield Warren (b. 1833, president of Boston University 1873-1903). He graduated at Wesleyan University in 1853, was ordained in 1855, filled pastorates in Massachusetts in 1871, in Philadelphia in 1871-74 and from 1879 to 1880 when he was elected bishop. He edited *The Study* (1896-1900) and was a prolific writer publishing *Recreations in Astronomy* (1879), *The Bible in the World's Education* (1892) etc.

Alexander Stewart Webb, military officer and educator, died February 12 1911. He was born in New York City February 15, 1831 and was graduated from the U.S. Military Academy in 1855. In the Civil War he served in the Army of the Potomac, being made brigadier-general of volunteers in June 1863. He was wounded at Gettysburg, on the Rapidan, and at Spotsylvania. At the time of Lee's surrender he was General Meade's chief of staff. After the war he was brevetted major-general in the regular army. In 1870 he was discharged at his own request because in the previous year he had been chosen president of the College of the City of New York. Here he remained until 1903 when he retired. He wrote *The Peninsula*, an excellent sketch of the McClellan Campaign of 1862.

Frederic Cope Whitehouse, lawyer and archaeologist, died November 16 1911. He was born at Rochester, N.Y. November 9 1842, graduated at Columbia University in 1861, studied in Europe, and was admitted to the New York bar in 1871. He spent much time

in Egypt, investigating Semitic traditions in regard to that country and attempting to identify localities mentioned in the Bible. In 1882, he discovered the depression in the desert now known as the Wadi Rayan and advocated unsuccessfully its use as a storage reservoir for the water of the Nile. The khedive granted him the Mejdieh order for his efforts in behalf of Nile regulation, and he was also a commander of the Osmanieh order.

**Ozi William Whitaker**, Protestant Episcopal bishop, died February 9 1911. He was born at New Salem Mass. May 10 1830 and was ordained deacon and priest in 1863 after graduation from the General Theological Seminary. After serving two years as rector at Gold Hill Nev. he held a charge in Englewood N. J. but returned to Nevada in 1867 and was rector at Virginia City for two years. He was then (1869) consecrated missionary bishop of Nevada and became assistant bishop of Pennsylvania in 1886. In 1887 he succeeded Bishop Stevens. He laboured assiduously for the extension of the diocese until failing eye sight compelled him to relinquish the charge in 1910.

**Wilbur Wright**, aeronaut, died at Dayton Ohio on May 30 1912. He was born near Millville Indiana on April 16 1867 and was the son of Milton Wright a bishop of the United Brethren in Christ. He was educated in the high schools of Richmond Indiana and Dayton Ohio. He and his brother Orville were early interested in problems of flying and about 1900 began experiments on the coast of North Carolina in gliding from some high points. In 1903 they ventured to fit a petrol motor to their machine and at the end of the year accomplished a flight of 260 yds. the first successful experiment of the kind with a motor propelled aeroplane. On October 5 1905 they established a record by flying 24½ miles at a speed of 38 miles an hour. They unsuccessfully tried to sell their patents to some one who would develop them without any public exhibition. They were therefore obliged to come out into the open and Wilbur went to France where his great flight of 56 miles on September 21 1908 established his fame. He set up a school at Pau and trained pupils. On December 31st of that year he flew 77 miles remaining 2 hrs. 20 min. in the air. After that his advice and his machines were in great demand. He visited Italy and England in 1909 and on his return to America devoted himself to tests which resulted in the sale to the War Department of a machine for \$30 000. From then till his death he worked mainly on the mechanical side of the business.

**Walter Wyman**, physician, died November 21 1911. He was born at St. Louis Mo. August 17 1848 and graduated at Amherst College (1870) and the St. Louis Medical College (1875). He entered the Marine Hospital Service in 1876. His career was one of great activity in promoting better sanitary conditions among seamen and the prevention of epidemics and he established the first government sanatorium for consumptives at Fort Stanton N. M. After 1902 he was surgeon general of the U. S. public health and marine hospital service. He was instrumental in securing the government regulation of serums toxins etc. and the establishment of a leprosy investigation station in Hawaii.

## ALABAMA<sup>1</sup>

*Population* (1910), 2 138 093 (16.9% more than in 1900) average number per sq. m. 41.7 (35.7 in 1900). Of the total 56.6% were native whites (1.5% native whites of foreign parentage) 0.9% foreign born whites and 42.5% negroes (45.2% in 1900). In 11 counties running from East to West across the central part of the state (the "black belt") negroes made up 75% or more of the population and in 10 others 50% or more. Negroes constituted 42.5% of the urban population (45.3% in 1900) and 42.5% (45.2% in 1900) of the rural including towns of less than 2 500. The "rural" population was 82.7% of the total. The cities with 2 500 inhabitants or over were Birmingham 132 685 Mobile 51 521, Montgomery 38 136 Selma, 13 649, Anniston 12 794, Bessemer, 10 864 Gadsden, 10 557 Tuscaloosa, 8 407 Huntsville (town), 7 611, Dothan 7 016 Florence, 6 689 New Decatur 6 118 Talladega 5 854.

*Agriculture*—In 1900-1910 the number of farms increased 17.8% and the acreage of improved land 12% although the total area of farm land increased only 0.2%. The average number of acres in a farm was 92.7 in 1900 and only 78.9 in 1910. The value of farm property increased from \$179 399 882 to \$370 138 429 (\$216 944 175 land \$71 309 416 buildings, \$16 290 004 implements and \$65 594 834 domestic animals). In 1910 the average value of farm land per acre was \$10.46 and 60.2% (in 1890 48.6%) of the farms were operated by tenants.

In 1912 (preliminary estimates) the state ranked below Texas and Georgia in production of cotton—1 330 000 bales (173 lbs. per A.). Other crops were Indian corn 54 180 000 bu. (3 150 000 A.) wheat 318 000 bu. (30 000 A.) oats 5 200 000 bu. (260 000 A.) rye 12 000 bu. (1 000 A.) rice 9 000 bu. (300 A.) potatoes 1 215 000 bu. (15 000 A.) hay 261 000 tons (209 000 A.) and tobacco 225 000 lbs. (300 A.). In 1909 (U. S. Census) the value of all vegetables (excluding potatoes) was \$5 379 577 (69 468 A.) and of orchard fruits \$1 818 508.

## ALABAMA

(peaches and nectarines \$1 055,971 apples \$620 745). On January 1, 1912 there were on farms 243,000 horses, 265,000 mules 396 000 milch cows 540 000 other neat cattle 140 000 sheep and 1 533,000 swine.

Besides the staple fruit crops especially peaches the Alabama farmers have recently experimented with pecans Japanese persimmons Satsuma oranges (usually planted with pecan trees) etc. and many cotton farmers are turning to horticulture or truck raising because of the advance of the boll weevil. The same cause tends to promote the selection of harder cotton and more scientific methods of cultivation. The Alabama experiment station at Tuskegee in 1911 and 1912 carried on important studies in feeding beef cattle and swine it has bred two new varieties of cotton notably Carver's hybrid and had experimented with Indian corn to produce a breed which will resist weevil. There is a state department of agriculture and industries and a board of agriculture (established in 1911) supervises appropriations for farm demonstration work. County commissioners are authorised to appropriate funds for farm demonstration work or farm life clubs in counties where such work has been undertaken by Federal or state authorities.

**Minerals**—Natural gas and petroleum were discovered at Fayette in the W part of the Warrior coal field early in 1909 when gas was found 475 ft below the surface. Wells drilled early in 1910—some 2,200 ft deep—had varying success. The field is undeveloped and the find has not yet been of commercial importance. In 1911 the total value of mineral products was \$28 005 278. The largest items were coal 15 021 421 tons valued at \$19 079 949 nearly 10% less than in 1910 but ranking Alabama 5th in the Union and iron 1 617 150 tons (pig) worth \$17 379 171 (not included in total given above) more than a quarter less than the value in 1910 and 3 955 582 tons of ore (\$4 876 106 3d in the United States). The Woodward mine with 502 471 tons of ore ranked 17th of the iron mines of the country. Clay products \$1 947 102—a slight increase over 1910. Mineral waters were reported sold from 10 springs (3 in Mobile county) and a little mica is found.

**Manufactures**—In 1909 the number of establishments was 3 398 (in 1904 1 882 the increase being largely in saw mills and timber plants) the number of persons engaged in manufacturing was 81 972 of whom 72 148 were wage earners the invested capital was \$173 180 000 and the value of products, \$145 962 000. Among the more important manufactures were lumber and timber products (mostly yellow pine) including the output of planing mills and wooden packing boxes \$26 058 000 cotton goods including small wares \$22 212 000 cotton-seed oil and cake \$9 178 000 ranking the state 6th in this industry iron and steel blast furnaces \$21 236 000 foundry and machine shop products \$11 550 000 and iron and steel not separately reported coke \$8 843 000 steam railway cars and shop construction \$7 528 000 fertilisers \$6 423 000 (\$2 159 000)—Alabama ranking 7th in fertilisers flour and grist mill products, \$2 779 000 printing and publishing \$2 768 000 and turpentine and rosin \$2 472 000—Alabama ranking 3rd in this industry.

The principal manufacturing cities were Birmingham (\$24 128 000 nearly  $\frac{1}{4}$  of the state's total and including 45 of the state's foundry and machine shop products) Bessemer (\$6 106 000) Montgomery (\$5 442 000) Mobile (\$5 429 000) and Anniston (\$4 333 000).

**Transportation**—Railway mileage January 1 1912 5 295 11 m. Under the Federal River and Harbor Act of 1910 work was begun on making a 4 ft depth in the Alabama and Coosa rivers to Wetumpka and on the 27 ft channel (200-300 ft wide) in Mobile harbour to be finished about 1914 on the Warrior and Tombigbee rivers three locks in addition to 13 formerly built in a series of 17 were practically completed in 1911-12. The legislature has created a state highway commission authorised to administer for good roads an annual appropriation of \$154 000 which may be increased at the option of the governor by not more than \$4000 a year for each county appropriating an equal amount.

**Government**—The quadrennial regular session of the legislature was held January to April 1911. A state court of appeals of three members (salary \$5,000) elected for six years was created, to relieve the supreme court and to have final jurisdiction in certain minor cases. A constitutional amendment prohibiting the sale or possession of liquor was defeated at a special election November 29 1910. The strict prohibitionist legislation of 1907 and 1908 (in effect January 1, 1909) was replaced by the Parks local (county) option bill (Feb 21, 1911), which provides that counties may vote not only for or against the sale of liquor but whether liquor shall be sold by dispensary, and prohibits the sale of intoxicating liquor except within the corporate limits of cities or towns which continually employ at least one policeman. This law was held constitutional by the state courts in 1912, when it was attacked by the Anti Saloon League. Under this law 15 counties voted in 1911 and 2 in 1912 9 for no licence 7 for licence and 1 for a county dispensary. The Smith Bill (1911) regulates strictly the licensed sale of liquor, forbidding it between 11 P.M. and 6 A.M. and limiting the number of saloons in incorporated places according to population.

Commission government was made mandatory for cities of 100 000 or over (only Birmingham in 1910) and for cities between 25 000 and 50 000 (only Montgomery in 1910) and permissive for all other cities above 1 000 on petition and favourable vote. The recall of a commissioner is provided for. Cordova, Hartsell, Huntsville, Talladega, Tuscaloosa and Sheffield (Aug 19 1912 in effect Oct 5) have adopted commission government—also Mobile the only city in Class B' legislation not being mandatory for this class. Civil service regulations were provided for police in cities of 25 000 or more. In November 1912 the people adopted an amendment abolishing the fee system in Jefferson county.

Primary elections are taken under state control—although the party state committees still have much power and may fix assessments on candidates—and must be held throughout the state on the same day (four months or more before the regular November election) for state and county elective officers representatives in Congress and presidential electors. Corporations are forbidden to contribute for or against nominations.

Among important labour measures is one requiring the appointment by the governor of an inspector of coal mines for each 2 500 000 tons of coal mined: the inspectors must investigate accidents promptly and they may close mines and must oversee the re opening of old mines: the law minutely prescribes measures for insuring safety sanitation and ventilation and forbids women and boys under 14 to work in mines. A state board of mediation and arbitration was created and similar local boards were authorised.

On January 3 1911 (219 U S 219 *Bailey v Alabama*) the United States supreme court (Justices Lurton and Holmes dissenting) declared the Alabama Contract of Service (for pionage) Law counter to the 13th Amendment to the Federal Constitution and unconstitutional because the state rule of evidence gave the accused no opportunity to prove or testify to his uncommunicated motives purpose or intention and the law made breaking a contract on which a cash payment had been advanced prima facie evidence of intent to defraud. The legislature on March 9 1911 provided for the conviction and punishment of any one entering into a written contract for service or rent of land with intent to defraud and with like intent obtaining money or property thereon: the new act omits the provision making breach of contract prima facie evidence of intent to defraud and a provision which gave one half of the fine to the injured party.

The salary of the governor was increased from \$5000 to \$7500. A mansion for the governor was purchased in 1911 and the legislature appropriated \$100 000 (available in 1912-13) for the improvement of the state capitol at Montgomery. The capitol wing has been completed on this appropriation. An oyster commission was created to preserve and develop oyster shrimp terrapin and turtle fisheries and to control canneries of sea food. Columbus Day (12 October) and Mardi Gras were made legal holidays.

*Finance*—The bonded debt on September 30 1912 was \$9 057 000: the balance in the treasury September 30 1911 \$7 071: the receipts for the following year \$6 261 27: the year's disbursements \$6 341 852. An act of 1911 taxes telephone and telegraph companies on the basis of mileage of lines operated: express companies doing intrastate business: sleeping car companies \$5 500 a year—besides a municipal privilege tax: insurance companies 1½-2% of gross premium less cancelled premiums—besides municipal taxes: brewers automobile owners corporations (franchise) bottlers rectifiers theatres ball parks travelling salesmen peddlers lawyers doctors brokers freight lines etc. A state banking department was created in 1911.

*Charities and Penal Institutions*—In 1911 the legislature provided for the Alabama home of refuge at East Lake (Birmingham) for wayward and delinquent white females between 12 and 18 and for a reform school at Mount Meigs for juvenile negro law breakers: taking over the reformatory formerly managed by the State Federation of Colored Women's Clubs. The office of state prison inspector was created and a juvenile court of Jefferson county (including Birmingham) was established. Liberal provision was made for pensioning Confederate soldiers and sailors.

*Education*—For public schools the state appropriated for the year ending September 30 1911 \$1 933 861: county appropriations amounted to \$389 164 and city appropriations to \$405 108. In addition \$317 600 was available from general property taxes loans bond sales etc. The total income for the nine district agricultural schools was \$56 365 and for the normal schools \$433 396—\$102 761 for the six schools for whites (at Daphne Florence Jacksonville Livingston Moundville and Troy) and \$380 635 largely from non-official sources for the three negro schools (at Montgomery Normal and Tuskegee). In 1911 \$100 for each county was appropriated for public school libraries in towns of 1 000 inhabitants or less. Connected with the work of the rural schools is the Boys Corn Club (first organised in Alabama in 1910) for interesting boys in scientific agriculture. In 1911 the Girls Industrial School became the Girls Technical Institute. In 1911 the legislature established the North East Alabama Agricultural and Industrial Institute at Lineville for whites over the age of seven years and the Alabama School of Trades and Industry for Boys and Young Men (white) at Ragland (to be opened in 1913). In illiteracy the state's percentage 22.9% of all 10 years of age and more in 1910 (34 in 1900) was exceeded only by that of Louisiana (29%) and of South Carolina (25.7%). Among whites the rate was 9.9% in 1910 (14.7% in 1900) and among negroes 40.1% in 1910 (57.4% in 1900).

## ARIZONA

The school population in 1912 was 727,297 (399,273 white 328 024 negro) the enrollment 445 105 (298 638 white 146 457 negro) and the percentage of full time attendance 61 for whites and 59 for negroes. The average school term was 132 days for whites and 96 for negroes. The receipts for schools were \$3 793 711 and the expenditures \$3 547 955.

*History*—For several years preceding 1912 the most prominent question in local politics was that of the prohibition of the sale of intoxicating liquors. The administration which came into office in January 1911, and especially Governor Emmet O'Neal (b 1853 his father Edward A. O'Neal was governor in 1882-86) was opposed to state wide prohibition and enacted the Parks county option law. In February 1911 a negro who had accosted a white woman was lynched after being taken from officers on the way to the Eufaula jail and on April 2, 1911 a negro accused of rape was taken from the sheriff of Bullock county and was lynched near Union Springs. Governor O'Neal preferred charges against the sheriff who had said that he was kidnapped in daylight. He was removed from office (May 25 1911). In 1912 a negro was lynched at Bessemer (Jan 28th) one at Hale's Station (Aug 5th), one near Gadsden (Aug 28th) one at Wetumpka (Nov 18th) and one at Butler (Dec. 7th)—all for murder. An international conference on the negro was held at Tuskegee, April 17-19 1912. There was no state election in 1911 the election in November 1912 resulted in a large majority for Woodrow Wilson for president (82 440 votes to 22 680 for Roosevelt, 9 730 for Taft and 3 029 for Debs, who received 1 399 in 1908) and in the choice of the regular Democratic nominees for members of the Federal House of Representatives, 10 under the new apportionment instead of 9 as formerly. In the Democratic National Convention the state delegates had supported for the presidential nomination Oscar W. Underwood (b 1862) one of the congressmen from Alabama, who had won national prominence as the leader of the Democrats in the House of Representatives. John Hollis Bankhead (b 1842) who had succeeded John T. Morgan as United States senator in 1907 was re-elected in January 1911 for the term 1913-19.

*Bibliography*—*Laws* (2 vols. Montgomery 1911) and other official reports.

ARIZONA<sup>1</sup>

*Population* (1910) 204 354 66 2% more than in 1900. Density 1 8 per sq. m. (1 1 in 1900). Foreign born whites constituted 22 9% of the total (in 1900, 18 2%) native whites 61% (more than one third born of foreign parents), negroes 1% Indians and Asiatics 15 1%. Nine cities and towns each with 2,500 or more contained 31% of the total in 1900 the four such places contained 15 9%. Thirteen cities and towns with less than 2,500 each made up 8% of the 1910 total ten made up 7 2% of the 1900 total. The largest municipalities in 1910 were Tucson, 13,193 (7 531 in 1900) Phoenix 11,134 (5,544 in 1900), Bisbee, 9,019, Globe, 7 083 (incorporated 1907), Douglas, 6,437 (inc 1905) Prescott 5 092 (3 559 in 1900), Chifton 4,874 (inc 1909) Nogales 3 514 (1,761 in 1900), Yuma, 7,914 (inc 1902).

*Agriculture*—In Arizona agriculture is more and more intensive the acreage in farms decreased from 1 935 327 to 1 246 613 between 1900 and 1910 but the improved land in farms increased from 254 521 to 350 173 acres the average farm acreage fell from 333 2 to 135 1 and the value of the farm property increased from \$29 993 847 to \$75 123 970 (\$42 349 737 land \$4 935 573 buildings \$1 787 790 implements and \$26 050 870 domestic animals). Of the land area about 1 7% was in farms in 1910. The average value of farm land per acre was \$33 97. In four counties crossed by the Gila river—Maricopa Graham Yuma and Pinal—there is the largest use of irrigation. The total acreage irrigated in 1909 was 320,051 (62 2% more than in 1899) of this total 307 778 was supplied from streams. In October 1912 the Salt River project of the Federal Reclamation Service was nearly completed, the water coming from the reservoir controlled by Roosevelt Dam which was formally dedicated on March 18 1911. The Yuma project (partly in California) in October 1912 was nearly three-quarters completed. The total cost of irrigation enterprises to July 1 1910 was \$17,677 966 and the estimated final cost of improvements begun was \$24,828 868. Of cereals 85 2% by acreage in 1909 was grown on irrigated land and of barley 98.1% of hay and forage crops 84 3% and of alfalfa 98 9% of sugar beets 92 8%. Farms were operated largely by owners (8,203 by owners, 163 by managers and 861 by tenants). In 1912 (preliminary estimates) the principal crops were Indian corn, 528 000 bu. (16 000 A) wheat 707 000 bu. (23,000 A), oats 268 000 bu. (6,000 A), barley 1,440 000 bu. (36 000 A).

<sup>1</sup> See E. B. ii 544 et seq.

potatoes 125 000 bu (1 000 A) hay 384 000 tons (113 000 A) In 1909 (U S Census) the total value of vegetables other than potatoes was \$379 293 of orchard fruits \$241 110 (apples \$109 395) of grapes \$25 371 of tropical fruits \$63 632 (oranges, \$52 341) On Jan 1 1912 there were on farms 104 000 horses 32 000 milch cows 741 000 other neat cattle, 1 510 000 sheep, and 22 000 swine. Dry-farm experiments are being carried on near Prescott and Snowflake and in Sulphur Springs Valley and experiments in raising date palms (and in artificial ripening) at Tempe and intensive farming at Yuma where acclimated Egyptian cotton has been successfully grown. Tunis sheep and ostriches have been bred.

*Mineral Products*—Total value 1911 \$44 104,731. The state ranked as for several years first in copper 303 202 532 lbs (more than one quarter the country's output of blister copper) valued at \$37 900 317. In the Globe district and in Mineral Creek district there were new companies producing copper in 1912. The yield in gold and silver per ton of copper ore was \$0.51 and the total value of all gold \$3 521 400 and of all silver from the state \$1 743 600. Of zinc the total output was 2 476 tons (\$282 264) and of lead 3 450 tons (by smelter reports 5 137 by mine reports) much more than in 1910. In 1911 asbestos deposits at Bass Camp Grand Canyon were being developed.

*Manufactures*—The total value of factory products for 1909 was \$50 257 000 79% more than in 1904 capital invested in manufacturing \$32 873 000 (128.3% more than in 1904) the number of establishments 311 and the number of persons engaged in manufacturing 7 202. The value of the copper smelting and refining products was \$41,059 000 (81.7% of the total) of the wage earners 486 were employed in this industry. Tucson's factory product was valued at \$2 037 000 that of Phoenix at \$1 467 000.

*Transportation*—Railway mileage Jan 1 1912 2 190 19. In 1912 the legislature required the raising by tax annually of \$250 000 for the state road fund.

*Government*—A convention at Phoenix (October 15th–December 9th 1910) adopted a constitution ratified by the people at a special election February 9 1911. The opposition of President Taft to its provision for the 'recall' of judges led to the passage of Public Resolution 8 (6 Cong) which required the people of Arizona to adopt an amendment omitting judicial officers from the clause providing for recall. This amendment was adopted at the general election held December 12 1911 but an amendment restoring the original clause by which the recall is applicable to all elective officers was adopted by popular vote (16 272 to 3 401) November 5 1912. Elections for recall follow a recall petition giving the reason for removing the official (in 200 words or less) signed by at least 5% of the voters at the last election in the electoral district which elected the official, and not circulated until an officer has been six months in office. If an official is re-elected at a recall election no second recall petition against him may be filed during his term of office until the petitioners pay into the treasury all expenses of the first recall election. At the general election in 1912 an amendment was adopted (14 928 to 3 607) giving the state and all municipal corporations the right to engage in industrial pursuits. The constitution reserves to the people the initiative (petition for legislation by a minimum of 10% of the total number of electors voting for governor at the preceding election and for a constitutional amendment by at least 15%) and the referendum the legislature or 5% of the qualified electors may require the submission to the people of any law or any part of a law, unless immediately necessary and except emergency measures no law goes into effect within 90 days. The governor may not veto an initiative or referendum measure approved by a majority of the voters. The constitution provides for initiative and referendum in municipal and local elections.

The house of representatives consists of 35 members and the senate of 19 all must be at least 25 years old and residents of Arizona for 3 years and of the county from which elected for one. They are paid \$7.00 a day (for no more than 60 days in a session) and 20 cents a mile for mileage. The legislature meets biennially. At special sessions no business may be transacted not described in the governor's call for the session. Bills may be passed only by a majority vote of all members elected. Measures or items in appropriation bills may be passed over the governor's veto by two-thirds vote of all elected members. Measures not returned with the governor's approval in 5 days (excepting Sundays) become law. The executive officers elected for 2 years must be at least 25 years old and citizens of the United States for 10 years and of Arizona for 5. They are governor (\$4 000 a year) secretary of state (\$3 500) auditor and treasurer (\$3 000 each) attorney general and superintendent of public instruction. There is no lieutenant governor.

The supreme court is made up of three justices with a six year term one being elected at each general election. The names of candidates for judicial office must be in alphabetical order on the ballots without partisan or other designation.

Suffrage except in school elections was originally limited by the constitution to male citizens of the United States 21 years of age, resident in the state one year and not under guardianship, non compos mentis, insane, or convicted of treason or felony (unless restored to civil rights) but in November 1912 an amendment (proposed by initiative petition) for woman suffrage was adopted by 13 452 votes to 6 202. The legislature following the instructions of the constitution in 1912 provided for an advisory popular vote for United States senator (and for United States district judges the returns of the popular vote being submitted to the president) and enacted a direct primary law providing for nominations for elective state county and city officers and candidates for United States senator and representatives in Congress a registration law (at the special session) making ability to read the constitution in English a requisite for suffrage<sup>1</sup> and a law for general publicity before and after election of all campaign contributions and expenditures. The legislature ratified the proposed 16th and 17th amendments to the Federal Constitution (April 8th and June 3 1912).

Constitutional amendments may be proposed in either house of the legislature or by a 15% initiative petition they may be voted on by the people at special or general election after due publication. The legislature may not call a constitutional convention without the approval of the people on a referendum vote.

The constitution prohibits plural or polygamous marriages and the sale or gift of intoxicating liquors to Indians.

Municipal corporations must be by general statute but any city of 3 500 inhabitants or more may frame its own charter to be approved by the governor who may withhold approval only if the charter is in conflict with the constitution and the laws.

There is a strict article in the constitution governing non municipal corporations and forbidding monopolies and trusts. A state corporation commission supervises public service corporations except those in incorporated cities and towns and issues certificates of incorporation and (to foreign corporations) licenses to do business in the state. The legislature in 1912 passed an elaborate Public Service Corporation Act.

The constitution makes 8 hours a lawful day's work in all employment by the state or any political division thereof forbids the employment of children under 14 during school hours and of children under 16 in mines in an injurious or hazardous occupation at night or more than 8 hours a day makes it illegal for employers to stipulate in a contract that employees give up claims against employers for personal injuries at work abrogates the common law doctrine of fellow servant as affecting the liability of a master for injuries to a servant and makes the defence of contributory negligence or assumption of risk a question of fact to be left to the jury. By a provision of the constitution alien labour may not be employed by the state by counties or by municipalities.

The legislature as required by the constitution passed an employers liability act applying to dangerous occupations and adding 12% interest per annum to original damages granted for the time consumed in appealing a case. Compensation (not more than \$4 000) for temporary incapacity is one half of average earnings for incomplete disability one half the difference between earnings before and those after the accident for death 1 200 times average daily wages or if there are no dependents medical and burial expenses. Companies and corporations are required to pay their employees twice a month. Blacklisting is forbidden. Women are not to be employed in an occupation which requires constant standing or in any mine quarry or coal breaker.

An eight hour law was passed for mines and smelters and similar establishments and for electric light and power plant. Other laws provide in various ways for the safety of railway passengers and employees, and specify minutely requirements for the safety of mine workers. Suits against the state were authorised the penal code was amended and description of wife or failure to provide for wife or minor child was made a felony. Columbus Day was made a legal holiday.

Pandering was made punishable by a fine of \$1 000 and imprisonment from one to ten years. A state laboratory for the analysis of food and drugs was established.

**Finance**—The constitution provides for a state board of equalisation and for county boards of supervisors to act as boards of equalisation, but a substitute clause was ratified (15 967 to 2 831) by the people in November 1912 allowing the legislature to prescribe a method of assessment equalisation and levy. A state tax commission was created in 1912 and laws were passed for the taxation of private car companies, at the rate of 7% of the gross receipts of express companies at the rate of 5% of the gross receipts and of all railways, telegraph and telephone companies, county by county. In 1912 a graduated collateral inheritance tax law was passed. The corporation commission is allowed to exempt at its discretion any railroad from the three cent minimum fare law. The constitutional limit on municipal indebtedness was increased by a constitutional amendment adopted November 3 1912 by 15 357 votes to 2 682.

The report of the state treasurer for the year ending June 20 1912 shows receipts of

<sup>1</sup> As there is a large Spanish-speaking (Mexican) element in the population, the constitutionality of this requirement may be tested in the courts.

\$1 192 350 expenditures of \$1 300,858 and a balance of \$411 441. The net state debt was \$946 972 exclusive of a funded county and city indebtedness of \$2,098 303.

*Education*—The constitution leaves educational administration mostly to legislative provision and a school code was adopted in 1912 but the constitution vests general conduct and supervision of public schools in a state board of education. The governor appoints regents of the university and the governing boards of other state educational institutions. A permanent school fund is derived from the sale of public lands from escheated estates and from unclaimed shares and dividends of corporations incorporated in the state. Laws of 1912 give state aid for vocational education in high schools (and in normal schools) and provide for free text books in public schools for county scholarships in the state university and for the retirement on a pension of \$600 a year of any teacher who has served in the public schools for 25 years or more.

In 1911-1912 the school population was 42 381 the enrollment 32 749 the average daily attendance 22 812 and the length of the average school year 8 months. The total revenue was \$1 817 641 and the expenditures \$1 321 595.

Of the total population 10 years and over in 1910 20.9% were illiterate (29% in 1900).

*Charitable Institutions*—In 1910 a pioneers home was opened.

*History*—The proposed new state constitution was ratified by the people on February 9, 1911 by a vote of 12 000 to 3 500. The first state election on December 12 1911 resulted in the success of the Democratic ticket headed by George Willie Paul Hunt (b 1859) who had been president of the constitutional convention and whose four year term of office began on December 31 1911. The proclamation admitting Arizona as a state to the Union was signed on February 14 1912. On March 7th the legislature (15 Democrats and 4 Republicans in senate 30 Democrats and 5 Republicans in house) chose as United States senators two Democrats Marcus Aurelius Smith (b 1835) who had been a delegate to Congress from the Territory and Henry F Ashurst (b 1875), who was speaker of the Territorial legislature in 1909. There was no election for state officers in 1911. In June the Republican state convention chose delegates pledged to President Taft but there was a contesting Roosevelt delegation the national convention decided against the latter. At the November election the state was carried by the Democrats with 10 324 for Wilson, 6 049 for Roosevelt 3 163 for Debs and 3 001 for Taft the Congressman chosen was a Democrat and the people approved several railway bills passed by the legislature but referred on petitions which were easily secured by the railways—by far the largest employers of labour in the state.

On November 8 1912 Phoenix adopted a new charter with a commission of three and with provisions for initiative and referendum but this charter was not approved by the governor.

## ARKANSAS

*Population* (1910) 1 514 449 (one fifth greater than in 1900) 28.1% negroes (28% in 1900) 68.4% native whites of native parentage and 2.3% of foreign parentage 11% foreign born. Density of population 30 per sq m. In 1910 the 28 incorporated places with 2 500 or more each contained 19% of the total in 1900 the 15 such places contained 85%. In 1910, 2/3 cities and towns with less than 2 500 each contained one ninth of the total population in 1900 173 contained 8.6%. The strictly rural population not in cities and towns decreased from 82% in 1900 to 76% in 1910. The largest cities in 1910 were Little Rock 43 941 Fort Smith 3 975 Pine Bluff 15 102 Hot Springs 14 434 Argenta (Pulaski county incorporated from part of Little Rock in 1904, Baring Cross consolidated with it in 1905), 11 138 Helena 8 772, Jonesboro, 7,123 Texarkana 5 655 and Paragould, 5 248.

*Agriculture*—In 1910 51.8% of the state's area was in farms 8 076 254 out of 17 416 975 acres were improved (one sixth more than in 1900). The average number of acres in each farm was 81.1 average value per farm \$1 864. The total value of farm property increased in 1900-10 from \$181 416 001 to \$400 089 303 (land \$246 021 450 buildings \$63 145,363 implements and machinery \$16 864 198 and domestic animals \$74 058 292). Of the farms 107 412 were operated (1910) by owners and managers and 107 266 by tenants. In 1909

<sup>1</sup> See E B 11 551 *et seq*

## ARKANSAS

232 farms (27,753 acres) were irrigated for rice growing. During 1900-1910 the acreage of cotton increased about 30% and that of hay about 80% but that of cereals decreased. The farmers co-operative demonstration associations and the agricultural college have organized boys corn clubs. In 1912 (preliminary estimates) the crops were cotton 854 000 bales (190 lbs per A.) Indian corn, 50 490 000 bu (2,475 000 A.) wheat 940 000 bu (94 000 A.) oats 3 482 000 bu (175 000 A.) rye 10 000 bu (1 000 A.) rice 3 405 000 bu (90 800 A.) potatoes 1 750 000 bu (25 000 A.) hay 352 000 tons (286 000 A.) tobacco 520 000 lbs. (800 A.) In 1909 (U. S. Census) the value of vegetables other than potatoes was \$4 843 442 of small fruits \$601 722 of orchard fruits \$3 011 377 (apples \$1 322 785 peaches and nectarines \$1,502 996). On January 1 1912 there were 265 000 horses 228 000 mules 404 000 milch cows 538 000 other neat cattle 134 000 sheep and 1 738 000 swine.

*Mineral Products*—Total value 1911 \$5 829 606. Coal was the most important 2 106 789 tons (\$3 396 649). Zinc from northern Arkansas amounted to 385 tons (\$43 890) and 15 tons (\$1 350) of lead were reported. In Sebastian and Scott counties there is a little natural gas. Mineral waters bottled at 8 springs were valued at \$118 994. The state is the foremost producer in the country of bauxite and of oilstones (novaculites and Ouachita or Arkansas stone). Phosphate rock in 1911 was mined near Batesville. Diamonds continue to be found in Pike county in 1911 one weighed 8½ carats another 3½ carats.

*Manufactures*—In 1904-09 the number of establishments increased from 1 907 to 2 925 and that of persons engaged in manufacturing from 37 557 (33 089 wage earners) to 51 730 (44 982 wage earners). Capital invested from \$46 306 000 to \$70 174 000 and the value of products from \$53 865 000 to \$74 916 000. The value of lumber and timber products was \$40 640 000 more than half the state's total and in their manufacture nearly three-fourths of the wage earners were employed. The state produced in 1909 28.4% of the red gum lumber 20.5% of the cottonwood 11.4% of the ash and 13.5% of the hickory cut in the United States and in each it ranked first in the country except in hickory in which it was second. The largest cut—five eighths of the state's total—was yellow pine. Other important manufactures were cottonseed oil and cake \$7 789 000 ranking the state 6th in this industry flour and grist mill products \$5 615 000 steam railway cars construction and repairs \$4 154 000 printing and publishing \$2 082 000 carriages and wagons \$1 664 000 (115.5% more than in 1904) and foundry and machine shop products \$1 051 000. The following five cities produced together about one quarter in value of the state's total: Little Rock \$6 882 000 Argenta \$4 842 000 Fort Smith \$3 739 250 Pine Bluff \$2 387 000 and Hot Springs \$844 570.

*Transportation*—Railway mileage Jan 1 1912 5 190 72 m. In 1911 and 1912 the Federal government was building locks and dams on the Ouachita river was removing obstructions on the upper part of that river and on the Saline and was dredging the Arkansas (under the River and Harbor Act of 1910).

*Legislation*—A constitutional amendment, declared in effect in January 1911 reserves to the people the legislative powers of initiative—by petition of 8% of the legal voters (for governor at the preceding election) filed at least 4 months before the general election at which the measure is to be voted upon—and of referendum which may be ordered except in case of emergency measures by the legislature or by a petition signed by 5% of the legal voters (as above) filed within 90 days after the final adjournment of the legislature which passed the Act in question. The governor may not veto a measure adopted by the people on referendum vote.

The legislature met in regular session from January 9 to May 13, 1911 and in special session from May 22 to June 10 1911. The income tax amendment to the Federal Constitution was ratified on April 22nd. Acts were passed for a franchise tax on corporations doing business in the state. Railways and other public service corporations including pipe lines are to be assessed for their franchises as for other property. An elaborate act is to reduce the rate of taxation.

For 1911 and 1912 \$1 250 000 was appropriated for Confederate pensions provision was made for a census of Confederate veterans in the state and \$10 000 was voted for a monument to the women of the Confederacy on the new capital grounds at Little Rock.

The sale of intoxicating liquor without a county license the giving or selling of it to an intoxicated person and free lunches in saloons were prohibited. There may be a second primary election if no candidate received a majority at the first and a statute provides for the contest of primary elections. General election days the birthday of Jefferson Davis and October 12 (Columbus Day) were made legal holidays. Concubinage of whites and negroes was made a felony and the birth of a mulatto child prima facie evidence of guilt justifying the conviction of the mother.

An act of 1911 regulates liability of common carriers for injuries to their employees. Contributory negligence does not bar recovery if the employer's disregard of the law has

contributed to the injury. No contract of indemnity constitutes a bar to action for damages but any sum contributed for insurance relief benefit or indemnity by the employer may be set off in trial of such an action. Contributory negligence of a person injured by a railway train is not to be considered if the railway fails to have proper lookout the burden of proof devolving on the railway. The state law requiring full train crews has been declared valid by the Federal Supreme Court (31 S C R 275).

*Finance*—The state debt is \$1,250,500 in 3<sup>rd</sup> thirty year bonds maturing in 1929 held by permanent school fund and University of Arkansas endowment funds. The total receipts for the two years ending September 30 1912 were \$6,902,386 disbursements \$6,812,486 (principally for general expenses common schools and Confederate soldiers pensions). The balance in the treasury on September 30 1912 was \$800,771.

*Education*—The legislature of 1911 created a state board of education and provided for state aid to high schools and for compulsory attendance at school for one half the school year of children between 8 and 16 (unless the family is destitute) and of children between 16 and 20 if they are not regularly employed—but this applies to only half the counties of the state. The Medical Department of Arkansas Industrial University in Little Rock was made part of the state university. A proposed constitutional amendment providing for uniform text books was defeated in September 1912 by 64,898 votes to 73,701. A commission of twenty appointed by the governor and with the state superintendent of public instruction as chairman works with funds from the Southern Education Board. It made its first report in 1911. In 1912 work began on an educational building at the state university for which the Peabody Board gave \$40,000. Four district agricultural schools at Jonesboro Russellville Magnolia and Monticello created by an act of 1910 were opened in 1912. Of the total population 10 years old and more 12.6% was illiterate in 1910 (20.4% in 1900). Of whites over 10% was illiterate (11.5% in 1900) of negroes 26.4% (43% in 1900).

In the year ending June 30 1912 the total school population was 603,226 the enrollment 409,746 the average daily attendance 261,747 the average length of school year 117.9 days the number of teachers employed 10,175 the total number of school houses 6,338 (282 erected during the year) and the total value of school property \$10,151,828. The balance on hand at the beginning of the year was \$1,398,699 the income during the year \$3,876,954 and the expenditures \$3,837,549 leaving a balance of \$1,438,104.

*Charities and Corrections*—The legislature of 1911 established juvenile courts in the several counties of the state. Governor Donaghey's recommendation in his call for a special session that the convict labour system be abolished and that provision be made for the proper management and control of the state penitentiary had no legislative result. On December 17 1912 Governor Donaghey as a protest against the lease system pardoned 360 convicts.

*History*—Governor George W. Donaghey (b 1856), re-elected by the Democrats for 1910-11 (by 101,646 votes to 39,510 for the Republican candidate) did not secure a renomination in 1912<sup>1</sup> his successor in 1913 being Joseph Taylor Robinson (b 1872) Democratic member of the Federal House of Representatives from 1903 to 1913, elected on the 9th of September 1912. The people at this state election voted against state wide prohibition of the liquor traffic (85,358 to 69,390) and against the 'grandfather' clause or negro disfranchising amendment to the state constitution (74,950 to 51,334) but adopted the 'recall'<sup>2</sup> of elective officers (71,234 to 57,860) and limited sessions of the state legislature to 60 days (10,246 to 33,397). In November the state was carried for Woodrow Wilson (68,838 votes, Roosevelt 21,673 Taft 24,467, Debs 8,153—in 1908 58,422) and seven Democratic congressmen were elected—the complete delegation as the number was not increased by the new apportionment. The election practically eliminated from the control of Federal patronage in the state Powell Clayton (b 1833) governor in 1868-71 United States senator in 1871-77 and long member from Arkansas of the Republican National Committee.

The new legislature is strongly Democratic (the only Republicans are four in the lower house), it chose (January 29, 1913) Joseph Taylor Robinson, the newly elected governor who had been inaugurated on the 14th to succeed U S senator Jeff Davis (b 1862, governor 1901-07), who died January 3, 1913 and who had been opposed by

<sup>1</sup> The issue in the Democratic primaries was state wide prohibition of the sale of intoxicating liquors. Donaghey favoured prohibition Robinson local option.

<sup>2</sup> Upon Robinson's entering the U S Senate the lieutenant governor W C Rodgers became governor in March.

<sup>3</sup> A circuit judge has ruled that the recall amendment was not adopted because it did not receive a majority of the votes cast for state officers at the same election and that it was illegally proposed being the fifth amendment submitted whereas only three amendments may be submitted at a time.

## CALIFORNIA

Stephen Brundidge Jr (b 1857), member of Congress 1897-1909 On January 6, 1913, the governor had appointed *ad interim* J N Heiskell, editor of the *Arkansas Gazette* of Little Rock but on January 30 he was succeeded by Judge W M Kavanaugh to serve until March 4 In the spring of 1912 the Socialist party elected a mayor in Hartford Sebastian county (pop 1910, 1 780)

There were several lynchings in the state in 1911-12 In 1911 a negro was killed at Benton in a race war growing out of an attack on a minstrel troupe, one was lynched at Augusta (Sept 9) for rape and murder two mulattoes were killed at Dumas (Sept 27) in a fight in which they and their white father resisted arrest a negro was lynched at Forest City (Oct 16) charged with rape and another at Hope (Oct 20) for using abusive language On March 23 1912 an apparently innocent negro was lynched at Fort Smith by a mob excited at the shooting of a constable The police made no effort to defend him and the chief three officers and six patrolmen were removed from office On May 2 twenty three indictments were returned by the grand jury for participation in the lynching but no convictions have been secured On the 4th of July a negro was lynched at Plummersville for killing a deputy and on the 19th of August another at Russellville for assault on a white woman

The state suffered severely from the Mississippi flood in 1912 The levee at three places where it was 1 to 3 ft below standard grade broke early in April and flooded a large part of the lower St Francis basin in N F Arkansas, about 2 500 sq m where people were cut off for days

*Bibliography* —*Public Acts* (Little Rock 1911) and official reports especially of the department of education

CALIFORNIA<sup>1</sup>

*Population* (1910) 2 371 540 an increase of 60 1% since 1900 75 % native whites (26 1% native whites of foreign parentage) 21 8% foreign born whites 0 9%, negroes and 4% Indians and Asiatics Density 15 3 to the sq m Roughly the growth was relatively larger in the southern part of the state in Los Angeles county it was 196% and in the two southern most counties San Diego and Imperial 114 5% In 1910 61 8% of the total was in the 70 cities with more than 2 500 each in 1900 52 4% in the 40 cities of this size The semi urban population in 1 8 (76 in 1900) cities and towns each with less than 2 500 inhabitants constituted 64 0 (61 1% in 1900) of the total The rural population decreased relatively from 41 5% in 1900 to 31 1% in 1910

There were 10 cities with between 5 000 and 10 000 each in 1910 34 cities (and 5 other places) each with 2 500 to 5,000 and 60 cities (and 68 other places) each with less than 2 500 Twenty-one cities, as follows, had more than 10 000 each (the 1900 populations are given in brackets) San Francisco 416 912 (342 782) Los Angeles 519 198 (102 419) Oakland 150 174 (66 060), Sacramento the capital 44 606 (9 282) Berk elev 40,434 (13,214), San Diego 39,578 (17 700) Pasadena 30 91 (9 117) San Jose 28 946 (21 500) Fresno 4 892 (12 470), Alameda 23,383 (16 464) Stockton 23 53 (17 506), Long Beach 17,809 (2 252), Riverside 15 212 (7 073) San Bernardino 12,779 (6 150) Bakersfield 12 727 (4 836) Eureka 11 845 (1 327), Santa Barbara 11 659 (6 581) Vallejo 11 340 (7 965), Santa Cruz 11 146 (5 650) Redlands 10 449 (4 797) Pomona, 10 207 (5 526) It is noteworthy that four of these cities are in Los Angeles county Los Angeles itself which in 1911-12 had a population of some 400 000 continues to grow with great rapidity and the street car connection with Pasadena on one side and the 'beach towns,' Santa Monica Redondo etc on the other, is creating a 'Greater Los Angeles,' by stimulating their development and that of the area between them and the city In San Francisco the recovery from the ruin caused by the fire and earthquake of 1906 has proceeded with striking results what is practically a new and even finer city has come into existence, full of palatial buildings, and active preparations are being made for the great Panama Pacific Exposition to be held in 1915

<sup>1</sup> See *E B v 7 et seq*

**Agriculture**—In 1910 the farm acreage was 27,931,444 (11,389,894 improved) and the average acreage of each farm was 316.7—all these being a little less than in 1900. In the decade the total value of farm property increased from \$796,527,955 to \$1,614,694,584 (land \$1,317,195,448 buildings \$133,406,040 implements \$36,493,158 and domestic animals \$127,599,938) and the average value of a farm from \$10,980 to \$18,308 and of farm land per acre from \$21.87 to \$47.16. In 1910 about four fifths of all farms were operated by owners or managers and only one fifth by tenants. The most striking change in crop acreage was in wheat of which in 1899 2,683,495 acres (less than in 1889) were harvested, but in 1909 only 478,217. In 1909 39,352 farms (out of 88,197) were irrigated, in 24 of the 58 counties more than half the farms were irrigated and of the total irrigated acreage (2,664,104) 961,136 acres were individual or partnership enterprises 779,020 acres co-operative 746,265 commercial 173,793 in irrigation districts 3,490 under the Indian service and 400 under the United States Reclamation Service. In its first season 1911 the (Federal) Orland project (begun 1906 85<sup>0</sup> finished in November 1912) irrigated 2,600 acres and preliminary examinations for the Needles (Colorado river) project are not completed. The cost of irrigation up to 1910 was \$72,580,000 (\$20.05 an acre) and the estimated final cost of enterprises begun is \$84,392,344.<sup>1</sup>

In 1912 (preliminary estimates) the principal crops excluding fruits were Indian corn 1,924,000 bu (52,000 A.) wheat 6,290,000 bu (370,000 A.) oats 7,800,000 bu (200,000 A.) barley 41,760,000 bu —about one-fifth of the country's crop—(1,392,000 A.) rye 141,000 bu (8,000 A.) potatoes 10,140,000 bu (78,000 A.) hay 3,825,000 tons (2,500,000 A.) cotton 9,000 bales rice 70,000 bu (1,400 A.) sugar beets 1,037,283 tons (99,545 A.) In 1909 (U. S. census) the value of tropical fruits was \$16,752,101 (oranges \$12,951,505 lemon \$2,916,571 olives \$401,277 figs \$260,153 pomeloes (grapefruit) \$143,180) of hemp 839,000 (300 A.) of vegetables other than potatoes \$6,886,885 of flowers and plants \$1,388,513 of nursery products \$2,212,788 of small fruit \$1,789,214 (strawberries \$1,149,475 raspberries and loganberries \$304,169 blackberries and dewberries \$282,383) of orchard fruits \$18,356,897 (apples \$2,901,662 peaches and nectarines \$4,573,775 plums and prunes \$1,660,963 cherries \$5,473,539 apricots \$1,768,921) of nuts \$2,959,845 and of grapes \$10,846,812. On January 1, 1912 there were on farms 493,000 horses 72,000 mules 505,000 milch cows 1,515,000 other neat cattle 2,656,000 sheep and 830,000 swine. In December 1911 an act was passed for the promotion of horticulture and to prevent the introduction of insects or diseases injurious to fruit trees etc. it provide for the inspection of nursery stock etc. brought into the state.

The University of California received an appropriation of \$30,000 to enable it to hold farmers institutes \$15,000 every two years for research work in viticulture the same sum for the improvement of cereal crops and the same for the study of plant diseases not already arranged for by the Southern California Pathological Laboratory. Experiments in rice culture point toward the possibility of large crops of this cereal important investigations have been made of orange thrips and scale insects and it has been proved that the bubonic plague was carried by wood rats and ground squirrels. In 1911 a new bird reservation was established at the Clear Lake reservoir S. E. of Lake Klamath.

**Mineral Products**—Total value 1911 \$90,517,566. The state ranked first in petroleum with an output of 81,134,391 bbls (\$38,719,080) in asphalt mostly oil asphalt \$1,104,421 (50% more than in 1910) and in gold \$19,928,500 (a little more than Colorado's output in 1911 or California's for 1910). The North Star mine near Grass Valley and the Kennedy at Amador City ranked 9th and 14th respectively among the largest gold mines in the country. There was an increase in placer production and quartz mining, but a decrease in deep mining due to the decrease in mining copper and lead. In silver \$686,300 there was a decrease of nearly one-third compared with the preceding year. The output of copper was 35,835,651 lbs (20% less than in 1910) of lead 615 tons (less than half that of 1910) and of zinc 1,404 tons (mine reports 959 tons smelter reports none reported in 1910). The state produced in 1911 about nine tenths (\$867,749) of all quicksilver more than one seventh of all pyrites all the magnesite (including that from a new deposit at Bissell, Kern county) most of the crude platinum (511 oz.) practically all the borax (\$1,569,151) and all the chromic iron ore (\$1,629 from Shasta Siskiyou and Tehama counties) produced in the country. Important absolutely were salt 1,062,813 bbls. (\$543,917) clay products (\$4,915,866 mostly brick and tile) Portland cement (\$8,737,150 ranking next to Pennsylvania) stone (\$4,676,902 ranking fifth) the larger items being granite, \$1,738,094 and trap rock \$2,055,930 sand and gravel \$416,980 and lime \$364,175. Natural gas was valued at \$800,714 much more than in any previous year and about 12 times as much as in 1901. Mineral waters bottled at 40 springs including 18 resorts were valued at \$578,439, almost a half more than in 1910. Brine in Seales Lake, San Bernardino county has 6,786<sup>67</sup> of potash and may furnish a supply for fertilizer.

**Manufactures**—Between 1904 and 1909 the number of establishments increased from 6,839 to 7,659 the number of persons engaged in manufacturing from 120,040 (100,355 wage-

<sup>1</sup> See F. W. Roeding *Irrigation in California* and Victor M. Cone *Irrigation in the San Joaquin Valley* (both Washington 1911).

earners) to 141 576 (115 296 wage-earners) the invested capital from \$282 647 000 to \$537 134 000 and the value of products from \$367,218 000 to \$529 761 000. The principal products were lumber and timber products \$45,000 000 slaughtering and meat packing products \$34 280 000 (116 7 % more than in 1899) canned and preserved fruits vegetables fish etc localised largely in Fresno Oakland Pomona and Redlands \$32 915 000 (more than one-fifth the total for the United States and far more than for any other state) foundry and machine shop products \$26,731 000 flour and grist mill products \$25 188 000 (93 % more than in 1899) printing and publishing \$25 032 000 steam railway cars and construction \$18 719,000 refined petroleum \$17 878 000 about 25 times as much as in 1899 butter cheese and condensed milk \$12 761 000 (256 2 % more than in 1899) tanned curried and finished leather \$9 367 000 malt liquors, \$9 319,000, vinous liquors \$8 937 000 (68 1 % of the total for the United States) illuminating and heating gas \$8 927 000 copper tin and sheet iron \$6 804 000 cement \$6 504,000 manufactured principally in Solano Santa Cruz and San Bernardino counties roast and ground coffee and spice \$6 492 000 food preparations \$5 508 000 distilled liquors, \$5,353 000 and men's clothing \$5 121 000.

In 1909 55 7, of the total value was reported from the 21 cities each with 10 000 inhabitants or more. San Francisco was still the first manufacturing city, and the decrease in the value of manufactures from \$137 788 000 in 1904 to \$133 041 000 in 1909 was due partly to the fire of 1906. Los Angeles (\$68 586 000), the second city showed an increase of 353 2, between 1899 and 1909 and Oakland (\$22 343 000) third an increase of 316 2. Other important manufacturing cities were Sacramento \$13 977 000 Stockton \$11 849 000 Fresno \$11 090 000 San Jose \$5 610 000 San Diego \$4 741 000 and Berkeley \$4 435 000.

**Transportation**—Railway mileage January 1 1912 7 511 78. The department of engineering was reorganised in 1911 and now appoints a highway engineer. Many separate acts were passed to establish state highways, notably in Alpine county which has long been without any westward outlet the only roads leading E into Nevada. Much has been done to improve roads for motoring especially near Los Angeles. The state contributed towards the improvement of the Sacramento and Feather rivers and the Federal government appropriated (March 4 1911) \$15 000 for the state debris commission and in 1911-12 was dredging the harbour of Los Angeles and building a breakwater there improving San Francisco harbour by rock removal, digging a 30 ft channel in San Diego harbour and another in Oakland and improving the entrance channel at San Luis Obispo.

**Legislation**—The 39th session of the legislature met from January 2 to March 27 1911, and on February 3 ratified the proposed 16th amendment to the Federal Constitution. At an extra session, November 27 to December 24 the state was redistricted, into senatorial assembly and congressional districts and by joint resolution an amendment to the Federal Constitution to provide for a nation wide direct vote for president and vice president was urged.

A conservation commission was appointed by the governor to report laws and make regulations in regard to forestry, water, the use of water water power electricity mines mineral lands, etc, and \$100,000 was appropriated for this work although no salary was allowed to the commissioners.

Provision was made for a presidential primary election to be held on the second Tuesday in May in the years of presidential elections. A primary law adopted the Oregon plan of pledging legislators to the people's choice for United States senator as shown in the primary or of having a legislator sign an alternative pledge that he would consider the primary choice merely as a recommendation. Nominations other than by primary must be made by petition with a certificate for each signer. A law providing for a registrar of voters was referred to the people and defeated (255 051 to 145 924) in Nov 1912.

The law in regard to voting machines was revised no machine may be used which makes it possible for a straight ticket to be voted without the separate motion of lever or button for each separate candidate. A ballot law provides for the office group form with names arranged in rotation—but alphabetically for local offices—with the party name or the word independent following the name of the office and with a blank space in each party group for the addition of the name by the elector. A sample ballot and a card containing instructions must be mailed to each voter. Pamphlets containing arguments for or against referendum measures must be distributed to voters—until there is legislative action for bidding this—and pamphlets on proposed constitutional amendments must be distributed to public schools.

Twenty three constitutional amendments were adopted by popular vote on October 10 1911 the most important being for the initiative and referendum providing for initiation directly to the people if the petition is signed by 8 % of the voters or more but through the legislature if the petition is signed by more than 5 % and less than 8 and giving the governor as in Oklahoma the power to call a special election for initiative measures an amendment providing for woman suffrage one for the recall of all elected officers (178 115

votes to 53 755) one prohibiting the reversal of verdicts in criminal cases on mere technicalities and one limiting biennial sessions of the legislature to 30 days with a recess of 30 days before re-assembling no bill then to be introduced except with the consent of three-fourths of the members of the house and no member to be allowed to introduce more than two bills. Before the adoption of these amendments the legislature had granted to voters of municipalities the right of initiative and referendum on municipal questions providing for initiative on a petition of 15 % of the qualified electors—in this case the measure must come before a general election but if the petition is signed by 30 % it must either be passed by the city council or must be brought up at a special election only emergency measures passed by a four-fifths vote by the city legislative body are exempt from the referendum appropriation measures do not go into effect for 30 days and they may be suspended by a petition signed by 25 % of the voters until they are acted on by a special or general election. The provision for a recall was that a vote for the recall of any city official might be called by a petition of 25 % of the voters at the last city election after he had been in office for four months. A similar law provides for the initiative referendum and recall in counties but the initiative petition must be signed by 20 % of the qualified electors to secure the calling of a special election and a vote for the recall of an officer after he has been in office six months can be secured by petition of 20 % of the voters at the last congressional election.

A law for local option in incorporated towns and cities and in supervisorial districts outside of a city or town requires a local option election on a petition of 25 % of the qualified voters. This law has been held constitutional and there were to the end of 1912 about 160 elections under the act of about 60 cities two-thirds voted for licence and of about 100 supervisorial districts 3 out of 5 voted for licence. Two measures in regard to local officers and one (initiated) providing for consolidated city and county governments were defeated at the November 1912 election—each by about 7 to 4.

The municipalities of the state were re-classified<sup>1</sup> and a law authorises the municipal ownership construction and operation of public utilities.

The commission form of government was extended in 1911-12 to the following cities: Oakland (election Dec 8 1910 in effect July 1 1911) Modesto (election Sept. 14 1910 in effect July 1 1911) Vallejo (election Feb 21 1911 in effect July 1 1911) Pomona (election Feb 16 1911 in effect May 8 1911) San Luis Obispo (election Sept 12 1910 in effect May 15 1911) Monterey (election Dec 12 1910 in effect July 1 1911) Santa Cruz (election Jan 31 1911 in effect July 3 1911) Petaluma (election Feb 14 1911 in effect April 17 1911 not a pure commission) Sacramento (election Nov 7 1911 in effect July 1 1912) and Stockton (election Oct 17 1911 in effect Jan 6 1913). In every case the new charter was drawn by the board of freeholders or city council. San Mateo also has commission government not a freeholder charter and San Bernardino adopted it in 1912. Los Angeles rejected it December 3 1912 by nearly 2 to 1 and Eureka by 1 048 to 124.

At a special election in San Francisco on November 15 1910 18 out of 35 amendments proposed to the charter were adopted one for initiative and referendum and recall one for direct nominations with no party name to appear on the ballot but not less than ten or more than twenty sponsors must appear before the registrar to certify under oath to the qualifications of any candidate for office and one for the minimum wage of \$3.00 a day for municipal employees in San Francisco. Of 37 amendments submitted December 10 1912 that for local option by city districts was defeated but one extending the power of the civil service commission and one authorising the purchase of land for a civic centre were adopted. On December 20 five propositions for bond issues were voted upon and all were rejected except one for \$1 700 000 to complete the county hospital.

Fourteen amendments to the charter of Los Angeles were adopted on March 6 1911 at a special election. They provide for the initiative referendum and recall for primary nominations for the regulation of expenses of candidates for the creation of a commission on a city plan for the establishment of a department of public utilities a harbour department a department of public service playground department and a municipal art commission and for the creation of pension funds for firemen and policemen. On December 5 1911 the people voted (58 134 to 43 937) for a municipal newspaper but against (88 395 to 32 283) a measure prohibiting saloons and on May 28 1912 voted for an aqueduct investigating board (16 564 to 15 697) and against the improvement of a harbour boulevard (20 415 to 11 412)—it is to be remarked that the vote on these initiated measures was much smaller in 1912 than in 1911. In the latter year there were two referendum votes (May 28) one against (18 883 to 13 899) an ordinance requiring the testing of milk for tuberculosis and one for (21 085 to 11 662) an ordinance regulating franchises.

<sup>1</sup> Cities over 400 000 are in the first class and those between 250 000 and 400 000 in the first and one-half class cities between 100 000 and 250 000 in the second class those between 23 000 and 100 000 in the third those between 20 000 and 23 000 in the fourth those between 6 000 and 20 000 in the fifth and those under 6 000 in the sixth but cities already organised are not to be classified and municipal corporations are not to be reclassified on the basis of the Federal census without action of the state legislature. Another law classified the counties of the state and adopted a new county code. Laws provide for the recall of elective officers and for initiative and referendum in counties and in subdivisions of counties.

A railway commission (later changed to a public utilities commission) was organised and by constitutional amendments and statutes received important powers—among others (by the Eshelman Stetson law) to fix absolute (and not minimum) rates and to make physical valuations of railways. \$210 000 was appropriated for the work of the commission. A high way engineer is to be appointed by the department of engineering reorganised in 1911.

The state bureau of labour was reorganised. The term of the commissioner is no longer limited to four years but he holds office at the pleasure of the governor. In 1911 the state passed the first law in the United States requiring all physicians to report occupational diseases to the state board of health, the report to be transmitted to the commissioner of labour. The penalty for failure to report is not more than \$10. One of the constitutional amendments adopted in October 1911 enabled the legislature to make compulsory the elective compensation laws for workmen and an act of 1911 applying to all employments but not to casual employees is compulsory for state or municipality as employer. The compensation provided for is in case of death three years' earnings not less than \$1 000 or more than \$5 000 if there are no dependents \$100. For total disability the compensation is 65% weekly of 1-52 of the average yearly earnings (if a nurse is required 100%) with \$333.33 the minimum and \$1666.66 the maximum yearly earnings the limit to be 3 times the yearly earnings or 15 years' and for partial disability 65% of the weekly wage loss with the same limits as for total disability. Child labour laws forbid any minor under 18 (formerly 16) to work between 10 P.M. and 5 A.M. (formerly 6 A.M.) or more than nine hours a day but children between 15 and 18 may appear on the stage. Fifteen years is the age limit for most employment and 16 the limit for employment during school hours. Children over 12 may work on special permit from a judge of the juvenile courts. The law making 8 hours a maximum working day for women in factories stores hotels restaurants public utility companies etc. (but not canneries of vegetables and fruits) was held to be constitutional by the supreme court on May 27 1912 in a test case brought by a hotel keeper in Riverside who was imprisoned for making a woman in his employ work nine hours a day. All employers must pay their employees monthly or oftener. Employees discharged must be paid immediately and those that resign within five days. The powers of the Industrial Accident Board were enlarged. Employers were required to keep records of accidents. Hours on railways must be no more than 16 in succession followed by 6 hours off. A new law provides for full train crews and sets qualifications for engineers conductors and brakemen. A law in regard to convict labour requires goods manufactured in state prisons to be marked with the name of the prison and not be sold but only be for public use.

The law for general vaccination passed in 1889 was amended by a clause exempting those that sign a statement they are conscientiously opposed to vaccination but unvaccinated children may not attend school in a district where there is smallpox. The practice of medicine surgery osteopathy and other treatments of cure was regulated by two new acts. The state board of health received an appropriation of \$5 000 to spread a knowledge of tuberculosis through the state. Giving or selling tobacco to minors is made a misdemeanor. Dairy products must not be manufactured from unhealthy cattle and the sale of impure or adulterated products is forbidden. The United States Department of Agriculture standard of purity for condensed and evaporated milk is proclaimed for the state. Cold storage eggs or butter kept for three months must have marked on the package the date of storage and any place in which they are sold must display a sign Cold Storage Eggs or Butter Sold Here. It is made unlawful to dump garbage in navigable waters of the state or in the Pacific within 20 miles of land. The secretary of state is to keep standard weights and measures and counties cities and towns are to appoint sealers of weights and measures. A tenement code was passed for buildings in incorporated places.

The laws against pumping and pandering were made more severe than before and a wife's testimony against her husband in such a case is competent.

The law against pool selling and book making on races was amended but an initiative measure for a state horse racing commission was defeated in November 1912 by 353 070 to 149 864. A new section added to the Penal Code prohibited gambling by use of slot machines and of dice having more than six faces.

A state flag was adopted showing a grizzly bear in dark brown on a white field with a red stripe at the bottom of the flag and a red star in the upper left hand corner and on the flag the legend California Republic.

**Finance**—A state board of control was created in 1911 to be composed of three members appointed by the governor to hold office during his pleasure at a salary of \$4 000. This board is to examine the books of every state institution and visit institutions to investigate school land funds to supervise the state's financial policy to pass on contracts for supplies to supervise a new department of public accounting and to institute a uniform system of accounting. The board of examiners was abolished. In accordance with a constitutional amendment of 1910 public service corporations are taxed on their gross earnings for a state tax only and the state and local taxes were separated. Public service corporations were taxed from 2% to 4% on gross earnings insurance companies  $1\frac{1}{2}\%$  on their gross premiums and banks 1% on their capital surplus and undivided profits. These rates may be changed by a two thirds vote of the legislature. The state banking law was revised in 1911. An

amendment (1911) to the law in regard to non resident taxation taxes anything left by the will of a resident of the state or by the will of a non resident bequeathing property within the state or on a transfer without valuable consideration and makes the tax a lien on the property. There is a scale for the nearness of kin to the legatee under \$25 000 the rate is 1 % for those nearest of kin and 5 % for those more remote for sums between \$100 000 and \$500 000 the corresponding rates are 5 % and 25 %. In 1912 the controller published the first annual report of the finances of municipalities and counties in the state authorised by a law of April 21 1911. An initiated amendment for local taxation was defeated in November 1912 by 243 939 to 160 321 but one changing the system of depositing public funds was adopted 307 199 to 128 411.

The cash in the state treasury July 1 1910 was \$7 201 220. The receipts for the fiscal year ending June 1911 were \$18 843 854 and for the year ending June 30 1912 \$27 395 144. The expenditures for these years were respectively \$18 591 471 and \$24 945 213 leaving a balance on hand June 30 1912 of \$9 903 534.

*Education*—A new compulsory education law of 1911 sets the age for school attendance from 8 to 15 but there are many exceptions. In accordance with a constitutional amendment of 1910 the fund for the University of California is to be increased by 7 % a year from 1911 until 1915. In November 1911 the people approved (343 443 to 171 486) an amendment to the constitution giving free text books to pupils in day and evening schools. A state normal school at Fresno was opened for instruction in September 1911. One high school in every first class city must teach French Italian Spanish and German and such a school is to be called a cosmopolitan school. Athletics and military drill may be included in the high school curriculum and high school cadet companies may be organised with target practice under the supervision of an officer of the National Guard.

For the school year ending in the summer of 1912 the total enrollment was 423 824 the average daily attendance 323 657 and the length of the average school year 172 days. The total school revenue (excluding that of the University of California) was \$32 265 791 and the expenditures \$24 534 266.

Illiteracy in the population 10 years old and over was 3.7 % in 1910 against 4.8 % in 1900.

The University of California in 1912 received a gift of \$100 000 for the endowment of scholarships for men. Late in the same year Prof Merriam of the University began the excavation of remarkably preserved skeletons of prehistoric animals mixed in tar pools on Rancho La Brea near Los Angeles. In April 1912 the University Medical school was reorganised in three departments gynecology and obstetrics medicine and surgery.

*Charitable and Penal Institutions*—The state board of charities and correction received new powers in 1911 and a state reformatory for first offenders between 16 and 30 was established it is to be erected near Yountville Napa county. Inebriates and those with drug habits may be committed to a state hospital for the insane. The juvenile court law was twice amended in minor details in 1911. On November 6 1911 the Federal Supreme Court (Finley v California) held that there was no unconstitutional discrimination in a law making death the penalty for assault with intent to kill on the part of a convict serving a life term. In 1912 an effort was made to propose by initiative a constitutional amendment abolishing capital punishment.

*History*—Hiram W. Johnson (b 1866) was elected in November 1910 governor for the term 1911-13 by 1 101 votes to 1 483 for Cecil (Democrat) 4 519 for Wilson (Socialist) and 5 807 for Meads (Prohibitionist). This was the result of a campaign in which Johnson toured the state in an automobile attacking 'special interests' and particularly the Southern Pacific Railroad whose counsel (and vice president since March 1910) William F. Herrin (b 1854), he accused of having an undue and improper influence upon legislation and nominations for state office. Johnson's nomination and election gave the Lincoln Roosevelt League and the progressives generally control of the Republican partisan machinery.

The Eshelman Stetson law (see above) had for its object the lessening of the power of the Southern Pacific the amendment for municipal home rule resulting in the adoption of several free holder charters with commission government put the cities of the state on a better government basis than those of any other state and Colonel Roosevelt said that Governor Johnson and the legislature put through "the most comprehensive program of constructive legislation ever enacted at a single session of any American legislature." An attempt was made to 'side track' the governor by electing him United States senator but the choice fell (Jan 11) on John Downey Works (b 1847), one of Johnson's aides in the campaign justice of the state supreme court in 1888-91 an authority on water rights and a prominent Christian Scientist. In the election of delegates to the National Convention the state law stipulated that the vote for district

delegates should be by the state at large, the rules of the Republican National Committee that they should be by districts. There resulted a bitter contest in the Convention in the case of two seats which the Convention awarded to Taft. Johnson's primary law was one factor: his name on the Progressive ticket and the votes of women were others in the victory of Roosevelt in the Republican presidential primary. He received 70,000 votes more than Taft and 25,000 more than Taft and LaFollette combined. Champ Clark defeated Woodrow Wilson in the Democratic primary—William Randolph Hearst was one of Clark's strongest supporters and a power in the Democratic party in the state. On October 3 the state supreme court barred from the Republican ticket the electors pledged to Taft at the same time calling the primary law a very bad one because it would practically disfranchise one third of the voters of the state. This made it necessary for Taft electors to be nominated by petition with signatures of 11,000 voters who had not taken part in the primaries. The state was carried for Roosevelt by 174 plurality for the highest Republican elector (283,610 for Roosevelt and 283,436 for Wilson). Of the 13 presidential electors 11 were for Roosevelt and 2 for Wilson. The Socialist vote was 79,201 (in 1908, 28,650, in 1910 for governor 47,819) and the vote for Taft was only 3,914. The Congressional delegation 11 instead of 8 as for the last decade, contains 3 Democrats, 4 Republicans and 4 Progressives. The new state legislature contains enough Democrats and Taft Republicans to make difficulties for Governor Johnson. One Socialist was elected to the lower house from Los Angeles.

The municipal election in San Francisco in 1911—the first under the new non-partisan plan—resulted for the first time in the victory of the anti-Union Labour party at the primary. James Rolph, Jr. received a majority of all votes cast (Sept. 26th) defeating Mayor McCarthy who had the backing of the Union Labour party and becoming mayor-elect without a general election. In the spring of 1911 a Socialist mayor, city commissioner, and member of the board of education were elected in Berkeley—an educational and residential rather than an industrial city and in April 1912 in Daly City, a suburb of San Francisco with 3,000 inhabitants the Socialists elected a city clerk and three (out of five) members of the board of trustees including the mayor—that is gained the control of the city government. In Oakland the Industrial Workers of the World secured a petition (March 1912) for the "recall" of the mayor and two commissioners on the ground that they protected vice but the recall election resulted in favour of the incumbents. In San Francisco a municipally owned and operated street railway to Golden Gate Park (bonds issued in 1909) was opened December 27, 1912. An extension to Ocean Beach is planned. A municipal opera house in San Francisco seems assured. Los Angeles has a municipal cement mill built in 1908.

The trial beginning October 9, 1911 in Los Angeles of John J. and James B. McNamara (arrested in Indianapolis April 22) for dynamiting the Los Angeles Times Building (Oct. 1, 1910) and the Llewellyn Iron Works was one of the most important events in the state's recent history (see UNITED STATES § History). The Los Angeles election of December 5, 1911 was marked by the first participation of women voters and by a contest between the Socialists whose candidate Job Harriman, one of the counsel for the McNamaras suffered from their cause being discredited and the Good Government party, which re-elected Mayor Alexander (83,918 to 52,933 for Harriman). Late in November 1912 a recall petition against the mayor was circulated—apparently for political purposes.

The experiences of Los Angeles with organised labour aroused opposition in San Diego to the Industrial Workers of the World and other radicals who in April 1912 made the place a centre for their propaganda and flocked thither from the whole Pacific Coast. In December 1911 the city council had abolished street meetings in a district where they had formerly been held. After the arrest of speakers at meetings called by a Free Speech League,<sup>1</sup> a meeting, not in the forbidden quarter, was broken up by the

<sup>1</sup> The demonstrations were nominally to test the right of free speech as were meetings in February 1911 in Portland (Oregon) and Spokane (Washington) and in Fresno (California) where 40 were convicted and put to breaking stone.

police March 17 1912 On May 17th two policemen watching a lodging house frequented by radicals were shot from ambush Camps outside the city were established to turn back Industrial Workers and a vigilance system was organized Dr Ben Reitman an aide of Emma Goldman, was tarred and feathered and driven out of the city on May 15 Mrs Goldman left the city immediately afterwards without lecturing on free speech as she intended and there were riots in the city on the 27th Six leaders of the Industrial Workers were convicted of felony on August 17 In the meantime a special commissioner reported to Governor Johnson that the city authorities were blameworthy for arbitrary treatment of the speakers and the governor instructed the attorney general to restore law and order He threatened to declare military law and began an action against the vigilantes but the grand jury adjourned without finding an indictment A negro was lynched at Bakersfield September 12, 1912, for an alleged assault on a white woman

A civil service system was established in Oakland in 1912 with the assistance of two members of the Chicago civil service board In 1911 an efficiency department was established in Pasadena

## COLORADO<sup>1</sup>

*Population* in 1910 799 024 (48% more than in 1900) The greatest relative increase since 1900 was 635.9% in Cheyenne county on the E boundary In 14 counties in the central part of the state and near the S W corner there were actual decreases (39.9% in Hinsdale county) In 1910 82.2% of the population were native whites and 14% negroes, 15.9% were whites of foreign birth and 22.7% were whites of foreign parentage The average density of population was 7.1 to the sq m There were 7 cities and towns with more than 2 500 inhabitants each, and these contained 50.7% of the total (in 1900 20 with 48.3%) The purely rural population increased more than 4% in the decade but was only 37.2% of the total There were 11 cities with more than 5 000 each Denver 135 581 (135 859 in 1900) Pueblo 44 395 (8 151 in 1900), Colorado Springs 29 078 Trinidad 10 204 (5 345 in 1900) Boulder 9 530 Fort Collins 8 210 Greeley 8 109 Grand Junction 7 754 Leadville 5 508 Cripple Creek 6 206 Canon City 5 162

*Agriculture*—The acreage in farms increased from 9 474 588 to 13 532 113 between 1900 and 1910 and the improved land in farms from 2 273 968 to 4 302 101 the average farm acreage fell from 333.6 to 293.1 and the value of farm property increased from \$161 045 101 to \$191 471 806 (\$362 822 205 land \$45 696 656 buildings \$12 791 601 implements and \$70 161 344 domestic animals) In 1910 one fifth of the land area was in farms 36 993 farms were operated by owners 787 by managers and 8 390 by tenants The average value of farm land per acre (exclusive of buildings) was \$26.81 The total acreage irrigated in 1909 was 2 792 032 173.3% more than in 1899) of this total 2 758 283 were supplied from streams The total cost of irrigation enterprises to July 1 1910 was \$56 636 443 and the estimated final cost of improvements begun was \$76 443 239 Of cereals 42.6% by acreage in 1909 was grown on irrigated land and of oats 69.7% of barley 68.3% of hay and forage crop 74.8% and of alfalfa 94.4% wild salt or prairie grasses 75.9% of sugar beets 99 and of potatoes 69% There is an irrigation demonstration farm at Eads Kiowa county The Gunnison tunnel of the (Federal) Uncompahgre Valley project (see E B vi 720b) was completed for present use in June 1910 and in November 1912 the entire project was 56.2% completed Preliminary work is being done on the Grand Valley project (Mesa county) to irrigate 53 000 acres by tunnels from the Grand river In 1912 (preliminary estimates) the principal crops were Indian corn 8 736 000 bu (420 000 A) wheat 10 968 000 bu (453 000 A) oats 12 412 000 bu (290 000 A) barley 2 964 000 bu (76 000 A) rye

<sup>1</sup> See E B vi 717 et seq

## COLORADO

488 000 bu (25,000 A.) potatoes, 8 075 000 bu (85 000 A.) hay 1 905 000 tons (870 000 A.) flaxseed 96 000 bu (12 000 A.) and sugar beets 957 142 tons (86 437 A.) In 1909 the value of vegetables other than potatoes was \$2 349 654 of flowers and plants \$468 085 of nursery products \$72 090 of small fruits \$398 836 (strawberries \$156 059 raspberries \$156 668) of orchard fruits \$4 651 792 (apples \$3 405 442 peaches and nectarines \$764 561) On January 1 1912 there were on farms 321 000 horses 167,000 milch cows 921 000 other neat cattle 17,000 mules 1 579 000 sheep and 211 000 swine. Carriage horses were successfully bred in 1911-12 at the Agricultural Experiment Station.

The legislature of 1911 amended previous irrigation laws created the office of state dairy commissioner and passed an elaborate act for dairy sanitation and for the branding of dairy products it gave to the state board of agriculture authority over forestry and provided for the appointment of a state forester passed a law requiring a health certificate for cattle over six months old brought into the state and a law requiring railways to build fences to protect herds. A school of horticulture and forestry was established in 1911 at the Grand Junction Indian School and a School of Agriculture and Mechanical Arts at the Fort Lewis School which was thereby put on a par with the Fort Collins School.

**Mineral Products**—Total value 1911 \$51 958 239. In gold the state ranked second with \$19 138 800 less than that of California in 1911 and less than Colorado's output in 1910 when the state ranked first. There was a similar decrease in the value of silver in which the state ranked fifth in 1911 with \$3 958 800 in 1910 it ranked fourth a position held by Idaho in 1911. Teller county with the Cripple Creek district was the principal gold producer and Lake county (Leadville) the principal producer of silver. Other metals were copper 9 791 861 lbs zinc 42 233 tons, and lead 30 621 tons. Second in value to gold was coal 10 157 383 tons (\$14 747 764 less than in 1910). The value of petroleum was \$228 104 (226 926 bbls). A little natural gas was used commercially in Boulder and Fremont counties. Clay products were valued at \$1 606 709 stone at \$1 514 827 (mostly marble and including small output of marble from several other states) and sand and gravel at \$65 366. Portland cement was manufactured at two plants. From the Boulder field 730 tons of tungsten were taken in 1911. Vanadium was found in San Miguel and Montrose counties. Sulphur deposits in Mineral county have not yet been worked commercially. Mineral waters bottled at 14 springs including 5 resorts were valued at \$104 763. Mica fluorspar graphite and grindstones were minor mineral products.

**Manufactures**—From 1904 to 1909 the number of establishments increased from 1 606 to 2 034 the number of persons engaged in manufacturing from 25 888 (21 813 wage earners) to 34 115 (28 067 wage earners) the invested capital from \$107 664 000 to \$167 668 000 (51% increase) and the value of products from \$100 144 000 to \$130 044 000. The principal manufactures in 1909 were smelting products (value not shown separately) slaughtering and meat-packing products \$9 657 000 (1905 more than in 1904) flour and grist mill products \$7 868,000 printing and publishing \$6 962 000 steam railway car construction and repairs \$6 559 000 foundry and machine shop products \$5 907 000. The principal manufacturing cities with the value of their products were Denver \$51 538 000 Pueblo \$3 345 000 and Colorado Springs \$1 733 000.

**Communications**—Railway mileage January 1 1912 5 728 30 m. Beginning with 1911 the second Friday in May became a state holiday under the name of Good Roads Day. An act of 1911 provided for a tunnel through James Peak to be used but not exclusively for fifty years by the Denver Northwestern & Pacific Railroad with the option to purchase but under the necessity of completing a through line to Salt Lake City this was referred to the people in November 1912 and was defeated.

**Legislation**—The legislature met from January 4 to May 6 1911. On February 20 it ratified the proposed Federal income tax amendment. Amendments to the state constitution were proposed, making smelters public utility works and providing for a state tax commission. An initiated amendment for prohibition was defeated in November 1911, this was the first measure of great importance brought before the people under the constitutional amendment (like that of Oregon) for initiative and referendum, passed in special session September 10 1910, adopted at the November 1910 election by 89 141 votes to 78 698 declared invalid by the district court August 3 1912, but held constitutional by the state supreme court on September 23. Other important amendments and measures voted on in 1912 were for recall of officials adopted by 53 620 to 39 564 for popular recall of decisions of the state supreme court that laws are unconstitutional, adopted by 55 416 to 40,801 a new ballot law adopted by 43,390 to 39 504, and a measure for state compensation to deserted or widowed mothers of dependent children, adopted 82,337 to 31,870.

Two new counties were created in 1911 Crowley from Otero (temporary county seat, Ordway), and Moffat from Routt (temporary county seat Craig).

Voters except for school elections must register ten days or more before the election.

The legislature established a court of appeals for four years to be composed of five judges appointed by the governor and to supplement the overworked supreme court which may transfer cases to it.

Among labour laws passed were one establishing a workmen's compensation commission, and one providing for employers' liability. A department of factory inspection was created, and mining and working in smelters, stamp mills, reduction works, coke ovens, etc., are classed as injurious and dangerous occupations. Eight hours (except in emergencies) is made a legal day in such work. A child labour law forbids any child under 14 being employed in a theatre or in a place of amusement where intoxicating liquors are sold, mercantile institution, hotel, laundry, factory, bowling alley or elevator, or as a messenger or driver. A child of this age must have a permit to work on a farm or in an orchard. No child under 14 is to be employed during school terms or before 7 A. M. or after 8 P. M. and eight hours is the maximum day for child labour. The age limit is set at 16 years (formerly 14) for hazardous and immoral occupations, and children may not be employed at all in the manufacture of paint, white lead, etc. Girls under 10 may not sell newspapers or engage in any street trade. An anti-coercion act forbids an employer discharging an employee for membership in a lawful organisation or society, or preventing an employee from joining such a society. For the use of armed guards in labour disputes written permission must be secured from the governor. Several labour laws, especially in regard to working hours, were referred to the people in November 1912 and all were ratified.

The 1909 law in regard to prostitution was revised and made more severe, and there is a special clause making a husband or a wife a competent witness against the other. Maternity hospitals must be licensed by the state board of health and by the bureau of child and animal protection. Public drinking cups are forbidden unless they are properly sterilised. The sale of cocaine and similar drugs is forbidden except by druggists on prescription or by manufacturers (to registered physicians, dentists or veterinarians).

Among interesting miscellaneous laws are those making false statements about newspaper and periodical circulation a misdemeanor, making non-support a felony, and adopting a state flag of three horizontal stripes with a red C on the gold design in the field.

**Municipal Government**—On September 19, 1911, Pueblo adopted a commission form of government with a provision like that of the charter of Grand Junction for preferential voting (on ballots for commissioners, First Choice, Second Choice, and Third Choice, etc.) to be entered if the candidates are more than twice and less than thrice as many as the number of offices to be filled, and provisions for initiative, referendum and recall. A similar charter was adopted by Durango in September 1912. The validity of the Pueblo charter was taken to the courts; the district court decided that the commission form was valid; the supreme court in December 1912 had not yet handed down a decision.

In May 1911 the state supreme court reversed its previous decision that the merger under the charter of 1904 of the city and county of Denver was unconstitutional, so that the merger is now in force. Early in 1910 the people of Denver voted not to renew the franchise of a private water company and created the public utilities commission of the city and county of Denver, and on August 6, 1910 they voted a bond issue of \$8,000,000 for a municipal water plant. The New York Trust Company, a holder of the bonds of the private company, secured an injunction against the issue of the new bonds, first in the U. S. District Court and then in the U. S. Circuit Court of Appeals. The Trust Company argued that the franchise of 1890 required the city to renew in 1910 or else to purchase the plant; the utilities commission that there was nothing mandatory in the terms of the franchise.<sup>1</sup> On May 21, 1912, Denver adopted two charter amendments: one for a half mill tax for five years for the purchase and improvement of mountain land for parks, and one for the trial of violators of the excise law in the county court, but voted against a mill tax for playgrounds and for a playground commission. An election on a commission charter for Denver was postponed from November 1912 to the spring of 1913.

**Finance**—The legislature of 1911 created a state auditing board and a tax commission, revised the revenue laws of 1908 and 1902, created the office of state bank commissioner, and prescribed the amount of paid-up cash capital (varying according to the size of the place) for banks to be organised. On February 19, 1912, the United States Supreme Court (Atchison, Topeka & Santa Fe v. O'Connor, 223 U. S. 280) decided that the state tax of 2c per \$1,000 of capital stock of a foreign railway was invalid—the Santa Fé was a Kansas corporation.

**Education**—An act of 1911 establishing 6 summer normal schools (instead of 13 as formerly) was defeated by the people at the November election in 1912. The normal school at Greeley was renamed in 1911 the State Teachers College of Colorado. Appropriations were made for a normal school at Gunnison, opened in September 1911, and for a State Home and Training School for Mental Defectives, opened for patients in July 1912 and for school work in September 1912. The state made an interesting experiment in appropriating money to

<sup>1</sup> See C. L. King, *The History of the Government of Denver* (Denver 1911), which harshly criticises public utility corporations.

employ a state teacher of the adult blind. The General Education Board in October 1912 gave \$100,000 to the University of Denver. In 1910 the percentage of illiteracy in the population 10 years of age and over was 3.7 (4.2 in 1900). For the year ending June 30, 1912 the school population was 227,142; the enrollment 173,229; the average daily attendance 118,245; and the length of the average school year 162 days. The total revenue was \$7,089,936 and the expenditures \$6,158,064.

*Charities and Penal Institutions*—Under an act of 1911 the state soldiers and sailors home may admit Confederate veterans. The legislature provided for the parole of prisoners in county jails for good conduct and work and for employment of prisoners in jails half of any prisoner's earnings to go to his dependent wife and children. The State Home and Training School for Mental Defectives at Aryada (10 m. N.E. of Denver) authorised in 1909 was practically completed in 1912; the opening being planned for May, 1913.

*History*—There was an unbroken deadlock in the 1911 legislature over the election of a United States senator to succeed Charles James Hughes, Jr. (18.3-1910) Democrat, elected for the term ending 1915. Senator Simon Guggenheim (b. 1867) Republican, the state's only representative in the Federal Senate in 1911 and 1912, announced that for personal reasons only he would not be a candidate for re-election in 1913. There was a bitter struggle in the Democratic party also, for control of the platform; or radical Democrats were led by John Franklin Shafroth (b. 1854) governor since 1909 and Alva Adams (b. 1850) governor in 1887-89 and the 'City Hall' wing was led by Robert Walter Speer (b. 1855) mayor of Denver in 1904-12. The Republican state convention (April 1912) was for Taft. The Progressive party was well organised in the state with nominations for governor (E. B. Costigan) and Congressmen; but the Republican nominees (C. C. Parks for governor) ran better—the fact that the Roosevelt nominees were supported by three parties—the Bull Moose, Roosevelt and Progressive, was no advantage since the ballot is not of the party column form. In the November election the state went for Woodrow Wilson (114,232 votes to 72,306 for Roosevelt, 58,386 for Taft and 16,418 for Debs). Elhas M. Ammons Democrat was elected governor (receiving 101,293 votes to 63,035 for Costigan and 54,720 for Parks) and the remainder of the Democratic ticket<sup>1</sup> was successful including James B. Pearce, Secretary of State, who ran behind the ticket because of criticism of his personal morality by a part of the press and of the clergy of the state—in this particular the campaign was singularly venomous. On January 14, 1913 two Democrats were chosen as U. S. senators, ex-governor Shafroth for the full term and for the short term Charles Spalding Thomas (b. 1849), governor in 1899-1901. The legislature is Democratic by more than 40 on joint ballot. The four congressmen (3 under the previous apportionment) are Democrats. The municipal machine in Denver was defeated May 21, 1912 by a 'Citizens' Ticket' on which Judge Ben Lindsey of the Juvenile Court was the best known name and Henry J. Arnold was the successful candidate for mayor with 40,871 votes to 16,898 for J. B. Hunter (Democrat), of Mayor R. W. Speer's wing of the party and 12,510 for United States Marshal D. C. Bailey (Rep.) whose candidacy suffered from his connection with William G. Evans, the Denver Street Railway magnate, who sued the *Denver Post* for \$1,000,000 for libel. In the campaign Mayor Speer bought the *Evening Times* so that he might have an organ with which to reply to the attacks of the *Rocky Mountain News* and of the *Post*.

A cloudburst on Cherry Creek caused a flood in Denver, July 15, 1912, which did damage estimated at \$1,000,000 and resulted in the loss of two lives.

*Bibliography*—*Laws* (Denver, 1911) and other official publications. E. Parsons *A Guide to Colorado* (1911). E. A. Mills *The Spell of the Rockies* (1911).

### CONNECTICUT<sup>2</sup>

*Population* (1910) 1,114,756 (908,420 in 1900), Connecticut ranking 4th among the states in density of population with 231.3 per sq. m. (188.5 in 1900). The percentage of increase in 1900-10 was 22.7, greater than that for any decade since 1850-60. Foreign born whites constituted 26.1% of the total in 1900 and 29.5% in 1910; native

<sup>1</sup> B. R. Montgomery, lieutenant governor-elect, died December 29, 1912.

<sup>2</sup> See E. B. vi, 951 *et seq.*

## CONNECTICUT

785

whites 72.1% in 1900 and only 69.1% in 1910 (of foreign parentage 31.1% in 1900 and 33.6% in 1910) and negroes 1.7% in 1900 and 1.4% in 1910 decreasing in actual numbers from 15,226 in 1900 to 15,174 in 1910. In 1910 89.7% (in 1900 87.2%) of the population was in places (72 in 1910 70 in 1900) of 2,500 or more. The 18 cities with a population of over 5,000 contained together 57.6% of the total. The following cities, boroughs, and towns, each had 10,000 or more: New Haven, 133,605; Bridgeport, 102,034; Hartford, 98,915; Waterbury 73,141; New Britain (city and town since 1906), 43,916; Meriden (city), 27,263; Stamford (city), 25,138; Norwich (city), 20,367; Danbury (city), 20,234; New London, 19,659; Greenwich (town), 16,463; Torrington (borough and town), 15,483; Ansonia 15,152; Manchester (town), 13,641; Naugatuck (borough and town), 12,722; Windham (town), 12,604; Middletown (city), 11,851; Orange (town), 11,272, and Willimantic (city), 11,230.

**Agriculture**—The acreage in farms decreased from 231,208.3 to 218,578.8 between 1900 and 1910 and the improved land in farms from 1,064,525 to 988,252; the average farm acreage fell from 85.8 to 81.5 and the value of farm property increased from \$113,305,580 to \$159,399,771 (\$72,206,058 land, \$66,113,163 buildings, \$6,916,648 implements and \$14,163,902 domestic animals). Of the land area 70.9% was in farms. The average value of farm land per acre was \$33.03. Farms were operated largely by owners (23,234 by owners, 949 by managers and 2,632 by tenants). In 1912 (preliminary estimates) the principal crops were: Indian corn 3,000,000 bu (60,000 A); oats 338,000 bu (11,000 A); rye 122,000 bu (7,000 A); buckwheat 62,000 bu (3,000 A); potatoes 2,461,000 bu (23,000 A); hay 436,000 tons (379,000 A); and tobacco 29,750,000 lbs (17,500 A). In 1909 (U. S. Census) the value of vegetables other than potatoes was \$1,965,635; of flowers and plants \$1,047,431; of nursery products \$261,506; of small fruits \$316,752 (strawberries \$235,648); of orchard fruits \$13,707.4 (apples \$833,168; peaches and nectarines \$417,598); of grapes \$43,523. On January 1, 1912 there were on farms 47,000 horses, 120,000 milch cows, 71,000 other neat cattle, 21,000 sheep and 60,000 swine. The Storrs Agricultural Experiment Station published in 1912 important studies of the chestnut blight showing that it was not imported; that its spread is due to weather conditions and that it will naturally die down and continued its important researches into nutrition.

**Mineral Products**—Total value 1911 \$3,151,588. The principal products of mines and quarries were: stone (granite and traprock mostly) valued at \$1,215,462; lime \$328,904; feldspar 16,497 tons (less than in 1910 but ranking the state third value \$73,557); clay products \$1,284,166 (entirely brick and tile) and mineral waters bottled at 28 springs \$182,744, two thirds more than in 1910.

**Manufactures**—In 1909 the gross value of products was \$490,272,000 (\$369,082,000 in 1904); the increase being partly due to the increased price of raw material; there were 4,251 establishments (3,477 in 1904) and 210,792 wage earners, 18.9% of the total population. More than 60 different industries had each an output valued at more than \$1,000,000. Among the principal manufactures are: brass and bronze products \$66,933,000 being four ninths of the total for the United States; foundry and machine shop products including hardware \$65,535,000; cotton goods \$24,232,000; silk goods \$21,063,000; firearms and ammunition \$19,948,000 (the output of ammunition being nearly four fifths of the total for the country and of firearms nearly one quarter); woollen, worsted and felt goods \$19,363,000 and fur felt hats \$10,400,000; silverware and plated ware \$15,837,000 more than one third the total value for the country; and for plated ware alone more than two thirds corsets \$12,815,000 more than one third the country's total automobiles \$11,668,000—41.3% more than in 1904; cutlery and tools \$10,717,000; electrical machinery \$9,824,000; and clocks and watches \$7,390,000.

In 1909 68.1% of the state's product came from cities and boroughs, 15% in all which had each a population of 10,000 or more. These were: Bridgeport \$65,609,000 with 14.9% of the state's foundry and machine shop products, 53.8% of the corsets, 33.8% of the electrical machinery and more than half of the sewing machines and of the talking machines. New Haven \$51,071,000 of which more than one seventh was foundry and machine-shop products and other important items were clocks, automobiles, boots, malt liquors. Waterbury \$50,350,000 of which five eighths was brass and bronze (21% of the total for the country); the next item being clocks and watches. Hartford \$40,680,000. New Britain \$22,021,000, 52.9% of which was hardware, Ansonia \$20,088,000, chiefly brass and bronze products, clocks and watches. Meriden \$16,317,000 chiefly silverware and plated ware. Torrington \$12,550,000 mainly brass and bronze products. Naugatuck \$11,033,000 mainly rubber goods. Danbury \$10,318,000 about two thirds of which was fur felt hats (nearly a quarter of the country's output). Norwich \$9,389,000 mainly textiles. Stamford \$8,740,000. Willimantic \$6,733,000 textiles and thread. Middletown \$4,955,000 largely men's furnishing goods and New London \$4,483,000 largely textiles.

**Transportation**—Railway mileage January 1, 1912, 1,015.98. The Federal River

# CONNECTICUT

and Harbor Act of February 1912 appropriated \$77 000 (and empowered the Secretary of War to expend \$100 000 more) for improvement of the Connecticut river below Hartford. In 1911 the Federal improvements of the Bridgeport harbour and the 12 ft channel in the New Haven harbour were completed and in the latter harbour breakwaters were practically finished and a 12 ft anchorage basin more than half completed in 1912.

**Government**—The regular session of the legislature was held in 1911 from January 4 to September 26. It rejected the proposed 16th (income tax) amendment to the Federal Constitution. The house of representatives proposed, on January 20, a constitutional amendment providing for two thirds (instead of a plurality) vote in each house to pass a bill over the governor's veto; this is to come before the legislature of 1913. Amendments adopted by popular vote in 1911 and 1912 provide for the lieutenant governor's succession to the gubernatorial office if the governor is unable to serve (29 138 votes to 4 770) and that the legislature adjourn *sine die* by the first Wednesday after the first Monday in June (30 349 votes to 4 865) sessions thus being limited to 5 months. The salary of the governor after the 1912 general election was increased to \$5 000 a year, and that of the lieutenant governor to \$1 500 and that of the attorney general to \$5 000 after September 1, 1911. A board of state bank commissioners was to report to the legislature in 1913. Columbus Day was made a legal holiday.

The corrupt practices act and the Australian ballot law of 1909 were amended. Any political division of the state may vote for or against the merit system for all its officers and employees. The legislature created a public utilities commission. All public service companies must make return to the commission and immediately report all accidents to it. It controls rates and service of public utilities.

Commissions were created to report by April 1, 1913 on the employment of women and children and to investigate employers' liability and workmen's compensation. The eight hour day was made a maximum for mechanics in state institutions except in unavoidable emergencies. If workmen work on Sunday they must have one other day off in seven, but the act excepts commercial occupations and industrial processes.

by their nature continuous. No minor under 16 and no woman of any age is to be employed in a mercantile establishment unless it is manufacturing or mechanical more than 58 hours a week; but if the employer makes the hours 55 a week or less in June, July and August the hours a week for the rest of the year may be 60 and the provision is not applicable between December 17th and December 25th if the employee gets seven holidays during the year with full pay. No child under 14 is to be employed in a mercantile, mechanical or manufacturing establishment and no child under 16 unless he has a certificate of an elementary education. No child under 16 may run or adjust certain dangerous machinery or be employed in the manufacture of dangerous drugs or explosives and none under 18 may run an elevator. An elaborate law was passed forbidding blacklisting. Damages for injuries resulting in death were limited to \$10 000 and suit must be brought within one year from the time of the neglect complained of. Physicians are required to report to the state commissioner of labour cases of occupational disease. An act of 1911, probably the first American state law dealing with aeronauts, requires the registration of air ships and the licensing of aeronauts. An elaborate act for sanitation in tenements, boarding and lodging houses and several acts safeguarding public health providing for purity of milk and other food and regulating the sale of liquor and drugs were passed. Tobacco must not be sold or given to minors under 16. Any combination to increase prices of necessities is punishable by a maximum fine of \$1 000 or by imprisonment for 5 years or by both.

The town of Bristol in August 1911 adopted a city charter (in effect Oct. 1, 1911) which contains some features usually found in the commission plan of government and provisions for the initiative and referendum.

**Finance**—A commission appointed in 1911 to examine into the methods of taxation of railways and other taxable corporations was to report in 1913. The treasurer, comptroller and tax commissioner constitute a board of equalisation of taxes. Land planted with forest trees at least 1 200 to an acre if the planting is approved by the state forester is exempt from taxation but this exemption cannot hold after the timber is cut nor in any case for more than 20 years.

The state treasury had a balance on hand October 1, 1911 of \$376 576. The receipts for the year ending October 1, 1912 (including \$4 000 000 bonds sold) were \$9 915 418 and the expenditures (including \$1 450 000 temporary loans paid) \$8 105 730 leaving a balance in cash of \$2 186 244. The state debt in October 1912 was \$7 064 100.

**Education**—For the school year 1911-12 the school population (between 4 and 16) was 255 692, the total enrollment in public schools 197 852, the average daily attendance 155 735, the average length of the school year 184 days and the total revenue for schools \$6 040 132 and the expenditures \$6 122 307. The total indebtedness of towns and districts for school purposes was \$8 813 998 in 1912—as compared with \$3 110 210 in 1901—in the same

period the enumerated school population increased less than one-fourth. Of the towns 129 provide (39 do not) free text books. The work of consolidation of small schools is going on in Connecticut—as in no other state except New York—there was an increase of illiteracy in 1909-1910 from 5.9% to 6.1% of the population 10 years of age and more. This rate was the highest in New England excepting that of Rhode Island. Morton F. Plant gave \$1,000,000 in June 1911 for the Connecticut College for Women. A site has been secured in New London but late in 1912 building had not begun. With the autumn term of 1912 Wesleyan University (Middletown) ceased to be co-educational and received men only. In June it completed an endowment fund of \$1,000,000. In October 1912 J. Pierpont Morgan gave money for a new library and administration building at Trinity College, Hartford. To Yale University M. C. D. Borden left \$250,000 in 1912 and the McPherson fund for indigent students will amount to \$400,000 or more.

*Charitable and Penal Institutions*—In 1911 the legislature created (over the governor's veto) an annual pension of \$30 to veterans of the Civil War, their widows, their widowed mothers, etc. but the act was declared unconstitutional in April 1912 by the state supreme court. An act of 1911 provides for the transfer from the state prison to the newly completed reformatory at Cheshire (subject to the approval of the directors of these institutions) of male prisoners under 25 sentenced to less than 5 years. Contracts for convict labour may not be made for longer than 4 years. This law does not apply to inmates of county institutions in farm domestic and casual service. A prisoner in the state prison sentenced for attempt to murder by assault or attempt to poison may be paroled after two years.

*History*—On January 4, 1911, Simeon Eben Baldwin (b. 1849), professor of constitutional and private international law in Yale University since 1872, and chief justice of the state supreme court of errors, was inaugurated governor—the first Democrat to hold the office since 1895. He had a Republican legislature (majority of 7 in senate of 60 in house) which blocked some of his proposed legislation, and the senate refused to ratify the governor's nominee for state highway commissioner although the Republican incumbent of that office had been much criticised. On January 17, 1911 the legislature elected a Republican, George Payne McLean (b. 1857, governor 1901-03), United States senator to succeed Morgan G. Bulkeley (b. 1838) also a Republican. Opposition to the New Haven Railroad's political power exercised it was charged through the Republican party helped the growth of a Progressive party which was led in the gubernatorial campaign of 1912 by Herbert Knox Smith (b. 1866) who resigned as federal commissioner of corporations to join the third party and received 31,020 votes to 67,531 for Judge John P. Stedley, Republican and 78,264 for Baldwin. With Baldwin the entire Democratic state ticket was elected including 5 congressmen (all from districts formerly 4 districts and 1 at large). Ebenezer J. Hill (b. 1845) Republican representative since 1895 and one of the "Old Guard" was defeated. The Democrats secured a majority of 7 (11 to 14) in the senate; in the Assembly there are 130 Republicans, 120 Democrats, 6 Progressives and 2 Progressive Republicans. But the Republican majority on the joint ballot is comparatively unimportant as no United States senator had to be elected in 1913. The Democratic presidential electors received 74,614 votes, the Republican 68,099, the Progressive 34,143 and the Socialists 10,078, as compared with 5,113 in 1908 and 12,179 in 1910 (for Robert Hunter as governor). In the spring of 1912 Socialists got control of the borough government of Naugatuck; in 1911 they cast a large vote in Bridgeport, where they elected one alderman.

A short strike of Italian weavers in Middletown led by representatives of the Industrial Workers of the World began on June 5, 1912 and was accompanied by so much disorder that the militia was called out.

The Federal district court at Hartford on October 11, 1912 handed down a verdict of \$80,000 and costs in favour of D. E. Loewe & Co. hatters of Danbury, against the United Hatters Union of North America for boycott (see *E. B.* iv, 353).

A city plan for New Haven, submitted by Cass Gilbert and F. L. Olmsted, has not been acted upon, but in 1912 the city was planning approaches to a new railway station and the commission made its fifth annual report. In Wallingford a private bureau of municipal research was established in February 1911.

During the year 1912, 6 towns formerly "no licence" voted for the sale of intoxicating liquor, making 81 licence and 87 no licence towns in the state.

In Waterbury on the night of April 22, 1912 about a dozen fires were set by an incen-

## DELAWARE

diary who afterwards confessed to setting 30 fires in Connecticut and western Massachusetts. The state militia was called out to control the panic.

*Bibliography*—*Public Acts* (Hartford 1911) *Register and Manual* (*ibid* 1912) and other official publications J. A. Stoughton, *Corner Stone of Colonial Commerce* (Boston 1911)

DELAWARE<sup>1</sup>

*Population* (1910) 202,322 (9.5% more than in 1900) 76% were native whites, 12.8% whites of foreign parentage, 8.6% foreign born whites, and 15.4% negroes. The average number to the sq. m. was 103 (94 in 1900), the state ranking 9th in density of population. 52% of the total lived in unincorporated territory or in incorporated places of less than 2,500 inhabitants. Wilmington, the only city with 5,000 or more, had 87,411. Dover the capital, 3,720, and New Castle, 3,351.

*Agriculture*—The acreage in farms decreased from 1,066,228 to 1,038,866 between 1900 and 1910. The improved land in farms from 754,010 to 713,538 and the average farm acreage from 110.1 to 95.9. The value of farm property increased from \$40,697,654 in 1900 to \$63,179,201 in 1910 (\$34,938,161 land \$18,217,822 buildings \$3,206,095 implements and \$6,817,123 domestic animals). About four fifths of the land area was in farms in 1910. The average value of farm land per acre was \$33.63. Farms were operated largely by owners (6,178 by owners 123 by managers and 4,535 by tenants). In 1912 (preliminary estimates) the principal crops were Indian corn 6,630,000 bu. (195,000 A.) wheat 1,942,000 bu. (111,000 A.) oats 122,000 bu. (4,000 A.) rye 14,000 bu. (1,000 A.) buckwheat 64,000 bu. (4,000 A.) potatoes 1,100,000 bu. (11,000 A.) and hay 96,000 tons (72,000 A.). During 1912 the shipments of fruit etc. over the Delaware Railroad comprising most of that marketed were berries 18,626,793 qts. apples 556,621 baskets (8 bu.) peaches 336,037 baskets (8 bu.) pears 1,026,620 baskets grapes 3,225,876 lbs. potatoes 303,601 bbls. canteloupes 489,752 carriers watermelons 478 cars. Except apples and peaches the crops were unusually large. In 1909 (U. S. Census) the total value of vegetables other than potatoes was \$1,102,620 of flowers and plants \$71,429 of nursery products \$39,057 of small fruits \$649,732 (strawberries, \$569,354 blackberries \$61,817 raspberries \$17,359) of orchard fruits \$195,766 (apples \$115,371 and pears \$52,022) of grapes \$43,967. On January 1, 1912 there were on farms 34,000 horses 6,000 mules 37,000 milch cows 19,000 other neat cattle 8,000 sheep and 59,000 swine. In 1912 a study by the state experiment station of the effect of various forms of lime in the soil indicated that ground limestone is as effective in promoting decomposition of organic matter as burned lime. A study of Bordeaux injury to the apple was completed.

*Manufactures*—The total value of factory products in 1909 was \$52,840,000 an increase of 28.4% since 1904. Capital invested in manufacturing \$60,906,000 the number of establishments 726 and the number of persons engaged in manufacturing 23,984. The value of leather tanned, curried and finished was \$12,079,000 foundry and machine shop products \$4,781,000 cars steam railway not including operations of railway companies \$3,628,000 cars and general shop construction and repairs by steam railways \$3,251,000 paper and wood pulp \$2,292,000 products of canning and preserving \$2,106,000 and shipbuilding \$1,990,000. The factory products of Wilmington were valued at \$38,069,000 (72% of the state's total).

*Transportation*—Railway mileage January 1, 1912 388.17. During 1911 T. Coleman du Pont offered \$1,500,000 to the state to build a state boulevard and the legislature authorized the organization of a boulevard corporation to build a boulevard from the northern to the southern part of the state. The corporation (the Coleman du Pont Road Incorporated) under the law was permitted to build and maintain telegraph and telephone lines a street railway lighting heating and power plants. The constitutionality of the boulevard law was in question the state supreme court unanimously decided (July 17, 1912) that it was valid but an appeal on a writ of error was taken to a Federal court by land owners who opposed the building of the road. No decision was handed down in 1912.

In 1911-12 the Federal government was improving the channels in several streams in the state—the Appoquinimink Murderkill Mispillion St. Jones Leipsic and Broadkill.

*Government*—The regular biennial session of the legislature was held from January 3 to March 30, 1911. It proposed constitutional amendments (to come before the legislature in 1913 for ratification) giving the legislature the power of laying out such roads as are continuous highways through a part of the three counties of the state and making one superior court justice (instead of two) a quorum except in a court of oyer and terminer. The law of negotiable instruments was made uniform and ground rents were extinguished. For capital punishment life imprisonment may be substituted at the option of the court if the jury recommends to mercy.

<sup>1</sup> See E. B. VII 947 et seq.

Commissions were appointed to report on child labour and on employer's liability to the legislature of 1913. The filling of prescriptions for intoxicating liquors for medical purposes was strictly regulated by law. Cold storage food may be sold only if it is marked with the date of storage; this act does not apply to fruit or fish. A state live stock sanitary board was created. Twenty acts of 1911 deal with fish, oysters and game and the provisions for the protection of fish, birds and game are made more stringent. A contract for a state armory in Dover was let in March 1912. A city charter for Wilmington proposed by the legislature was defeated June 1 1912 by 7,700 to 991 votes. For Wilmington a public utilities commission was created in 1911. The 12th of October (Columbus Day) was made a state legal holiday.

*Finance*—The outstanding indebtedness on January 1 1913 was \$826 785. In January 1912 the school fund was \$944 407 of which \$712 500 was the market value of shares of stock in the Farmers Bank of the State of Delaware in whose board of directors the state is represented. A revenue and tax commission was to report in 1913 to the legislature. New revenue laws require manufacturers to pay for an annual licence and to turn in an annual report; require gypsies to take out a licence for which they must pay \$300 and require a licence (\$300 in large cities less in small cities) for travelling shows and other licences for smaller concerns and a licence to carry dangerous weapons.

The annual report of the treasurer shows a balance on January 1 1912 of \$49 987 receipts \$843 572 expenditures \$601 211 and balance on hand December 31 1912 \$92 348.

*Education*—The legislature of 1911 abolished the old state board of education and provided for a new board (with increased powers) to be appointed by the governor and to receive no compensation. A special commission was created to report on the higher education of women in the state. Half an hour a week in public schools must be devoted to teaching morals and humanity and experiments in public schools on live animals are prohibited; the act does not apply to Wilmington. A retirement fund is authorised for teachers in the public schools of Wilmington. A special appropriation was made for negro school houses. In Delaware college the State Chair of History, a pathological and bacteriological laboratory and a division of agriculture extension were established. Of the total population 10 years and over 81% were illiterate in 1910 (12% in 1900) whites 5% (1% in 1900) negroes 25.6% (38% in 1900).

*Charities and Corrections*—In 1911 the legislature provided for the appointment by judges of the superior court of a probation officer to act for the whole state and for a juvenile court in Wilmington. The state commission for the blind reports (1912) that there are in the state 378 feeble minded (246 under 25) 277 blind (46 under 25 and 12 in special schools) and 154 deaf (77 under 20 and 16 in schools for the deaf).

*History*—There was delay in 1911 in the organisation of the legislature and then a deadlock over the choice of United States senator through the disaffection of state Senator Lewis A. Drexler who complained that the party organisation had failed to keep a promise to make him president of the senate *pro tem* but on January 25th H. Algernon du Pont (b. 1838) was re-elected to the United States Senate. The Republican governor Simeon Selby Pennewill (b. 1867) came out for Colonel Roosevelt's candidacy in March 1912. There was not merely a progressive schism from the Republican party but two Progressive parties were formed—one calling itself the Original Progressives was represented on the National Committee of the Progressive party and nominated a full state ticket and the other called the 'National Progressive' party, had on its ticket the Roosevelt electors and the Republican state county and district nominations. The Republican candidate for governor Charles R. Miller, endorsed by one Progressive faction received 22,745 votes to 21,460 for Thomas M. Monaghan (Dem.) and 3,010 for George B. Hynson (Prog.) third but the Democratic candidates for other state offices were elected. Woodrow Wilson carried the state with 22,631 votes to 15,997 for Taft and 8,886 for Roosevelt. 556 for Debs (239 in 1908). A Democratic congressman was elected and as the state legislature is Democratic on joint ballot (senate, 9 Republicans and 8 Democrats; house, 14 Republicans and 21 Democrats), a Democrat was chosen in 1913 to succeed Harry Alden Richardson (b. 1853) Republican United States senator—namely Willard Saulsbury (b. 1861) Democratic national committeeman from Delaware.

*Bibliography*—*Laws of Delaware* Vol. xxvi (Wilmington 1911) and other public documents C. H. B. Turner ed. *Some Records of Sussex County* (Philadelphia, 1909) and *Rodney's Diary* (1911) A. C. Meyers ed. *Narratives of Early Pennsylvania, Delaware and West Jersey 1630-1708* (New York 1911).

## DISTRICT OF COLUMBIA

DISTRICT OF COLUMBIA (WASHINGTON CITY)<sup>1</sup>

*Population* (1910) 531 069 distributed as follows in original limits of Washington City 230 630 (120 284 in Northwest, 40,959 in Northeast, 32 513 in South west and 56 874 in Southeast), in Georgetown 16 046 and in former Washington county 84 303. Whites numbered 236 128 (41.3% in 1900, 68.1%) and negroes 94 446 (28.5% in 1900, 31.3%). Native whites of native parentage constituted 50.4% of the total and those of foreign parentage, 13.6% and whites of foreign birth 1.4%. Of all foreign born whites 21.9% were born in Ireland, 21.3 in Germany, 13.9 in Russia, 11.3 in Italy, 10.8 in England, 4.6 in Canada, 2.9 in Scotland, 2.1 in France, 1.9 in Austria, 1.5 in Sweden, 1.4 in Greece and 1.2 in Switzerland. The ratio of males to females 91.3 to 100, was a little higher than in 1900 (90 to 100). This comparatively low ratio is only partly due to the large number of female employees in government departments: the ratio among whites is 94.0 among negroes 8.2. The death rate in 1911 was 17.8 per 1000 (whites 14.61, negroes 26.12) and the birth rate was 19.86.

*Agriculture*—The acreage in farms decreased from 8 489 to 6 063 between 1900 and 1910 the improved land in farm from 5,934 to 5 133 the average farm acreage from 3.6 to 27.9 and the value of farm property from \$11 535 376 to \$8 476 533 (\$7 193 950 land \$1 037 393 buildings \$92 350 implements and \$152 840 domestic animals). The principal crops were hay and forage 2 148 tons (962 A) potatoes 32 028 bu (226 A) sweet potatoes and yams 19 662 bu (126 A) and Indian corn 12 667 bu (426 A).

*Manufactures*—Apart from establishments operated by the Federal government the number of factories increased in 1899-1909 from 491 to 518 the number of wage earners from 6 155 to 7 707 capital invested from \$17 960 000 to \$30 553 000 and the value of products from \$16 426 000 to \$25 289 000. The larger manufactures were printing and publishing \$4 899 000 malt liquors \$1 805 000, foundry and machine shop product \$1 175 000.

*Buildings*—The most important changes in the city of Washington are the new buildings for the departments of state justice and commerce for which commissions were made in April 1911 and which are to be grouped between Pennsylvania avenue and the Mall and Fourteenth and Fifteenth streets. All are to be of white marble. The Commerce building (architects York and Sawyer) is to be five storeys high as to stand between the other two (each three storeys) and is to cost \$3 050 000. The State building (architect Arnold W. Brunner) will cost \$2 200 000 and the building of the department of justice (architect Donn Barber) \$1 900 000.

In 1911 Congress appropriated \$2 000 000 for a Lincoln Memorial and appointed the Lincoln Memorial Commission, with President Taft as chairman which cooperating with the Federal Fine Arts Commission appointed Henry Bacon to design a plan. The Fine Arts Commission July 17 1911 recommended Potomac Park as the site of the memorial. Mr. Bacon's plan, as completed in 1912, is for a hall of white marble resembling a Greek temple surrounded by 36 Doric columns representing the 36 states of Lincoln's time to be built in Potomac Park in the centre of a circular terrace 500 ft in diameter rising 16 ft above another terrace 1 000 ft in diameter and 11 ft above the present grade. In the hall is to be placed a statue of Lincoln and on the interior walls are to be inscribed his Gettysburg speech and his second inaugural. The memorial terminates the principal axis of the city and is intended to fit into the design for the revision and extension of the original plan of Washington which was undertaken by a commission appointed in 1901. Early in 1913 the memorial was adopted by Congress. Plans for a memorial to Christopher Columbus for which Congress appropriated \$100,000 and to which the Knights of Columbus contributed were drawn by the architect Daniel H. Burnham and the sculptor Lorado Taft. The memorial made of Georgia marble, consists of a semi-circular fountain, 70 ft wide and 65 ft deep adorned with a statue of Columbus behind which rises a stone shaft 45 ft high surmounted by a globe. Figures typifying the new world an American Indian and the old world a Caucasian stand on either side of the shaft. Columbus is represented as standing on the prow of a ship the figure head of which is a female statue typifying discovery. The memorial was unveiled June 3, 1912. The Memorial Continental Hall (architect E. P. Casey)

<sup>1</sup> See E. B. xxviii 349 *et seq.* The District and the city are coterminous.

was erected by the Daughters of the American Revolution. Among new monuments is one by William W. Bosworth at the tomb of Major Pierre Charles L'Enfant who planned the city in Arlington Cemetery unveiled May 22 1911. On April 17 1911 a statue of John Paul Jones was unveiled in Potomac Park. The corner stone of Gibbons memorial hall of the Catholic University of America was laid October 12, 1911.

Appropriations were made for the establishment in 1913 of a park in the south eastern part of the city including Forts Davis and Dupont and to extend Rock Creek Drive from Massachusetts Avenue to Montrose Park. Proposed parks for which no appropriations have yet been made are Klinge Ford Valley (28.5 acres), Mount Hamilton (81 acres) and Piney Branch.

The Engineer Commissioner of the District of Columbia has urged an annual appropriation for permanent works of improvement beginning in 1913 with \$1,230,000 and increasing annually by not less than \$100,000. This work to include the reclamation of the Anacostia Flats and the converting of this section into a public park, extension of the improvements of Rock Creek Valley, improvement of the harbour by means of public wharves and completion of the park system.

*Finance*—On June 30 1912 the debt of the Federal District was \$10,240,300 of which \$8,258,450 was bonded. The cash balance at the beginning of the fiscal year was \$337,712, and at its end \$398,753. The receipt for the year were \$14,868,722 and the expenditures \$14,807,681. In the year an elaborate inventory of district property was begun. An Act of Congress dividing certain fees collected in the District between the District and the United States will probably reduce the District revenues about \$65,000 a year. The assessed valuation of real property for 1912 was \$3,303,324.87 and for 1913 was \$339,198,090 and for the former year the real estate tax was \$4,954,987 and the personal tax levy \$1,131,946. The tax for national banks and trust companies is 6% on gross earnings on gas companies 2% on gross earnings on incorporated savings banks electric light companies telephone companies 4% on gross earnings and on street railways 4% on gross receipts.

*Education*—For the school year ending June 30 1912 the school population (6-17 years) was 65,867 the enrollment 57,781 (18,663 negroes) average daily attendance 46,231 average length of the school year 36 weeks the school revenue \$3,180,378 and expenditures \$3,050,031. In 1910 the percentage of illiteracy of the population over 10 years was 4.9 (in 1900 8.6) among negroes 13.5 foreign born whites 8.2 native whites 0.5. The percentage of illiterates between 10 years and 20 was only 1.

*Charities*—On February 15 1912 the penal farm at Occoquam Virginia the workhouse of the District of Columbia was formally placed under the supervision of the District board of charities taking the place of a workhouse in the city. An institution for feeble minded negro children is projected.

## FLORIDA<sup>1</sup>

*Population* (1910) 1,526,619 41% negroes 54.5% native whites (4.8% of foreign parents) and 4.5% foreign born whites. The average number per sq. m. was 13.7%. In 1910 25 cities and towns each with 2,500 or more made up 20.1% of the total in 1900 12 municipalities of the same class contained 0.3%. The semi urban population in 125 places in 1910 (79 in 1900) each with less than 2,500 made up 11.6% (10.1% in 1900). The rural population decreased from 69.6% of the total in 1900 to 59.5% in 1910. The rate of increase during the decade was 42.4% for the whole state, 73.5% for urban territory—111.4% for cities having more than 2,000 and 5.4% for cities and towns between 2,500 and 5,000 and 3.6% for the rural remainder. There were 10 cities each with more than 5,000. Jacksonville 5,609 (28,429 in 1900) Tampa 3,118 (15,839 in 1900) Pensacola 22,982 Key West 19,945 West Tampa 8,533 (2,335 in 1900) Gainesville 6,183 (3,633 in 1900) St. Augustine 5,494 Miami 5,411 (1,681 in 1900) Lake City 5,03 and Tallahassee 5,018 (2,981 in 1900).

*Agriculture*—The acreage in farms increased from 4,363,891 to 5,253,538 between 1900 and 1910 and the improved land in farms from 1,511,653 to 1,805,408. The average farm acreage fell from 106.9 to 105.0 and the value of farm property increased from \$53,929,064 to \$143,183,183 (\$93,738,065 land \$24,407,924 buildings \$4,446,007 implements and \$20,591,187 domestic animals). Of the land area 15% was in farms. The average value of farm land per acre was \$17.84. Farms were operated largely by owners (35,399 by owners and 13,342 by tenants). In 1912 (preliminary estimates) the principal crops were Indian corn, 8,515,000

<sup>1</sup> See E. B. x 540

## FLORIDA

bu (655,000 A.) oats 740 000 bu (43 000 A.), potatoes 1 023 000 bu (11 000 A.) hay 54 000 tons (43,000 A.) cotton 68,000 bales (119 lbs. per A.) tobacco 2,604 000 lbs (3 100 A.) and rice 15,000 bu (600 A.) In 1909 (U S Census) the value of vegetables other than potatoes was \$6 314 313 of nursery products \$478 174 of small fruit \$302,383 (strawberries \$301 056) of orchard fruits \$232 203 (peaches and nectarines \$128,029) of tropical fruits \$7 092 150 (oranges \$4 304 987 pomeloes (grapefruit) \$1 907 816, pineapples \$734 069) On January 1 1912 there were on farms 52,000 horses 25 000 mules 123 000 milch cows 758 000 other neat cattle 120 000 sheep and 954,000 swine

The legislature of 1911 required the appointment of an inspector of nursery stock and appropriated \$5 000 for farmers' co-operative demonstration work The shipment of immature citrus fruit was made unlawful In 1911 successful experiments were made in growing rice without irrigation in prairie districts and in raising Rhodes grass for hay and a representative of the Federal department of agriculture found in Saharapur India and brought to the United States parasites and insect enemies of the white fly pest in orange groves

**Mineral Products**—Total value 1911 \$10 250 228 The only important mineral product in the state is phosphate rock more than two thirds (and pebble the output in 1911 was valued at \$9 473,638 about 9% more than in 1910 In this product and in fuller's earth the state ranked first The value of mineral waters from 9 springs including 5 resorts was \$19 330—one third more than in 1910

**Manufactures**—From 1904 to 1909 the number of factories increased from 1 413 to 2 159 the number of persons engaged in manufacturing from 46 985 (of whom 42 091 were wage earners) to 64 810 (57 473 wage earners) the capital invested from \$32 972 000 to \$65,291 000 (98%) and the value of products from \$50 298 000 to \$72 890 000 In 1909 the most important single industry was the manufacture of tobacco (mostly cigars and cigarettes) valued at \$21 575 000 Florida ranking 3rd in Key West 93.7% of the total value of products (\$3 965 000) and in Tampa 82.7% of the much larger total (\$17 653 000) was the value of tobacco manufactures Lumber and timber products (more than 90% yellow pine) were valued at \$20 863 000 and turpentine and rosin at \$11 938 000 The only other important distinctive industry was the manufacture of fertilizer \$3 878 000 (143.9% more than in 1904)

**Transportation**—Railway mileage January 1 1912 4 467.09 m On January 22 1912 the Florida East Coast Railway formally opened the last link 45.5 m from Knights Key to Key West completing its all rail route from Jacksonville to Key West<sup>1</sup> a car ferry is projected to run from Key West to Havana (90 m) The Federal government began work in 1911 on a channel 30 ft deep and 300 ft wide from Jacksonville to the Ocean which makes it possible to ship naval stores to foreign ports direct from Jacksonville and in 1912 nearly completed deepening the St. Johns river channel at piers opposite Jacksonville the improvements across the bar and at West Pass channel in Apalachicola Bay and a channel 30 ft deep and 500 ft wide from the Gulf to the docks at Pensacola

**Legislation**—The legislature met from April 4 to June 2, 1911 It enacted that no judgment in a state court should be set aside and no new trial granted unless the error complained of actually resulted in a miscarriage of justice and that a judge should charge a jury only upon the law After January 1913 there are to be only 5 instead of 6 justices of the supreme court A constitutional amendment adopted in November 1912 (18 051 to 3,057) provides for an additional circuit judge in Duval county The state building commission created in 1911 chose a site near the capitol for a building for the state supreme court the railroad commission and the state library which was begun in April 1912 \$100 000 was appropriated for this building An appropriation of \$50,000 was made for a Florida exhibit at the proposed National Historical Exposition in St. Augustine in 1913 to celebrate the 400th anniversary of the discovery of Florida by Ponce de Leon \$6 000 was appropriated for work on the valuable state archives \$10 000 for a statue of Dr. John Gorrie (1803-55 see *E B* II 159a) the inventor of a machine for making artificial ice in the National Statuary Hall in the Capitol at Washington, and \$5,000 for a monument to the Confederate women of Florida

A new pure food and drugs act was passed there are to be two inspectors and an assistant

<sup>1</sup> This great engineering triumph was the result of nearly seven years actual work construction south of Homestead (128 m from Key West) began in April 1905 The railway leaves the mainland at Everglade station (on Manatee Creek) crosses Lake Surprise to Key Largo goes by the two Matecumbes and on Long Key to Grassy Key by a viaduct 2½ m long and then by the 7 m Knights Key—Little Duck viaduct which is followed by about 13 m sometimes piers sometimes concrete arches and some embankment work protected by marl slopes to West Summerland Some piers were built on foundations 30 ft below tide level Forty nine miles of the road was constructed by submarine blasting of limestone and by dredges and traveling excavators At Key West about 134 acres of land was filled in for a terminal and a concrete pier is building 1 700 ft long and 134 ft wide

state chemist, and the previous offices of pure food and drug inspector and commercial stock feed inspector were abolished. The work of inspection is put under the chemical division of the state agricultural department.

Heavy penalties are imposed for the sale of intoxicating liquors in any prohibition county or precinct. In any county on a petition by 25% of the qualified voters a special election must be held to decide whether or not liquor shall be sold in the county. A bill closing saloons between 9 P.M. and 6 A.M. one prohibiting the use of screens tables or chairs in saloons and one forbidding soliciting orders for intoxicating liquor in dry territory were vetoed by the governor separately and again together in a general revenue bill. In 1912 11 counties in the state were licence territory.

The board of railroad commissioners has power to regulate telephone business and telegraph rates and only with its permission may railways or canal companies be consolidated or lease or purchase other common carriers. Many game laws were passed mostly for separate counties and localities, and many of them forbidding the taking of food fish except by hook and line.

A large part of the legislation of the year was local. Ten new towns were incorporated, Pass-a-Grille in Hillsborough county with a commission government and a provision for the recall of officials and a new charter providing a commission form of government was granted to Green Cove Springs. The charters of Jacksonville St. Augustine and Tampa (to which East Tampa was annexed) were amended. A new county Pinellas was created from Hillsborough county with Clearwater as its county seat. In 1912 Tampa adopted a commission charter with provision for advisory voting.

*Finance*—The tax levy for 1911 and 1912 was set at 2 mills for current expenses and for interest on the bonded debt and 1 mill for a school tax but the governor was authorised to reduce these rates. If the assessment of the state and other sources of revenue permitted the trustees of the internal improvement fund and the state board of education are required to retain a three fourths interest in phosphates petroleum or other minerals found in any lands sold by them. Building and loan associations were permitted to increase their capital stock to \$2,000,000 and a law was passed for the incorporation of trust and security companies. A constitutional amendment was adopted in November 1912 (16,348 to 4,014) empowering the legislature to provide for special tax districts and to issue bonds for free public schools therein. There was in the state treasury January 1, 1912 a balance of \$858,440. Receipts for the year 1912 were \$3,023,698 and expenditures \$2,870,603 leaving a balance on December 31, 1912 of \$1,011,535.

*Education*—For the year ending June 30, 1912 the school population was 225,000 the enrollment 157,161 the average daily attendance 110,364 and the length of the average school year 5½ months. The revenue for schools was \$2,339,679 and the expenditures were \$2,327,395. The board of commissioners of state institutions was made in 1911 a state school book commission to adopt uniform text books throughout the state—there had already been uniformity in each county for about ten years. School books are to be furnished free to any child under 15 whose parents are on the roll of the county poor or are indigent or are dead. The trustees of the Peabody Fund gave \$40,000 to the University of Florida for a school of education the new department was opened in the autumn of 1910 and a new building was begun. The principal appropriations for higher education were for the University of Florida \$177,000 for the State College for Women \$136,500 for the School for the Deaf and Blind \$82,500 and for the Agricultural and Mechanical College (1887) for Negroes \$30,000. The first Friday in November is to be celebrated in the public schools each year as Mothers' Day.

The percentage of illiteracy in the population 10 years of age and over in 1910 was 13.8 (21.9 in 1900). Of whites it was 5.5 (8.9 in 1900) of negroes 25.5 (38.4 in 1900).

*Penal and Charitable Institutions*—The legislature of 1911 appropriated \$50,000 for the purchase of a state prison farm—about 17,000 acres were purchased but no buildings were erected in 1912—and authorised the state board of health to establish a hospital for the treatment of indigent children or to send them to established hospitals the latter course was still being pursued in 1912. The board of commissioners of state institutions was for bidden to lease or release convict labour before July 1, 1913 the present lease expires on December 31, 1913. County judges are required to act as judges of juvenile courts and keep a separate juvenile record and the governor is to appoint a probation officer in each county for dependent and delinquent children. Newspapers are forbidden to print the name of a woman criminally assaulted and 5 years imprisonment or a fine of \$1,000 or both is made the maximum penalty for enticing girls for immoral purposes.

*History*—Two primary elections (May 9 and June 7, 1910) were necessary to secure a majority vote for a United States senator to succeed James P. Talaferro (b. 1847) whose term expired in 1911 but Napoleon B. Broward (1857–1910, governor in 1905–06) who defeated Senator Talaferro in the second primary died before he took office. There was no majority for any one of the four candidates at the primary of January 10, 1911, but on January 31 Nathan Philemon Bryan (b. 1872) was chosen at the Demo-

## GEORGIA

cratic primary which was followed by his election by the legislature. The Democratic primaries for delegates to the national convention elected men pledged to Oscar Underwood, Albert Waller Gulchrist (b 1858) governor since 1909—possibly because he opposed the submission to the people of the amendment for initiative and referendum—did not secure a renomination from the Democrats, who nominated and in November elected Park M. Trammell, then attorney general, with a full state ticket and carried the state for Woodrow Wilson, who received 36 417 votes to 4 535 for Roosevelt and 4 279 for Taft. There was a Progressive state ticket in the field with 3 nominees for Congress and William C. Hodges for governor and this cut heavily into the usually small Republican vote and the opposition of the Progressives to the negro and the success of the party over the Republicans minimised the political importance of the negro. The four Democratic nominees for representatives in Congress were elected (1 at large). The Socialists made gains in the state polling 4 806 votes for Debs (3 74, in 1908)—more than for Taft or for Roosevelt. The Socialist candidate for governor Thomas W. Cox received 3 467 votes to 38 977 votes for Trammell (Dem.), 2,646 for William R. O'Neal (Rep.) and 2,314 for William C. Hodges (Prog.).

Peonage in the state received a severe blow when President Taft refused to grant the request of the Florida legislature in 1911 to pardon five officers of a lumber company convicted by a United States circuit court in 1906 of conspiracy to arrest and return to a condition of peonage foreign-born labourers. There seem to have been fewer lynchings in 1912 than in 1911. In the former year a negro was lynched (March 4) at Cypress for attempting to shoot a marshal and seven negroes accused of murder were killed (May 21) at Lake City by men in three automobiles. In 1911 on April 15 a negro was lynched near Tampa for murder on July 4 another at Bradentown for alleged assault on a white woman on September 14 one at Alton for assault and two at Ocala (Nov. 14 and 19) for murder. The presence of militia in Jacksonville on March 7 1912 prevented an attack on five negroes charged with murder and assault. In the first part of November 1912 there was a serious street car strike in Jacksonville with some violence, so that car lines were tied up and militia was called out.

*Bibliography*—*Acts and Resolutions* (Tallahassee 1911) and official reports J. C. Gifford *Everglades and other Essays relating to Southern Florida* (Kansas City 1911) H. G. Rhodes and M. W. Dumont *Guide to Florida* (New York 1911).

GEORGIA<sup>1</sup>

*Population* (1910) 2 600 121 an increase of 17.7% since 1900 negroes were 45.1% of the total foreign born 0.6% whites of native parentage 53.3%. Density 44.4 to the sq. m. In the 45 cities and towns in 1910 (31 in 1900) each having more than 500 there was 20.6% of the total (15.6% in 1900) in the 516 incorporated places (344 in 1900) having less than 2 500, 11% (8.7% in 1900) and in the purely rural districts 68.4% (75.6% in 1900). There were 3 municipalities with a population exceeding 5 000 at the 1910 census—Atlanta 154,839 (80,872 in 1900) Savannah 65 064, Augusta 41 040 Macon 40 665 (23 272 in 1900) Columbus 20 554 Athens 14 913 Waycross 14 485 (5 919 in 1900) Rome 12 099 Brunswick 10 182 Albany 8 100 (4 606 in 1900) Americus 8 063 Valdosta, 7 656, Griffin 7 478 Thomasville (town) 6 711 Elberton 6 483 (3 834 in 1900), Marietta, 5 949 Gainesville, 5 915 Cordele, 5 883 Dublin 5,705 (2 087 in 1900) Fitzgerald, 5 795 (1 817 in 1900), La Grange, 5 587 Newnan 5 548 and Dalton 5 324.

*Agriculture*—The acreage in farms increased from 26 392 057 to 26 953 413 between 1900 and 1910 and the improved land in farms from 10 615 644 to 12,298 017, the average farm acreage fell from 117.5 to 92.6 and the value of farm property increased from \$2,834,637 to \$580,546 381 (\$370 353 415 land \$108 830 917 buildings \$20 948 056 implements \$80 393,993 domestic animals). Of the land area 71.7% was in farms in 1910. The average value of farm land per acre was \$13.74. Farms were operated largely by tenants (98 628 by owners 1,419 by managers and 190,980 by tenants). In 1912 (preliminary estimates) the principal crops were Indian corn 53 958 000 bu. (3 910 000 A.) wheat 1 228 000 bu. (132 000 A.) oats, 7 571,000 bu. (364 000 A.) rye 101,000 bu. (11,000 A.) potatoes 936 000

<sup>1</sup> See *E. B.* xi 751

bu (12 000 A.) hay 316,000 tons (234 000 A.) cotton 1 701 000 bales (163 lbs per A.) tobacco 1 162 000 lbs (1,400 A.) and rice 27 000 bu. (900 A.) In 1909 (U S Census) the value of vegetables (excluding potatoes) was \$5 580,368 of small fruits \$111 754 of orchard fruits \$2 930 793 (peaches and nectarines \$2 182 613). On January 1 1912 there were on farms 124 000 horses 310 000 mules 406 000 milch cows 667 000 other neat cattle 174,000 sheep and 2 098,000 swine.

Spraying with Bordeaux mixture was recently proved a specific for the scab which had seriously threatened the pecan groves. The great increase in recent years of the Indian corn crop is partly due to the work done by the Boys Corn Growing Clubs—in 1911 in the seventh congressional district 1 200 boys were engaged in this contest.

The legislature of 1911 authorised the veterinary department of the agricultural college to manufacture serum for hog cholera and to instruct the public in its use and that of 1912 appropriated \$15 000 for the eradication of cattle tick. The appropriation for the board of entomology was increased in 1911 so that its work might be enlarged. Upon petition of 50 producers of cotton any county must appoint (1912) a weigher and grader of cotton.

In McDowell county 8 113 acres were taken over in 1912 by the United States for a forest reservation under the Weeks Law (Mar. 1 1911) to preserve forests on upland water sheds and 31 876 acres more (Fannin Union Gilmer and Lumpkin counties) were approved for purchase for the same purpose by the National Forest Reservation Commission.

**Mineral Products.**—Total value 1911 \$6 171 367. Of iron ore the output was 207 279 tons (\$315 704) and of coal 165 210 tons (\$246 208)—both less than in 1910. Clay products were valued at \$2 036 380 (almost entirely brick and tile) stone at \$1 960 077 more than one half being the value of marble and sand and gravel at \$175 734. Most of the ochre in the United States came from Georgia value \$69 447. A little gold was still taken from placers and about half as much from alluvial ores value \$35 070. The output of a bestos was about 60 more than in 1910 and that of bauxite was less although a new field was worked in Wilkinson county.

**Manufactures.**—In 1909 there were 4 792 establishments (3 219 in 1904) the capital invested was \$20 778 000 (50 more than in 1904) and the total value of products \$21 866 000 (43 more than in 1904) 25 7 was the value of cotton goods (\$18 037 000) hosiery knit goods mostly cotton (\$3 233 000) and woollen and worsted goods (\$871 000). The value of lumber and timber (about 49 yellow pine) was \$24 632 000 of cottonseed oil and cake \$23 641 000 (an increase of 193 2 since 1899) of manufactured fertilisers \$16 800 000 (about one sixth of the total for the United States and about five times as much as in 1899) of flour and grist mill products \$8 000 000 of turpentine and rosin \$6 090 000 steam railway cars and repairs \$6 535 000 printing and publishing \$6 400 000 and foundry and machine shop products \$5 808 000. The principal manufacturing cities with the value of their product in 1909 are Atlanta \$3 038 000 Macon \$10 703 000 Augusta \$10 456 000 Columbus \$8 552 000 and Savannah \$6 734 000.

**Transportation.**—Railway mileage January 1 1912 7 382 19. The Federal government in 1912 had more than half finished increasing the channel depth of Savannah harbour to 26 ft and clearing up the Savannah river below Augusta. Work on the river at Augusta was begun in 1911 by the Federal government and the state together.

**Legislation.**—The legislature met in regular session in 1911 (June 28–Aug 17) and in 1912 (June 26–Aug 14). In 1912 constitutional amendments were adopted creating Bleckley county from a part of Pulaski (28 1, to 6 886) and Wheeler county from a part of Montgomery (64 67 to 13 003) increasing the governor's borrowing power for annual deficit from \$ 00 000 to \$300 000 (19 581 to 1 550) giving the legislature authority to require corporations to pay taxes on September 1 instead of December 20 (21 409 to 14 534) permitting counties to levy taxes for high schools (8 924 to 6 900) empowering the legislature to replace with municipal courts justice courts in all cities (except Savannah) with more than 25 000 inhabitants (4 11 to 10 193) exempting farm products from taxation while held for sale (75 836 to 10 57) and allowing judges of superior courts to grant charters in vacation (74 119 to 8 084). Lobbying was prohibited (1911) by a law which requires agents for bills to register the name of their employers the purpose of their employment and an itemised account of their expenditures. Practice in courts of review was revised especially as regards review of judgment for lack of proof of venue and as regards service of bills of exception. Provision was made for the investigation of the judicial system of the state and defects in penal laws.

The state was divided into 12 Congressional districts in 1911 under the new apportionment. A department of game and fish was established and a department of commerce and labour. Hours in cotton and woollen factories were reduced from 11 to 10 a day and from 66 to 60 a week. In 1912 new laws were passed for calling out militia in time of riot and for declaration of martial law and an insurance department was created.

The powers of the state inspector of drugs were enlarged (1911). An application for an internal revenue tax receipt or the possession of such a receipt is prima facie evidence of the violation of the state prohibition law. A bill the Tippins law to close near beer saloons, was vetoed by the governor and could not be passed over the veto. Newspapers published in the state are forbidden to print the names of any victims of criminal assault.

A quasi commission charter for Atlanta provided by the 1911 legislature was defeated by the electors of the city on September 27, 1911. In 1911 Summerville (pop. 4,361 in 1910) was annexed to Augusta. A commission form of government was provided for Marietta. Macon was authorized to own and operate water works and a civil service system for the police and fire departments was added to its charter.

The cities of Baxley, Fayetteville, Glennville and Lilly (August 1911) and Albany, Lawrenceville, Springfield, Statesboro, Stone Mountain, Sycamore and Villa Rica (August 1912) received new charters and the cities of Blackshear, Bostwick, Folkston, Odum and Woodville were incorporated in 1911 and Rex in 1912. The governor was authorized in 1912 to bring suit to test the state's claim to a part of Tallulah river, Tallulah Falls and adjacent country as unsurveyed and not legally granted by the state.

**Finance**—A joint committee of the house and the senate was appointed in 1911 to codify the state banking laws and the state insurance laws, but the bill which it drafted failed to pass in 1912. The maximum number of directors of any bank was increased from 15 to 25 (1912). The state debt (Jan. 1, 1913) was \$6,734,202 and the annual appropriation for interest on the state debt was \$287,945 for 1912 and \$283,445 for 1913. The treasurer's report shows a balance on hand December 31, 1911 of \$727,076, receipts of \$6,014,109, expenditures of \$5,627,668, leaving a balance on December 31, 1912 of \$1,113,517.

**Education**—In 1911 the school law of the state was revised by a remarkably brief and clear act which however does not apply to Atlanta, to a few county districts or in most respects to especially incorporated local districts. The title of the chief executive officer has been changed from superintendent of schools to school commissioner. The state board of education is now professional rather than political in its character. An appropriation of \$25,000 a year and \$5,000 for equipment was made for the agricultural industrial normal school of South Georgia at Valdosta which was to open early in 1913 and one of \$25,000 (1912) for an industrial building for the North Georgia agricultural college at Dahlonega. At Clarkston near Atlanta, Lamar College under the auspices of the Christian Church will be opened early in 1913. The University of Georgia received in 1912 a gift of \$12,500 from the Phelps Stokes Fund to found a permanent fellowship for the study of the negro.

For the year ending December 31, 1911, the enrollment was 565,071 (222,942 of whom were negroes), the attendance 352,059 (130,678 negroes) and the average length of the free<sup>1</sup> school year was 118 days for whites and 107 for negroes. The number of teachers was 13,024 (4,070 negroes) and their average monthly salary ranged from \$118.70 for white male teachers in cities to \$20.56 for negro female teachers in counties.

The percentage of illiteracy in the white population 10 years of age and over in 1910 was 20.7 (30.5 in 1900), among whites 7.8 (11.9 in 1900) and among negroes 36.5 (52.4 in 1900).

**Penal and Charitable Institutions**—In January 1912 of the 2,708 convicts serving time in the state prison, 1,487 had been convicted of crimes against life (812 for murder, 365 for manslaughter, 1,310 for attempted murder). Among the appropriations for 1912 and for 1913 each were \$530,000 for the Georgia state sanitarium, \$20,000 for consumptive patients in the sanitarium, \$515,000 to Confederate soldiers, \$145,000 to the indigent widows of Confederate soldiers, \$100,000 to widows of Confederate soldiers who died in action and \$300,000 to Confederate soldiers and their widows and \$30,000 for the soldiers' home. The act of 1910 pensioning Confederate soldiers and their widows was amended in 1912 so as to make the requirements for pensions less difficult; the pension of blind soldiers was increased from \$60 to \$100 a year.

**History**—Hoke Smith (b. 1855), Secretary of the Interior in President Cleveland's cabinet in 1893-96 and governor in 1907-09, was again inaugurated governor July 1, 1911. On July 12th he was chosen United States senator to succeed Joseph Meriwether Terrell, who was in bad health and who immediately resigned. Governor Smith refused to accept Senator Terrell's resignation as he wished to remain governor for a time at least, but Senator Terrell<sup>2</sup> refused to return to Washington and for the remainder of the session of the 61st Congress Georgia was represented in the United States Senate by

<sup>1</sup> In special systems where there was no local tax, teachers were paid by patrons for additional teaching in some cases so that the average for these special systems was 170 days (175 for white and 164 for negro) making the average for all schools 140 days.

<sup>2</sup> Terrell, born in Greenville in 1861, died in Atlanta November 17, 1912. He served in the state legislature, was attorney general 1892-1902, governor 1902-07 and after his political ally Joseph M. Brown succeeded Hoke Smith, his opponent as governor, United States senator, being appointed November 1910 by Governor Brown for the unexpired term of Senator Alexander Stephens Clay (1853-1910).

one senator only Augustus O Bacon. In the 62nd session Hoke Smith took his seat as United States senator. He was succeeded as governor by Joseph M Brown who had been governor in 1909-11. Brown's term ends July 1, 1913, and the Democratic primaries on August 21, 1912 (by 104,857 votes against Hooper Alexander 39,037, Joe Hill Hall 24,836) named John M Slaton (elected in October) to be his successor and re-nominated United States senator Bacon for the term 1913-19. Local politics centre around the liquor question which splits the Democratic party. The newly elected state legislature will be nine tenths (or more) Democratic. In November 1912, 12 Democratic congressmen were elected—formerly the Georgia delegation was 11 and the state was carried for Woodrow Wilson by 93,171 votes to 22,010 for Roosevelt, 5,190 for Taft, 1,028 for Debs (584 in 1908) and 147 for Chafin.

On December 18, 1912 the state protested (memorial of Aug. 19) to Congress against the adoption by a two-thirds vote of the quorum (and not of the total membership) of each house of Congress of the measure to submit to the states the constitutional amendment for popular election of United States senators.

In 1911 there were 20 lynchings in the state: all negroes but one—a negro at Vera for murder (Jan. 20), two for murder at Warrenton (Feb. 25), three accused of murder (taken from jail) at Ellaville and one for rape at Lawrenceville (April 8), one for threatening to kill in Bullock county (April 22), one for murder (May 14) and one for killing an officer (May 21) at Swansboro, one for murder at Crawfordsville (May 22), a white man for rape at Monticello (June 18), a negro for rape at Social Circle and one for suspicious loitering at Monroe (June 27), one for murder at Baconton (July 11), one for rape at Dublin (Oct. 5), one on no definite charge, at Vienna (Oct. 7), one for attempted rape (taken from bailiff) at Irwinton (Oct. 11), one for murder at Washington (Oct. 28) and one for murder at Donaldsonville (Dec. 23). In 1912 three negroes and one negress were lynched at Hamilton (Jan. 2) for murder, a negro was lynched at Cordele (Jan. 30) for rape, one was burned at Macon (Feb. 4), one was lynched at Cochran (March 21) for murder, one near Jackson (April 26), one for murder at Columbus (Aug. 13), one on suspicion of aiding a murderer at Cumming (Sept. 10), one for assaulting a white woman at Americus (Oct. 5), one was taken from the court house at McRae and was lynched (Nov. 30) for assaulting and shooting two white women and on the same day one was lynched at Cordele for murder. Anti-negro night riders terrorised northern Georgia in December 1912.

Augusta was put under martial law in the last part of September 1912 when street railway employees rioted and tied up car lines: three were killed on the 27th and on October 1 about 30 soldiers were put on trial for murder. The strike ended October 17 when the company granted a wage increase of one-eighth and shorter hours. On October 1, 1912 the Georgia Railroad was paralysed by a strike of conductors and trainmen, but on the 12th they returned to work agreeing to arbitration.

*Bibliography*—*Louis* (Atlanta 1911 and 1912) and official reports *Georgia Code* of 1910 (4 vols. *ibid* 1911) *Georgia Annual* (*ibid*). *The Alexander Letters 1787-1900* (Savannah 1910) O Wegelin *Bibliography of Georgia* (1911).

IDAHO<sup>1</sup>

*Population* (1910) 325,594 (101.3% more than in 1900). The greatest relative increase was in Lincoln county—610.5%. Density 3.9 to the sq. m. The Indian and Asiatic element constituted 1.7% of the total (in 1900 4.3%), foreign born whites 12.4%, and whites of foreign parentage 23.1%. There were 12 (in 1900 only 2) places with 2,500 inhabitants or more including 21.5% (in 1900 only 6.2%) of the total as follows (1900 figures in brackets): Boise, 17,358 (5,957), Pocatello, 9,110 (4,046), Coeur d'Alene, 7,291 (508), Lewiston, 6,043 (2,425), Twin Falls, 5,258 (inc. 1908), Idaho Falls, 4,827 (1,262), Nampa, 4,205 (799), Moscow, 3,670 (2,484), Caldwell, 3,543 (997), Wallace, 3,000 (2,265), Sandpoint, 2,993 (inc. 1907), Weiser, 2,600 (1,364). The pop. of smaller incorporated places made up 18.1% of the total (15.7% in 1900).

<sup>1</sup>See *E. B.* xiv 276 *et seq.*

**Agriculture.**—In 1910 nearly one-tenth of the state's area was in farms (5 283 604 acres) but hardly more than half the farm acreage (2 778 740 A.) was improved this was 96.6% more than in 1900. The average number of acres in a farm in 1910 was 171.5 in 1900 183.4. In the decade the value of farm property increased from \$67 271 202 to \$305 317 185 (land \$219 953 316 buildings \$25 112 509 implements and machinery, \$10 476 051 and domestic animals \$49 775 309) the average value of each farm from \$3 850 to \$9 911 and the average value of farms per acre from \$11.07 to \$41.63. More than half the farms (and more than one fourth the farm acreage) were irrigated in 1910 of the 1 430 848 acres irrigated 628 102 were by co-operative concerns 403 600 by individuals and partnerships 16 418 by Carey Act 'enterprises' and 47 300 by the U. S. Reclamation Service. The (Federal) Boise project was 52% (excluding Boise river storage, 98%) completed in November 1912 and was in 1911 irrigating 121 000 acres and the Minidoka project 90% completed irrigated in 1912 91 000 acres. In 1910 more than 90% of the alfalfa and nearly half the wheat acreage was irrigated. In 1912 (preliminary estimates) the following crops were reported: Indian corn 394 000 bu. wheat, 14 366 000 bu. oats 17 017 000 bu. barley 6 916 000 bu. rye 66 000 bu. potatoes 6 475 000 bu. hay 1 938 000 tons and sugar beets 206 367 tons. In 1909 (U. S. census) the value of vegetables other than potatoes was \$1 007 667 of small fruits \$201 525 (strawberries \$92 904) of orchard fruits \$863 516 (apples \$610 504 plums and prunes \$132 804). On January 1 1912 there were 214 000 horses 94 000 milch cows 343 000 other neat cattle, 2 931 000 sheep and 212 000 swine.

In 1911 agriculture was first taught systematically in the rural high schools of the state. The federal department of agriculture in 1911 established an experiment farm at Aberdeen for the study of cereals in dry lands in co-operation with the state experiment station. An irrigation demonstration farm at Gooding has done much to teach economic use of water.

**Mineral Products.**—Total value 1911 \$17 588 340. The principal products were gold and silver of the former 65 688 fine oz. valued at \$1 357 900 and of silver 8 184 900 oz. valued at \$4 419 800 mostly from lead mines in the Coeur d'Alene and Gilmore regions. The output of lead in which the state ranked second in 1911 was 117 159 tons (136 278 tons on mine reports) of zinc 3 180 tons and of copper 4 514 116 lbs. (less than for any year since 1904). Less salt was produced than in 1910. A little phosphate rock was found in 1911 in the S. E. part of the state.

**Manufactures.**—The total value of factory products for 1909 was \$22 400 000, 155.4 more than in 1904. the capital invested in manufacturing \$32 477 000 an increase of 233.2% the number of establishments 725 and the number of persons engaged in manufacturing 9 999. Lumber and timber products valued at \$10 680 310 (240.2% more than in 1904) made up 47.7% of the total value followed by flour and gristmill products \$2 479 719 cars and general shop construction and repairs by steam railway companies \$1 366 000 and printing and publishing \$1 148 033. Boise had factory products valued at \$1 660 497.

**Transportation.**—Railway mileage January 1 1912 2 550.88.

**Government.**—The legislature met in regular session from January 2 to March 4 1911 and in special session January 11–31 1912. It ratified the proposed 16th amendment to the Federal Constitution January 20 1911, and submitted several constitutional amendments to popular vote at the 1912 general election. These include one providing for the referendum (adopted 43 658 to 13 490), one providing for the recall of state officers except judicial officers (adopted 37 875 to 13 460) one for the initiative (adopted 38 918 to 15 195) one making the limit of state indebtedness for work on the capitol \$2 000 000 (adopted 31 712 to 18 083) one permitting convicts to work outside of prison grounds and on the other public works (adopted 33 908 to 11 876) and one providing for an appointed board of education (adopted 33 043 to 14 796) in place of the present *ex officio* board.

In 1911 four new counties were created: Bonneville from the N. E. part of Bingham (county seat Idaho Falls) Clearwater from the N. E. part of Nez Perce (county seat Orofino) Adams from the N. part of Washington (temporary county seat, Council) and Lewis from the central part of Nez Perce (temporary county seat, Nez Perce).

The legislature passed a law revising and enforcing that of 1903 declaring saloons in prohibition districts common nuisances, the discovery of liquor on the premises to be *prima facie* evidence of guilt. In 1912 four counties which had been 'no-licence' for two years voted for licence. Saloons dance halls etc. are not to be opened on Sunday.

The legislature enacted a commission charter for cities of 2 500 or more if they adopt the act at a special election. The charter provides for nomination by petition for initiative (on a 10% petition) for referendum (on a 25% petition) and for the recall of any local officer after he has been in office three months, at an election called by a 20% petition. The charter may be abandoned after 6 years by a vote at a special election called by a petition of 25% of the voters. Boise adopted the charter on February 23 1912 in effect May 21 1912. Lewiston has had a commission government since 1907.

The state appropriated \$750,000 for work on the capital building which was nearly completed in 1912 and \$12,000 to purchase about 12,000 acres for a state park, to be called Heyburn Park, in what was the Coeur d'Alene Indian Reservation; the land was bought immediately. A Game Preserve was created in Cassia, Twin Falls, Oneida and Bear Lake counties.

Among important labour laws was one making 8 hours a day's work on public works. The state insurance department was organised and an act was passed to protect commerce against monopolies and to prevent rebating. Sanitary laws provide for the inspection of hotels and for sanitation in dairies and in peddling of dairy products and forbid the sale of adulterated misbranded or impure foods or drugs. Lotteries are declared unlawful. The white slave trade is forbidden and the penalty is imprisonment from 2 to 20 years, fine of \$1,000 to \$5,000 or both imprisonment and fine. Other miscellaneous laws organise the militia, make Columbus day (12th of October) a legal holiday and forbid advertising on rocks or similar natural objects.

**Finance**—The taxes collected in 1911 were \$1,300,000 more than in any previous year and in 1912 the senate declared that the taxes had become oppressive and urged economy on state officers. An *ad valorem* tax of \$900,000 was laid for 1911 and 1912. In 1911 the legislature provided for the appointment of a state bank commissioner and for the control of bank organisations and in 1912 revised the tax laws. On January 1, 1911 the balance in the treasury was \$853,706 and on October 1, 1912 \$1,280,654; the receipts in the interval were \$6,023,947; the expenditures \$5,596,999. The debt (Oct. 1, 1912) was \$2,364,750.

**Education**—The legislature of 1911 passed an elaborate educational code drafted by a commission. This was partly amended in 1912. Among the important changes are the following: The state board of education has larger powers and the superintendent smaller ones; a new class of school districts is formed with enlarged powers and graduated scale for the length of the school term in the different parts of the state. The system of certification for teachers is improved. The state board is empowered to draft rules and regulations for building schoolhouses and there is an important change in the method of apportioning the school fund. This Idaho plan distributes two-thirds of the total fund among the different districts on the basis of the school population—except that each district is assumed to contain at least 20 children; 5% of the remainder goes to rural high school districts in proportion to the number of actual high school teachers, not more than \$300 for each teacher; one-half of the remainder goes to weak or poor school districts and the other half to the districts in proportion to their school population. The law forbids the employment of children under 14 in any employment (formerly only for certain stated employments) during school hours and before 6 A.M. or after 9 P.M. There are the same limitations on the employment of children between 14 and 16 unless they have met certain educational requirements. The code makes education compulsory for children between 8 and 18 unless they are excused on a doctor's certificate or are over 14 years old and have passed through the 8th grade.

In 1912 the school population was 109,610; the total enrollment 82,387; the average daily attendance 57,359 and the average length of school year about 7 months. The revenues for the year ending in the summer of 1912 were \$3,218,035, and the expenditures \$2,910,301. The percentage of illiteracy in the population 10 years and over in 1910 was 2.2 (4.6 in 1900). The college of agriculture of the state university supervises agricultural extension work including farmers' institutes, movable schools and demonstration trains.

**Charities and Corrections**—In 1911 the legislature established the Idaho State Sanitarium for feeble minded and epileptics near Nampa and created a prison labour commission to investigate the state penitentiary. The punishment for murder in the first degree was made either death or life imprisonment.

**History**—James H. Hawley (b. 1841), Democratic governor in 1911-12, was re-nominated but was defeated by John M. Haines, Republican, formerly mayor of Boise who received 35,056 votes to 33,902 for Hawley and 24,325 for G. H. Martin (Progressive) and 11,094 for L. A. Coblantz (Socialist). The Republican nominees for Congress (2 instead of 1 as under the previous apportionment) were elected and in the state legislature the Republicans have very large majorities (56 to 4 in the lower house) so that William Edgar Borah (b. 1865) was re-elected U.S. senator, January 14, 1913. The governor appointed November 18, 1912, Judge Kirtland I. Perky, Republican, of Boise for the unexpired term (to March 4, 1915) of Weldon Brinton Heyburn (1852-1912) U.S. senator since 1903 who died October 17th. Senator Borah and Representative Burton L. French (re-elected 1912) had considered Taft's nomination fraudulent, but had not left the Republican party. Although the Progressive cause received a set back when the Supreme Court of the state decided (October 1, 1912) that electors of the National
